The ship slipped out from the harbor through the glassy river of the Straits of Malacca, and on past points and shores that to me had never been anything but geographic names. There was a magic stillness to air and sea; the calm was as of enchantment, and one felt as if in some hypnotic trance, with all nature chained in the same spell. The pale, pearly sky was reflected in smooth stretches of liquid pearly sea, with vaporous hills, soft green visions of land beyond. Everywhere in these regions the shallow water shows pale green above the sandy bottom, and the anchor can be dropped at will. All through the breathless day the ship coursed over this shimmering yellow and gray-green sea, with faint pictures of land, the very landscapes of mirage, drawn in vaporous tints on every side. We were threading a way through the Thousand Islands, the archipelago lying below the point of the Malay Peninsula, a region of unnamed, uncounted «summer isles of Eden,» chiefly known to history as the home of pirates.

The high mountain-ridges of Sumatra barred the west for all the first equatorial day, the land of this «Java Major» sloping down and spreading out in great green plains and swamps on the fertile but unhealthy eastern coast. The large settlements and most of the cultivated land are on the west coast, where the hills rise steeply from the ocean, and sugar, tobacco, coffee, and cinchona plantations succeed one another in successive levels. Padang on that coast is a center of trade, more particularly of the coffee-trade, which now has more importance on Sumatra than on Java. There are no government plantations on Sumatra, and private owners have brought immense areas under cultivation, purchasing or leasing the lands direct from native chiefs. When the British returned Java after the Napoleon scare was over, they retained Ceylon and the Cape of Good Hope, and sovereign rights over Sumatra, relinquishing this latter suzerainty in 1872, in exchange for Holland's imaginary rights in Ashantee and the Gold Coast of Africa. The Dutch then attempted to reduce the native population of Sumatra to the same estate as the more pliant people of Java; but the wild mountaineers, of the north, or Achin, end of the island in particular, warned by the sad fate of the Javanese, had no intention of being conquered and enslaved, of giving their labor and the fruit of their lands to the strangers from Europe's cold swamps. The Achin war has continued since 1872, with little result save a general loss of Dutch prestige in the East, an immense expenditure of Dutch gulden, causing a deficit in the colonial budget every year; a fearful mortality among Dutch troops, and the final abandonment, in this decade of trade depression, of the aggressive policy. Dutch commanders are well satisfied to hold their chain of forts along the western hills, and to punish the Achinese in a small way by blockading them from their supplies of opium, tobacco, and spirits. In one four years of active campaigning the Achin war cost seventy million gulden, and seventy out of every hundred Dutch soldiers succumbed to the climate before going into an encounter. The Achinese merely retired to their swamps and jungles and waited, and the climate did the rest. One's sympathy goes naturally with the brave, liberty-loving Achinese; and in view of their unconquerable spirit, Great Britain did not lose so much as it seemed when she let go unconquerable Sumatra. British tourists are saddened when they see what their ministers let slip with Java, for with that island and Sumatra all Asia's southern shore-line, and virtually the far East, would have been England's own. Geologically this whole Malay Archipelago was one with the Malay Peninsula, and although so recently made, is still subject to earthquake change, as shown in the terrible eruption of the island of Krakatoa in the narrow Sunda Strait, west of Java, in August, 1883. Native traditions tell that anciently Sumatra, Java, Bali, and Sumbawa were one island, and

Digitized by Google

«when three thousand rainy seasons shall have passed away they will be reunited»; but Alfred Russell Wallace denies it, and proves that Java was the first to drop away from the Asiatic mainland and become an island.

While the sun rode high in the cloudless white zenith above our ship the whole world seemed aswoon. Hills and islands swam and wavered in the heat and mists, and the glare and silence were terrible and oppressive. One could not shake off the sensation of mystery and unreality, of sailing into some unknown, eerie, other world. Every voice was subdued, and the beat of the engines was scarcely felt in that glassy calm, and the stillness of the ship gave a strange sensation, as of a magic spell. It was not so very hot,—only 86° by the thermometer,—but the least exertion to cross the deck, to lift a book, to pull a banana, left one limp and exhausted, with cheeks burning and the breath coming faster, that insidious, deceptive heat of the tropics declaring itself—that steaming, wilting quality in the sun of Asia that so soon makes jelly of the white man's brain, and in no way compares with the scorching, dry 96° in the shade of a North American hot-wave summer day.

At five o'clock, while afternoon tea and bananas were being served on deck, we crossed the line—that imaginary parting of the world, the invisible thread of the universe, the beginning and the end of all latitude—latitude 0°, longitude 103° east, the sextant told. The position was geographically exciting. We were literally «down South,» and might now speak disrespectfully of the equator if we wished. A breeze sprang up as soon as we crossed the line, and all that evening and through the night the air of the Southern Hemisphere was appreciably cooler. The ship went slowly, and loitered along in order to enter the Banka Straits by daylight; and at sunrise we were in a smooth river of pearl, with the green Sumatra shores close on one hand, and the heights of Banka's island of tin on the other. A ship under full sail swept out to meet us, and four more barks under swelling canvas passed by in that narrow strait, the rocks and reefs of which are fully attested by the line of wrecks and sunken masts down its length. The harbor of Muntuk, whence there is a direct railway to the tin-mines, was busy with shipping, and the white walls and red roofs of the town showed prettily against the green.

The open Java Sea was as still and glassy as the straits had been, and for another breathless, cloudless day the ship's engines beat almost inaudibly as we went southward through an enchanted silence. When the heat and glare of light from the midday sun so directly overhead drove us to the cabin, where swinging punkas gave air, we had additional suggestion of the tropics when a passenger from Macassar, returning from Penang and Malacca, showed us fifty freshly cured specimens of birds the gorgeous plumage of which repeated the most brilliant and dazzling tints of the rainbow, the flower-garden, and the jewel-case, and left us bereft of adjectives and exclamations. Here we found another passenger, who spoke Dutch and looked the Hollander by every sign, but who quickly claimed citizenship with us as a naturalized voter of the great republic. He asked if we lived in Java, and when we had answered that we were going to Java *en touriste*, «merely travelers,» he established comradeship by saying, «I am a traveling man myself—New York Life.» This naturalized one said quite naturally, «We Dutchmen» and «our queen»—Americanisms with a loyal Holland ring.

In the earliest morning a clean white light-house on an islet was seen ahead, and as the sun rose, bluish mountains came up from the sea, grew in height, and outlined themselves, detached volcanic peaks of most lovely lines, against the purest pale-blue sky; soft clouds floated up and clung to the summits; the blue and green at the water's edge resolved themselves into groves and lines of palms; and over sea and sky and the wonderland before us was all the dewy freshness of dawn in Eden.

It was more workaday and prosaic when the ship, steaming in between long breakwaters, made fast to the stone quays of Tandjon Priok, facing a long line of corrugated-iron warehouses, behind which was the railway connecting the port with the city of Batavia. The silting up of the shallow Batavia harbor obliged commerce to remove to this deep bay, six miles farther east, and the colonials have made it a model harbor. The customs officers at Tandjon Priok were courteous and lenient, passing our tourist luggage with the briefest formality, and kindly explaining how our steamer-chairs could be stored in the railway rooms until our return to port. It is but nine miles from the Tandjon Priok wharf to the main station in the heart of the original city of Batavia—a stretch of swampy ground dotted and lined with palm-groves and banana-patches, with tiny woven baskets of houses perched on stilts clustered at the foot of tall

Digitized by Google

cocoa-trees that are the staff and source of life and of every economical blessing of native existence. We leaped excitedly from one side of the little car to the other to see each more and more tropical picture: groups of bare brown children frolicking in the road, and mothers with babies astride of their hips, or swinging comfortably in a scarf knotted across one shoulder, and every-day life going on under the palms most naturally, although to our eyes it was so strange and theatrical.

SKETCH MAP OF SINGAPORE AND JAVA.

iron of the East,» dates from 1621, when the Dutch removed from Bantam, where quarrels between Portuguese, Javanese, and the East India Company had been disturbing to trade for fifteen years, and built Fort Jacatra at the mouth of a river off which a cluster of islands sheltered a fine harbor. Its position in the midst of swamps was unhealthy, and the mortality was so appalling as to seem incredible. Dutch records tell of eighty-seven thousand soldiers and sailors dying in the government hospital between 1714 and 1776, and that more than one million people died within the city walls between 1730 and 1752, the place at no time claiming over forty thousand inhabitants all told. The people were long in learning that those who went away to the higher suburbs to sleep, and who built houses of the most open construction, to admit of the fullest sweep of air, were free from the fever of the walled town surrounded by swamps, cut by stagnant canals, and facing a harbor the mud banks of which were exposed at low tide. The city walls were destroyed in this century, the quaint old, air-tight Dutch buildings were torn down, and streets were widened; and there is now a great outspread town of red-roofed, white-washed houses, with no special features or picturesqueness to make its street-scenes either distinctively Dutch or tropical. Mod-

At the railway-station we met the *sadoe* (dos-à-dos), a two-wheeled cart which is the common vehicle of hire of the country, and is drawn by a tiny Timor or Sandalwood pony, with sometimes a second pony attached outside of the shafts.

No Europeans live at Tandjon Priok, nor in the old city of Batavia, which from the frightful mortality during two centuries was known as «the graveyard of Europeans.» The banks and business houses, the Chinese and Arab quarters, are in the «old town»; but Europeans desert that quarter before sundown, and betake themselves to the «new town» suburbs, where every house is in a park of its own, and the avenues are broad and straight, and all the distances are magnificent. The city of Batavia, literally «fair meadows,» grandiloquently «the queen of the East,» and without exaggeration «the grid-

ern Batavia has one hundred thousand inhabitants, less than a tenth of whom are Europeans. While the last-century Stadhuis might have been brought from Holland entire, a steam tramway starts from its door and thence shrieks its way to the farthest suburb, the telephone hellos from center to suburb, and modern inventions make tropical living possible.

The Dutch do not welcome tourists, or encourage one to visit their paradise of the Indies. Too many travelers have come, seen, and gone away to tell disagreeable truths about Dutch methods and rule; to expose the source and means of the profitable returns of twenty million dollars and more for each of so many years of the last and the preceding century—all from islands the whole area of which only equals that of the State of New York. Although the tyrannic rule and the «culture system,» or forced labor, are things of the dark past, the Dutch brain is slow and suspicious, and the idea being fixed fast that no stranger comes to Java on kindly or hospitable errands, the colonial authorities must know within twenty-four hours why one visits the Indies. They demand one's name, age, religion, nationality, place of nativity, and occupation, the name of the ship that brought the suspect to Java, and the name of its captain—a dim threat lurking in this latter query of holding the unlucky mariner responsible should his importation prove an expense or embarrassment to the island. Still another permit—a *Toetlakings-Kaart*, or «admission ticket»—must be obtained if one wishes to travel farther than Buitenzorg, the cooler capital, forty miles away in the hills. The tourist pure and simple, the sightseer and pleasure traveler, is not yet quite comprehended, and his passports usually accredit him as traveling in the interior for «scientific purposes.» Guides or efficient couriers in the real sense do not exist. The English-speaking servant is rare and delusive, yet a necessity unless one speaks Dutch or Low Malay. Of all the countries one may ever travel in, none equals Java in the difficulty of being understood, and it is a question, too, whether the Malays who do not know any English are harder to get along with than the Dutch who know a little. Thirty years ago Alfred Russell Wallace inveighed against the unnecessary discomforts, annoyances, and expense of travel in Java, and every tourist since has repeated his plaint. The philippics of returned travelers furnish steady amusement for Singapore residents, and none bring back the same enthusiasm that embarked with them. It is not the Java of the Javanese that these returned ones berate so vehemently, but the Netherlands India, and the state created and brought about by the merciless, cold-blooded, rapacious Hollanders who came half-way round the world and down to the equator, nine thousand miles away from their homes, to acquire an empire and enslave a race, and who impose their hampering customs and restrictions upon even alien visitors. Java undoubtedly is «the very finest and most interesting tropical island in the world,» and the Javanese the most gentle, attractive, and innately refined people of the East, after the Japanese; but the Dutch in Java beat the Dutch in Europe ten points to one, and there is nothing so surprising and amazing, in all man's proper study of mankind, as the equatorial Hollander transplanted from the cold fens of Europe; nor is anything so strange as the effect of a high temperature on Low-Country temperament. The most rigid, conventional, narrow, thrifty, prudish, and Protestant people in Europe bloom out in the forcing-house of the tropics into strange laxity, and one does not know the Hollanders until one sees them in this «summer land of the world,» whither they threatened to emigrate in a body during the time of the Spanish Inquisition.

When one has driven about the old town and seen its crowded bazaars and streets, and has followed the lines of bricked canals, where small natives splash and swim, women beat the family linen, and men go to and fro in tiny boats, all in strange travesty of the solemn canals of the old country, he comes to the broader avenues of the new town, lined with tall tamarind- and waringen-trees, a species of *Ficus*, with plumes of palms, and pyramids of blazing Madagascar flame-trees in blossom. He is driven into the long garden-court of the Hotel Nederlanden, and there has presented a spectacle of social life and customs that nothing in all travel can equal for distinct shock and sensation. We had seen some queer things in the streets,—women lolling barefooted and in startling dishabille in splendid equipages,—but concluded them to be servants or half-castes; but there in the hotel was an undress parade that beggars description, and was as astounding on the last as on the first day in the country. Woman's vanity and man's conventional ideas evidently wilt at the line, and no formalities pass the equator, when distinguished citizens and officials can roam and lounge about hotel courts in pajamas and bath slip-

Digitized by Google

pers, and bare-ankled women, clad only in the native *sarong*, or skirt, and a white dressing-jacket, go unconcernedly about their affairs in streets and public places until afternoon. It is a dishabille beyond all burlesque pantomime, and only shipwreck on a desert island would seem sufficient excuse for women being seen in such an ungraceful, unbecoming attire—an undress that reveals every defect, while concealing beauty, that no loveliness can overcome, and that has neither color nor grace nor picturesqueness to recommend it in itself.

The hotel is a series of one-storied buildings surrounding the four sides of a garden court, the projecting eaves giving a continuous covered gallery that is the general corridor. The bedrooms open directly upon this broad gallery, and the space in front of each room, furnished with lounging-chairs, table, and reading-lamp, is the sitting-room of each occupant by day. There is never any jealous hiding behind curtains or screens. The whole hotel register is in evidence, sitting or spread in reclining-chairs. Men in pajamas thrust their bare feet out bravely, puffing clouds of rank Sumatra tobacco as they stared at the new arrivals; women rocked and stared as if we were the unusual spectacle, and not they; and children sprawled on the cement flooring, wearing only the most intimate undergarments of civilized children. One turned his eyes from one undressed family group only to encounter some more surprising dishabille; and meanwhile servants were hanging whole mildewed wardrobes on clothes-lines along this open hotel corridor, while others were ironing their employers' garments on this communal porch.

We were sure that we had gone to the wrong hotel; but the Nederlanden was vouched for as the best, and when the bell sounded, over one hundred guests poured into the vaulted dining-room, and were seated at the one long table. The men wore proper coats and clothes at this midday *riz tavel* (rice table), but the women and children came as they were—*sans gêne*.

The Batavian day begins with coffee and toast, eggs and fruit, at any time between six and nine o'clock, and the affairs of the day are despatched before noon, when that sacred, solemn, solid feeding function, the riz tavel, assembles all in shady, spacious dining-rooms, free from the creaking and flapping of the punka, so prominent everywhere else in the East. Rice is the staple of the midday meal, and one is expected to fill the soup-plate before him with boiled rice, and on that heap as much as he may select from eight or ten dishes, a tray of curry condiments being passed with this great first course. Bits of fish, duck, chicken, beef, bird, omelet, and onions rose upon my neighbors' plates, and spoonfuls of a thin curried mixture were poured over the rice, before the conventional chutneys, spices, cocoanut, peppers, and almond went to the conglomerate mountain resting upon the «rice table» below. Beefsteak, a salad, and then fruit and coffee, brought the midday meal to a close. Squeamish folk and unseasoned tourists complain of loss of appetite at these hotel riz tavels; but we forgot all that had gone before when the feast was closed with the mangosteen—nature's final and most perfect effort in fruit creation.

After the riz tavel every one slumbers—as one naturally must after such a very «square» meal—until four o'clock, when a bath and tea refresh the tropic soul, the world dresses in the full costume of civilization, and the slatternly women of the earlier hours go forth in the latest finery of good fortune, twenty-six days from Amsterdam, for the afternoon driving and visiting, that continue to the nine-o'clock dinner-hour. Batavian fashion does not take its airing in the jerky sadoe, but in roomy «vis-à-vis,» or barouches, and comfortable «milords,» or giant victorias, that, being built to Dutch measures, comfortably accommodate three ordinary people to each seat, and are drawn by gigantic Australian horses, or «Walers» (horses from New South Wales), to match the turnouts of Brobdingnag.

Society is naturally narrow, provincial, colonial, conservative, and insular, even to a degree beyond that known in Holland. The governor-general, chosen from the resident Dutch, and whose salary is twice that of the President of the United States, lives in a palace at Buitenzorg, forty miles away in the hills, with a second palace higher up in the mountains, and comes to Batavia only on state occasions. This ruler of twenty-four million souls has a standing army of thirty thousand men, more than half of whom are natives, but only Europeans hold officers' commissions. The island is divided into fifteen provinces or residencies, a resident, or local governor, ruling, or, as «elder brother,» effectually directing the few provinces ostensibly ruled by native princes. All these residents are answerable to a secretary of the colony, appointed by the sovereign at The Hague, and much of executive detail has to be submitted to the home government for ar

proval. Naturally there is much friction between all these functionaries, and etiquette is punctilious to a degree. A formal court surrounds the governor-general, and is repeated in miniature at every residency. The pensioned native sovereigns, princes, and regents maintain all the forms, etiquette, and barbaric splendor of their old court life, elaborated by European customs. The Dutch officials condescend equally to the rich planters and to the native princes. The planters hate and deride the officials; the natives hate the Dutch of either class, and despise their own princes who are subservient to the Dutch; and the wars and jealousies of rank and race and caste, of white and brown, of native and imported folk, flourish with tropical luxuriance.

Batavian life differs considerably from that in British India and all the rest of Asia, where the British-built and conventionally ordered places support the same formal order of England unchanged, save for a few luxuries and concessions incident to the climate. The Dutchman does not waste his perspiration on tennis or golf or cricket, or on any outdoor pastime more exciting than horse-racing. He does not make well-ordered and expensive dinners his one chosen form of hospitality. He dines late and dines elaborately, but the more usual form of entertainment in Batavia is the evening reception or musicale, for which the spacious houses, with their great white porticos, are well adapted. Batavian residents have each a paradise park around their dwellings, and the white houses of classic architecture, bowered in magnificent trees and palms, shrubs and vines and blooming plants, are most attractive by day. At night, when the great portico, which is drawing-room and living-room, and as often dining-room, is illuminated by many lamps, each lovely villa glows like a fairyland in its dark setting. If the portico lamps are not lighted, it is a sign of «not at home,» and mynheer and his family may sit in undress at their ease. There are weekly concerts at the Harmonie and Concordia clubs, where the groups around iron tables might have been summoned by a magician from some Continental garden. There are such clubs in every town on the island, and they furnish society its center and common meeting-place. In these tropical gardens one sees fine gowns and magnificent jewels; ladies wear the heavy silks and velvets of an Amsterdam winter and men dance in black coats and broadcloth uniforms. Society is brilliant, formal, and by lamp-light impressive; but when by daylight one meets the same fair beauties and bejeweled matrons stockingless, in sarongs and flapping slippers, the disillusionment is complete.

The show-places of Batavia are easily seen in a day: the old town hall, the Stadkirche, the lighthouse, the old warehouse, and the walled gate of Peter Elberfeld's house, with the spiked skull of that half-caste rebel against Dutch rule pointing a more awful reminder than the inscription, in several languages, to his «horrid memory.» The pride of the city, and the most creditable thing on the island, is the Museum of the Batavian Society of Arts and Sciences, known sufficiently to the world of science and letters as «the Batavian Society,» of which Sir Stamford Raffles was the first great inspirer and exploiter. In his time were undertaken the excavations of the old Hindu temples and the archæological work which the Dutch government and the Batavian Society have since carried on, and which have helped place that association among the foremost learned societies of the world. The museum is housed in a beautiful building resembling a Greek temple, the white walls of which are shaded by magnificent trees. It faces the broad Koenig's Plein, the largest parade-ground in the world, the Batavians say. The halls, surrounding a central court, shelter a complete and wonderful exhibit of Javanese antiquities and art works, of arms, weapons, implements, ornaments, costumes, masks, basketry, textiles, musical instruments, models of boats and houses, silver and metal-work, and all the industries of these gifted people. It is a place of absorbing interest; but with no labels and no key, except the native janitor's pantomime, one's visit is often filled with exasperation.

The Tjina, or China, and the Arab *kampongs*, or villages, are show-places to the stranger in the curious features of life and civic government they present. Each of these foreign kampongs is under the charge of a captain or commander, whom the Dutch authorities hold responsible for the order and peace of his compatriots, since they do not allow so-called «European freedom» to these yellow colonials. Great wealth abides in both these alien quarters, the leaders of which have been there for generations, and have absorbed all retail trade, and as commission merchants, money-lenders, and middlemen have garnered great profits and earned the hatred of Dutch and Javanese alike. The lean and hook-nosed followers of the prophet conquered the island in the fifteenth century, and have built their *messigits*, or mosques, in

every province. The Batavian messigit is a cool little blue-and-white-tiled building, with a row of inlaid wooden clogs and loose leather shoes at the door, and turbaned heads within bow before the mihrab that points west toward Mecca. Since the Mohammedan conquest of 1475, the Javanese are Mohammedan if anything; but they take their religion easily, and are so lukewarm in the faith of the fire and sword that they would easily relapse to their former mild Brahmanism if Islam's power were broken. The Dutch have always prohibited the pilgrimages to Mecca, since those returning with the green turban were viewed with reverence, and accredited with supernatural powers that made their influence a menace to Dutch rule. Arab priests have always been enemies of the government and foremost in inciting the people to rebellion against Dutch and native rulers; but no evangelical work seems to have been done by Christian missionaries to counteract Mohammedanism, save at the town of Depok, near Batavia.

In all the banks and business houses is found the lean-fingered Chinese comprador, or accountant, and the rattling buttons of his abacus, or counting-board, play the inevitable accompaniment to financial transactions, as everywhere else east of Colombo. The two hundred and fifty thousand Chinese in Dutch India present a curious study in the possibilities of their race. Under the strong, tyrannical rule of the Dutch they thrive, show ambition to adopt Western ways, and approach more nearly to European standards than one could believe possible. Chinese conservatism yields first in costume and social manners; the pigtail shrinks to a mere symbolic wisp, and the well-to-do Batavian Chinaman dresses faultlessly after the London model, wears spotless duck coat and trousers, patent-leather shoes, and, in top hat or derby, sits complacent in a handsome victoria drawn by imported horses, with liveried Javanese on the box. One meets correctly gotten-up equestrians trotting around Waterloo Plein or the alleys of Buitenzorg, followed by an obsequious groom, the thin remnant of the Manchu queue slipped inside the coat being the only thing to suggest Chinese origin. The rich Chinese live in beautiful villas, in gorgeously decorated houses built on ideal tropical lines; and although having no political or social recognition in the land, entertain no intention of returning to China. They load their wives with diamonds and jewels, and spend liberally for the education of their children. The Dutch tax, judge, punish, and hold them in the same regard as the natives, with whom they have intermarried for three centuries, until there is a large mixed class in every part of the island. The native hatred of the Chinese is an inheritance of those past centuries when the Dutch farmed out the revenues to the Chinese, who, being assigned so many thousand acres of rice-land, and the forced labor of the people on them, gradually extended their boundaries, and by increasing exactions and secret levies oppressed the people with a tyranny and rapacity the Dutch could not approach. In time the Chinese fomented insurrection against the Dutch and the native princes, until they were restrained from all monopolies and revenue-farming, and restricted to their present humble political state. The Dutch vent their dislike by an unmerciful taxation. The Chinese are mulcted on landing and leaving, for birth and death, for every business venture and privilege; yet they prosper and remain, and these «Paranaks» in a few more generations may attain the social and political equality they seek. It all proves that under a strong, tyrannical government the Chinese make good citizens, and can easily put away the notions and superstitions that in China itself hold millions in the bondage of a long-dead past. The recent exposure of Chinese forgeries of Java banknotes to the value of three million pounds sterling have put the captains of Batavia and Samarang kampongs in prison, and have led to wholesale arrests of rich Chinese throughout the island.

Native life swarms in this land of the betel and the banana, where there seems to be more of inherent dream and calm than in other lands of the lotus. The Javanese are the finest flowers of the Malay race—a people possessed of a civilization, arts, and literature in that golden period before the Mohammedan and the European conquests. They have gentle voices, gentle manners, fine and expressive features, and are the one people of Asia besides the Japanese who have real charm and attraction for the alien. They are more winning, too, by contrast, after one has met the harsh, unlovely, and unwashed people of China, or the equally unwashed, cringing Hindu. They are a little people, and one feels the same indulgent, protective sense as toward the Japanese. Their language is soft and musical—«the Italian of the tropics»; their ideas are poetic, and their love of flowers and perfumes, of music and the dance, of heroic plays and of every emotional form of art,

Digitized by Google

proves them as innately esthetic as their distant cousins, the Japanese, in whom there is so large an admixture of Malay stock. Their reverence for rank and age, and their elaborate etiquette and punctilious courtesy to one another, are as marked in the common people as among the Japanese; but their abject, crouching humility before their Dutch employers, and the brutality of the latter to them, are subjects for sadder thinking, and something to make the blood boil.

These friendly little barefoot people are of endless interest, and their daily markets are panoramas of life and color that one longs to transplant entire. Life is so simple and primitive, too, in the sunshine and warmth of the tropics. A bunch of bananas, a basket of steamed rice, and a leaf full of betel preparations, comprise the necessities and luxuries of daily living. With the rice may go many peppers and curried messes of ground cocoanut, which one sees made and offered for sale in small dabs laid on bits of banana-leaf, the wrapping-paper of the tropics. Pinned with a cactus thorn, a bit of leaf makes a primitive bowl or cup, and a slip of it serves as a sylvan spoon. All classes chew the betel- or areca-nut, bits of which, wrapped in betel-leaf with lime, furnish cheer and stimulant, dye the mouth, and keep the lips streaming with crimson juice. In China, across the peninsula, and throughout India, men and women have equal delight in this peppery stimulant. The Javanese lays his quid of betel tobacco between the lower lip and the teeth, and so great seems to be the solace and comfort of it that dozing venders and peddlers will barely turn an eye and grunt responses to one's eager «*Brapa?*» («How much?»)

Peddlers bring to one's doorway fine Bantam basketry and bales of the native cotton cloth, or *battek*, patterned in curious designs that have been in use from time out of mind. These native art fabrics are also sold at the daily markets, and one soon recognizes the conventional designs, and distinguishes the qualities and merits of these hand-patterned cottons that constitute the native dress. The sarong, worn by men and women alike, is a strip of cotton, two yards long and one yard deep, which is drawn tightly around the hip, the fullness gathered in front and by an adroit twist made so firm that a belt is not necessary to native wearers. The sarong has always one formal panel design, which is worn at the front or one side, and the rest of the surface is covered with the intricate ornaments in which native fancy runs riot. There are geometrical and line combinations, in which appear the swastika and the curious latticings of Central Asia; other freer ones as bold and natural as anything Japanese; and others where the palm-leaves and quaint animal forms of India and Persia attest the other art influences that have swept over these refined, adaptive, assimilative people. One favorite serpentine pattern running in diagonal lines did not need explanation in this land of gigantic worms and writhing crawlers; nor that other pattern where centipeds and insect forms cover the ground; nor that where the fronds of cocoa-palm wave, and the strange shapes of mangos, jacks, and breadfruit are interwoven. The deer and the tapir and the «hunting-scene» patterns are reserved for native royalty's exclusive wear. The sarong's value depends upon the fineness of the drawing, the elaboration of the design, and the number of colors employed; and, beginning as low as one dollar, these brilliant cottons, or hand-painted calico sarongs, increase in price to even twenty or thirty dollars. The Dutch ladies vie with one another in their sarongs as much as do the native women, and their dishabille dress of the early hours has not always economy to recommend it. The battek also appears in the *slandang*, or long shoulder-scarf, which used to match the sarong and complete the native costume when passed under the arms and crossed at the back, thus covering the body from the armpits to the waist. It is still worn knotted over the mother's shoulder as a sling or hammock for a little one; but Dutch fashion has imposed the same narrow, tight-sleeved *kabaia*, or jacket, that Dutch women wear with the sarong. The *kam kapala*, a square handkerchief tied around men's heads as a variant of the turban, is of the same figured battek, and with the slandang often exhibits charming color combinations and intricate Persian designs. When one conquers his prejudices and associated ideas enough to pay seemingly fancy prices for these examples of free-hand calico-printing, the taste grows, and he soon shares the native longing for a sarong of every standard and novel design.

One's most earnest desire, in the scorch of Batavian noondays and stifling Batavian nights, is to seek refuge in «the hills»—in the dark-green groves and forests of the Blue Mountains, which are ranged with such admirable effect as background when one steams in from the Java Sea. At Buitenzorg, only forty miles away and seven hundred and fifty feet above the sea, heat-worn people find

floored building the airy halls and waiting- and refreshment-rooms of which are repeated on almost as splendid a scale at all the large towns of the island, was enlivened with groups of military officers, whose heavy broadcloth uniforms, trailing sabers, and clanking spurs transported us back from the tropics to some chilly European railway-station, and presented the extreme contrast of colonial life. The train came panting up from Tandjong Priok, and during the hour-and-a-half's ride from Batavia to Buitenzorg gave us an epitome of tropical landscapes as it ran between a double panorama of beauty. Everywhere the soil was a deep, intense red, as if the heat of the sun and the internal fires of this volcanic belt had warmed the fruitful earth to this glowing color, which contrasted so strongly with the complemental green of grain and the groves of palms and cacao-trees. The level rice-fields were being plowed, worked, flooded, planted, weeded, and harvested by the same primitive methods that have been in use for centuries.

refuge in an entirely different climate, an atmosphere of bracing clearness tempered to moderate summer warmth. Buitenzorg («without care»), the Dutch Sans Souci, has been a general refuge and sanitarium for Europeans, the real seat of government, and the home of the governor-general for more than a century. It is the pride and show-place of Java, the great center of its social life, leisure interests, and attractions. The higher officials and many Batavian merchants and bankers have homes at Buitenzorg, and residents from other parts of the island make it their place of recreation and holiday trips.

Undressed Batavia was just rousing from its afternoon nap, and the hotel court was surrounded with barefoot guests in battek pajamas and scant sarongs, a sockless, collarless, unblushing company, that yawned and stared as we drove away, rejoicing to leave this Sans Gêne for Sans Souci. The Weltevreden Station, on the vast Koenig's Plein, a spacious stone-

PAINTING SARONGS.

vested side by side, the several crops of the year going on continuously, with seemingly no regard to seasons. Nude little boys, astride of smooth gray water-buffaloes, posed statuesquely while those leisurely animals browsed afield; and no pastoral pictures of Java remain clearer in memory than those of patient little brown children sitting half days and whole days on buffalo-back, to brush flies and guide the stupid-looking creatures to more luscious bits of herbage. Men and women were wading knee-deep in paddy-field muck, transplanting the green rice-shoots from the seed-beds, and picturesque harvest groups posed in tableaux, as the train shrieked by. Children rolled at play before the gabled baskets of houses clustered in toy villages beneath the inevitable cocoa-palms and bananas, the combination of those two useful trees being the certain sign of a kampong when the braided-bamboo houses are invisible.

At Depok there was a halt to pass the down-train, and the natives of this one Christian village and mission-station, the headquarters of evangelical work in Java, flocked upon the platform with a prize horticultural display of all the fruits of the season for sale. The record of mission work in Java is a short one, as after casting out the Portuguese missionaries the Dutch forbade any others to enter, and Spanish rule in Holland had perhaps taught them not to try to impose a strange religion on a people. All mission work was prohibited and discouraged until very lately, the government being content to let the natives enjoy their mild Mohammedanism, and taking no steps even to educate the Javanese. Our Mohammedan servant spoke indifferently of mission efforts at Depok, with no scorn, no contempt, and apparently no hostility to the European faith.

Once above the general level of low-lying rice-lands, cacao-plantations succeeded one another for miles; the small trees hung full of fat pods, just ripening into reddish brown and crimson. The air was noticeably cooler in the hills, and as the shadows lengthened the near green mountains began to tower in shapes of lazuli mist, and a sky of soft, surpassing splendor made ready for its sunset pageant. When we left the train we were whirled through the twilight of great avenues of trees to the hotel, and given rooms the veranda of which overhung a strangely rustling, shadowy abyss, where we could just discern a silver line of river leading to the pale-yellow west, with the mountain mass of Salak cut in gigantic purple silhouette.

The ordinary bedroom of a Java hotel, with latticed doors and windows, contains

one or two beds, each seven feet square, hung with starched muslin curtains that effectually exclude air as well as lizards or winged things. The bedding, as at Singapore, consists of a hard mattress with a sheet drawn over it, a pair of hard pillows, and a long bolster laid down the middle as a cooling or dividing line. Blankets or other coverings are unneeded and unknown, but it takes one a little time to become acclimated to that order in the penetrating dampness of the dewy and reeking hours before dawn. If one makes protest enough a thin blanket will be brought, but so camphorated and mildew-scented as to be unsupportable. Pillows are not stuffed with feathers, but with the cooler, dry, elastic down of the straight-armed cotton-tree, which one sees growing everywhere along the highways, its rigid, right-angled branches inviting their use as the regulation telegraph-pole. The floors are made of a smooth, hard cement, which harbors no insects, and can be kept clean and cool. Pieces of coarse ratan matting are the only floor-coverings used, and give an agreeable contrast to the dirty felts, dhurries, and carpets, the patches of wool and cotton and matting, spread over the earth or wooden floors of the unspeakable hotels of British India. Yet the Javanese hotels are disappointing to those who know the solid comforts and immaculate order of certain favorite hostelries of The Hague and Amsterdam. Everything is done to secure a free circulation of air, as a room that is closed for a day gets a steamy, mildewed atmosphere, and if closed for three days blooms with green mold over every inch of its walls and floors. The section of portico outside each room at Buitenzorg was decently screened off to serve as a private sitting-room for each guest or family in the hours of startling dishabille; and as soon as the sun went down a big hanging-lamp assembled an entomological congress. Every hotel provides as a night-lamp for the bedroom a tumbler with an inch of cocoanut-oil, and a tiny tin and cork arrangement for floating a wick on its surface. For the twelve hours of pitch-darkness this little lightning-bug contrivance burns steadily, emitting a

A JAVANESE YOUNG WOMAN.

delicious nutty fragrance, and allowing one to watch the unpleasant shadows of the lizards running over the walls and bed-curtains, and to look for the larger, poisonous brown gecko, the unpleasant voice of which, calling « Becky! Becky! Becky! » in measured gasps, six times, over and over again, is the actual, material nightmare of the tropics.

The order of living at the up-country hotels is the same as at Batavia, and the charges are the same everywhere in Java, averaging about three dollars gold each day, everything save wine included. It has been said that « no invalid or dyspeptic should enter the portals of a Java hotel, » and this cannot be insisted upon too strongly to deter any such sufferers from braving the sunrise breakfasts and bad coffee, the heavy riz tavel, and the long-delayed dinner-hour, solely for the sake of tropical scenery and vegetation and a study of Dutch colonial life.

At daylight we saw that our portico looked full upon the front of Mount Salak, green to the very summit with plantations and primeval forests. Deep down below us lay a valley of Eden, where thousands of palm-trees were in constant motion to the eye, their branches bending, swaying, and fluttering as softly as ostrich-plumes, but with a strange, harsh, metallic rustle and clashing different from the whispers and sighs and cooing sounds of temperate foliage. As stronger winds thrashed the heavy leaves, the level of the valley rippled and tossed in green billows like a barley-field. We watched the dark indigo mass of Salak turning from purple and

Digitized by Google

azure to sunlit greens in the light of early day. The breakfast of the country was brought to our porch—cold toast, cold meats, eggs, fruit, tea, or the very worst coffee in all the world, something that even the American railway restaurant and frontier hotel would spurn with scorn. Java coffee, in Java, comes to one in a stoppered glass bottle or cruet, a dark-brown fluid that might as well be walnut catsup, old port, or New Orleans molasses. This double extract of coffee, made by cold filtration, is diluted with hot water and hot milk to a muddy gray-brown, lukewarm drink that is uniformly bad in every hotel and public place of refreshment that a tourist encounters on the island. In private houses, where the fine Arabian berry is toasted and powdered, and the extract made fresh each day, the morning draught is quite another fluid, and worthy the cachet the name of Java gives to coffee in far countries.

Buitenzorg is one of the enchanted spots where days can slip by in dateless delight; one forgets the calendar and the flight of time, and hardly remembers the heavy, sickening heat of Batavia stewing away on the plains below. It is the seat of the governor-general's court, and the social life of the island, a resort for officials and the leisure class, and for invalids and the delicate, who find strength in the clear, fresh air of the hills, the cool nights, and the serenely tempered days, each with its reviving shower the year round.

There are strange pictures to be seen, since the sarong is as much the regular morning dress at the cool, breezy hill-station as in sweltering Batavia. Buitenzorg is the Simla of Netherlands India, but it awaits its Kipling to record its social life in clear-cut, instantaneous pictures.

The famous botanical garden at Buitenzorg is the great show-place, the paradise and pride of the islands. The Dutch are admitted to be the best horticulturists of Europe, and with the heat of a tropical sun, a daily shower, and a century's well-directed efforts, they have made Buitenzorg's garden first of its kind in the world, despite the rival efforts of the French at Saigon,

FRANGIPANI, SAUSAGE-TREE, AND CANDLE-TREE.

and of the British in Singapore, Ceylon, Calcutta, and Jamaica. The governor-general's palace is in the midst of a ninety-acre inclosure, reached from the main gate near the hotel by what is undoubtedly the finest avenue of trees in the world. These graceful kanari-trees, arching one hundred feet overhead in a great green cathedral aisle, have tall, straight trunks covered with stag-horn ferns, bird's-nest ferns, ratans, creeping palms, blooming orchids, and every kind of parasite and air-plant the climate allows; and there is a fairy lake of lotus and *Victoria regia* beside it, with pandanus and red-stemmed Banka palms crowded in a great sheaf or bouquet on a tiny islet. When one rides through this green avenue in the dewy freshness of the early morning, it seems as though nature and the tropics could do no more, until he has penetrated the tunnels of waringen-trees, the open avenues of royal palms, the great plantation of a thousand palms, the grove of tree-fern, and the frangipani thicket, and has reached the knoll commanding a view of the double summit of Gedeh and Pangerango, vaporous blue volcanic heights, from one peak of which a faint streamer of smoke perpetually floats. There is a broad lawn at the front of the palace, shaded with great waringen-, sausage-, and candle-trees, and trees the branches of which are hidden in a mantle of vivid-leafed bougain-

villea vines, with deer wandering and grouping themselves in as correct park pictures as if under branches of elm or oak, or beside the conventional ivied trunks of the North.

It is a tropical experience to reverse an umbrella and in a few minutes fill it with golden-hearted white frangipani blossoms, or to find nutmegs lying as thick as acorns on the ground, and break their green outer shell and see the fine coral branches of mace enveloping the dark kernel. It is a delight, too, to see mangosteens and rambutans growing, to find bread, sausages, and candles hanging in plenty from benevolent trees, and other fruits and strange flowers springing from a tree's trunk instead of from its branches. There are thick groves and regular avenues of the waringen, a species of *Ficus*, and related to the banian- and the rubber-tree, a whole family the roots of which writhe over the ground, drop from the branches, and generally comport themselves in unconventional ways. Bamboos grow in clumps and thickets, ranging from the fine, feathery-leafed canes that are really only large grasses, up to the noble giants from Burma, the stems of which are solid trunks easily soaring to a hundred feet in air, and spreading there a solid canopy of graceful foliage.

The creepers run from tree to tree, and writhe over the ground like gray serpents; ratans and climbing palms one hundred feet in length are common, while uncommon ones stretch to five hundred feet. There is one creeper with a blossom like a magnified white violet, and with all a wood-violet's fragrance; but with only Dutch and botanical names on the labels, one wanders ignorantly and protestingly in this paradise of strange things. The rarer orchids are grown in matted sheds in the shade of tall trees; and although it was then the end of the dry season, and few plants were in bloom, there was an attractive orchid show, in which the strangest and most conspicuous bloom was a great butterfly flower, or pitcher-plant, the pale-green petals of which were veined with velvety maroon, and half concealed the pelican pouch of a pitcher filled with water. It was an evil-looking, ill-smelling, sticky thing, and its unusual size and striking colors made it haunt one longest of all the vegetable marvels. There were other more attractive butterflies fluttering on pliant stems, strange little woolly white

orchids like edelweiss transplanted, and scores of delicate Java and Borneo orchids, not so well known as the Venezuelan and Central American orchids commonly grown in American hothouses, and so impossible to acclimate in Java.

Lady Raffles died while Sir Stamford was governor of Java, and was buried in the section of the palace park that was afterward set apart as a botanical garden, and the care of the little Greek temple over her grave near the kanari avenue was provided for in a special clause in the treaty of cession. The bust of Theismann, who founded the garden and added so much to botanical knowledge by his studies in Java and Borneo, stands in an oval pleasance called the rose-garden; and there one may take heart and boast of the temperate zone, since that rare exotic, the rose, is but a spindling bush, and its blossoming less than scanty at Buitenzorg, when one remembers California's perennial prodigalities in showers of roses. After the death of the learned curator, Dr. Treub, in 1895, Professor Lotsy of Johns Hopkins University, Baltimore, was called to the charge of this famous garden, which provides laboratory and working-space for and invites foreign botanists freely to avail themselves of this unique opportunity of study. Over one hundred native gardeners tend and care for this great botanic museum of more than nine thousand living specimens, all working under the direction of a white head-gardener. The Tjilewong River separates the botanic garden from a culture-garden of forty acres, where seventy more gardeners look to the economic plants—the various cinchonas, sugar-canes, rubber, tea, coffee, gums, spices, hemp, and other growths, the introduction of which has so benefited the planters of the colony. Experiments in acclimatization are carried on in the culture-garden, and at a mountain garden high up on the slopes of Salak, where the governor-general has a third palace, and where there is a government hospital and sanitarium.

All Java is in a way as finished as little Holland itself, the whole island being cultivated from edge to edge like a tulip-garden, and connected throughout its length with post-roads, as smooth and perfect as park drives, all arched with waringen-, kanari-, tamarind-, or teak-trees. The rank and tangled jungle is invisible, save by long journeys; and great snakes, wild tigers, and rhinoceroses are almost unknown now. One must go to Borneo and the farther islands to see them. All the valleys, plains, and hillsides are planted in formal rows, hedged, terraced, banked, drained, and as carefully weeded as a flower-bed. The drives are of endless beauty, whichever way one turns from Buitenzorg, and we made triumphal progresses through the kanari- and waringen-lined streets in an enormous «milord.» The equipage measured all of twenty feet from the tip of the pole to the footman's perch behind, and with a cracking whip and at a rattling gait we dashed through shady roads, past Dutch barracks and hospitals, over picturesque bridges, and through villages where the native children jumped and clapped their hands with glee as the great Juggernaut vehicle rolled by. We visited the grave of Raden Saleh, a lonely little pavilion or temple in a tangle of shrubbery that was once a lovely garden shaded by tall cocoa-palms; and we drove to Batoe Toelis, «the place of the written stone,» and in the little thatched basket of a temple saw the sacred stone inscribed in ancient Kawi characters, the original classic language of the Javanese. In another basket of a shrine we were shown the veritable foot-prints of Buddha, with no explanation as to how and when he rested on the island, nor yet how he happened to have such long, distinctively Malay toes. Near these temples is the villa where the poor African prince of Ashantee was so long detained in exile—an African chief whose European education had turned his mind to geology and natural sciences, and who led the life of a quiet student here until, by the change of Ashantee from Dutch to British ownership, a way was opened for him to return to and die in his own country. There is a magnificent view from the Ashantee villa out over a great green plain and a valley of palms to the peaks of Gedeh and Pangerango, and to their volcanic neighbor, Salak, silent for two hundred years. Peasants, trooping along the valley roads far below, made use of a picturesque bamboo bridge that is accounted one of the famous sights of the neighborhood, and seemed but processions of ants crossing a spider's web. All the suburban roads are so many botanical exhibitions approaching that in the great garden, and one's interest is claimed at every yard and turn.

It takes a little time for the temperate mind to accept the palm-tree as a common, natural, and inevitable object in every outlook and landscape; to realize that the joyous, living thing with restless, perpetually thrashing foliage is the same correct, symmetrical, motionless feather-duster on end that one knows in the still life of hothouses

Digitized by Google

and drawing-rooms at home; to realize that it grows in the ground, and not in a pot or tub to be brought indoors for the winter season. The arches of gigantic kanari-trees growing over by-lanes and village paths, although intended for triumphal avenues and palace driveways, overpower one with the mad extravagance, the reckless waste, and the splendid luxury of nature. The poorest may have his hedge of lantana, which, brought from the Mauritius by Lady Raffles, now borders roads, gardens, and the railway-tracks from end to end of the island. The humblest dooryard may be gay with tall poinsettia-trees, and bougainvilleas may pour a torrent of magenta leaves from every tree, wall, or roof. The houses of the rich planters about Buitenzorg are ideal homes in the tropics, and the Tjomson and other great tea and coffee estates are like parks. The drives through their grounds show one the most perfect lawns and flower-beds and ornamental trees, vines, and palms, and such ranks on ranks of thriving tea-bushes and coffee-bushes, every leaf perfect and without flaw, every plant in line, and the warm red earth lying loosely on their roots, that one feels as if in some ornamental *jardin d'acclimatation* rather than among the most staple and serious crops of commerce. Yet from end to end of the island the cultivation is as intense and careful, entitling Java to its distinction as «the finest tropical island in the world.» It is the gem of the Indies, the one splendid jewel in the Netherlands crown, and a possession to which poor Cuba, although corresponding exactly to it geographically and politically, has been vainly compared.

Eliza Ruhamah Scidmore.

A DAY IN NORWAY.

IT was after 11 o'clock P. M. of a July day that I looked down from the high deck of the Hull steamer, which had been stealing through the silent Christiania Fiord, and now was made fast to the quay at the foot of the city. There was an apparent mystery about our approach: there had been no light in the city; we had passed scarcely any other craft; and, to my imagination, the little crowd gathered upon the quay spoke in whispers. I tried to make out in the strange light the pleasant face of my expectant hostess, Fru G——, and heard her voice first; the sound was more reassuring than the face, for speaking ghosts are rare. In the dim silence it was easy to believe that we had sailed from busy, draggled England to another world which borrowed all the light from the moon. I clambered down the plank, and took my place in the phaëton by my friend's side, while the driver perched behind us, gathered his reins, which were always on the point of boxing my ears, and telegraphed some message to the little Norwegian pony, which seemed to be the leader of a tandem that had lost his companion.

The stucco fronts of the buildings added to the enchantment; they looked as if quarried from moonshine. And what were these little children flitting through the streets? Were they gnomes? I touched my compan-

I threw an added cheerfuless into my voice as we bowled along out of the city and through suburban roads to where Frogner lay, amid dark-green trees, looking down upon the waters of the fiord. It seemed impossible to speak of ordinary things; were not we ourselves of mysterious flesh and blood? I wanted to get into the light to look at myself and my companion, but in the house no lamps or candles were lighted. It was the strange shadow of day which broods in those high latitudes during the nights of the summer months. It was not twilight, but a strange deepening of shade which did not grow darker as the night went on, but changed its tone, so that the dark greens seemed to take on a purplish tinge, and a spectral light transfigured all objects. I am very sure that in the dying out of the race of fairies, the last haunt which they will leave will be the midnight hills and waters of Scandinavia.

Often as I sat, late into the night, watching the strange *belysning*, as the Norwegians term it, I never escaped the glamour which crept over me; and Fru G—— confessed that the weird scene was as novel to her now as when she first saw it, nearly a score of years ago. The long day, which knows only a faint shading in the middle of each twenty-four hours, lasts for a few weeks, and during that time bewitches the people. They travel indifferently by day or by night,—called so by courtesy,—and take long excursions with children who are playing out of doors till

Digitized by Google

one thinks their mothers have forgotten that there is any bedtime. The lights on the coast are unlighted, and the lamps within the houses are never called for.

My day in Norway lasted four or five weeks of ordinary time, and for a week or so I was within the region of perpetual sun. It is possible for the sun to be clouded by night as well as by day, and so it happened that only twice did I have the good fortune, when crossing to the North Cape and returning, to see the sun at midnight. It may be that the fog which had veiled so much of the coast from our sight had something to do with heightening the effect of that wondrous afternoon which stretched on and on until it lifted and widened into a new day. We had left Tromsö behind, looking, with its crowded houses and spires and masts, like a miniature city. The snow was everywhere; only three weeks before there had been a race on snow-shoes at Tromsö, and we passed valleys now where the fields lay hopelessly buried beneath the lingering snow. It was past the middle of summer, and before these fields could be plowed the new winter snow would fall. The fiords and sounds through which we moved were captivating in their winding mystery. We steamed forward against what seemed an impassable barrier of snow-covered rock, when suddenly a crack would discover itself, we would creep into its opening, and find ourselves, it may be, in a broad bay. As we came this afternoon toward Kaag Sund, a wild chaos of island and mountain forms was before us. It seemed impossible that we should penetrate the dark mass, and as our boat went steadily forward we appeared to be driving to destruction. In every direction were ranges of lofty, snow-covered, rocky heights. Glaciers could be descried by their form, but only occasionally could the glitter of ice be seen beneath the weight of snow. The summits of these mountains were from two to five thousand feet high, and rising as they did from the open sea, the effect was strangely impressive.

It grieved me that day to think that the sea and the mighty forms, the sun shining upon the white snow, the black rocks breaking forth from the glittering coldness, the mists wreathing the tops of peaks or lying in banks across the precipitous side—that all this wondrous scene would fade in its exact outline from my mind, and that even the impression made upon me would grow indistinct. We say at such times that we never can forget the sight. Alas! we do forget it, all but shreds and fragments. Yet there is something better even than the memory of lost landscapes, and that is the momentary glimpse which one may get, in the presence of such scenes, of some common human experience. The great cliffs of Kaagö overhung us as we passed through the sound, and on the opposite island of Arno there were great valleys filled with snow. The pilot pointed one out to me. Never before, he said, had such snow been seen there. I asked if there were any houses in view, and, directing my sight, he showed me close by the water's edge a few shivering houses, with the cold water before them and the cold snow behind. The silence of sleep seemed upon the white valley. I turned, and saw behind the crags and glaciers of the Lyngen, and there rushed into my mind the meaning of Tennyson's

> Break, break, break,
> On thy cold gray stones, O Sea!

Like the poet, I found no words which could quite interpret the thought, but I could understand how in such a scene the prevailing thought would be an intense longing for a lost or irrecoverable human sympathy which would lead me to cry out:

> But oh for the touch of a vanish'd hand,
> And the sound of a voice that is still!

The frost and glitter of the North, and the relentless beat of the waves, make the despair of nature.

After we had passed through Kaag Sund we crossed a broad water to the island of Loppen. The open sea was before us, and except for a low bank of clouds on the horizon, the sky was serene. That bank of clouds, however, was the field of our speculation. Suddenly the captain gave orders to put the boat about, and we began steaming over the water we had just traversed. The reason was soon apparent: if we had kept on our course we should soon have been behind a rocky cliff and out of the view of the sun. The manœuver was well timed, for as all the company was assembled on the captain's bridge, eight bells sounded, and at that moment the sun, spurning the bank of clouds, shone full and undimmed. In the opposite quarter of the heavens was the moon, just past the full, shining with a pale refulgence which added no light to the landscape, but lent a charm to the sky. Even the clouds about it appeared to get nothing by being so near. The rocks cast long shadows down the fiord, while the snow-clad heights were bright

and warm in the low sunlight. There was no mist, and it was not cold. Something of the strangeness of the scene was thrown into it from our minds, conscious of the hour and the situation; yet it was hard to believe that we were looking only upon an early sunrise scene, or at a sunset. One feels compelled to use paradox and say that the sun was shining brightly at dawn.

Certainly nature seemed to be in a dream. Sea-gulls brooded on the water, and were waked only by our passage; and as we looked down from the long lane of shadow formed by the rocks, the very fiords seemed asleep. A whale suddenly crossed our bows, near enough almost for us to stroke his back; we had startled him in some watery bed. The merry party on the deck was in bright contrast to the scene in nature. There we were on the little steamer, laughing and joking, and far as we could see there was nothing but a waste of silent waters and rocks and snow—not a tree, not a house, not a sign of verdure. But we were not alone, for there in the distance were dots of fishing-boats, each with its man dropping a line into the unplanted deep. Nothing impressed me more in my Northern voyage than the resolution with which the Norse folk wrest a living from sea and land. It would seem as if generations of home-keeping had transformed the piratical viking into a fisherman and farmer, and his fighting prowess into an indomitable courage and patience in a hand-to-hand struggle with life. It is this presence of human life in unexpected places which makes the journey something better than a cold search for desolation.

I remember a fascinating turn in our voyage, when we persuaded the good-natured captain to go out of his course and take us up Raft Sund. The passage was not unlike, in certain general effect, that of the Rhine. The sound wound as the river does, and crags and slopes hemmed it in on each side; but there was little here that was smiling. The storm seemed ready to burst just before us, and we drove into the sound by such tortuous ways that, looking back, it was as if the gates of the hills had silently closed upon us. Yet there was a sweetness now and then in the midst of this wild, rude pass. A broken hill, which once had been a mass of mighty rock and gravel, had been reclaimed by nature with a soft, green moss or verdure that fitted like a warm covering into every angle and hollow of the mass. Then the light from the sun would fall upon a bit, and here would be a pale-green, distant hillside. At every turn were clusters of lovely houses, and boys in fishing-boats waving their hats at us. To our imagination, in turning aside from the regular route we were entering a wild waste; but we found ourselves confronted by these indomitable people.

The Norwegian fisherman finds a safe harbor, and builds his house there, no matter how bare and unpromising the soil may be; the farmer discovers a green spot in the midst of the ice and rock, and makes his farm there, no matter how inaccessible it may be. Passing down the narrow arm of the Hardanger Fiord, which leads to Odde,—a mere ribbon of water between lofty hills,—I saw at a dizzy height a mere patch of green, so inaccessible apparently that we wondered whether it was reached from above or below; yet here was a homestead, and upon the other side of the fiord was a glittering glacier overhanging the rocks at the summit. Vapor oozed out from it and fell in cascades down the almost precipitous sides. Then straggling trees; a little lower, houses and farms; and at the base a mill, a house, and a landing-place. It made one weary to think of the toil which the common duties of those farms that clung to the side of the rock imposed upon the men and women and boys and girls.

What a profound and continuous nationality underlies this Norwegian life! In the sturdy, independent, friendly, quick-spirited peasant of to-day the old viking blood flows, modified but not conformed to the change which Christianity and an exclusion from the strong currents of modern history have brought. The boats which bear the fishermen in the far North have the very form of the old viking ships, and, what is more to the point, the hands that handle them have not lost their cunning. On land the Norwegians are not especially graceful, but put them into their boats and they use the oar as the fish uses its fins; a centaur is scarcely more a part of the horse than the Norse boy or girl is a part of the boat. One sees primitive modes of farming, and discovers how limited are the opportunities for applying high organization of labor, or the machines which have changed the methods of agriculture elsewhere. Here the patient, frugal life makes its round, with little promise of richer forms. The grass, when cut, is hung laboriously upon trellises, since it could not be cured upon the ground, and early and late the peasant wrestles with reluctant, frosty nature. The peasant life which Tidemand has depicted in his interesting series of paintings can scarcely have been very different in his day from what it

Digitized by Google

was a hundred years before; and if it shows changes now, the changes are largely the result of the sudden inroad of foreign visitors, but still more of the emigration movement, which is not only breaking up the Norwegian families, but bringing into Norwegian politics an American democratic spirit.

It is unquestionably a hard life which the Norwegians live, and there is an absence of sunshine in it; but the resultant in character, so far as the traveler who spends a long summer day there can discern, is of a kind singularly attractive. He finds himself comparing Norway with Switzerland. In the latter country the people seem to exist for the benefit of the tourist, and to have a half-melodramatic air when caught in holiday guise. In Norway the tourist is welcomed and hospitably treated, but the people have business of their own to attend to, which goes on without any more interruption than is necessary. There is a sturdy self-respect in the peasant and the tradesman, which contrasts strongly with the obsequiousness which one meets, for example, in England; and one is constantly reminded that he is dealing with his equals. Little customs bear this out. I was embarrassed, when I went back to England, by the difficulty I found in getting rid of the habit I had formed in Norway—doing as the Norwegians did—of doffing my hat when I entered a shop, and keeping it off until I made my final bow, offered my thanks, and shut the door behind me. Then there is a frank, manly way they have of grasping your hand and shaking it when they wish to show friendliness or express gratitude. Many is the luckless tourist who has given his gratuity, and taken the outstretched hand as begging for more. At the table, after dinner the children go to their father, or the guests to their host, take his hand, and say, «*Tak for maden*» («Thanks for the meal»). I found the more cultivated people disposed to apologize for this ancient custom, and to represent it as going out of fashion. I am afraid it may be, for people nowadays have an ambition to be cosmopolitan. Perhaps the quaintness of the custom is more apparent to the stranger, and its novelty may explain in part its charm; but I begged my friend to hold fast by so generous a rite, and to save it by throwing even a little more earnestness into it.

I happened to travel on a boat with a captain who had lately been married, and I took a stealthy and somewhat shamefaced pleasure in watching his innocent and candid advertisement of his domestic happiness. I was forever getting in the way of the proud couple as they walked the deck, hand in hand, or with their arms about each other's waist. I tried to efface myself, to look the other way, and to countenance the delightful proceedings by appearing not to see or be seen. But how idle all my false delicacy was! They were so happy and so contented in the sunshine of their marriage that a general benevolence extended to all about them. How different they were from that newly married American couple which I remember, with a newspaper spread over their clasped hands, as they sat dreamily side by side in a railway-car!

The individuality which is fostered by the agricultural life of the interior, by the fisheries of the coast, and by the great difficulties of communication, is brought to the casual traveler's attention in many ways. There is but one considerable line of railroad, that which connects Christiania with Throndhjem, between which places two trains run each day, and occupy nearly twenty-four hours.[1] At regular intervals sufficient time is given for a generous meal at a station, and after I had learned the simple method which is followed I used to amuse myself with watching ignorant travelers, such as I had lately been, who sat at a table and tried in vain to induce some one to wait upon them. In point of fact, the traveler forages for himself. He gets a plate and knife and fork, and then goes about the room, helping himself to salmon, potatoes, or whatever else he fancies, and then finds, if possible, an empty corner of a table, where he deposits his plunder, and sits down to his meal. When he has finished, he reports to the young woman who presides over the festivities what he has had, and she tells him how much he ought to pay. A delightful spirit of mutual confidence appears to underlie this and similar social customs.

Railway traveling gives one as little insight into life in Norway as elsewhere, and it is fortunate for the traveler that his principal mode of conveyance is by cariole over the solid roads which bind together the Norwegian farms and hamlets. The cariole is giving way, I believe, on the great thoroughfares, to the diligence, and the *stolkjærre* is often brought forward when the cariole is called for; but these are variations of a mode of traveling which do not wholly disturb the old-established customs. The government gives to certain farms lying along the roads the rights and duties of stations. Each keeps

[1] Since this was written conditions of travel in Norway have changed.

Digitized by Google

a number of horses, the requisite number being named in the agreement, and agrees to furnish them to travelers at a fixed tariff of so much a meter. These stations are also prepared to furnish to travelers accommodations of bed and board. The tourist is perhaps making his way from Bergen to Christiania, and has decided upon the Valders route. He has taken a steamer through the Sogne Fiord, and has finally been deposited at Lärdalsören. Here, as the steamboat draws up to the pier, he sees a crowd of men and boys, with all the eagerness of the cosmopolitan hackman, ready to seize upon him. It is one of the places in Norway where he feels himself to be one of the ignoble mob of tourists. He rushes into the degrading competition with his fellow-travelers, and tries with his unpractised eye to choose his cariole and horse instead of being chosen by the post-boy who clutches at him. But once on the road, he feels the novelty and exhilaration of the journey, and devotes himself to the business of admiring himself and trap.

The cariole is very like a country doctor's sulky without a top. It differs chiefly in having a long and narrow body, in which the traveler may lay his legs to rest, and a perch behind his seat, where he straps his portmanteau, and where the post-boy kneels or sits, or variously dangles in such attitudes as his native taste may prefer. A boot buttons over the body of the cariole for protection against rain or cold, and the seat has usually a very low back, so that for a few miles the traveler is occupied chiefly in adjusting himself to the gait of the vehicle, and trying to make up his mind whether it is better for him to drop his legs on each side, as if he were riding horseback,—indeed, he sometimes finds stirrups provided,—or to recline with his legs extended stiffly before him, as if he were in an ambulance.

But after he has changed his mind frequently he is at leisure to enjoy the situation. He may drive, or he may fold his arms, letting the little urchin behind drive, and give himself up to an unrestricted view of the scenery. He is almost on horseback, and as he jogs along at no great speed he begins to realize the independence of the mode. The stations are at intervals of ten or a dozen miles, and the breaks in the journey come just often enough to give variety, while the distances are long enough to enable him to settle himself in his seat. He engages his cariole, horse, and boy from one station to the next; and when he reaches the station he dismounts, unstraps his luggage, and may now stay as long as he pleases, or go on with a fresh cariole, horse, and boy at once. He may stay and take dinner, or spend the night, or stay a week. He has a delightful sense of traveling with his own carriage, and yet having no care or responsibility. The boy who has attended him to the station will drive back with the little beast to the gait of which he has just become accustomed, and after a succession of boys, ponies, and carioles the traveler stops his career at the end of the day with a virtuous feeling that he himself is the only one that is tired; he is the only consecutive part of the journey.

With what unflagging zeal, also, the traveler tries his little vocabulary upon each new post-boy! How soon he manages to make him know that he is an American, and to ask if his little friend has relatives in America! How easily he thinks he understands the answers to his questions, and how puzzling he finds the return questions to be! I invariably asked how soon the boy was going to America, and found only one in the course of my travels who was content with Norway. What amused me was the popular notion which prevailed that America was discovered and populated by the Norwegians—not in the mythic times of the viking wanderers who amused themselves with excursions to our Atlantic coast for the purpose of perplexing historians, but a generation or so ago. It was some time before I could understand the surprise of Norwegian peasants that I was not myself of Norwegian parentage and born in Norway. I tried to persuade myself that there was a delicate piece of flattery implied, which took advantage of my nonchalant use of a carefully guarded stock of Norwegian words; but I discovered that there was a theory which covered my case. About fifty years or less before my visit there began to be an exodus from Norway to America; the country hitherto uninhabited except by Indians and wild beasts was now becoming prosperous under Norwegian enterprise; since I was not an Indian, I must be Norwegian-American.

It seems very certain that Norway and the United States are to have an influence upon each other of which the beginning only is seen. The influence will be partly personal: the absorption of Norwegian farmers into the American stock; the increase of American travel in Norway. It will be partly political, the Norwegian political thought receiving a strong impulse from the democratic form of American life; but if America here makes the larger contribution, it ought to receive a very

Digitized by Google

positive advantage from a closer connection of the literature of the two countries. There is an interesting possibility in the influence of Scandinavian literature upon American literary art. We are readier, I think, to assimilate this literature to our own than the English are, and in going to it for suggestion and inspiration we find what is at once foreign and familiar. There is a common ground on which the thought of the two nations may meet; but the Norwegian expression has an idealism and a romantic element which we may advisedly study. I think a study of the finer literature of Norway would be better worth the while of American authors than much of the labor which is expended on German current literature, for example. The inspiration to be drawn from it is peculiarly fit and forcible; for this literature is expressive of a people possessing virtues singularly desirable in the American character. I think that both travel in Norway and study of Norwegian literature offer admirable advantages to the American student.

Horace E. Scudder.

ANOTHER DAY IN NORWAY.

IT is only by degrees that the recent visitor to Norway who has recollections of the old idyllic period can attune his mind to the change which has come over the country. From a purely literary point of view, the drowsy idyl in which Mr. Scudder reveled was, I fancy, far more attractive than the political strife and turmoil into which I plunged when, after an absence of nineteen years, I landed at the pier in Christiania. It was the very same pier, by the way, which inducted Mr. Scudder into the long, enchanted day that preceded the present storm. The mountains, to be sure, were there yet, bathed in the magic illumination of the midnight sun. The fiords had the same still, mysterious air, and the steamers glided over their surface as in a dream; and the light of wonderland broke from the sky in strange, swift flashes, thrilling one with a delicious, vaguely questioning sense of unreality, like that of Aladdin when he first entered his fairy palace. But the life—the life for which this mighty scenery forms the setting—is marvelously changed. I had all the time a feeling as if it had been transposed into a different and wholly discordant key. On the northward steamer, where my predecessor in 1881 encountered only jollity and good-natured mirth, I was assailed by clamorous political debate, rude, shrill, and angry. Even the ladies with whom I spoke scoffed at the old idyllic repose, and declared that Norway was now wide-awake and modern, and that the time was happily past when she was content to be «romantic» and picturesque for the benefit of gaping tourists. A charming blonde maiden, of the purest Scandinavian type, whom I took to be of the meek and submissive kind (like the heroines of Walter Scott), assured me that Ibsen and Kielland were her favorite authors, that Björnson was old-fashioned, and that she could see nothing so very shocking in Zola. She also asked me if I knew Elizabeth Cady Stanton and Julia Ward Howe; and I rose visibly in her estimation when I was able to boast the acquaintance of the latter.

This was no isolated experience, but one of a long series which gradually convinced me that Norway had, in very truth, been invaded by modern thought, and that the old idyl which looked so lovely in Björnson's early tales has grown by a myriad imperceptible filaments into the great web of European life, and is an idyl no more, but a *fin de siècle*, realistic novel. I confess that, though generally speaking my sympathies are with human advancement and progress, an indefinable regret stole over me at this discovery. I would not, indeed, have Norway stagnate in medieval conditions, and cut herself off from a vigorous participation in the world-life. Her situation, to be sure, and her smallness, will always prevent her from playing a leading part. But then we cannot all be protagonists, and an inferior rôle is preferable to none. Only, that stimulated cerebral activity which enables a man or a nation to assert himself or itself in the battling ranks of modern civilization involves the loss of simplicity, picturesqueness, and a number of other pastoral virtues for which we do not ourselves aspire, but which we have agreed to regard as esthetically commendable.

And here is just the point which I wish to emphasize. As long as you are unconsciously picturesque, as the Norwegians were in the old idyllic days, you suffer no degradation, no loss of self-respect, by reason of your pic-

Digitized by Google

turesqueness. But only let the least hint of a suspicion enter your mind that you are pictorially interesting, and you instantly become uneasy, awkward, vaguely theatrical. Presently you are confronted with the alternative of discarding either your picturesqueness or your self-respect. It is this which has happened to the Norwegian peasantry during the last ten or twenty years. The tourists have stared at their national costumes, and have been stared at in return, until some confusion of mind has arisen as to which of the two are the more normal human creatures. In my childhood I remember hearing the peasants laugh heartily at the stray Englishman or American who invaded our valley, and call him «speckle-bird» (on account of his speckled clothes) and other derisive names. It never occurred to them then to question that a Norwegian peasant was the most normal and rational creature in God's world, and that all departures from his type must be regarded as queer, abnormal, and standing in need of an explanation. But since then the travelers have poured down upon them year by year in an ever-broadening current, until at last it looks as if the world were inhabited, not by Norwegians, but by speckled tourists. When the foreign artist at the roadside now asks the peasant girl to pose for him, and the kodak fiend snaps his instrument at her, the deadly suspicion invades her mind that it is not he, but she, who is queer; and this suspicion, when once it becomes rooted, reverses for her the order of the universe.

It is this which is meant when you hear —not once, but a hundred times, during a summer's sojourn—that the English and the Americans have ruined Norway. The old, primitive existence is going, if it is not already gone. Nothing impressed me more painfully than this ever-obtrusive fact that the note, the accent, of life, was changed. The chord was more complex, no doubt, but it was not more beautiful. It had lost a certain sweet, pastoral tranquillity, and a shrill, uncomfortably self-assertive modernness kept perpetually jarring on my ears. It appears to be a mere question of time when Norway, like Switzerland, will have to pay the full penalty of her picturesqueness, and her peasantry will by degrees degenerate from dignified freeholders into a race of innkeepers and liverymen. They are making the discovery (which, of course, they could not fail to make) that the tourist traffic is far more remunerative than the culture of the meager soil from which, with extreme toil, they barely managed to coax a scant crop of rye, grass, and potatoes. But be it said to their credit that they have not abused the opportunities which this new industry has thrown in their way. Being themselves reared in a state of chronic impecuniosity, they may not as yet have risen to a conception of the tourist's presumable resources. However that may be, I fancy that the absence of all extortion gave an additional zest to my enjoyment of the magnificent scenery with which Norway fairly overwhelms one at every turn. All demands for compensation were so delightfully reasonable that I was frequently tempted to remonstrate with my landlady in her own interest rather than in mine.

It is impossible to speak of modern Norway without mentioning the name of Björnstjerne Björnson, for he has been a tremendous factor in bringing about the change. He has himself chronicled both the old idyllic period (in «Synnöve Solbakken,» «Arne,» and «A Happy Boy») and the new, wide-awake aspiration (in «Flags are Flying» and «The Ways of God»). Norway was like the princess in the fairy-tale «The Sleeping Beauty,» only she had slept for four centuries instead of one. Björnson was the daring prince who broke through the dense, thorny hedge of obscurantism, prejudice, and patriotic conceit, and woke the slumbering princess with a kiss of stormy affection. A great fresh gust of modern thought rushed in through the breach which he had made, and it was of no avail that the conservative ministers of state and the Lutheran clergy pulled the furred collars of their overcoats up to their very eyes in order to preserve themselves from the dangerous nineteenth-century draft. People began to breathe the new atmosphere, and it apparently agreed with them. Nothing very terrible happened to anybody except the old minority government, which was turned out of office.

Björnson possesses in a remarkable degree the faculty (in which Goethe gloried) of compelling his people to share the processes of his own intellectual growth. He has been, and is, to Norway an intellectual liberator. He is himself aware that a man who undertakes such a labor will and must reap a great deal of contemporary hatred and malediction; and I fancy, too, that there are moments in which he may concede that the new which he brings is not an unmixed blessing. For, as Stevenson has aptly said, «The possession of a brain that has been thus improved and cultivated, and made into the prime organ of a man's enjoyment,

THE MIDNIGHT SUN.

brings with it certain inevitable cares and disappointments.» A semi-vegetable existence, repeating tranquilly the ancestral routine of centuries, untrammeled by any other problem than that of nutrition, has, no doubt, advantages compared with the restless, eager, nervously overwrought condition of modern life, keenly conscious in every fiber. And yet, who would exchange the latter condition for the former? Who would descend in the scale of being, and buy ignoble repose by a spiritual shrinkage and lowered vitality expressing itself in blunted curiosity and dulled desires? The intense intellectual life which Norway has displayed during the last twenty-five years is the direct result of the awakening which the old fogies, both at home and abroad, are lamenting.

Such keenly modern spirits as Björnson, Ibsen, Kielland, Lie, and Grieg could not have sprung from a nation of idyllic herdsmen and sailors. And the price Norway has paid for whatever eminence she now enjoys is a proportionate loss of that Arcadian innocence which literary tourists, from Harriet Martineau to Horace Scudder, have not grown weary of praising. There is, indeed, yet left much that is quaint and delightful; but the traveler who desires to enjoy it will do well in not delaying too long.

Hjalmar Hjörth Boyesen.

A WISH.

ONLY to be a bird
In the primrose dark of the morning;
No future—no past;
Just a present, with wings
For an instant cast
On the green verge of things,
Then to cease without warning!

CHARACTERISTICS OF JENNY LIND.

JENNY LIND'S impression upon her audience was the result of four remarkable qualities united in one artist—a voice unique in power, musical beauty, and dramatic quality; a thorough musicianship; unusual intellectual culture; and a character of unaffected goodness, kindness, and high moral principle, which gave her insight into a range of emotions, especially in religious music, possessed by herself alone. She approached each piece of music from the point of view of a great musician. She conceived its dramatic possibilities as a woman of ardent temperament molded by high social culture. She studied and created her *chefs-d'œuvre* with great intelligence. Her own inner life developed a class of emotions of an exceptionally gracious character, which she sought to express through her art. Such was her effect on me, an artist; and it did not differ, except in intensity and delight, from the impression made on people who had no technical knowledge of music.

The generation which has never heard Jenny Lind is prone to suspect that the hold which she possesses upon the imagination and heart of those who heard her is no test of her greatness; that she is still supreme in memory because she was the first great artist that sang to the young, ardent, and unsophisticated audience which this new country offered. This is an error. Jenny Lind differed from all other great artists, not in degree, but in kind. She was unique. I have heard almost every great singer of my generation; Jenny Lind could be compared to none of them. Her art was altogether different in its nature. It took hold on us in a different way.

The public were mad about her. Wherever she sang, every window and roof for blocks from the concert-hall was packed with people waiting to see her pass. I have it on the authority of Mr. Henry Rochester that once when she dropped her shawl from a balcony, it was caught and in a moment torn to shreds by the crowd below. In America were repeated the scenes of London, where the frantic rush of people fighting their way toward her in the concert-room had generated a new name—the «Jenny Lind crush.» Yet her mastery over this crazed mob was complete. During her presence on the stage the hush of reverent expectation was so intense that one could hear a pin drop. I use the word «reverent» advisedly; her public invariably left her presence uplifted into higher regions of feeling and of desire.

Jenny Lind united in her concerts three fields of music usually quite distinct, and was equally great in all. Although she did not sing in opera in America, her programs contained the arias which were inseparably connected with her triumphs in that field of art. She sang the greatest of the oratorio arias, and a variety of folk-music, Swedish and English. In whatever she sang there was a pathetic quality in her voice that vibrated in the feeling even to tears. I was a young artist just come to New York when she returned there from her tour in the interior to give her great concerts in Tripler Hall, which had been built for her, and on one of these occasions I was engaged as solo violinist. This brought me in contact with her as a musician, and I heard her with the enthusiasm of an artist. I remember as if it were yesterday how she used to dance out sidewise before her audience. I can see her now, a young woman in a dress low in the neck, with short sleeves, and with a full skirt reaching only to the ankle, according to the fashion of the day. Her eyes were light blue, very bright and sparkling; her hair was the true Swedish yellow; her complexion was pale and clear; her cheek-bones were high; and her mouth was most lovable and cultivated in its play of expression. In her own character she was not a woman to fall in love with; she was too reserved. She gave the impression of great dignity and high breeding. Her manners were those of the nobility, very simple and modest, and yet stately. She possessed a fine education and great force of character, and she was so kind and good!

Jenny Lind's voice was a soprano, in richness more like Parepa's than that of any other modern singer, or perhaps like Scalchi's at its best. Its timbre was like a clarinet, penetrating and tearful and sweet, and it flowed out with great volume and power. When she sang in Rochester, people bought standing-room in the Arcade, across the street from Corinthian Hall, where her con-

JENNY LIND.

Digitized by Google

cert was held. Through the open windows they heard her perfectly, and at a distance the listening crowd caught the swell of that mighty tone. She possessed two qualities of voice—one somber, the other of a clear, sunny ring, brilliant and sparkling. She carried her middle voice in one quality up to high B flat without a break, and sang there in the same rich tone as in her middle octaves. She used to throw this extraordinary «medium» voice right up on her upper notes with tremendous power. It rang out there as no other voice has ever rung before or since. This was the source of many of her grandest effects. But the peculiarity of her singing was the astonishing sympathy and dramatic intensity which she threw into everything, and the intelligence that guided her. Bravura, sympathy, and intellectual art are each the gift of a different artistic temperament; she united them all. Moreover, behind her interpretation was her high training of mind and feeling. This lent power and variety to her artistic conception.

Jenny Lind sang each piece from its own proper mental standpoint. She was the pupil of Garcia, the brother of Malibran, and in acting had studied carefully the art of the French stage, especially that of Rachel. She was the one ideal opera-singer for Meyerbeer, whose tender friendship for her is well known. For her he wrote the part of *Selika*, for her *Vielka*. In her operatic singing she threw herself with absolute abandon into each character, and sang with alternate tenderness and fire of irresistible intensity. Hers was a fiery voice. In America, of course, she expressed her temperament through her singing only. I cannot see how she could have been the great actress Europe recognized in her. Here she was awkward in her movements; but I used to think, from her habit of dancing on and off the stage sidewise, that she had been slightly lamed by some mishap.

Jenny Lind created her success in London in the rôle of *Alice* in Meyerbeer's «Robert le Diable.» Lumley relates how the dramatic censor withheld permission to produce the work there, on the ground of the damage to public morals which would result from bringing a live devil upon the stage. For Jenny Lind, however, this and every other opera was a passionate exposition of human life. She is said to have carried the interpretation of the rôle of *Alice*, with the climax of the terzetto preceding the finale, to a height of dramatic power never reached by any other artist. «How can I tell how I sang?» she said after the opera. «I stood on the man's right hand, and the fiend on his left, and my one thought was how to save him.»

For a singer of such instincts the friendship of Mendelssohn was sure to be of the closest. He quotes her as «a member of that church invisible,» and delighted in her «splendid enthusiasm.» He himself taught her the spirit and interpretation of oratorio music. She was only fulfilling his inspiration when she gave vent to the exaltation of artistic-religious feeling in such strains. «I know that my Redeemer liveth» she sang with such a fervor of religious passion that it caught one up, as it seemed, into the sacred presence. And so it was with all her sacred melodies. In her the art of music was grafted upon a religious nature so deep that practical Christianity was the master-spring of her life. This girl, a ballet-dancer as a child, a comedy actress in her teens, a most passionate and yet most womanly exponent of the great tragic rôles of opera as a mature artist, was supposed in America to be the daughter of a Lutheran clergyman.

It was in ballad-singing that Jenny Lind's childlike sympathy of character came out most clearly. She reveled in the ventriloquial displays of her bird-song; she threw herself with delight into the homely lieds of Sweden. No one ever heard her sing «Home, Sweet Home» without weeping. The quality of tone as she spoke the words wrung the heart. In everything she sang she revealed, apparently with perfect artlessness, beauties of which nobody had dreamed. She was perfectly original in all that she did.

Looking at Jenny Lind's art from the standpoint of its artistic school, it is easy to cite singers who have, in one or another charm, excelled her. She had not the soft warmth of an Italian singer in her voice. Many have been her superiors in feats of execution—Alboni, Tietjens, even Mme. La Grange; but she had a magnificent trill, and a scale of astounding evenness, purity, and brilliancy. The great power of her voice made it impossible for her to equal the colorature of singers possessing a lighter timbre. But this great voice she had under very high cultivation. She sang firmly, without a tremolo; purely, no slightest aspirate marring the sunny quality of her embellishments; and she could pass from the most tremendous crescendo to the most delicate pianissimo. Her climax in the part-singing of *Agatha* in «Der Freischütz» stands before me as the acme of passion; her bird-song as an example of airy and exquisitely graceful colorature.

I was present at Jenny Lind's last concert. The late Mr. Scharfenberg, one of New York's pioneer musicians, sat beside me. «What do you think?» I asked him. «She will never sing again,» he answered. Glorious as her voice still was, there had come a veil over the upper notes, once so brilliant; the delicacy and sympathy were gone from the lower—they had become harsh and cold. I did not hear her in the future triumphs in oratorio of which her biographers write so enthusiastically. To my mind, her fiery temperament, which she had thrown against her voice, had worn her and her voice out together. The American tour had destroyed her.

Henri Appy.

WHAT JENNY LIND DID FOR AMERICA.

JENNY LIND'S sojourn in America was fruitful in many ways. Her progress left a chain of charities through the land by which orphans and sick are still nurtured and healed. The rapture of her music created a criterion by which the success of every other artist has been measured from that day to this. The tradition of her pure and noble womanhood has remained to music a bulwark against which the scandal and corruption of the operatic and musical world has broken in vain. In the memory of every human being who heard her, her singing has rung to the hour of death as the one perfect and sublime revelation of the beauty and ecstasy of music itself. This is much. But America owes Jenny Lind one other and greater debt that has never been recognized, which it is the purpose of this article to consider. She brought the musical temperament of America to consciousness of itself. Her tour was the supreme moment in our national history when young America, ardent, enthusiastic, impressible, heard and knew its own capacity for musical feeling forever. From that hour it has received or denied the world's great artists who have made pilgrimage hither, supreme in its own consciousness of its artistic needs and temperament.

In the foregoing article Mr. Appy has summed up the musical gifts of Jenny Lind, and if we apply his analysis to the effect of these gifts on ourselves, it will help us to see ourselves from the outside.

The very first fact that stares us in the face is that she was what Rockstro calls her —«a passionate idealist.» It is Jenny Lind the idealist who won our first fealty. America is «a passionate idealist» also. A nation that left home to plant itself in the wilderness for a religious idea; that fought for a moral idea a bloody and devastating civil war; that has chosen for its national saints the ideal magnanimity of Washington and the strong and yet tender patriotism of Lincoln; that builds its homes on an ideal of love, and has taught its sons and daughters to believe that romance is a short word for the happy end of true affection—such is the nation to which Jenny Lind sang. And since her day, whatever partial following musicians may have had for other gifts, it is the idealist and the poet alone who have gathered the consent of the whole nation. Nay, more; America has idealized the character and life of every genius it has loved from that day to this.

The second criterion of our temperament follows from the first. While Jenny Lind was the one perfect singer for the composer of «Robert le Diable,» she was undoubtedly the greatest interpreter of such strains as «I know that my Redeemer liveth.» It is as a singer of religious music that America reveres her most. She touched the masterchord of a profoundly religious people, and, while America stands, this, the highest cause and revelation of music, will be most potent to its temperament.

She was, moreover, in earnest. «Through Jenny Lind,» wrote Hans Christian Andersen, «I first became sensible of the holiness of art. Through her I learned that one must forget one's self in the service of the Supreme. No books, no men, have had a more ennobling influence on me as a poet than Jenny Lind.» In fact, she revered her own art, not only as a musician, but as a dramatic artist. When called upon by her fiancé, Mr. Harris, «not only to abandon my profession, but to be ashamed of it,» she, who had already decided to quit the stage, first threw over her lover.

Jenny Lind was intelligible to every one that heard her. Mr. D. W. Powers related to me that six Tonawanda Indian chiefs came in from their reservation and called on her at the Eagle Tavern in Rochester. Sitting in his office down-stairs, he heard her sing to them. They understood her art, and went away satisfied. She was very simple and

Digitized by Google

logical, and therefore clear, in her interpretations. And this clearness and simplicity were the result of her convictions of art. We are told that it was her «invariable custom to reserve her great effects, with true artistic self-abnegation, for certain points which the unerring instinct of her genius indicated as the fittest for the introduction of a logical climax; and to the power and perfection of such a climax she unhesitatingly sacrificed an indefinite number of those minor effects upon which many artists gifted with less creative power are ready to seize for the purpose of securing a passing triumph at the expense of the logical whole. She kept her dramatic power in reserve, with a reticence which none but the greatest artists are ever known to exercise, for the predetermined situations in which she felt that it could be successfully exhibited with logical consistency and the deepest reverence for dramatic truth.»

This is a very intellectual type of art. By this she brought Hans Christian Andersen to tears—tears on the stage, whither he had smuggled himself in as a «supe,» as he watched her *Norma;* and Balfe to tears in the audience as she sang, «Ah! non credea,» in «La Sonnambula.» It would be too much to say that no American audience has ever confused blind temperament with dramatic genius; but it is certain that America has never for very long mistaken temperamental excess for the ecstasy produced by such spiritual art as Jenny Lind's. On the other hand, the breadth and intensity of passionate feeling which America recognized in her became the criterion of its future favor, and just as exact a criterion of the nation's self. Less fire than her climax, more apathy than her calm, have never since convinced. From her day to ours, every artist who has dwelt among us has been forced by his hearers into greater heights and depths in his efforts to win his public. Without temperament no one wins American listeners.

It was the greatest triumph of Jenny Lind that she carried the musical world captive by expressing the highest types and revelations of character. She would not take corrupt rôles. Her art was particularly normal, healthy, and direct. It was tragic, for the deepest suffering is the correlative of the highest natures; but it never struck the notes of brutal passion, rung so continuously nowadays. She sang with exquisite feeling the chaste part of *Valentine.* Her *Norma* failed to win her English hearers because it was a loving woman, not a demon. In «La Sonnambula» her dignity and innocence convinced her listeners and brought them to tears. She appealed, in fact, to the very feelings and emotions that not only are most natural, but are most sedulously cultivated, in American women. This was the charm with which Clara Louise Kellogg afterward won America and astonished Europe.

The purity of *Amina,* the pathetic love of *Lucia,* the chastity of *Valentine,* the merriment of *Susanna,* the dignity of *Norma*—how little these resemble the dramatic situations of our modern stage! What has America to do with the polluted rôles of European degeneracy? We have room enough here for suffering of a nobler strain. Where there is suffering there may be song. Let America sing her own song on the high themes where first she found her voice.

I have shown the choice which Jenny Lind made of the emotions which she would communicate to her hearers. It follows that her art was sincere. She was sincere in technic. If she had not execution for a cadenza, she simplified it. If she found her part demanded a dangerous passage over a falling bridge, she forbade stage illusions, and walked in fear and trembling; if she worked up a climax, she did it within the intention of the composer; if she desired to excite sympathy, she became her own heroine, and suffered. It is no illusion which declares the energy of the moral force that projected such music into the souls of her hearers. It was the character of Jenny Lind behind her music that made her America's ideal. It was «something not ourselves» that spoke in her accents.

Lastly,—and this is the one unfailing characteristic of the highest art,—Jenny Lind the artist was full of sweetness and light—of *kindly* light. Her message was optimistic. Happiness informed it,—the happiness of the good,—and it had the energy of happiness, and communicated its divine spark to artists of every sister art. If it was intellectual, it was also exquisitely beautiful. It was full of sympathy, and it was just as full of innocent gaiety. The «enthusiasm of humanity» pervaded it. The characteristics briefly enumerated in this paper are those that lie at the very heart of American temperament, and that have determined the success of every artist who has visited us. These are the qualities that are struggling to find expression in our own American artists and composers. Let them speak simply and directly, and we will hear.

JOHN BURROUGHS.

WHEN Dante pictured to himself the approach to the Inferno, he could think of nothing more oppressive to the imagination than the «forest savage, rough and stern,» into which the reader plunges at the very beginning of the first great modern poem. And yet Dante loved nature, and softened his somber visions again and again with simile, image, and figure from the world about him. Light from the sky, and sound from the sea, and the roar of the forest when the wind works its will, recall us at times from the appalling sights of the Inferno, or the pathetic scenes of the Purgatorio, to the smiling earth and the serene heavens. To the beauty of nature, nowhere more obvious and full of suggestion than in the country of his birth, Dante was as responsive as a man so intensely introspective and so deeply committed to the ethical and spiritual structure of things could be; but he was a man of his time as truly as he was a man of all time, and his time was well within the limits of medievalism. It is true, the Italian mind had gone a long way toward emancipating itself from the superstitious idea that nature is corrupt and sinful and given over to evil spirits; but even the Italian mind was not yet at home with the world, and probably very few men of the thirteenth century, in which the poet was born, or of the fourteenth century, in which he died, could cross the Alps without inward trepidation, or explore the recesses of the woods without an instinctive fear that some evil thing was there. And even after fear was banished there was little

Digitized by Google

appreciation of those aspects of the natural world which modern men feel most deeply.

In this feeling for nature, as in many other things, Petrarch was the first modern man—the first man, that is, who lived as freely and unconsciously in the outer as in the inner world; who possessed himself as completely of the resources and pleasures of the one as of the other; and who recognized the deep and marvelous kinship between the human soul and the fertility and organic beauty by which it is infolded. Medieval men recognized the familiar and obvious loveliness about them, but they shrank from solitude, sublimity, and grandeur in nature. Deep forests, shadowy defiles, lonely summits, and rocky coasts repelled them; they did not discern the kinship between these austere and awful aspects of the world and the deeper and sterner experiences of the soul. Petrarch was not the man to explore these darker recesses; but his active, inquisitive, and sunny nature led him far afield in that easy and natural relation in which modern men stand to the external world, and made him, in a sense, the rediscoverer of that world. «That part of my life that I have passed in Vaucluse,» he said in his later years, «I have passed in such tranquillity, in such sweetness, that, since I knew what human life is, I consider it as almost the only time in which I have lived, and all the rest as a punishment.» When we remember how solitary those years were, and how active and fruitful the poet's later life was, these words are very remarkable, and the impression on the mind of the old man is confirmed by letters written during this joyous exile from society:

> In the morning I wander over the fields, in the evening through the meadows, or in that other more rocky garden near the fountain, which Nature has made more beautiful than could the art of man. This little spot under the rocks, in the midst of the waters, is more suited than any other to inspire profound thoughts by which the most idle minds may feel themselves lifted to lofty contemplation. . . . How often has night found me still wandering in the fields! How often have I risen in the silence of a summer night to offer up my prayers and midnight orisons to Christ, and then to steal forth alone, without disturbing the servants, to wander by the light of the moon over the fields and mountains! How often at the same hour have I gone, without any companion, with mingled feelings of terror and delight, into that terrible cavern of the Sorgue, where even in daylight, and with company, one cannot enter without awe! Do you ask me how I came to be so bold? I have never been afraid of shadows.

In that last sentence lies the secret of the radical revolution of thought about nature which separates the modern man from the man who lived in Petrarch's time and before it.

That revolution has borne many kinds of fruit. It has emancipated the mind from those blighting superstitions which arbitrarily cut off a large share of the pleasures and resources of life; it has corrected the false perspective produced by exclusive and passionate study of the subjective, with almost complete indifference to the objective, world; and it has created a new kind of literature. There were naturalists before Gilbert White, and keen observers before Thoreau; but the attitude of these students of the world about them, and especially the manner and substance of their records, were essentially new. During the last century civilized men have probably lived out of doors to a greater extent than at any period since the days of the myth-makers; and even the myth-makers, who looked at nature through the imagination, and, despite numerous errors of fact, discovered many fundamental truths, were not so thoroughly at home in the world as modern men are fast becoming. Science has played a great part, not only in accurate observation and intelligent report of natural phenomena and life, but in effecting that extension of human knowledge and interest which puts men in equal possession of the world within and the world without. If nature has parted with some of the novel splendor which shone from her upon the young imagination of the race, she has parted also with the terrors of superstition and ignorance which long held men back from an intimacy made possible only after knowledge had held a torch in the darkest corners and dropped its sounding-line into the deepest seas.

Doubtless something has been lost by familiarity, but for most men there has been an immeasurable gain. The myth-makers—the men who see nature with the imagination as well as with the eye—are few in any generation, and for them the miracle does not grow stale by repetition. To the great mass of men devoid of poetic insight, on the other hand, life is immensely broadened and enriched by the inclusion of nature in thought, occupation, pleasure, and relaxation. It is not so much a rediscovery of the natural world which modern men have effected as the establishment of easy and normal relations with it—that intimacy which is bred by an intercourse so constant that it becomes a habit, and we cease to be specifically conscious of it, and which permits, therefore,

Digitized by Google

the natural play of thought, emotion, and imagination. Even observation, the first and, in a way, the elementary approach of man to nature, involves, for the highest fruitfulness, thorough familiarity with the object observed. «To be a good observer,» says Mr. Burroughs, «is not merely to see things: it is to see them in their relations and bearings; it is to separate one thing from another —the wheat from the chaff, the significant from the unimportant. The sagacity of the hound is in his scent; the skill of the musician seems in his hands and fingers; the mind of the observer is in his eye. To untrained perceptions the color of the clouds is this or that, gray or blue or drab; the artist picks out the primary tints, the separate colors of which this hue is composed.» Behind this higher power of observation there must be that familiarity with the object upon which the eye rests which separates it without effort, not only from other objects of its own class, but from all other things which are not necessary to its complete realization by the mind. It must not only reveal itself entirely, but it must disclose its significant relations to the order of which it is part.

The importance of this kind of observation lies in its perception of the fact of nature not only in its relations to the physical order, but also in its relations to the spiritual order of which man is part—a perception which makes it the inspiration of a literature distinct from scientific records and from the reports of the naturalists. For literature involves those elements of personality and of form which are in no way essential to the adequate and successful professional writing of the scientist and the naturalist. The scientist is concerned with facts as they lead to conclusions and reveal order and law; the naturalist studies the life of the field and of the woods that he may comprehend and classify it. Knowledge of some sort is the end which each of these observers sets before himself, and if the record of observation be correct, it matters not that it is formless; it belongs to the literature of knowledge, not to the literature of power. But the modern writers about nature who, like Thoreau, Jefferies, and John Burroughs, have created a new kind of literature, have approached their subjects as artists rather than as scientists. They are careful observers, but their observation is not impersonal; on the contrary, it is intensely individual, and it concerns itself with the facts of nature primarily as those facts appeal to or interpret the mind and heart of man.

Thoreau's temper toward his fellows was so cold that it seemed to have caught the elemental chill which one sometimes feels in deep and solitary ravines; but no man was ever more conscious of himself than the recluse of the Walden woods, and no man ever studied the world about him with more sophisticated eyes. Nature was not to Thoreau a succession of phenomena, to be dispassionately watched and reported; nature was a kind of private property which reflected everywhere the idiosyncrasies of its owner. He tramped through the woods with a complete philosophy in his knapsack, and while he waited to catch the earliest note of the bluebird he beguiled himself with thoughts which might have come to Plotinus, so highly speculative were they, or to Marcus Aurelius, so austere was their view of human conduct. A naturalist out of doors is all eyes; Thoreau was all brain. He carried into solitude the complete mental apparatus of a modern man. This unfitted him for the work of pure observation, but it made him one of the most original, pungent, and racy writers which this continent has produced.

With kindred intensity, though in a very different fashion, Jefferies's personality plays through his records of field and wood, and the pathos of his personal history lies on the landscape, sometimes like a mist which throws the objects in the foreground into striking relief, while it conceals the details of structure; sometimes like a rich atmosphere which obliterates the horizon-line so that earth and sky seem of a piece. Science is observation and generalization dealing exclusively with facts; literature, when it deals with nature, is nature plus the personality of the writer.

John Burroughs, like Thoreau, is strictly indigenous; he could not have grown in any other soil. Our literature betrays, in almost every notable work, the presence of foreign influences; but Thoreau and Burroughs have been fed by the soil, and have reproduced in flower and fruit something of its distinctive quality. Of the two, Thoreau had the more thorough formal education; but Burroughs shows keener susceptibility to formative influences of all kinds. Thoreau had the harder mind, the nature of greater resisting power; Burroughs is more sensitive to the atmosphere of his time, to the proximity of his fellows, and to the charms of art. Thoreau would have devoted more time to a woodchuck than to Carlyle, Arnold, or Whitman; Burroughs emphasized his indebtedness to Wordsworth, Arnold, Emer-

Digitized by Google

son, and Whitman. He has the more open mind, the quicker sympathies, the wider range. If he sometimes strikes us as less incisive and original than Thoreau, he is not less distinctively American, and there is a riper and saner quality in him. In Thoreau one is constantly aware of the element of wild life which still survives on this new continent. In Burroughs one feels the domesticity of nature; one is aware at all times of the simple, natural background of American life. In nothing is Burroughs's freedom from academic and literary tradition more evident than in the quality of homeliness which runs through his work. He writes in his shirt-sleeves, and is not ashamed of it; on the contrary, he believes that the only real writing is done by men who speak unaffectedly out of the conditions which form their natural environment. He can admire an academician who is an academician by nature; but he has no sympathy with the man who exchanges his native dialect for a speech which has greater precision and eloquence, but which is not a part of himself.

John Burroughs was born a countryman, and a countryman he remains. The horizon which he sees from his hillside farm of seventeen acres overlooking the Hudson includes within its intangible boundaries a world large enough to engage the closest observation, and important enough to justify the fullest record. He loves nature at large, but he is chiefly concerned with nature as a home-maker for man. Thoreau is so thoroughly detached from the society of his fellows that one point of observation is, for his purpose, as good as another, provided the point be remote from human settlement. Burroughs, on the other hand, delights not less in solitude and silence, but he keeps within sight of the thin line of smoke from the hearthstone. Thoreau wants the freedom of absolute detachment. «I would rather,» he says, «sit on a pumpkin, and have it all to myself, than be crowded on a velvet cushion. . . . The very simplicity and nakedness of man's life in the primitive ages imply this advantage, at least: that they left him still but a sojourner in Nature. When he was refreshed with food and sleep he contemplated his journey again. He dwelt, as it were, in a tent in this world, and was either treading the valleys, or crossing the plains, or climbing the mountain-tops. But lo! men have become the tools of their tools. The man who independently plucked the fruits when he was hungry is become a farmer, and he who stood under a tree for shelter a housekeeper.» Thoreau held to the ways of primitive man, and stings or shocks us out of our complacent civilization; but he pays the penalty of his isolation in a certain hardness of tone and a certain narrowness of sympathy. Burroughs not only plucks fruits, but produces them, for he is both a farmer and a housekeeper. He misses some insights and a kind of knowledge which are the exclusive possession of the primitive man; but he lives nearer the soil, in more intimate contact with it, and his report of nature, if less novel and surprising, is warmer and more persuasive in tone. He approaches nature, not with the stealthy step of the Indian, but with the easy air of the farm-bred boy who lays no claims to esoteric relations, but quietly takes possession of the world about him because he was born to it.

It was his good fortune to spend his childhood and youth in that very interesting region where the head waters of the Delaware have their rise: a country which has elevation, mass, and breadth to the eye, as well as that austere fertility which responds to hard work, but scorns the touch of the amateur or the indolent. In such a region there is room for the imagination as well as for quick observation and the ready hand. The conditions which the boy found about him were simple to the verge of bareness, but they were wholesome; they bred that sturdy independence which goes far to the making of an original man. The picture on which he looked had no unusual or striking features. There was the bald-top mountain in the lap of which the farm lay, and upon which the sheep grazed; on the slope of the hill was one of those clear springs so dear to childhood, and so indescribably refreshing in the memory of the mature man; in the distance stood the little red school-house; and through the meadows beyond it ran the brook, with its inexhaustible resources of swimming, fishing, and dam-building. «For thirty years or more,» he writes, «I have been afflicted with a sort of chronic homesickness—a longing for the old farm where I was born, yonder amid the hills.» This nostalgia of the soul for the surroundings amid which it came to a consciousness of its needs and powers and aims testifies to the imperishable influence of the things which are seen with the eyes of youth. It is doubtful if any later vision of things is clearer or so fruitful; and it is certain that every man's art is permanently affected by those earliest contacts with the world which stir the imagination out of its sleep. Mr.

Digitized by Google

Burroughs first looked upon nature from the door-step of the farm-house, and from that point of contact between the outer world of discovery and action and the inner world of rest and affection he still sees it. The early years were simple and homely, and the later years have been of a piece with them. «If a man is not born into the environment best suited to him,» he writes in «An Egotistical Chapter,» «he, as a rule, casts about him until he finds such an environment. My own surroundings and connections have been mainly of the unliterary kind. I was born of and among people who neither read books nor cared for them, and my closest associations have been with those whose minds have been alien to literature and art. My unliterary environment has doubtless been best suited to me. Probably what little freshness and primal sweetness my books contain is due to this circumstance.» Education in the deepest sense is so individual, so much a matter of assimilating what is essential to the clear and adequate expression of one's self, and of rejecting that which is alien or unrelated, that most men of force and gift secure the best training for themselves, whatever their opportunities offer or withhold. And that knowledge which is most vital to a man generally comes to him unawares. «As a farm boy,» writes Mr. Burroughs, «I had known all the common birds well, and had loved the woods passionately; but my attention was not seriously turned to natural history till I was a man grown. But no one starts in the study of natural history with such advantages as he whose youth was passed on the farm. He has already got a great deal of it in his blood and bones; he has grown up in right relations with man and beast; the study comes easy and natural to him. The main things are a love of nature and simple tastes; and who is so likely to have these as the boy from the farm?»

This love of nature is not a blind adoration; it is rather a superior and searching intelligence. It sees because it knows how to look, and it knows how to look because the imagination quickens the instinct. There is a deep truth in that maxim, known to all anglers, which says in effect, «If you would catch trout, bait your hook with your heart.» Knowledge without sympathy can do much, but sympathetic knowledge alone divines the secrets of nature and of men. In the woods things happen to a man of John Burroughs's quality which never befall the indifferent observer. «To see the life of the woods go on about you,» he sometimes says to his friends, «it is only necessary to keep still.» But this stillness which lures the shy, wild creatures from their hiding-places, and brings the bird to your shoulder and the trout to your hand, is a pregnant stillness; it has that quality of silence which Wordsworth had in mind when he wrote:

> The breath of this corporeal frame,
> And even the motion of our human blood,
> Almost suspended, we are laid asleep
> In body, and become a living soul.

This subtle persuasiveness of attitude, which disarms the suspicions of the world of wild life, and secures for a man the privileges of citizenship in that world, is possible to those only whose knowledge of natural processes and phenomena is pervaded by love; and love of nature in the productive sense comes mainly to those who discover the outer world when the imagination has not yet been divorced from observation. So far as insight and the power to reproduce in art are concerned, we know best the persons and the landscapes we knew in childhood. To people who did not know the little hamlet of Coate in childhood it is but a half a dozen mean and decaying cottages; they could not identify it with that half-fairy place which Richard Jefferies described. «No one else,» he says, «seems to have seen the sparkle on the brook, or heard the music at the hatch, or to have felt back through the centuries; and when I try to describe these things to them they look at me with stolid incredulity. . . . There is no music now in the old hatch where we used to sit, in danger of our lives, happy as kings, on the narrow bar over the deep water. The barred pike that used to come up in such numbers are no more among the flags. The perch used to drift down the stream and then bring up again. The sun shone there for a very long time, and the water rippled and sang; and it always seemed to me that I could feel the rippling and the singing and the sparkling back through the centuries.»

To look at nature with the inward as well as with the outward eye is the distinctive gift of the writer, who not only sees what other men fail to observe, but who gives his record of what he sees the quality of his personality. It is a significant fact in Mr. Burroughs's early history that he tapped the maple-trees, and secured the earliest market for his sugar, in order that he might buy text-books. Thus early did he lay nature under contribution for his education; and from the days when he whipped the brooks, as his grandfather had done before him, to

Digitized by Google

these days when he has come to hold the foremost place among living American writers about nature, that education has been uninterrupted and productive. He has not only steadily broadened his own vision, but he has shared his divinations and discoveries with an increasing number who find Thoreau a little too aboriginal and remote. For Thoreau often treats nature like a peasant proprietor whose love of the soil has a touch of fanatical exclusiveness, and sets up prohibitory notices and spring-guns at all approaches. He makes the conditions of acquaintance with nature so hard that we are constantly tempted to ask whether an entire surrender of civilization is not too great a price to pay, even for so great a privilege. There is something exclusive and divisive in the attitude of the recluse of Walden, which provokes the doubt as to whether a man cannot pay his taxes *and* learn all that nature has to impart for his discipline, instruction, and enrichment. We find ourselves asking what we shall gain if we make a new schism. Nature was long under the ban. Now that the two sides of life have been brought together, must civilization go to the wall in order that men may live again in complete and vital relation with nature? In Thoreau individualism runs to extremes, and he pays the penalty imposed upon puritanism in a partial and one-sided view of life. He is a schismatic, as his fathers were before him, because he divides the human activities and resources instead of conceiving of them as constituting an organic whole. Genuine fellowship with nature does not involve renunciation of the gains and resources of civilization; a man need not strip himself bare and revert to a savage type in order to get back to nature. It is natural to live the free, joyous life of the instincts and the senses, to seek silence and solitude, to love the smell of the earth and the sweep of the sky; but it is equally natural to live the life of thought, knowledge, taste, culture. It is natural to be born in «a state of nature»; but it is equally natural to grow out of that state into something fuller and higher, and civilization, in its essential quality, is nothing but growth. The seed and the blade are natural, and so also are the flower and the fruit.

This saner and deeper, if less striking, view of nature is presented by John Burroughs. He is not a schismatic; he is a harmonizer. He has no great love for cities, but he does not lose his poise and fall to cursing when he thinks of London or Boston or New York. He sees clearly enough the shams, the hypocrisies, the artificialities, which flourish among men organized into society; but he does not therefore leap to the conclusion that civilization is a sham or an artifice. He knows the supreme value in education of the solitude, the silence, the detachment of nature from all personal ties and all individual life; but he knows also that what one learns in the woods finds its closest readers in cities; that the spring of inspiration is hidden in the personality, but that it misses its great function of fertilization unless its current flows into organized human life; that man cannot be wholly sane and complete apart from nature, but that sanity and perfection are also conditional upon human relationship. Burroughs is less radical than Thoreau, but he is more fundamental; his point of view is less striking, but it is sounder.

Domesticity in the deeper sense involves the most intimate and continuous relation with one's surroundings. It means a good deal more than the most searching observation of those surroundings; it means living with them. And when a man lives deeply and adequately, his surroundings become so much a part of himself that his knowledge of them is a kind of extension of self-consciousness. This domesticity is not only the dominant note in Burroughs's attitude toward nature, but it is also the explanation of the wholesomeness of his view. One sometimes comes upon phrases in his work which seem strained and artificial, and remind us that in his youth he read Emerson with passionate ardor, and sometimes caught the manner and missed the inspiration; but the substance and texture of that work are sound and enduring. He escapes the fantastic, the idiosyncratic, the oracular; he addresses the understanding as well as the imagination; and in whatever ecstasy comes upon him in those hours when the hermit-thrush sings to that which is most solitary in the human soul, he does not lose his footing in the realities of life. His human sympathies are too warm and his human interests too deep for that isolation which, by severing a man in feeling from his kind, destroys his balance and makes him a prey to a distorted and partial vision of things. Moreover, the wild element in nature is, after all, not so alien to human life as it seems, and closer touch between the two reveals a deeper unity than could be suspected at the start. It is clear that we have not reached the ultimate truth with regard to the original relations of man and nature; but it is equally clear that every step which

Digitized by Google

science takes toward that truth binds man and nature with stronger and more mysterious bonds. The wild element is alien to us only so long as it is strange; domestication in nature destroys the impression of an inherent antagonism between the condition of the primitive man and the condition of the civilized man—between man isolated in nature and man in closest contact with his fellows. Throughout Burroughs's books runs this vein of domestication in nature; birds, beasts, woods, streams, the weather, are watched, studied, explored, recorded with a keen eye, with that passion for out-of-door life which leads the naturalist far and wide, and with that sense of hidden relationships, of secret unity, of pervading and infinite suggestion to the imagination, which is the distinctive possession of the man of letters. His inspirations and his authorities have been found afield, and the books he has written have grown up within him; the seeds of thought from which they have expanded have been, for the most part, deposited in his mind and heart in those unconsciously receptive hours when the world sinks deep into a man's imagination, to bear later the fruit of art.

«What I feel I can express,» he says, «and only what I feel. If I had run after the birds only to write about them, I never should have written anything that any one would care to read. I must write from sympathy and love, or not at all. I have in no measure the gift of the ready writer, who can turn his pen to all sorts of themes; or the dramatic, creative gift of the great poets, which enables them to get out of themselves and present vividly and powerfully things entirely beyond the circle of their own lives and experiences. I go to the woods to enjoy myself, and not to report them; and if I succeed, the expedition may by and by bear fruit at my pen.» Books produced in this way often lack formal arrangement, but they have vital unity, and, as a rule, they disclose growth. Burroughs has not made a systematic study of the world about him, but its various aspects have so long engrossed his attention that the record of them which he has kept is not only consistent with itself, but is fairly complete. Nothing is too homely or familiar to escape his eye, and he cares for things as nature disposes them, with apparent indifference to effects, a great deal more than for things as men arrange them. There is an elemental quality in him, born of his nearness to natural processes and products. He enjoys things in the rough, as a true lover of nature must, and feels the beauty of the solitary swamp, and of the burnt and desolate pine on the bare hillside, as keenly as the charm of a June morning when the whole world is abloom. He does not value things as they express culture, but as they express life; and the commonest and homeliest things are, for that reason, as significant and important, in his eyes, as those which are far-fetched and rare. The farmer on the fence, in his shirt-sleeves, is a much more impressive figure, to his thought, than many a man overlaid with the refinements and polish of society, simply because his is real, genuine, first-hand human nature. He means something as representative of the soil and the conditions about him. It is, therefore, a very plain, simple, hardy life which we find in John Burroughs's books, but it is a life full of flavor, health, reality. The natural man is not exploited in these books, but he is so quietly and faithfully reported that we begin to see how much more he means than any other kind of man. And from the same wholesome attitude toward the world we learn that the crow is quite as interesting as the thrush that makes the morning vocal, the cow-bird as well worth study as the eagle, and the woodchuck as important as the wild beast to which distance lends its traditional enchantment. Whatever is in nature, Burroughs seems to say, is there because it ought to be; and if we do not see its beauty, its worth, or its meaning, so much the worse for us. If he does not startle and sting us, as does Thoreau, he is not less an antiseptic in this end-of-the-century epoch of introspection, of straining of thought and of speech to compass and express abnormal experiences. His feet are always on the ground, and the open sky is over him; he is not afraid of hardship, because hardship is a part of nature; he fears only that sickness of the soul which makes men shrink from every rough wind, and that sickness of the imagination which confuses disease with health, and pieces words together, like bits of glass, to secure striking effects, instead of using language as the vital effluence of thought. He is not free from occasional touches of something very like affectation; but these forcings of the fancy are so rare that they emphasize the essential soundness and wholeness of his thought and style. He gets at the heart of the matter often with the directness of simple truth. Everything is subordinated to honest report of the fact. But it is not the bare fact which is recorded: it is the fact in its widest relations and in its deepest significance. He mixes human life with nature, and

Digitized by Google

sees nature with eyes that have imagination behind them. The elemental quality does not limit him to broad effects in style; he knows how to paint effectively on a small canvas, and he shows a thoroughly artistic appreciation of what a painter would call the «values» of his material. Such a piece of writing as «An Idyl of the Honey-Bee,» for instance, is a charming example of a harmonious disposition of a very few elements of interest. It is a bit of literature as well as a record of observation; it reveals the artist and the man of culture as well as the lover and student of nature.

And a man of culture Mr. Burroughs certainly is, if culture means not quantity but quality of knowledge, not acquirement but absorption of truth, not indefinite extension of intellectual interests, but ripeness, maturity, mastery. There is a flavor of literary association in almost everything he has written —the flavor, that is, of familiarity with books, as well as the gift of making books. If he has not read widely, he has read deeply and with the heart. He lived a year, he tells us, with the «Idler» and the «Rambler»; but it was only a question of time when he should fall under the spell of Emerson, that liberator of youth from traditional tastes, and from the painful indecision of aspirations working in the imagination, but vague and indistinct to the thought. He was confirmed in tendencies already well defined by reading Thoreau's «Walden»; but he was preserved from imitation by a radical difference of temperament, unconsciously suggested when he says: «I always envied him . . . his indifference to human beings.» Then came Whitman, with his «great humanizing power,» and Ruskin, Tennyson, Wordsworth, Coleridge, Arnold, and Carlyle. These were the formative influences in his education. There were other influences— Bryant, Longfellow, and Whittier—which were mainly confirmatory. There was something in Emerson which the boy felt rather than understood as native and indigenous, a new and vital force in thought and life. And it is significant both of his intellectual sensitiveness and of his hardy individuality, that in order to liberate himself from the overpowering spell of Emerson's searching thought and style, he took refuge in work; for self-expression is the sovereign remedy against that pressure from without which endangers the integrity of individuality. Instinct led him from the writing of essays on such Emersonian themes as «Expression» to the writing of out-of-door papers. «The woods, the soil, the waters,» he says, «helped to draw out the pungent Emersonian flavor, and restore me to my proper atmosphere.» In spite of certain unmistakable evidences of intimacy with Emerson, there was a fresh note in these earliest papers, and a fresh note involves an original power. Lowell spoke more than once of his delight in reading, as editor of the «Atlantic Monthly,» the first manuscript from John Burroughs that came into his hands; there was so much refreshment in the quiet, first-hand observation, and in the pungent, straightaway style. Those first ventures set the pace of a long, unhasting, but well-sustained activity, the fruits of which now fill ten volumes of moderate size. The very titles of these books suggest the fields where this knowledge and thought were gleaned. «Wake Robin,» «Locusts and Wild Honey,» «Winter Sunshine,» «Fresh Fields,» «Signs and Seasons,» «Birds and Poets,» hint at the presence of the imagination in this long record of observation, and suggest that the student of nature is also a man of letters. The literary gift is abundantly illustrated in all these books, and in two other of non-committal title—«Riverby» and «Pepacton»; and the literary interest and training are equally evident in «Indoor Studies,» and «Whitman.»

For Burroughs has studied and thought as well as observed. He has read Emerson, Carlyle, Arnold, and Whitman with the insight which never misses the fundamental truth that to be a great writer a man must first be an original force, and that no skill or grace can achieve that which lies only within the power of a strong and fresh personality. He is drawn, therefore, mainly to writers of elemental force and individual power; men in whose constant identification of ample knowledge and courageous insight, with perfection of form, one finds the supreme examples of that great but much abused word, culture. He responds to the appeal of men who speak fearlessly out of their own natures, and who have made the decisive discovery that art is not academic, but vital, and that to write freely out of one's soul is the supreme achievement in literature. He values those qualities in books to which his long familiarity with nature has given the highest authority—reality, sincerity, contact with concrete things. No man has written more wisely and intelligently of Carlyle, whose elemental energy and titanic fury of work appeal to him as something almost cosmical. «What Taine calls his barbarism,» he says in his interesting account

Digitized by Google

of «Carlyle's Country,» «was his strong mason sire cropping out. He was his father's son to the last drop of his blood, a master builder working with might and main. . . . I know of no man in literature with whom the sense of labor is so tangible and terrible. That vast, grim, struggling, silent, inarticulate array of ancestral force that lay in him, when the burden of written speech was laid upon it, half rebelled, and would not cease to struggle and be inarticulate. There was a plethora of power; a channel, as through rocks, had to be made for it; and there was an incipient cataclysm whenever a book was to be written.»

Burroughs is drawn also to a mind of very different temper, but of kindred integrity of fiber and distinctness of personal note. His essay on Matthew Arnold is not only an admirable piece of criticism, but it is a prime illustration of his catholic love for sound work, and of his power to recognize reality and downrightness of soul even in a writer of academic affinities. For Arnold bears unmistakable witness on every page to that quality of training which is imparted by the university, and by the university alone. But there was something hard and unyielding under that fine polish; indeed, the perfection of the finish was due in no small measure to the stubborn fiber of a material which responded slowly to the hand of art, and retained every impression which it received. In his way, Arnold had as great a power of resisting contemporary influences as Carlyle had, and was of a nature quite as strenuous and fearless. The same qualities Burroughs finds in a writer whose artistic methods were antipodal to those of Arnold, and whose view of modern life Carlyle would have detested. For many years Burroughs has urged the claims of Walt Whitman as a poet of original quality and insight. His advocacy has been loyal and generous, and if at times its claims have been too inclusive, there has been the justification of an atmosphere of exasperating indifference, if not of downright antagonism. The country has not accepted these claims for Whitman in their entirety; but to their persistent advocacy has been due in no small degree that change which has brought American opinion much nearer foreign opinion concerning a poet who has suffered almost equally at the hands of enemies and friends, and whose great qualities and marked defects need, above all things, dispassionate judgment. The elementary character of Whitman's ... was, the breadth of base which his human interests subtend, the uncompromising democracy of his spirit, found a quick response in Burroughs; but there was something in the feeling and rhythm of the poet which had for the lover of nature a charm almost novel in English poetry. Burroughs has said that Whitman can be understood only out of doors; that he has caught the gait of nature, and that his apparent formlessness, when one feels its quality, has the primitive power and spell of woods and fields. This quality eludes those who look at literature from what may be called the literary standpoint; but it is felt by those who go to books for contact with the elemental forces of life, and who discern in the apparent formlessness of nature the hints and suggestions of a form more vital and capacious than the great literary artists have yet mastered. In Burroughs's judgment, this change of method does not involve revolt against the great traditions of poetry, but marks that general advance of thought and feeling which tends more and more to bring men together on a basis of natural equality or inequality, and to infuse into all the arts not only a closer, but a more inclusive, human interest and impulse.

These opinions find their value not only in the contribution they make to the general comprehension of some of the most significant men of the century, but in the revelation they make of John Burroughs's intellectual and spiritual character. They disclose his affinities, his interests, and his point of view. And in these comments on literature, as in the comments on nature, one finds a search for simplicity, directness, absence of any kind of formalism, love of everything that concerns or contains life, a broad, sane, homely conception of man and his surroundings. There is very little historical background in Burroughs's thought; he rarely suggests that vast, rich world of finished achievement from which so many men unconsciously pilfer for the enrichment of their meager stores. We miss in these books that quality of atmosphere which gives Lowell's work, for instance, a charm distilled out of the best life of many centuries; but we find in them something which is of supreme value in literature: the simple, frank utterance of a strong, unaffected human soul in close and normal relations with nature and life. Such an utterance may lack completeness, but it cannot lack that deep reality which is born of personal contact with that about which it speaks; and such an utterance always brings us back to nature by reminding us that art is but a mask for nature.

A DONKEY-RIDE.

LONDON AT PLAY.

ON MARGATE'S SANDS.

WITH PICTURES BY JOSEPH PENNELL.

MARGATE is London's Coney Island, its big suburb by the sea, only far enough away for a long morning's voyage in a steamboat. It is easy to forget in town how near the coast is; but already at Charing Cross, sometimes, when the tide is high, you can smell the fresh, salt air through the London smoke; in winter the white gulls haunt the bridges at Waterloo and Blackfriars; and it is just after the widening Thames has lost itself in the North Sea that Margate stretches out its pier into the water. There are plenty of other places on the same cliffs—Broadstairs and St. Leonard's and Westgate, and a dozen more; but Margate first, with Ramsgate as an alternative, is the cockney's choice. This is why some people agree with Mrs. Tuggs that it is altogether too low—«nobody there but tradesmen!» But then, without the London crowd Margate would not be—well, Margate.

If you wish, you can take a train that starts from Charing Cross or Victoria, and, after a long, rambling tour through Kent, eventually gets to Margate. But half the fun is in going by boat. The lower Thames is supposed to be entirely commercial, but from time immemorial it has been the classic stream for the Londoner's frolic. You remember Dr. Johnson taking water to Billingsgate on the night of his famous «frisk» with Topham Beauclerk; and Hogarth sailing with his four jolly companions for

Digitized by Google

Gravesend; and Elia in the «old Margate hoy,» which he was right in thinking «ill exchanged for the foppery and fresh-water niceness of the modern steam-packet»; and Boz on so many of those very youthful excursions of his; or, to come down to our own contemporaries, Ally Sloper, that delightful British «Mayeux,» and his party, dancing on deck, as Baxter shows them in one of his wonderful Sloper drawings? Besides, Margate virtually begins when you meet the crowd hurrying down through the narrow, dirty streets leading to the Old Swan Pier, and you struggle with babies and bandboxes at the ticket-office, and you rush down the long gangway, where you get wedged in so tight that you cannot move hand or foot, while a cool official keeps calling: «This wye for the *Sovering*—the *Royal Sovering*. Passengers for Southend pass on to the houter boat. Passengers for Margit and Ramsgit on the *Sovering*—the *Royal Sovering!* Show your tickets, please! Move on! This wye for Southend! This wye for Margit!» And from rival boats at the next pier come a still louder screaming and yelling. It all sounds like a page out of Dickens or Thackeray.

When you are fairly off, when you have scrambled successfully for a seat, and the Southend boat has steamed away, and the *Royal Sovereign* has whistled playfully,—as only a Margate boat can, and very much as the bad boy shrieks when he wishes to make you jump,—you gradually discover that this is the way to see the Thames. For there, at the start, is St. Paul's lifting its dome above the grimy warehouses; and you pass under London Bridge, where swarms of idlers watch you safely through, hoping all the time that you will hit the arches and go to the bottom for their pleasure; and you steam by the Tower, and between the open gates of Tower Bridge, which, once well weather-stained, will be as imposing a feature as the river can

THE WANDERING MINSTREL.

boast; and on again, between miles and miles of docks, and «plantations of ship-masts and forests of steam-chimneys»; and on every side are the boats—huge ocean steamers, little penny steamboats, red-sailed barges, big sailing-ships, puffing, smoke-belching tugs. And then, presently, it is Greenwich, with the beautiful buildings of Inigo Jones, and the memories of fish dinners eaten by yourself or in friendly books, and Rosherville, and Gravesend with its gardens, and the broad flats that make you think of Pip and his «great expectations.»

And all the while, if you know how to do the thing in style, a sandwich is in one hand and a pot of porter in the other; for everybody on the boat is eating sandwiches and drinking porter. And by everybody I mean precisely the same company you jostle in the third-class carriages of the «underground» on the day of the University boat-race, or travel with by road down to the Derby,—«the mighty London populace,» Mr. James calls it,—its «female contingent» conspicuously sharing Mrs. Boffin's inclination toward fashion, while a baby, apparently, is as necessary to a Margate outfit as an umbrella on a rainy day. Of course there are musicians on board,—«Italians from the Strand,» is Mr. Mourey's description of the Thames boat band,—gold-laced and tarnished, out of time and out at elbows, playing their poor fiddles and harps and flutes first in the bow, then in the stern, up the middle and back again, and taking up an endless collection. And as the breeze grows

"'ARRY AND 'ARRIET."

Digitized by Google

brisker and the air keener, as the shores recede farther and farther, there seems to be, as in Mr. Punch's music-hall song, a call for «a drop o' something shorter»; for the little bar on deck is filled with men —and women, too: has not long practice in the public-house taught the Englishwoman how to take her drink standing like a man? Already by noon faces are redder, laughs lighter. There are races round the deck. A few figures are huddled up suggestively against the railings. There are wild shrieks and playful giggles. And in the midst of it children are dancing, children are sick, children are yelling, children are sleeping. And the boat stops no more, though the cliffs are dotted with little towns, until all the gay crowd that does not mean to go on to Ramsgate is emptied upon the pier at Margate, where a crowd as gay watches its arrival.

CARRIED ASHORE.

Margate is fairly big—a substantial town, in fact, not the least like the American seashore place. There is an embankment instead of the familiar board walk, blown away regularly every season by the worst storm remembered for years. There are houses and shops of brick and stone, instead of the wooden cottages and hotels that can be wheeled off at a moment's notice. Indeed, I believe if you explore far enough you can find old gables and markets and assembly-rooms, and probably Baedeker or Murray would chronicle a creditable number of inhabitants. But for London people the only Margate is the beach. Nothing else counts, unless it is the pier in the evenings, or when the tide is in, or when the London boats arrive. I suppose the people do go into the town occasionally, for they must sleep somewhere, and there are not enough hotels and lodging-houses directly on the sea to hold them all. But wherever they sleep, they live on the beach. It is a very good one for the English coast, though perhaps not to be compared to the beautiful sweep of sands at Atlantic City and many another little town on the Jersey coast. However, not a square foot of it is wasted. There the London crowd squats—there is no other word for it; the same crowd, partly small tradesmen, partly swaggering clerks, partly well-to-do workmen, partly professional loafers, and largely their wives and daughters, that you see picknicking and betting on the Downs at Epsom, or scattered over the river-banks at the Henley regatta, or packed into a solid mass at the Lord Mayor's show. The only difference is in the background and the way the holiday is spent.

Digitized by Google

Oh, I love to sit a-gyzing on the boundless blue horizing
When the scorching sun is blyzing down on sands and sea!
And to watch the busy figgers of the happy little diggers,
Or to listen to the niggers when they choose to come to me.

There you have it in Mr. Anstey's «idyllic» verse. Only no one can ever sit «a-gyzing» in romantic solitude. Not even in Santa Lucia in Naples have I seen people herded so close together, and living an outdoor life with such unembarrassed frankness. Rows upon rows, groups upon groups, of men and women sprawl on low steamer-chairs, open-mouthed and snoring without shame. Lovers lie in each other's arms prone upon the sand—the disconcerting spectacle 'Arry and 'Arriet always present in their hour of courtship. Family parties sit within neatly dug-out inclosures, mothers with the week's mending, fathers with their pipes. And children by the dozen, by the hundred, by the thousand, bare-legged, frocks and knickerbockers rolled well up into little bathing-drawers, are digging and paddling and building; while in a space apart, marked by a gay red flag, poor little pale-faced cripples are hobbling about in the sand, a show for the pennies of the compassionate. And down into this mess of people, too stupefied by sunlight and sea air to seek amusement, come the same beloved negro minstrels who turn up at Epsom and Henley and Hammersmith, and at chance London street-corners on a Saturday afternoon. But they are ten times more gorgeous at Margate: faces shinier, coats and trousers gaudier, sashes wider, buttonhole bouquets huger, hats jauntier, some in tights, some in flannels, with bones, tambourine, and banjo all complete. And a wide space is made for them hours beforehand, and the audience collects, first a circle of children low on the sands; then circle after circle of the steamer-chairs; then people standing behind the chairs, and more people on the Embankment. For the late-comer there is no getting near enough to hear a joke or a song. And when finally the morning's heroes arrive, they bring another audience with them—men, women, and children dogging their every step through the streets, patiently waiting outside every public-house where it pleases them to stop. Talk of the success of a Patti or a Melba: it is nothing to that of the minstrels at Margate!

And down, too, on the beach come the seedy German bands, and the unblackened strolling singers, and the men with pianos

THE CROWD.

Digitized by Google

and concertinas and cornets and harmoniums, and the preachers, and the photographers. And down, too, comes the Punch-and-Judy man, but not the summer I was at Margate; for Mr. Brown, who had the monopoly, was ill, —so I learned upon inquiry,— and not another Punch of such irreproachable morals was to be found in all England. The fact is, though you would not believe it, the police have a strict eye upon the program of the beach performance.

Through the crowd boys push and wriggle with trays of nougat or fruit or buns. And over the chorus of noises you hear the ceaseless «Hi! hi!» of the donkey-boys, and the shrieks of giddy young ladies clinging to the donkeys as they gallop full tilt along the sands, and the screams of delighted children in the little goat-carriages on the Embankment above. Away out beyond, standing in a white-and-green line, wheel-deep in the surf, are the absurd bathing-machines; and between them and the dry beach an old cart loaded with people is being continually driven backward and forward; while fat old bathing-women, as out of date as Sairey Gamp herself, wait gossiping in the water; and farther still bathers are splashing, men and women apart—as well they may be, for the costume of the men would be a scandal anywhere save in prudish England.

THE BATHING-MACHINES.

This is the scene presented by Margate sands every day, and every hour of the day, during the season—serenely domestic at moments, boisterously hilarious at others, especially when a big excursion is let loose upon the place. Then you have the courting that is done by blows and thumps; then you see 'Arry and 'Arriet exchanging hats; then you have horse-play bedlam; and mounted police show themselves in the near streets, and magistrates, the next morning, are officially shocked by the conduct of the «savages» from London.

It is true there is a more elegant end to the sea-front, partly for invalids whose doctors prescribe Margate air, which has the name of being the purest and most bracing in England, the number of Bath chairs proving medical compulsion. There is no promiscuous herding here. Groups take their books and work and gossip into railed-off spaces, with a haughty assumption of the privacy that costs a penny. The very amusements are distinctly genteel: archery, lawn-tennis, and a lightning draftsman making portraits in a tent while you wait; and as the shore has risen into cliffs, bathers are discreetly screened from public gaze, and the narrow sands are as decorous as in that picture of «Pegwell Bay,» by Dyce, in the National Gallery—a picture of a shingly beach, and two or three lone figures, in the absurd costumes of the fifties, gathering shells in polite isolation.

But upon the cliff end the real Margate crowd never intrudes. Why should it? There are far better ways of enjoying itself. If you wish to give the Briton a really good time, put him in some sort of vehicle, averaging from the donkey «shay» that «knocked 'em in the old Kent road» to the brake and cornet, and

Digitized by Google

send him off driving. Where the Embankment widens into a great square above the sands, brakes and busses are always ready to start for St. Leonard's or Westgate or Pegwell Bay—above all, for Ramsgate. There 's the place for a «'appy day»! The drive over is short,—about half an hour or so,—but quite long enough to need a half-way house, where everybody stops for a drink, and the conductor takes up a collection for no better

THE PIER.

reason than that nothing can be done in Margate without a collection; the real marvel is that your landlord does not come with his hat instead of his bill! I have always wondered why Mrs. Tuggs, when she found Margate too low, went over to Ramsgate. It is really Margate all over again, but Margate exaggerated, intensified, concentrated. The beach is smaller, the people are huddled closer together, and the crowd is the same,—negroes, strolling players, donkeys, goat-carts, bathers, children, lovers, preachers, photographers, peddlers, sleepers, cockshies, and bathing-machines,—but in so dense a [illegible] it looks as if a swarm of human bees or ants had alighted upon the sands. The very air seems close, and one would as soon bathe in the Thames at London Bridge as in the sea just here. If Trouville made Flaubert long to hide himself in the Sandwich Islands or in the virgin forests of Brazil, what, what would he have felt here at Ramsgate? Yet not even in an Eastern bazaar or market could there be more dazzling color; and as for character, there is enough to set up a new Dickens or Charles Keene for life.

If you do not care to go to Ramsgate, there are boats in the harbor, with their «boatmen so beguiling,» and the menagerie with its beasts to be fed, and the music-hall attached, with its «stars» from London, who 'd «all be in the workhouse should their antics cease to dror!»—an inducement for women and babies and nurses, who would be quite out of place in the palaces of Leicester Square, to flock to this «hall by the sea.» And there are shops full of the indispensable china «souvenirs from Margate.» And first and last and always, there are tea and shrimps! Many things may have changed. Gillray's little phaëton, with the round apron front, and its boy in jack-boots on one of the horses, has disappeared from the beach; the saucer hats and swirling crinolines of Leech are no more: but tea and shrimps are as essential elements to Margate life as the sea and the sky. You are not supposed to need or to wish anything else, and in vain you may try the little restaurants that are perched on the cliffs as delightfully as the Neapolitan cafés on the Posilipo, or those others that set out their tables on balconies looking seaward. If you would dine, you must fall back upon the pompous hotel table d'hôte, which you share with the last theater company down from London. But one other thing you can order at the restaurant, to be sure—champagne. To be in the Margate fashion, you must drink it without so much as a biscuit to eat. On the pier, which is as select as the twopence charge for admission can make it, couples of those stupendously vulgar people you do not believe in when you see them on the pages of papers like «Pick-Me-Up»—indeed, you hardly believe in them when you see them in life—may be found as

Digitized by Google

THE BREAKS FOR RAMSGATE.

early as eleven in the morning pledging each other over a magnum of extra dry. And the Margate swell will bring his friends into one of the restaurants, at any hour after his evening meal of tea and shrimps, and call loudly for champagne, just to let you know that he can do the thing in style when he chooses, and pay for his bottle with the biggest lord or «dook» of them all!

I hesitate to mention beauty as another of Margate's charms, so little has it to do with the popularity of the place. But for all that, very beautiful it is; and its sands every morning and afternoon arrange themselves into a picture as brilliant and gay as you could find at Trouville or Abbazia, at Coney Island or Newport. To follow the cliffs beyond the hotels and villas is to find one's self at once in as pretty English country as Constable ever painted—a country of broad meadows and plowed fields, of hedge-rows and stately elms, of old farm-houses and gray ruins, of cloud-swept skies and misty blue distances. Toward twilight, when the tide is coming in and the beach is deserted except by the small boy kindly giving the necessary spot of black here and there, and the occasional barge left high and dry on the sands, the lines are as lovely as those that the Venetian Lagune make at low water. As for the barges, with their half-furled sails, they are really finer than anything at Venice; while every evening there is the atmosphere for which on the Adriatic you might have to wait a year. And as dusk deepens, lines of light on the Embankment curve with the curving shore, and torches flame from the barrows of the periwinkle-men, and the black, shadowy pier crosses the deep blue of sea and sky as fantastically and decoratively as in a color-print by Hiroshige. And, gradually, what people are pleased to call the vulgarity of Margate is lost in the beauty of night, only broken momentarily by the shriek of 'Arry sporting with 'Arriet in the «shide»!

CONTROVERSIES IN THE WAR DEPARTMENT.

UNPUBLISHED FACTS RELATING TO THE IMPEACHMENT OF PRESIDENT JOHNSON.

BY JOHN M. SCHOFIELD, LIEUTENANT-GENERAL U. S. A.

DURING nearly the entire history of the government of the United States the relations between the general-in-chief, or nominal commanding general of the army, and the War Department have been the cause of discord, sometimes descending to bitter personal controversy, and in a few instances leading to very serious results.

The differences between General Scott and the Secretary became so serious that the general removed his headquarters from Washington to New York, and remained away from the capital several years, until the time when civil war was imminent. General Sherman also found it necessary to escape from an intolerable situation by removing to St. Louis, and did not return to Washington until the condition of the War Department led to the impeachment of the Secretary of War. During their long absence from the capital neither of these generals could exercise any appreciable influence over either the administration or the command of the army. It is thought to be worthy of note that during one of those periods of absence of the general-in-chief the military resources of the country were mostly placed within easy reach of those about to engage in an effort to break up the Union, and that during the other period corruption in the War Department led to impeachment. It is no reflection upon the many eminent, patriotic citizens who have held the war portfolio to say that the very few men who have proved unworthy of that great trust would have been much less likely to do serious harm to the public interests if they had been under the watchful eye of a jealous old soldier, like Scott or Sherman, who was not afraid of them.

As hereafter explained, the controversy between General Grant and the Secretary of War finally led to the impeachment of the President of the United States. The cause of this trouble has seemed to be inherent in the form and character of the government. An essential provision of the Constitution makes the President commander-in-chief of the army and navy. It is manifestly indispensable that the executive head of a government be clothed with this authority. Yet the President is not, as a rule, a man of military education or experience. The exigencies of party politics also seem to require, in general, that the Secretary of War be a party politician, equally lacking with the President in qualifications for military command.

The art of war has in all ages called forth the highest order of genius and character, the great captains of the world having been esteemed as among the greatest men. So, also, and in continually increasing degree in modern times, the military art has called for scientific education of the very highest character, supplemented by practical experience. It cannot be questioned that the military profession requires ability, education, and practical training no less than the legal or any other profession. A Supreme Court of the United States composed of merchants and bankers would be no more of an anomaly than a body of general and staff officers of like composition. The general policy of our government seems to be based upon a recognition of this self-evident principle. We have a national military academy and other military schools inferior to none in the world, and well-organized staff departments which are thoroughly efficient in war as well as in peace. The laws also provide a due proportion of subordinate general officers for the command of geographical departments in time of peace, or of divisions and brigades in the field in time of war. But no provision is made for an actual military commander of the entire army either in peace or in war. During only one single year since the adoption of the Constitution of the United States has this not been the fact. In pursuance of a special act of Congress and the orders of President Lincoln, General Grant in fact commanded «all the armies of the United States» during the last year of the Civil War; but at no other time has there been an actual military commander of the army or armies whose authority as such was recognized by the War Department.

Why, it may be asked, this strange departure from the recognized rule of organization

Digitized by Google

in all governmental and business affairs? Why provide educated and trained experts for all subordinate positions, and none for the head or chief, vastly the most important of all?

In the first place, it is important to observe that the matter rests absolutely in the hands of the President: Congress has no power in the matter. To create by law a military head for the army would be a violation of the essential provision of the Constitution which makes the President commander-in-chief.

In the case of General Grant, Congress fully recognized this fact, saying: «Under the direction and during the pleasure of the President» he «may» command the armies of the United States. Even this, if intended as conveying authority to the President, was superfluous, and if intended as more than that would have been unconstitutional. In fact, it was only a suggestion, intended to be entirely within the limits of constitutional propriety, of what was the general opinion of the people and of Congress, that after three years of failure the President ought to select a soldier and put him in actual command of all the armies. The President then went far beyond the suggestion of Congress, and even to the extreme limit of military abdication. He not only gave General Grant absolute, independent command, placing at his disposal all the military resources of the country, but he even denied to himself any knowledge whatever of the general's plans. In this patriotic act of extreme self-abnegation President Lincoln undoubtedly acted in exact accord with what he believed to be the expressed popular opinion, and probably in accord with his own judgment and inclination; for no one could have been more painfully aware than he had by that time become of the absolute necessity of having a military man actually in control of all the armies, or more desirous than he of relief from a responsibility to which he and his advisers had proved so unequal. But it must be admitted that in this President Lincoln went beyond the limit fixed by his constitutional obligation as commander-in-chief. He would have more exactly fulfilled that obligation if he had endeavored faithfully to comprehend and adopt as his own all the plans proposed by his chosen and trusted general-in-chief, guarding the latter against all possible interference, theretofore so pernicious, from the War Department or any other source. By such means the President could have actually exercised the chief command imposed upon him by the Constitution, sharing in due measure with his chief military officer the responsibilities imposed by their high offices. In no other way, it is believed, can the duties imposed upon a constitutional commander-in-chief who is not possessed of military education and experience be fully and conscientiously performed. Indeed, such is the method pursued by great military sovereigns all over the world, except in the few instances where the monarch believes himself, either truly or falsely, superior in military ability to his chief of staff. It is only in this country, where the chief of state has generally no military training, and his war minister the same, that a chief of staff of the army is supposed to be unnecessary. While it is easy to understand the reasons which led to the action of the government in the spring of 1864, it is much less easy to understand why some reasonable approximation to that course, as above suggested, and in accord with the practice of all military nations, has never been adopted as a permanent system in this country. Perhaps it may be like the case of that citizen of Arkansas who did not mend the roof of his house when it was not raining because it did not then need mending. But it would seem the part of wisdom to perfect the military system so far as practicable in time of peace rather than continue a fruitless controversy over the exact location of an undefined and undefinable line supposed to separate the military administration from the command in the army, or the functions of the Secretary of War from those of the commanding general. The experience of many years had shown that the Secretary was sure to get on both sides of that line, no matter where it was drawn. But it is encouraging to note that some experiments made in more recent years, in the direction of the generally recognized sound military system, have not proved by any means unsatisfactory.

This chronic controversy between the military administration and the command once gave rise to one of the most dangerous crises in American history. The facts in respect to the origin of that crisis soon became obscured by other events, and have never been correctly published.

The assassination of President Lincoln occurred a very short time before the end of the Civil War. It appears that his successor in the Presidential office did not withdraw any part of the supreme authority which had been conferred upon General Grant by President Lincoln a year before. Nevertheless, Secretary Stanton, who had very reluctantly

Digitized by Google

yielded to President Lincoln's order, began, soon after the end of hostile operations, to resume the exercise of those functions which had formerly been claimed as belonging to the War Department, and which had been suspended by President Lincoln. By this General Grant was deeply offended, and finally declared that the action of the Secretary of War was intolerable. Early in August, 1867,[1] in Richmond, Virginia, General Grant in most emphatic terms announced his intention to demand, on his return to Washington, that the President either remove Secretary Stanton or accept his (General Grant's) resignation. A very few days later the President's order was published suspending Secretary Stanton and appointing General Grant Secretary of War *ad interim*. Up to this time General Grant's relations with the President had not been unfriendly, and it seems more than probable that his demand was used as a sufficient reason for doing what would not otherwise have been done, namely, the removal of Secretary Stanton. But events connected with the return of Stanton to the War Department, after the Senate had declined to concur in his suspension, produced intense bitterness of feeling between President Johnson and General Grant. This overshadowed entirely the former difference between Grant and Stanton, so that they became practically friends and allies in their common hostility to Johnson. Thus the original cause of Stanton's removal, which led to Johnson's impeachment, was lost sight of and never became public.

Of the impeachment and trial of President Johnson it is not my province to write. My special knowledge relates only to its first cause, above referred to, and its termination, both intimately connected with the history of the War Department, the necessities of which department, real or supposed, constituted the only vital issue involved in the impeachment trial. The following memorandum, made by me at the time, and now published with the consent of Mr. Evarts, explains the circumstances under which I became Secretary of War in 1868, and the connection of that event with the termination of the impeachment trial:

"MEMORANDUM.

"May, 1868.

"In compliance with a written request from Mr. W. M. Evarts, dated Tuesday, April 21, 1868, 2 P. M., I called upon that gentleman in his room at Willard's Hotel, Washington, a few minutes before three o'clock P. M. of the same day.

"Mr. Evarts introduced conversation by saying something about the approaching trial of Mr. Jefferson Davis, but quickly said that was not what he wished to see me about. The business upon which he wished to see me was of vastly greater importance, involving the safety of the country and the maintenance of the Constitution. Mr. Evarts then asked General Schofield's consent that the President might at any time before the close of the impeachment trial send my nomination to the Senate as Secretary of War in place of Mr. Stanton. General Schofield asked upon what ground, and for what reasons, the proposition was made, which question was then answered in part, and in the evening of the same day more fully, as hereafter related. It having been announced that General Grant was waiting at the door for me, this first interview was cut short with an agreement to renew it about eight o'clock the same evening. Before separating I asked Mr. Evarts whether I was at liberty to mention the subject to any other person. Mr. Evarts replied: 'I suppose you mean General Grant.' I said: 'Yes; my relations with General Grant, and his with the President, are such that I do not wish to act in such a manner without consulting him.' Mr. Evarts said he could not give consent that any person should be informed that such a proposition had been made on behalf of the President, and suggested some objections to consulting General Grant on the subject, for the reason of his being a candidate for the Presidency, but finally intimated that it might be well to talk to General Grant about it incidentally, and thus learn his views.

"While walking with General Grant after dinner the same day, I said to him, in effect, that I had reason to believe that a proposition like the one referred to above would probably be made to me, and that upon the theory, as I understood, that the President would not be convicted by the Senate, and I asked General Grant's opinion in regard to it. General Grant replied that he had supposed there was no reasonable doubt of the President's removal, but if that was not the case, or if it were, he (General Grant) would be glad to have me act as Secretary of War during the remainder of the term; that Mr. Wade would have some difficulty in making up a cabinet for so short a portion of a term.

"About eight o'clock P. M. of the same day (April 21) I again called upon Mr. Evarts at

[1] Three or four days before the suspension of Stanton.

Digitized by Google

the hotel, when a long conversation took place upon the subject referred to in the morning. The substance of what Mr. Evarts said was as follows: He was fully satisfied that the President could not be convicted upon the evidence; if he was removed, it would be done wholly from supposed party necessity; that this was the opinion and feeling of a considerable number of the ablest lawyers and statesmen among the Republican senators; that it was his and their opinion that if the President was removed, it would be not really from anything he had done, but for fear of what he might do; that he (Mr. Evarts) did not believe the President could possibly be convicted in any event, but that senators were at a loss how to remove the apprehensions of the Republican party as to what the President would do in case of acquittal, unless the War Department was placed in a satisfactory condition in advance. He said: 'A majority of Republicans in both houses of Congress and throughout the country now regret the commencement of the impeachment proceedings, since they find how slight is the evidence of guilty intent. But now the serious question is, how to get out of the scrape? A judgment of guilty and removal of the President would be ruinous to the party, and cause the political death of every senator who voted for it as soon as the country has time to reflect upon the facts and appreciate the frivolous character of the charges upon which the removal must be based. The precedent of the impeachment and removal of the President for political reasons would be exceedingly dangerous to the government and the Constitution; in short, the emergency is one of great national peril.' He added that this was the view of the case entertained by several among the most prominent Republican senators, and that from such senators came the suggestion that my nomination as Secretary of War be sent to the Senate, in order that the Senate might vote upon the President's case in the light of that nomination. Mr. Evarts believed that I was so named because my appointment would be satisfactory to General Grant, and would give the Republican party a sense of security as to the President's future action in reference to the War Department and the military districts of the South; that it was not with anybody a question of friendship or hostility toward the President personally, for he really had no friends. That while the Democrats in the Senate would of course vote for his acquittal, and do their whole duty in the case, just so soon as he was removed they would rejoice that it was done, feeling confident that it would cause the overthrow of the Republican party and the defeat of General Grant. Mr. Evarts was not at liberty to mention names of senators holding these views and originating the proposition of my nomination.

'I suggested a number of objections, some personal as to myself, and others of a public character, to giving my assent to the proposed nomination, in reply to which objections many of the above statements by Mr. Evarts were made. I then said I would again talk with General Grant upon the subject, and give a definite reply the next morning. About eleven o'clock the same night (April 21) I informed General Grant at my house that the proposition above named had been (or it would be) made to me; that it originated with Republican senators; and I gave in substance the reasons above stated as what I understood to be the grounds upon which the proposition was made. I did not give any names of senators, nor the channel through which my information or the proposition came. My remarks to General Grant were prefaced by the statement that while I would be glad of General Grant's advice if he felt at liberty to give it, I did not wish to ask General Grant to commit himself in so delicate a matter unless he desired to do so; but that the matter was one of so great importance that I thought it my duty to tell him all about it, and what I believed I ought to do, and leave General Grant to advise or not, as he thought best. I said that although the statement of the views and wishes of senators above referred to came to me indirectly, they came in such a way as not to permit me to doubt their correctness, and I believed it my duty to yield to the request. General Grant at once replied that under those circumstances he did not see how I could do otherwise. General Grant said he did not believe in any compromise of the impeachment question. The President ought to be convicted or acquitted fairly and squarely on the facts proved. That if he was acquitted, as soon as Congress adjourned he would trample the laws under foot and do whatever he pleased; that Congress would have to remain in session all summer to protect the country from the lawless acts of the President; that the only limit to his violation of law had been, and would be, his courage, which had been very slight heretofore, but would be vastly increased by his escape from punishment. General Grant said he would not believe any pledge or promise Mr. John-

Digitized by Google

son might make in regard to his future conduct. In his opinion, the only safe course, and the most popular one, would be to remove the President. He could understand the grounds of apprehension in the minds of some leading Republicans, but he did not agree with them. He believed the safest and wisest course was the bold and direct one. In this General Grant was very emphatic; he said he would not advise me to enter into any project to compromise the impeachment question, but if the facts were as represented that I could not well do otherwise than to acquiesce in the nomination.

«The next morning (April 22), about ten o'clock, I called upon Mr. Evarts at Willard's Hotel, and informed him that I had considered the matter as carefully as I was able to do, and that there was then only one difficulty in my mind. That was as to what would be the policy of the President during the remainder of his term, in the event of his being acquitted. I mentioned some of the President's recent acts, such as the creation of the Military Division of the Atlantic, disregard of military usage in sending orders to army officers out of the regular channels, etc.,—acts for which no good reason could be given, and which at least tended to create discord and trouble. Mr. Evarts replied that he could not tell anything about those matters, but presumed that such annoying irregularities would disappear with the removal of their cause, namely, hostility between the President and the Secretary of War. Mr. Evarts said he did not see how I could satisfy myself on that subject without a personal interview with the President, which would not be advisable in the circumstances. I then said I did not expect any pledge from the President, and did not expect to receive any communication from him on the subject, either directly or indirectly; and that I was not willing to converse with the President, nor with any other person except Mr. Evarts, on the subject; but that I wished the President to understand distinctly the conditions upon which I was willing to accept the appointment, and desired Mr. Evarts to inform the President of these conditions. If the nomination was then made, General Schofield would take it for granted that the conditions were satisfactory. I then said I had always been treated kindly by the President, and felt kindly toward him; that I had always advised him, whenever any excuse had been given for offering advice, to avoid all causes of irritation with Congress, and try to act in harmony with the legislative department; that I regarded the removal of Mr. Stanton, in the way it was done, as wrong and unwise; that I understood this proposition as coming originally from the Republican side of the Senate, and as being accepted by the President in the interest of peace, and for the purpose of securing harmony between the legislative and executive departments of the government, and a just and faithful administration of the laws, including the Reconstruction Acts. I added: ‹And if the President knows from General Schofield's acts what he means by this,—if, after these conditions have been fully stated to the President, he sends my name to the Senate,—I will deem it my duty to say nothing on the subject of accepting or declining the appointment until the Senate has acted upon it.›

«Mr. Evarts intimated that the above was satisfactory, and the interview then ended.»

I returned to Richmond on Thursday, April 23, being then in command in Virginia, executing the Reconstruction Acts. On the 24th the President sent to the Senate the nomination of General Schofield as Secretary of War. On the morning of the 26th I received a confidential letter dated April 25 from General Grant advising me under the circumstances to decline the Secretaryship in advance.[1]

To the above letter General Schofield sent the following letters in reply:

«Confidential.»

RICHMOND, VA., April 26, 1868.

DEAR GENERAL: I regret exceedingly that your advice came too late. I have already promised not to decline the nomination in advance of any action of the Senate. Yours very truly,

J. M. SCHOFIELD,
Bvt. Maj.-Gen.

GEN. GRANT,
Washington, D. C.

RICHMOND, VA., April 26, 1868.

DEAR GENERAL: I see from the papers that the President has nominated me to the Senate as Sec'y of War. You are aware that I do not want that office; yet under existing circumstances, if the Senate should wish me to serve I could not decline. I presume my nomination will not be confirmed, but have no right to act upon such presumption.

Yours very truly,
J. M. SCHOFIELD,
Bvt. Maj.-Gen.

GEN'L GRANT,
Washington, D. C.

I have no means of knowing to what extent, if any, the Senate was influenced by this

[1] General Schofield makes no attempt to explain General Grant's change of attitude, but from all the circumstances it is fair to assume that it was owing to General Grant's opinion as to the effect the nomination would have on the impeachment proceedings.—EDITOR.

nomination, but anxiety about the ultimate result seemed to be soon allayed. About a month later a vote was taken in the Senate, and the impeachment failed; my nomination was then confirmed, as stated at the time, by a nearly unanimous vote of the Senate.

I entered upon the duties of the office as Secretary of War on the first day of June, and continued to discharge them until *a few days after* General Grant's inauguration in March. I was greeted very cordially by the President, by all the members of his cabinet, by General Grant, and by a large number of senators who called upon me at the War Department.

The duties devolved upon me were often of a very delicate character, and it required at times no little tact to avoid serious trouble. President Johnson's views were sometimes in direct conflict with those which I felt compelled to maintain under the acts of Congress affecting the States lately in rebellion; but it is due to the memory of President Johnson to say that he did not at any time require me to do anything contrary to my interpretation of the acts of Congress, and that he in general acquiesced without objection in all the measures I deemed necessary to preserve the peace and secure a fair vote of the newly enfranchised citizens of the Southern States in the Presidential election. The cordial assistance of Mr. Evarts as Attorney-General was a great help to me in such matters. When he was present I had little difficulty in respect to the law involved in any question; but when he happened to be absent, and I was compelled to stand alone against all the cabinet, or all who chose to take any interest in the question, it was hard work. But I always carried the day—at least, in act if not in argument. The President never decided against me. He thus fulfilled to the letter the implied promise made when he submitted my nomination to the Senate.

If there ever had been any real ground for the wide-spread apprehension of criminal purpose on the part of President Johnson, certainly all indication of any such purpose disappeared with the failure of his impeachment and the settlement of the long-standing controversy respecting the War Department. The so-called Reconstruction Laws, which the President so emphatically condemned as being unconstitutional, were carried out without further objection from him; the Presidential election in the Southern States was conducted with perfect good order; a free ballot and a full count were secured under the supervision and protection of the army—a thing supposed to be so dangerous to the liberties of a free people. This and many other examples in the history of this country, from the time when Washington surrendered his commission to the Continental Congress down to the present time, show that a «free people» have nothing to fear from their army, whether regular, volunteer, or militia; the soldiers are, in fact, among the most devoted and loyal citizens of the republic, and thoroughly imbued with the fundamental principle of subordination of the military to the civil power.

With General Grant my relations while in the War Department were of the most satisfactory character. As a candidate for the Presidency, and as President-elect, he naturally desired to be as free as possible from the current duties of his office as general of the army, and he was absent from Washington much of the time, his chief of staff, General Rawlins, remaining there to promulgate orders in his name. Thus it devolved upon me to exercise all the functions of «commander-in-chief of the army»—functions which it is usually attempted to divide among three,—the President, the Secretary of War, and the general-in-chief,—without any legal definition of the part which belongs to each. Of course «the machine» ran very smoothly in the one case, though there had been much friction in the other.

In compliance with the wish of General Grant, I remained in office under him for a few days, for the purpose of inaugurating the system which he hoped would end the long-standing controversy between the War Department and the headquarters of the army. The order which was issued assigning General Sherman to command the entire army, staff as well as line, was prepared by me under General Grant's instructions, and the draft of the order was approved by him as expressing the views he had maintained when he was general-in-chief. As President he very soon adopted opposite views, and caused the order to be amended accordingly.

That General Sherman then entertained views of his authority which were too broad, as General Grant had also done, is no doubt true; but it ought not to have been very difficult to correct such errors. It was easier to take away all administrative authority and all command over the general staff of the army, and the latter course was adopted. The ancient controversy was up to 1888 no nearer settlement than it was in 1869, though in General Sheridan's time some progress had

Digitized by Google

been made in the persistent efforts to deprive the general-in-chief of the little authority which had been left to General Sherman. General Sheridan had, with his usual gallantry and confidence, renewed the contest, but had been worsted in his first encounter with the Secretary, and then gave up the struggle.

Upon my assignment to the «command of the army» in 1888, I determined to profit so far as possible by the unsatisfactory experience of Generals Scott, Grant, Sherman, and Sheridan—at least so far as to avoid further attempts to accomplish the impossible, which attempts have usually the result of accomplishing little or nothing. In fact, long study of the subject, at the instance of Generals Grant and Sherman, earnest efforts to champion their views, and knowledge of the causes of their failure, had led me to the conclusion heretofore suggested, namely: that under the government of the United States an actual military commander of the army is not possible, unless in an extreme emergency like that which led to the assignment of Lieutenant-General Grant in 1864; and that the general-in-chief, or nominal commanding general, can at most be only a «chief of staff,»—that or nothing,—whatever may be the mere title under which he may be assigned to duty by the President.

As the first step in the experimental course decided upon, I sent an order in writing to the adjutant-general, directing him never, under any circumstances, to issue an order dictated by me, or in my name, without first laying it before the Secretary of War; and I made it known to all the staff that I disclaimed the right to issue any order to the army without the knowledge of the President or the Secretary. I also forbade the issuing of any order in my name without my knowledge. The first rule was easy, the latter very difficult, to enforce. I found, with no little surprise, that the office of the «commanding general» usually learned for the first time of routine orders issued in his name by seeing them published in the New York papers the next day; and it was quite difficult at first to make it distinctly understood that such a practice could not be tolerated. In fact, it became necessary to call attention to the question of veracity involved in such a use of the general's name. Such was the condition the War Department had reached. The adjutant-general had acquired the habit of issuing nearly all orders to the army without the knowledge of any one of his superiors—the President, the Secretary of War, or the general-in-chief. In fact, the adjutant-general had in practice come very near being «commander-in-chief.»

Some time and much patience were required to bring about the necessary change, but ere long the result became very apparent. Perfect harmony was established between the War Department and the headquarters of the army, and this continued, under the administrations of Secretaries Proctor, Elkins, and Lamont, up to the time of my retirement from active service. During all this period, namely, from 1889 to 1895, under the administrations of Presidents Harrison and Cleveland, the method I have indicated was exactly followed by the President in all cases of such importance as to demand his personal action, and some such cases occurred under both administrations. The orders issued were actually the President's orders. No matter by whom suggested or by whom formulated, they were in their final form understandingly dictated by the President, and sent to the army in his name by the commanding general, thus leaving no possible ground for question as to the constitutional authority under which they were issued, nor of the regularity of the method, in conformity with army regulations, by which they were communicated to the army.

It is, I think, to be hoped that the system thus begun may be fully developed and become permanent, as being the best practicable solution of a long-standing and dangerous controversy, and as most in accord with the fundamental principles of our constitutional government, under which the President, whether a soldier or a civilian, is in fact as well as in name the commander-in-chief of the army and navy.

CAMPAIGNING WITH GRANT.

BY GENERAL HORACE PORTER.

PREPARING FOR THE LAST CAMPAIGN.

CAPTURE OF FORT FISHER.

AS soon as General Grant obtained accurate information in regard to the circumstances and conditions at Fort Fisher, he decided to send another expedition, and to put it in charge of an efficient officer, and one who could be trusted implicitly to carry out his instructions. As there had been a lack of precaution on the part of the officers engaged in the previous expedition to keep the movement secret, the general-in-chief at first communicated the facts regarding the new expedition to only two persons at headquarters. Of course he had to let it be known to the Secretary of War; but as the Secretary was always reticent about such matters, there was a reasonable probability that the secret could be kept. Directions were given which tended to create the impression that the vessels were being loaded with supplies and reinforcements for Sherman's army, and studious efforts were made to throw the enemy off his guard. Of course every one who knew the general's tenacity of purpose felt sure that he would never relinquish his determination to take Fort Fisher, and would immediately take steps to retrieve the failure which had been made in the first attempt; and as soon as Butler returned I suggested to the general that, in case another expedition should be sent, General A. H. Terry would be, for many reasons, the best officer to be placed in command. We had served together in the Sherman-Du Pont expedition which in 1861 took Hilton Head and captured Fort Pulaski and other points on the Atlantic coast, and I knew him to be the most experienced officer in the service in embarking and disembarking troops upon the sea-coast, looking after their welfare on transports, and intrenching rapidly on shore. General Grant had seldom come in contact with Terry personally, but had been much pleased at the manner in which he had handled his troops in the movements on the James River. A suggestion, too, was made that as Terry was a volunteer officer, and as the first expedition had failed under a volunteer, it would only be fair that another officer of that service, rather than one from the regular army, should be given a chance to redeem the disaster. The general seemed to listen with interest to what was said about Terry, particularly as to his experience in sea-coast expeditions, but gave no hint at the time of a disposition to appoint him; nor did he even say whether he would send another expedition to Fort Fisher: but on January 2 he telegraphed to Butler, «Please send Major-General Terry to City Point to see me this morning.» Grant considered the propriety of going in person with the expedition, but his better judgment did not approve such a course, for he would be too far out of reach of communication with City Point, and as Butler was the senior army commander, it would leave him in supreme command of the armies operating against Petersburg and Richmond.

When Terry came the general-in-chief told him simply that he had been designated to take command of a transfer by sea of eight thousand men, and that he was to sail under sealed orders. Terry felt much complimented that he should be singled out for such a command, but had no idea of his destination, and was evidently under the impression that he was to join Sherman. On January 5 Terry was ready to proceed to Fort Monroe, and Grant accompanied him down the James River for the purpose of giving him his final instructions. After the boat had proceeded some distance from City Point, the general sat down with Terry in the after-cabin of the steamer, and there made known to him the real destination and purposes of the expedition. He said: «The object is to renew the attempt to capture Fort Fisher, and in case of success to take possession of Wilmington. It is of the greatest importance that there should be a complete understanding and harmony of action between you and Admiral Porter. I want you to consult the admiral fully, and to let there be no misunderstanding in regard to the plan of coöperation in all its details. I served with Admiral Porter on the Mississippi, and have a high appreciation of his courage and judgment. I want to urge upon you to land with all despatch, and intrench yourself in a position from which

you can operate against Fort Fisher, and not to abandon it until the fort is captured or you receive further instructions from me.» Full instructions were carefully prepared in writing, and handed to Terry on the evening of January 5; and captains of the transports were given sealed orders, not to be opened until the vessels were off Cape Henry. The vessels soon appeared off the North Carolina coast. A landing was made on January 13, and on the morning of the 14th Terry had fortified a position about two miles from the fort. The navy, which had been firing upon the fort for two days, began another bombardment at daylight on the 15th. That afternoon Ames's division made an assault on the work. Two thousand sailors and marines were also landed for the purpose of making a charge. They had received an order from the admiral, in the wording of which facetiousness in nautical phraseology could go no further. It read: «Board the fort in a seamanlike manner.»

They made a gallant attack, but were met with a murderous fire, and did not gain the work. Ames's division, with Curtis's brigade in advance, overcame all efforts of the defenders, and the garrison was driven from one portion of the fort to another in a series of hand-to-hand contests, in which individual acts of heroism surpassed almost anything in the history of assaults upon well-defended forts. The battle did not close until ten o'clock at night. Then the formidable work had been fairly won. The garrison was taken prisoners, the mouth of the Cape Fear River was closed, and Wilmington was at the mercy of our troops. The trophies were 169 guns, over 2000 stands of small arms, large quantities of ammunition and commissary stores, and more than 2000 prisoners. About 600 of the garrison were killed or wounded. Terry's loss was 110 killed, 536 wounded, and 13 missing. After the news of the capture of the fort was received, I was sent there by General Grant with additional instructions to Terry; and upon my arrival I could not help being surprised at the formidable character of the work. No one without having seen it could form an adequate conception of the almost insurmountable obstacles which the assaulting columns encountered.

DUTCH GAP CANAL.

DURING the summer General Butler, who was always fertile in ideas, had conceived the notion that there were many advantages to be gained by making a canal across a narrow neck of land, known as Dutch Gap, on the James River, which would cut off four and three quarter miles of river navigation. This neck was about one hundred and seventy-four yards wide. The name originated from the fact that a Dutchman had many years before attempted a similar undertaking, but little or no progress had been made. The enterprise involved the excavation of nearly eighty thousand cubic feet of earth. Butler had been somewhat reluctantly authorized to dig the canal, and work upon it had been begun on August 10. The enemy soon erected heavy rifle-guns, and afterward put mortars in positions which bore upon it; and our men were subjected to a severe fire, and frequently had to seek shelter in «dugouts» constructed as places of refuge. Under the delays and difficulties which arose, the canal was not finished until the end of the year. On the 31st of December General Grant received a message from Butler saying: «We propose to explode the heading of Dutch Gap at 11 A. M. to-morrow. I should be happy to see yourself and friends at headquarters. We must be near the time because of the tide.» The general-in-chief replied: «Do not wait for me in your explosion. I doubt my ability to be up in the morning.» After the bulkhead wall of earth had been blown out, the debris at the north end was partly removed by means of steam dredges. The canal was not of any service during the war, but it has since been enlarged and improved, and has become the ordinary channel for the passage of vessels plying on the James River.

GRANT RECEIVES UNASKED ADVICE.

GENERAL GRANT had become very tired of discussing methods of warfare which were like some of the problems described in algebra as «more curious than useful,» and he was not sufficiently interested in the canal to be present at the explosion which was expected to complete it. About this time all the cranks in the country, besides men of real inventive genius, were sending extraordinary plans and suggestions for capturing Richmond. A proposition from an engineer was received one day, accompanied by elaborate drawings and calculations, which had evidently involved intense labor on the part of the author. His plan was to build a masonry wall around Richmond, of an elevation higher than the tallest houses, then to fill the inclosure with water pumped from the James River, and drown out the garrison and people like rats in a cage. The exact number of pumps required and their capacity had been

figured out to a nicety. Another inventive genius, whose mind seemed to run in the direction of the science of chemistry and the practice of sternutation, sent in a chemical formula for making an all-powerful snuff. In his communication he assured the commanding general that after a series of experiments he had made with it on people and animals, he was sure that if shells were filled with it and exploded within the enemy's lines, the troops would be seized with such violent fits of sneezing that they would soon become physically exhausted with the effort, and the Union army could walk over at its leisure and pick them up as prisoners without itself losing a man. A certain officer had figured out from statistics that the James River froze over about once in seven years, and that this was the seventh year, and advised that troops be massed in such a position that when the upper part of the James changed from a liquid to a solid, columns could be rushed across it on the ice to a position in rear of the enemy's lines, and Richmond would be at our mercy. A sorcerer in Rochester sent the general word that he had cast his horoscope, and gave him a clear and unclouded insight into his future, and added to its general attractiveness by telling him how gloriously he was going to succeed in taking Richmond. One evening the general referred to these emanations of the prolific brains of our people, and the many novel suggestions made to him, beginning with the famous powder-boat sent against Fort Fisher, and closed the conversation by saying: «This is a very suggestive age. Some people seem to think that an army can be whipped by waiting for rivers to freeze over, exploding powder at a distance, drowning out troops, or setting them to sneezing; but it will always be found in the end that the only way to whip an army is to go out and fight it.»

GRANT RELIEVES BUTLER.

On January 4 General Grant had written to the Secretary of War asking that Butler might be relieved, saying: «I am constrained to request the removal of General Butler from the command of the Department of Virginia and North Carolina. I do this with reluctance, but the good of the service requires it. In my absence General Butler necessarily commands, and there is a lack of confidence felt in his military ability, making him an unsafe commander for a large army. His administration of the affairs of his department is also objectionable.» Learning that the Secretary of War had gone to Savannah to visit General Sherman, and could not receive this letter in due time, on January 6 the general telegraphed to the President, asking that prompt action be taken in the matter. The order was made on the 7th, and on the morning of the 8th General Grant directed Colonel Babcock and me to go to General Butler's headquarters, announce the fact to him, and hand him the written order relieving him from command. We arrived there about noon, found the general in his camp, and by his invitation went with him into his tent. He opened the communication, read the order, and was silent for a minute; then he began to manifest considerable nervousness, and turning to his desk, wrote «Received» on the envelop, dated it 1864 instead of 1865, and handed it back. It was the custom in the army to return envelop receipts in case of communications delivered by enlisted men, but this was omitted when the instructions were transmitted by staff-officers. He was politely reminded that a written receipt was not necessary. Thereupon, in a somewhat confused manner, he uttered a word or two of apology for offering it, and after a slight pause added: «Please say to General Grant that I will go to his headquarters, and would like to have a personal interview with him.»

SHERMAN'S LOYALTY TO GRANT.

General Grant was in constant correspondence with Sherman in regard to the movements in the Carolinas. Sherman was to move north, breaking up all lines of communication as he advanced. If Lee should suddenly abandon Richmond and Petersburg, and move with his army to join the Confederate forces in the Carolinas with a view to crushing Sherman, that officer was to whip Lee if he could, and if not to fall back upon the sea-coast. Grant was to hold Lee's army where it was, if possible, and if not to follow it up with vigor. Sherman's triumphant march to the sea had gained him many admirers in the North, and it was believed about this time that a bill might be introduced in Congress providing for his promotion to the grade of lieutenant-general, which would make him eligible to command the armies in case he should be assigned to such a position. On January 21 he said in a letter to General Grant: «I have been told that Congress meditates a bill to make another lieutenant-general for me. I have written to John Sherman to stop it if it is designed for me. It would be mischievous, for there are enough rascals who

Digitized by Google

would try to sow differences between us, whereas you and I now are in perfect understanding. I would rather have you in command than anybody else; for you are fair, honest, and have at heart the same purpose that should animate all. I should emphatically decline any commission calculated to bring us into rivalry. . . .» General Grant replied: «No one would be more pleased at your advancement than I, and if you should be placed in my position and I put subordinate, it would not change our relations in the least. I would make the same exertions to support you that you have ever done to support me, and I would do all in my power to make our cause win.» On January 31 Sherman wrote: «I am fully aware of your friendly feeling toward me, and you may always depend on me as your steadfast supporter. Your wish is law and gospel to me, and such is the feeling that pervades my army.»

In all the annals of history no correspondence between men in high station furnishes a nobler example of genuine, disinterested personal friendship and exalted loyalty to a great cause.

A «GOOD SHOT.»

ADMIRAL PORTER had withdrawn nearly all the naval vessels from the James River in order to increase his fleet for the Fort Fisher expedition. Only three or four light gunboats were left, and one ironclad, the *Onondaga*, a powerful double-turreted monitor carrying two 15-inch smooth-bores and two 150-pound Parrott rifles. This vessel was commanded by Captain William A. Parker of the navy. Captain Parker would occasionally pay a visit to General Grant at City Point, and he usually brought with him a junior officer who afforded the general-in-chief no little amusement by the volubility of his conversation. When the general asked the captain a question, before he could venture a reply his sub would volunteer an answer, and frequently make it the occasion of an elaborate lecture upon the intricate science of marine warfare. The captain could rarely get in a word edgewise. In fact, he seemed to accept the situation, and did not often make the attempt. It might have been said of this young officer what Talleyrand said of a French diplomat: «Clever man, but he has no talent for dialogue.»

There had been so much talk about the formidable character of the double-turreted monitors that General Grant decided one morning to go up the James and pay a visit to the *Onondaga*, and invited me to accompany him. The monitor was lying above the pontoon-bridge in Trent's Reach. After looking the vessel over, and admiring the perfection of her machinery, the general said to the commander: «Captain, what is the effective range of your 15-inch smooth-bores?» «About eighteen hundred yards, with their present elevation,» was the reply. The general looked up the river, and added: «There is a battery which is just about that distance from us. Suppose you take a shot at it, and see what you can do.» The gun was promptly brought into position by revolving the turret, accurate aim taken, and the order given to fire. There was a tremendous concussion, followed by a deafening roar as the enormous shell passed through the air; and then all eyes were strained to see what execution would be done by the shot. The huge mass struck directly within the battery, and exploded. A cloud of smoke arose, earth and splintered logs flew in every direction, and a number of the garrison sprang over the parapet. The general took another puff at the cigar he was smoking, nodded his head, and said, «Good shot!» The naval officers indulged in broad smiles of triumph, and tried to look as if this was only one of the little things they always did with equal success when they tried hard.

NIGHT ATTACK OF THE ENEMY'S IRONCLADS.

ON the night of January 23 a naval officer, at General Grant's suggestion, was sent up to plant torpedoes at the obstructions which had been placed in the river at Trent's Reach, as he was apprehensive that our depleted naval force might be attacked by the enemy's fleet, which was lying in the river near Richmond. The officer made the discovery that the Confederate ironclads were quietly moving down the river. News of their approach was promptly given, and at once telegraphed to headquarters. The enemy's fleet consisted of six vessels, and by half-past ten o'clock they had passed the upper end of Dutch Gap Canal. The general directed me and another staff-officer to take boats and communicate with all despatch with certain naval vessels, warn them of the character of the anticipated attack, and direct them to move up and make a determined effort to prevent the enemy's fleet from reaching City Point. The officer whom I was to take with me got a little rattled in the hurry of the departure, and started, from force of habit, to put on his spurs. It took me some time to persuade him that these appendages to his heels would not particularly facilitate his movements in

climbing aboard gunboats. A third officer, Lieutenant Dunn, was sent to communicate with a gunboat stationed at some distance from the others. In the meantime orders were given to tow coal-schooners up the river, ready to sink them in the channel if necessary; and instructions were issued to move all heavy guns within reach down to the river shore, where their fire could command the channel. There was an enormous accumulation of supplies at City Point, and their destruction at this time would have been a serious embarrassment. The night was pitch-dark, but our naval vessels were promptly reached by means of steam-tugs; and their commanders, who displayed that cordial spirit of coöperation always manifested by our sister service, expressed an eagerness to obey General Grant's orders as implicitly as if he had been their admiral. Most of these vessels were out of repair and almost unserviceable, but their officers were determined to make the best fight they could. When I returned to headquarters, the general, Mrs. Grant, and Ingalls were talking the matter over in the front room of the general's quarters. «Well, now that we 've got all ready for them,» said Ingalls, «why don't their old gunboats come down?» «Ingalls, you must have patience,» remarked the general; «perhaps they don't know that you 're in such a hurry for them, or they would move faster; you must give them time.» «Well, if they 're going to postpone their movement indefinitely, I 'll go to bed,» continued Ingalls, and started for his quarters. News now came that it was thought the vessels could not pass the obstructions, and would not make the attempt; and the general and Mrs. Grant retired to their sleeping-apartment, orders being left that the general was to be wakened if there should be any change in the situation. Soon after one o'clock word came that the enemy's vessels had succeeded at high water in getting through the obstructions. A loud knock was now given upon the door of the general's sleeping-room. He called out instantly: «Yes. What have you heard?» The reply was: «The gunboats have passed the obstructions, and are coming down.» In about two minutes the general came hurriedly into the office. He had drawn on his top-boots over his drawers, and put on his uniform frock-coat, the skirt of which reached about to the tops of the boots and made up for the absence of trousers. He lighted a cigar while listening to the reports, and then sat down at his desk and wrote out orders in great haste. The puffs from the cigar were now as rapid as those of the engine of an express-train at full speed. Mrs. Grant soon after came in, and was anxious to know about the situation. It was certainly an occasion upon which a woman's curiosity was entirely justifiable. Dunn had returned with a report about the movement of the gunboat with which he had been sent to communicate, and Ingalls had also rejoined the party. Mrs. Grant, in the midst of the scene, quietly said, «Ulyss, will those gunboats shell the bluff?» «Well, I think all their time will be occupied in fighting our naval vessels and the batteries ashore,» he replied. «The *Onondaga* ought to be able to sink them, but I don't know what they would do if they should get down this far.» Just then news came in that upon the approach of the enemy's vessels the *Onondaga* had retired down the river. The captain had lost his head, and under pretense of trying to obtain a more advantageous position, had turned tail with his vessel, and moved down-stream below the pontoon-bridge. General Grant's indignation knew no bounds when he heard of this retreat. He said: «I have been thrown into close contact with the navy, both on the Mississippi River and upon the Atlantic coast. I entertain the highest regard for the intrepidity of the officers of that service, and it is an inexpressible mortification to think that the captain of so formidable an ironclad, and the only one of its kind we have in the river, should fall back at such a critical moment. Why, it was the great chance of his life to distinguish himself.» Additional instructions were at once telegraphed to the shore batteries to act with all possible vigor.

Mrs. Grant, who was one of the most composed of those present, now drew her chair a little nearer to the general, and with her mild voice inquired, «Ulyss, what had I better do?» The general looked at her for a moment, and then replied in a half-serious and half-teasing way, «Well, the fact is, Julia, you ought n't to be here.» Dunn now spoke up and said: «Let me have the ambulance hitched up, and drive Mrs. Grant back into the country far enough to be out of reach of the shells.» «Oh, their gunboats are not down here yet,» answered the general; «and they must be stopped at all hazards.» Additional despatches were sent, and a fresh cigar was smoked, the puffs of which showed even an increased rapidity. In about two hours it was reported that only one of the enemy's boats was below the obstruction, and the rest were above, apparently aground. More guns had by this time been placed in

Digitized by Google

the shore batteries, and the situation was greatly relieved. Ingalls, whose dry humor always came to his rescue when matters were serious, again assumed an air of disappointment, and said: «I tell you, I 'm getting out of all patience, and I 've about made up my mind that these boats never intended to come down here anyhow—that they 've just been playing it on us to keep us out of bed.»

A little while after matters had so quieted down that the general-in-chief and Mrs. Grant retired to finish their interrupted sleep. At daylight the *Onondaga* moved up within nine hundred yards of the Confederate ironclad *Virginia*, the flag-ship, and opened fire upon her. Some of the shore guns were also trained upon her, and a general pounding began. She was struck about one hundred and thirty times, our 15-inch shells doing much damage. Another vessel, the *Richmond*, was struck a number of times, and a third, the *Drewry*, and a torpedo-launch were destroyed. At flood-tide the enemy succeeded in getting their vessels afloat, and withdrew up the river. That night they came down again, and attacked the *Onondaga*, but retired after meeting with a disastrous fire from that vessel and our batteries on the river banks. This was the last service performed by the enemy's fleet in the James River.

HOW GRANT BECAME A CONFIRMED SMOKER.

THE next morning breakfast in the mess-room was a little later than usual, as every one had been trying to make up for the sleep lost the previous night. When the chief had lighted his cigar after the morning meal, and taken his place by the camp-fire, a staff-officer said: «General, I never saw cigars consumed quite so rapidly as those you smoked last night when you were writing despatches to head off the ironclads.» He smiled, and remarked: «No; when I come to think of it, those cigars did n't last very long, did they?» An allusion was then made to the large number he had smoked the second day of the battle of the Wilderness. In reply to this he said: «I had been a very light smoker previous to the attack on Donelson, and after that battle I acquired a fondness for cigars by reason of a purely accidental circumstance. Admiral Foote, commanding the fleet of gunboats which were coöperating with the army, had been wounded, and at his request I had gone aboard his flag-ship to confer with him. The admiral offered me a cigar, which I smoked on my way back to my headquarters. On the road I was met by a staff-officer, who announced that the enemy were making a vigorous attack. I galloped forward at once, and while riding among the troops giving directions for repulsing the assault I carried the cigar in my hand. It had gone out, but it seems that I continued to hold the stump between my fingers throughout the battle. In the accounts published in the papers I was represented as smoking a cigar in the midst of the conflict; and many persons, thinking, no doubt, that tobacco was my chief solace, sent me boxes of the choicest brands from everywhere in the North. As many as ten thousand were soon received. I gave away all I could get rid of, but having such a quantity on hand, I naturally smoked more than I would have done under ordinary circumstances, and I have continued the habit ever since.»

GRANT OFFERS HIS PURSE TO HIS ENEMY.

GENERAL GRANT never mentioned, however, one incident in connection with the battle of Donelson, and no one ever heard of it until it was related by his opponent in that battle, General Buckner. In a speech made by that officer at a banquet given in New York on the anniversary of General Grant's birthday, April 27, 1889, he said: «. . . Under these circumstances, sir, I surrendered to General Grant. I had at a previous time befriended him, and it has been justly said that he never forgot an act of kindness. I met him on the boat, and he followed me when I went to my quarters. He left the officers of his own army and followed me, with that modest manner peculiar to himself, into the shadow, and there tendered me his purse. It seems to me, Mr. Chairman, that in the modesty of his nature he was afraid the light would witness that act of generosity, and sought to hide it from the world. We can appreciate that, sir.»

GRANT RECEIVES THE «PEACE COMMISSIONERS.»

ON the morning of the 31st of January General Grant received a letter sent in on the Petersburg front the day before, signed by the Confederates Alexander H. Stephens, J. A. Campbell, and R. M. T. Hunter, asking permission to come through our lines. These gentlemen constituted the celebrated «Peace Commission,» and were on their way to endeavor to have a conference with Mr. Lincoln. The desired permission to enter our lines was granted, and Babcock was sent to meet them and escort them to City Point. Some time after dark the train which brought them arrived, and they came at once to headquarters. General Grant was writing

in his quarters when a knock came upon the door. In obedience to his «Come in!» the party entered, and were most cordially received, and a very pleasant conversation followed. Stephens was the Vice-President of the Confederacy; Campbell, a former justice of the Supreme Court of the United States, was Assistant Secretary of War; and Hunter was president *pro tempore* of the Confederate Senate. As General Grant had been instructed from Washington to keep them at City Point until further orders, he conducted them in person to the headquarters steamer, the *Mary Martin*, which was lying at the wharf, made them his guests, and had them provided with well-furnished state-rooms and comfortable meals during their stay. They were treated with every possible courtesy; their movements were not restrained, and they passed part of the time upon the boat, and part of it at headquarters. Stephens was about five feet five inches in height; his complexion was sallow, and his skin seemed shriveled upon his bones. He possessed intellect enough, however, for the whole commission. Many pleasant conversations occurred with him at headquarters, and an officer once remarked, after the close of an interview: «The Lord seems to have robbed that man's body of nearly all its flesh and blood to make brains of them.»

The commissioners twice endeavored to draw General Grant out as to his ideas touching the proper conditions of the proposed terms of peace; but as he considered himself purely a soldier, not intrusted with any diplomatic functions, and as the commissioners spoke of negotiations between the two governments, while the general was not willing to acknowledge even by an inference any government within our borders except that of the United States, he avoided the subject entirely, except to let it be known by his remarks that he would gladly welcome peace if it could be secured upon proper terms. Mr. Lincoln had directed Mr. Seward, the Secretary of State, on January 31, to meet the commissioners at Fort Monroe on February 2. General Grant telegraphed the President that he thought the gentlemen were sincere in their desire to restore peace and union, and that it would have a bad effect if they went back without any expression from one who was in authority, and said he would feel sorry if Mr. Lincoln did not have an interview with them, or with some of them. This changed the President's mind, and he started at once for Fort Monroe. The commissioners were sent down the James River that afternoon, and were met at Fort Monroe by the President and Mr. Seward on the 3d, and had a conference lasting several hours aboard the President's steamer. Mr. Lincoln stated that peace could be secured only by a restoration of the national authority over all the States, a recognition of the position assumed by him as to the abolition of slavery, and an understanding that there should be no cessation of hostilities short of an end of the war and a disbanding of all forces hostile to the government. The commissioners, while they did not declare positively that they would not consent to reunion, avoided giving their assent; and as they seemed to desire to postpone that important question, and adopt some other course first which might possibly lead in the end to union, but which Mr. Lincoln and Mr. Seward thought would amount simply to an indefinite postponement, the conference ended without result. After stopping at City Point and having another conversation with General Grant, principally in reference to an exchange of prisoners, the Confederate commissioners were escorted through our lines on their way back to Richmond. I accompanied the escort part of the way, and had an interesting talk with Mr. Stephens. He was evidently greatly disappointed at the failure of the conference, but was prudent enough not to talk much about it. He spoke freely in regard to General Grant, saying: «We all form our preconceived ideas of men of whom we have heard a great deal, and I had certain definite notions as to the appearance and character of General Grant; but I was never so completely surprised in all my life as when I met him and found him a person so entirely different from my idea of him. His spare figure, simple manners, lack of all ostentation, extreme politeness, and charm of conversation were a revelation to me, for I had pictured him as a man of a directly opposite type of character, and expected to find in him only the bluntness of the soldier. Notwithstanding the fact that he talks so well, it is plain that he has more brains than tongue.» He continued by saying what he said several times in Washington after the war, and also wrote in his memoirs: «He is one of the most remarkable men I ever met. He does not seem to be aware of his powers, but in the future he will undoubtedly exert a controlling influence in shaping the destinies of the country.»

Mr. Stephens was wrapped from his eyes to his heels in a coarse gray overcoat about three sizes too large for him, with a collar so high that it threatened to lift his hat off

Digitized by Google

every time he leaned his head back. This coat, together with his complexion, which was as yellow as a ripe ear of corn, gave rise to a characterization of the costume by Mr. Lincoln which was very amusing. The next time he saw General Grant at City Point, after the «Peace Conference,» he said to him, in speaking on the subject, «Did you see Stephens's greatcoat?» «Oh, yes,» answered the general. «Well,» continued Mr. Lincoln, «soon after we assembled on the steamer at Hampton Roads, the cabin began to get pretty warm, and Stephens stood up and pulled off his big coat. He peeled it off just about as you would husk an ear of corn. I could n't help thinking, as I looked first at the coat and then at the man, 'Well, that 's the biggest shuck and the littlest nubbin I ever did see.'» This story became one of the general's favorite anecdotes, and he often related it in after years with the greatest zest.

GRANT PLANS THE SPRING CAMPAIGNS.

GENERAL GRANT was at this time employing all his energies in maturing his plans for a comprehensive campaign on the part of all the armies, with a view to ending the war in the early spring. Sheridan was to move down the valley of Virginia for the purpose of destroying the railroads, the James River Canal, and the factories in that section of country used for the production of munitions of war. Stoneman was to start upon a raid from east Tennessee with 4000 men, with a view to breaking up the enemy's communications in that direction. Canby, who was in command at New Orleans, was to advance against Mobile, Montgomery, and Selma. In the movement on Mobile, Canby had at least 45,000 men. Thomas was to send a large body of cavalry under Wilson into Alabama. The movements of our forces in the West were intended not only to destroy communications, but to keep the Confederate troops there from being sent East to operate against Sherman. Sherman was to march to Columbia, South Carolina, thence to Fayetteville, North Carolina, and afterward in the direction of Goldsborough. Schofield was to be transferred from Tennessee to Annapolis, Maryland, and thence by steamer to the Cape Fear River, for the purpose of moving inland from there and joining Sherman in North Carolina. Schofield's orders were afterward changed, and he rendezvoused at Alexandria, Virginia, instead of Annapolis. The Army of the Potomac and the Army of the James were to watch Lee, and at the proper time strike his army a crushing blow, or, if he should suddenly retreat, to pursue him and inflict upon him all damage possible, and to endeavor to head off and prevent any portion of his army from reaching North Carolina as an organized force capable of forming a junction with Johnston and opposing Sherman. Some of these operations were delayed longer than was expected, and a few changes were made in the original plan; but they were all carried into effect with entire success, and the military ability of the general-in-chief never appeared to better advantage than in directing these masterly movements, which covered a theater of war greater than that of any campaigns in modern history, and which required a grasp and comprehension which have rarely been possessed even by the greatest commanders. He was at this period indefatigable in his labors, and he once wrote in a single day forty-two important despatches with his own hand.

In the latter part of January, General Grant went with Schofield down the coast, and remained there a short time to give personal directions on the ground. Sherman entered Columbia February 17, and the garrison of Charleston evacuated that place on the 18th without waiting to be attacked. When this news was received, Dr. Craven, a medical officer who was in the habit of drawing all his similes from his own profession, commended the movement by saying: «General Sherman applied a remedial agency which is in entire accord with the best medical practice. Charleston was suffering from the disease known as secession, and he got control of it by means of counter-irritation.» Wilmington was captured on the 22d of February.

THE PRESIDENT'S SON JOINS GRANT'S STAFF.

AN addition was now made to our staff in the person of Captain Robert T. Lincoln, the President's eldest son. He had been graduated at Harvard University in 1864, and had at once urged his father to let him enter the army and go to the front; but Mr. Lincoln felt that this would only add to his own personal anxieties, and Robert was persuaded to remain at Harvard and take a course of study in the law school. The fact is not generally known that Mr. Lincoln already had a personal representative in the army. He had procured a man to enlist early in the war, whom he always referred to as his «substitute.» This soldier served in the field to the end with a good record, and the President

Digitized by Google

watched his course with great interest, and took no little pride in him.

In the spring of 1865 Robert renewed his request to his father, who mentioned the subject to General Grant. The general said to the President that if he would let Robert join the staff at headquarters, he would be glad to give him a chance to see some active service in the field. The President replied that he would consent to this upon one condition: that his son should serve as a volunteer aide without pay or emoluments; but Grant dissuaded him from adhering to that determination, saying that it was due to the young man that he should be regularly commissioned, and put on an equal footing with other officers of the same grade. So it was finally settled that Robert should receive the rank of captain and assistant adjutant-general; and on February 23 he was attached to the staff of the general-in-chief. The new acquisition to the company at headquarters soon became exceedingly popular. He had inherited many of the genial traits of his father, and entered heartily into all the social pastimes at headquarters. He was always ready to perform his share of hard work, and never expected to be treated differently from any other officer on account of his being the son of the Chief Executive of the nation. The experience acquired by him in the field did much to fit him for the position of Secretary of War, which he afterward held. This month had brought me another promotion. I received a commission as brevet colonel of volunteers, dated February 24, for «faithful and meritorious services.»

LEE ASKS A PERSONAL INTERVIEW.

On the evening of March 3, just as the general was starting to the mess-hut for dinner, a communication was handed to him from General Lee, which had come through our lines, and was dated the day before. After referring to a recent meeting under a flag of truce between Ord and Longstreet, from which the impression was derived that General Grant would not refuse to see him if he had authority to act for the purpose of attempting to bring about an adjustment of the present difficulties by means of a military convention, the letter went on to say: «Sincerely desiring to leave nothing untried which may put an end to the calamities of war, I propose to meet you at such convenient time and place as you may designate, with the hope that, upon an interchange of views, it may be found practicable to submit the subjects of controversy between the belligerents to a convention of the kind mentioned. In such event, I am authorized to do whatever the result of the proposed interview may render necessary or advisable.» There came inclosed with this letter another stating that General Lee feared there was some misunderstanding about the exchange of political prisoners, and saying that he hoped that at the interview proposed some satisfactory solution of that matter might be arrived at. General Grant, not being vested with any authority whatever to treat for peace, at once telegraphed the contents of the communication to the Secretary of War, and asked for instructions. The despatch was submitted to Mr. Lincoln at the Capitol, where he had gone, according to the usual custom at the closing hours of the session of Congress, in order to act promptly upon bills presented to him. He consulted with the Secretaries of State and War, and then wrote with his own hand a reply, dated midnight, which was signed by Stanton, and forwarded to General Grant. It was received the morning of the 4th, and read as follows: «The President directs me to say to you that he wishes you to have no conference with General Lee, unless it be for the capitulation of General Lee's army, or on some minor and purely military matter. He instructs me to say that you are not to decide, discuss, or confer upon any political question. Such questions the President holds in his own hands, and will submit them to no military conferences or conventions. Meantime you are to press to the utmost your military advantages.» The general thought that the President was unduly anxious about the manner in which the affair would be treated, and replied at once: «. . . I can assure you that no act of the enemy will prevent me from pressing all advantages gained to the utmost of my ability; neither will I, under any circumstances, exceed my authority or in any way embarrass the government. It was because I had no right to meet General Lee on the subject proposed by him that I referred the matter for instructions.» He then replied to Lee: «In regard to meeting you on the 6th instant, I would state that I have no authority to accede to your proposition for a conference on the subject proposed. Such authority is vested in the President of the United States alone. General Ord could only have meant that I would not refuse an interview on any subject on which I have a right to act, which, of course, would be such as are purely of a military character, and on the subject of exchanges, which has been intrusted to me.»

Digitized by Google

A VISIONARY PEACE PROGRAM.

It was learned afterward that an interesting but rather fanciful program had been laid out by the enemy as a means to be used in restoring peace, and that this contemplated interview between Grant and Lee was to be the opening feature. Jefferson Davis had lost the confidence of his people to such an extent as a director of military movements that Lee had been made generalissimo, and given almost dictatorial powers as to war measures. As the civilians had failed to bring about peace, it was resolved to put Lee forward in an effort to secure it upon some terms which the South could accept without too great a sacrifice of its dignity, by means of negotiations, which were to begin by a personal interview with General Grant. One proposition discussed was that after the meeting of Grant and Lee, at which peace should be urged upon terms of granting amnesty, making some compensation for the emancipated slaves, etc., by the National government, it should be arranged to have Mrs. Longstreet, who had been an old friend of Mrs. Grant, visit her at City Point, and after that to try and induce Mrs. Grant to visit Richmond. It was taken for granted that the natural chivalry of the soldiers would assure such cordial and enthusiastic greetings to these ladies that it would arouse a general sentiment of good will, which would everywhere lead to demonstrations in favor of peace between the two sections of the country. General Longstreet says that the project went so far that Mrs. Longstreet, who was at Lynchburg, was telegraphed to come on to Richmond. The plan outlined in this order of procedure was so visionary that it seems strange that it could ever have been seriously discussed by any one; but it must be remembered that the condition of the Confederacy was then desperate, and that drowning men catch at straws.

HIGH PRICES IN RICHMOND.

It was seen that Grant, by his operations, was rapidly forcing the fight to a finish. The last white man in the South had been put into the ranks, the communications were broken, the supplies were irregular, Confederate money was at a fabulous discount, and hope had given place to despair. The next evening one of our scouts returned from a trip to Richmond, and was brought to headquarters in order that the general-in-chief might question him in person. The man said: «The depreciation in the purchasing power of ‹graybacks,› as we call the rebel treasury notes, is so rapid that every time I go into the enemy's lines I have to increase my supply of them. On my last trip I had to stuff my clothes full of their currency to keep myself going for even a couple of days. A barrel of flour in Richmond now costs over a thousand dollars, and a suit of clothes about twelve hundred. A dollar in gold is equal in value to a hundred dollars in graybacks. Then so much counterfeit Confederate money has been shoved in through our lines that in the country places they don't pretend to make any difference between good and bad money. A fellow that had come in from the western part of the State told me a pretty tough yarn about matters out there. He said: ‹Everything that has a picture on it goes for money. If you stop at a hotel, and the bill of fare happens to have an engraving of the house printed at the top, you can just tear off the picture and pay for your dinner with it.»

GRANT RECEIVES A MEDAL FROM CONGRESS.

On the 10th of March the Hon. Elihu B. Washburne, who had paid one or two visits before to headquarters, arrived at City Point, and brought with him the medal which had been struck, in accordance with an act of Congress, in recognition of General Grant's services, and which Mr. Washburne had been commissioned to present. A dozen prominent ladies and gentlemen from Washington came at the same time. On the afternoon of the next day General Grant went with them to the lines of the Army of the Potomac, and gave orders for a review of some of the troops. That evening some simple arrangements were made for the presentation of the medal, which took place at 8 P. M. in the main cabin of the steamer which had brought the visitors, and which was lying at the City Point wharf. General Meade suggested that he and the corps commanders would like to witness the ceremony, and in response to an invitation they came to City Point for the purpose, accompanied by a large number of their staff-officers. Mr. Washburne arose at the appointed hour, and after delivering an exceedingly graceful speech eulogistic of the illustrious services for which Congress had awarded this testimonial of the nation's gratitude and appreciation, he took the medal from the handsome morocco case in which it was inclosed, and handed it to the general-in-chief. The general, who had remained standing during the presentation

Digitized by Google

speech, with his right hand clasping the lapel of his coat, received the medal, and expressed his appreciation of the gift in a few well-chosen words, but uttered with such modesty of manner, and in so low a tone of voice, that they were scarcely audible. A military band was in attendance, and at the suggestion of Mrs. Grant a dance was now improvised. The officers soon selected their partners from among the ladies present, and the evening's entertainment was continued to a late hour. The general was urged to indulge in a waltz, but from this he begged off. However, he finally agreed to compromise the matter by dancing a square dance. He went through the cotillion, not as gracefully as some of the beaux among the younger officers present, but did his part exceedingly well, barring the impossibility of his being able to keep exact time with the music. He did not consider dancing his forte, and in after life seldom indulged in that form of amusement, unless upon some occasion when he attended a ball given in his honor. In such case he felt that he had to take part in the opening dance to avoid appearing impolite or unappreciative.

SHAVING UNDER DIFFICULTIES.

MR. WASHBURNE was assigned quarters in camp next to General Grant. The next day was Sunday. The congressman was the first one up, and when he went to shave he found there was no looking-glass in his quarters; so he stepped across to the general's office in his shirt-sleeves, and finding a glass there, proceeded to lather his face and prepare for the delicate operation of removing his beard. Just as he had taken hold of his nose with his left thumb and forefinger, which he had converted into a sort of clothes-pin for the occasion, and had scraped a wide swath down his right cheek with the razor, the front door of the hut was suddenly burst open, and a young woman rushed in, fell on her knees at his feet, and cried: «Save him! oh, save him! He 's my husband.» The distinguished member of Congress was so startled by the sudden apparition that it was with difficulty that he avoided disfiguring his face with a large gash. He turned to the intruder, and said: «What 's all this about your husband? Come, get up, get up! I don't understand you.» «Oh, general, for God's sake, do save my husband!» continued the woman. «Why, my good woman, I 'm not General Grant,» the congressman insisted. «Yes, you are; they told me this was your room. Oh, save him, general; they 're to shoot him this very day for desertion if you don't stop them.» Mr. Washburne now began to take in the situation, and led the woman to a seat, and tried to comfort her, while she began to tell how her young husband had been led, through his fondness for her, to desert in order to go home and see her, and how he had been captured and court-martialed, and was to be executed that day, and how she had heard of it only in time to reach headquarters that morning to plead for his life. By this time the general was up, and hearing from his sleeping-apartment an excited conversation in the front room, dressed hurriedly, and stepped upon the scene in time to hear the burden of the woman's story. The spectacle presented partook decidedly of the serio-comic. The dignified member of Congress was standing in his shirt-sleeves in front of the pleading woman, his face covered with lather, except the swath which had been made down his right cheek; the razor was uplifted in his hand, and the tears were starting out of his eyes as his sympathies began to be worked upon. The woman was screaming and gesticulating frantically, and was almost hysterical with grief. I appeared at the front door about the same time that the general entered from the rear, and it was hard to tell whether one ought to laugh or cry at the sight presented. The general now took a hand in the matter, convinced the woman that he was the commanding general, assured her that he would take steps at once to have her husband reprieved and pardoned, and sent her away rejoicing. His interposition saved the man's life just in the nick of time. He cracked many a joke with Mr. Washburne afterward about the figure he cut on the morning of the occurrence.

ARRIVAL OF SHERIDAN'S SCOUTS.

SHERIDAN had started out from Winchester on the 27th of February with nearly 10,000 cavalry. On March 5 news was received that he had struck Early's forces between Staunton and Charlottesville, and crushed his entire command, compelling Early and other officers to take refuge in houses and in the woods. For some time thereafter only contradictory reports were heard from Sheridan, through the Richmond papers which came into our hands; and as he was in the heart of the enemy's country, and direct communication was cut off, it was difficult to ascertain the facts. General Grant felt no apprehension as to the result of Sheridan's movements, but was anxious to get definite reports. On Sunday evening, March 12, the members of

Digitized by Google

the mess sat down to dinner about dark. Mrs. Grant and Mrs. Rawlins, who was also visiting headquarters, were at the table. Toward the end of the meal the conversation turned upon Sheridan, and all present expressed the hope that we might soon hear something from him in regard to the progress of his movements. Just then a colored waiter stepped rapidly into the mess-room, and said to the general: «Thah 's a man outside dat say he want to see you right away, and he don't 'pear to want to see nobody else.» «What kind of looking man is he?» asked the general. «Why,» said the servant, «he 's de mos' dreffle-lookin' bein' I ebber laid eyes on; he 'pears to me like he was a' outcast.» With the general's consent, I left the table and went to see who the person was. I found a man outside who was about to sink to the ground from exhaustion, and who had scarcely strength enough to reply to my questions. He had on a pair of soldier's trousers three or four inches too short, and a blouse three sizes too large; he was without a hat, and his appearance was grotesque in the extreme. With him was another man in about the same condition. After giving them some whisky they gathered strength enough to state that they were scouts sent by Sheridan from Columbia on the James River, had passed through the enemy's lines, bringing with them a long and important despatch from their commander, had ridden hard for two days, and had had a particularly rough experience in getting through to our lines. Their names were J. A. Campbell and A. H. Rowand, Jr. As Campbell had the despatch in his possession, I told him to step into the mess-room with me, and hand it to the general in person, so as to comply literally with his instructions, knowing the general's anxiety to have the news at once. The message was written on tissue-paper and inclosed in a ball of tin-foil, which the scout had carried in his mouth. The general glanced over it, and then read it aloud to the party at the dinner-table. It consisted of about three pages, and gave a vivid account of Sheridan's successful march, and the irreparable damage he had inflicted upon the enemy's communications, saying that he had captured twenty-eight pieces of artillery, destroyed many mills and factories, the James River Canal for a distance of fifteen miles, and the bridges on the Rivanna River, and stating that he was going to destroy the canal still further the next day, and then move on the Central and the Fredericksburg railroads, tear them up, and afterward march to White House, where he would like to have forage and rations sent him; and notifying the general that his purpose, unless otherwise ordered, was then to join the Army of the Potomac. The general proceeded to interrogate Campbell, but the ladies, who had now become intensely interested in the scout, also began to ply him with questions, which were directed at him so thick and fast that he soon found himself in the situation of the outstretched human figure in the almanac, fired at with arrows from every sign of the zodiac. The general soon rose from his seat, and said good-naturedly: «Well, I will never get the information I want from this scout as long as you ladies have him under cross-examination, and I think I had better take him over to my quarters, and see if I cannot have him to myself for a little while.» By this time the dinner-party was pretty well broken up, and by direction of the general several members of the staff accompanied him and the scouts to the general's quarters. It was learned from them that Sheridan, deeming it very important to get a despatch through to headquarters, selected two parties, consisting each of two scouts. To each party was given a copy of the despatch, and each was left to select its own route. Campbell and Rowand started on horseback from Columbia on the evening of the 10th, following the roads on the north side of Richmond. They were twice overhauled by parties of the enemy, but they represented themselves as belonging to Imboden's cavalry, and being in Confederate uniforms and skilled in the Southern dialect, they escaped without detection. When they approached the Chickahominy they were met by two men and a boy, with whom they fell into conversation, and were told by them that they had better not cross the river, as there were Yankee troops on the other side. Before the scouts were out of earshot they heard one of the men say to the other, «I believe those fellows are d—d Yankees,» and soon they found that the alarm had been given, and the Confederate cavalry were pursuing them. They rode forward to the Chickahominy as rapidly as they could proceed in the jaded condition of their horses, and when they reached the stream they took off everything except their undershirts, tied their clothes on the pommels of their saddles, and swam their horses across the river. Campbell had taken the roll of tin-foil which contained the despatch from the lining of his boot, and put it in his mouth. On the other side of the stream they found a steep, muddy bank and a row of piles.

Digitized by Google

As the horses could not struggle out, the men abandoned them, and got into a canoe which providentially happened to be floating past, and by this means got ashore. The Confederates by this time had opened fire on them from the opposite bank. The scouts made their way on foot for eleven miles, in their almost naked condition, to Harrison's Landing on the James River, where they met a detachment of our troops. The soldiers supplied them with trousers and blouses such as they could spare, and took them by boat to City Point. They had ridden 145 miles without sleep and with but little food. The second pair of scouts sent by Sheridan made their way by canal and on foot to the south of Richmond. After six unsuccessful attempts to get across the lines, one of them reached headquarters several days later. The scouts were given a meal of the best food of which the headquarters mess could boast, and put into a comfortable hut, where they lost no time in making up for lost sleep. The next day General Grant made all preparation for sending supplies and troops to meet Sheridan at White House. The general complimented the scouts warmly upon their success, directed that they be supplied with two good horses and an outfit of clothing, and sent them around to White House on a steamer to await Sheridan there; but on their arrival they could not restrain their spirit of adventure, and rode out through the enemy's country in the direction of the South Anna River until they met their commander.

Campbell was only nineteen years of age. Sheridan always addressed him as «Boy,» and the history of his many hairbreadth escapes that year would fill a volume. Campbell has always remained a scout and is still in the employ of the government in that capacity at Fort Custer; Rowand is now a prominent lawyer in Pittsburg, Pa.

This day (March 13) possesses a peculiar personal interest for me, for the reason that it is the date borne by two brevet appointments I received—one of colonel and the other of brigadier-general in the regular army—for «gallant and meritorious services in the field during the rebellion.»

GRANT DRAWS THE NET TIGHTER AROUND THE ENEMY.

SHERIDAN reached White House on March 19, after having made a campaign seldom equaled in activity, through a difficult country and during incessant rains. He had whipped the enemy at all points, captured 17 pieces of artillery and 1600 prisoners, and destroyed 56 canal-locks, 5 aqueducts, 23 railroad bridges, 40 canal and road bridges, together with 40 miles of railroad, numerous warehouses and factories, and vast quantities of military supplies.

On March 20 Stoneman advanced toward east Tennessee, and on the same day Canby moved his forces against Mobile. Sherman had whipped all the troops opposed to him in his march through the Carolinas, and destroyed communications in all directions. He and Schofield met with their armies at Goldsborough, North Carolina, on the 23d of March, and about all the points on the Atlantic coast were now in our possession.

When Sheridan started to join Grant, Hancock had been put in command of the Middle Military Division. The various armies were all working successfully with a common purpose in view, and under one watchful, guiding mind the web was being woven closer and closer about the Confederate capital, and the cause of secession was every day drawing nearer to its doom.

General Grant's only anxiety now was to prevent the escape of the enemy from Richmond before he could be struck a crushing blow. No campaign in force could be made at this time by moving around to the west of Lee's army and heading it off in that direction, for the reason that the rainy season still continued, and rendered the roads difficult for infantry and impassable for wagons and artillery, and because Sheridan's cavalry had not yet joined our army in front of Petersburg. Every possible precaution was taken meanwhile to prevent Lee from withdrawing his army. Scouts and spies were more active than ever before; about 30,000 men were kept virtually on the picket-line, and all the troops were equipped and supplied, ready to make a forced march at a moment's notice in case Lee should be found moving. It was now ascertained that Sheridan could start from White House on March 25 to join the Army of the Potomac, and on the 24th orders were issued for a general movement of the armies operating against Petersburg and Richmond, to begin on the night of the 28th, for the purpose of marching around Lee's right, breaking up his last remaining railroads, the Danville and the South Side, and giving, if possible, the final blow to the Confederacy.

MR. LINCOLN'S LAST VISIT TO GRANT.

ON March 20 General Grant had telegraphed the President: «Can you not visit City Point

for a day or two? I would like very much to see you, and I think the rest would do you good.» This invitation was promptly accepted, and on the 24th word came that he was on his way up the James aboard the *River Queen*. About nine o'clock that evening the steamer approached the wharf, and General Grant, with those of us who were with him at the moment, including Robert Lincoln, went down to the landing and met the President, Mrs. Lincoln, their youngest son, «Tad,» and several ladies who had come from Washington with the Presidential party. The meeting was very cordial. It lasted but a short time, however, as Mr. Lincoln and his family were evidently fatigued by the trip, and it was thought that they might want to retire at an early hour. His steamer was escorted by a naval vessel named the *Bat*, commanded by Captain John S. Barnes, an accomplished officer of the navy.

GRANT'S FORESIGHT.

GRANT, with his usual foresight, had predicted that Lee would make a determined assault at some point on our lines in an endeavor to throw our troops into confusion, and then make his escape before our men could recover from their consternation and be prepared to follow him closely. As early as February 22 the general-in-chief sent a very characteristic despatch to Parke, who was temporarily in command of the Army of the Potomac during Meade's absence: «As there is a possibility of an attack from the enemy at any time, and especially an attempt to break your center, extra vigilance should be kept up both by the pickets and the troops on the line. Let commanders understand that no time is to be lost awaiting orders, if an attack is made, in bringing all their resources to the point of danger. With proper alacrity in this respect, I would have no objection to seeing the enemy get through.»

On the evening of the 24th of March, General Meade came to headquarters to meet Mrs. Meade, who had arrived by steamer at City Point, and General Grant suggested to him that he had better remain over till the next day, which he did. General Ord also stayed at headquarters that night.

ATTACK ON FORT STEDMAN.

ABOUT six o'clock the next morning, March 25, the camp was awakened and was soon all astir by reason of a message from the Petersburg front saying that the enemy had broken through our lines near Fort Stedman and was making a heavy attack. Soon after it was found that the telegraph line had been broken, and as messages would now have to come most of the distance by couriers, there was increased anxiety as to the movement. General Grant saw at once that his prediction of a month before had been fulfilled, but believed that the cautions given would be observed, so that he did not experience much apprehension. We had wakened him the moment the announcement came by rapping upon the door of the room occupied by him and Mrs. Grant; and in reply to his questions the despatch was read loud enough for him to hear it without opening the door. He dressed at once, and as this was a process which never occupied many minutes, he was soon out in front of his quarters, where he was met by Meade and others. Meade was greatly nettled by the fact that he was absent from his command at such a time, and was pacing up and down with great strides, and dictating orders to his chief-of-staff, General Webb, who was with him, in tones which showed very forcibly the intensity of his feelings. The President, who was aboard his boat anchored out in the river, soon heard of the attack, and he was kept informed of the events which were taking place by his son Robert, who carried the news to him.

General Grant, with his usual aggressiveness, telegraphed to the Army of the James: «This may be a signal for leaving. Be ready to take advantage of it.» It was nearly two hours before any very definite information could be obtained, but the news began to be favorable, and by half-past eight o'clock it was learned that our whole line had been recaptured, many prisoners taken, and that everything was again quiet. Mr. Lincoln now sent a telegram to the Secretary of War, winding up with the words: «Robert just now tells me there was a little rumpus up the line this morning, ending about where it began.» Generals Meade and Ord returned as soon as they could to their respective commands, and took vigorous measures against the enemy.

It seems that the Richmond authorities had come to the conclusion that their position was no longer tenable, and that their army must retreat as soon as possible. A successful attack on our right, it was hoped, would throw our troops into confusion, and while we were maturing plans for the recapture of the lost portion of our lines, and drawing in troops from our left for this purpose, Lee would find an opportunity to make a forced march with his army toward the Carolinas.

Digitized by Google

This attack was one of the most dramatic events of the siege of Petersburg. It was commanded by General J. B. Gordon. There had been placed at his disposal for the purpose about one half of Lee's entire army. For some time men had been leaving the ranks of the enemy and making their way to us through the lines at night. The arms which they brought in were purchased from them at a fair price, and everything possible was done to encourage these desertions. The attacking party, knowing of this practice, took advantage of it, and succeeded in having his skirmishers gain an entrance to our lines in the guise of deserters, and suddenly make prisoners of our pickets. Just before dawn our trench guards were overpowered, our main line was broken between two of our batteries, and Fort Stedman, after a brief but gallant resistance, was captured, and its guns turned against our own troops. Several more batteries to the right and left were soon taken, and as friends could not be distinguished from foes, owing to the darkness, it was for a time difficult for our troops to use artillery. Further assaults, however, were handsomely repulsed; as soon as there was sufficient light a heavy artillery fire was concentrated on the enemy, and at a quarter to eight o'clock Hartranft advanced against Fort Stedman, and recaptured it with comparatively small loss.

The movement was well planned, and carried out with skill and boldness, but it proved a signal failure. It was a desperate military gamble, with very few chances of winning. It was a curious coincidence that on the same day that Lee was preparing for his assault on our right, Grant was writing his orders for a general movement of the Union armies against the enemy's right.

THE PRESIDENT TELLS SOME ANECDOTES.

GENERAL GRANT proposed to the President that forenoon that he should accompany him on a trip to the Petersburg front. The invitation was promptly accepted, and several hours were spent in visiting the troops, who cheered the President enthusiastically. He was greatly interested in looking at the prisoners who had been captured that morning; and while at Meade's headquarters, about two o'clock, sent a despatch to Stanton, saying: «. . . I have nothing to add to what General Meade reports, except that I have seen the prisoners myself, and they look like there might be the number he states—1600.» The President carried a map with him, which he took out of his pocket and examined several times. He had the exact location of the troops marked on it, and he exhibited a singularly accurate knowledge of the various positions.

Upon the return to headquarters at City Point, he sat for a while by the camp-fire; and as the smoke curled about his head during certain shiftings of the wind, and he brushed it away from time to time by waving his right hand in front of his face, he entertained the general-in-chief and several members of the staff by talking in a most interesting manner about public affairs, and illustrating the subjects mentioned with his incomparable anecdotes. At first his manner was grave and his language much more serious than usual. He spoke of the appalling difficulties encountered by the administration, the losses in the field, the perplexing financial problems, and the foreign complications; but said they had all been overcome by the unswerving patriotism of the people, the devotion of the loyal North, and the superb fighting qualities of the troops. After a while he spoke in a more cheerful vein, and said: «England will live to regret her inimical attitude toward us. After the collapse of the rebellion John Bull will find that he has injured himself much more seriously than us. His action reminds me of a barber in Sangamon County in my State. He had just gone to bed when a stranger came along and said he must be shaved; that he had a four days' beard on his face, and was going to take a girl to a ball, and that beard must come off. Well, the barber got up reluctantly and dressed, and seated the man in a chair with a back so low that every time he bore down on him he came near dislocating his victim's neck. He began by lathering his face, including his nose, eyes, and ears, stropped his razor on his boot, and then made a drive at the man's countenance as if he had practised mowing in a stubble-field. He cut a bold swath across the right cheek, carrying away the beard, a pimple, and two warts. The man in the chair ventured to remark: 'You appear to make everything level as you go.' 'Yes,' said the barber; 'and if this handle don't break, I guess I 'll get away with most of what 's there.' The man's cheeks were so hollow that the barber could n't get down into the valleys with the razor, and the ingenious idea occurred to him to stick his finger in the man's mouth and press out the cheeks. Finally he cut clear through the cheek and into his own finger. He pulled the finger out of the man's mouth, snapped the blood off it, glared at him, and cried: 'There, you lan-

Digitized by Google

tern-jawed cuss, you 've made me cut my finger!› And so England will discover that she has got the South into a pretty bad scrape by trying to administer to her, and in the end she will find that she has only cut her own finger.»

After the laugh which followed this story had exhausted itself, General Grant asked: «Mr. President, did you at any time doubt the final success of the cause?» «Never for a moment,» was the prompt and emphatic reply, as Mr. Lincoln leaned forward in his camp-chair and enforced his words by a vigorous gesture of his right hand. «Mr. Seward, when he visited me last summer, gave a very interesting account of the complications and embarrassments arising from the Mason and Slidell affair, when those commissioners were captured on board the English vessel *Trent*,» remarked General Grant. «Yes,» said the President; «Seward studied up all the works ever written on international law, and came to cabinet meetings loaded to the muzzle with the subject. We gave due consideration to the case, but at that critical period of the war it was soon decided to deliver up the prisoners. It was a pretty bitter pill to swallow, but I contented myself with believing that England's triumph in the matter would be short-lived, and that after ending our war successfully we would be so powerful that we could call her to account for all the embarrassments she had inflicted upon us. I felt a good deal like the sick man in Illinois who was told he probably had n't many days longer to live, and he ought to make his peace with any enemies he might have. He said the man he hated worst of all was a fellow named Brown, in the next village, and he guessed he had better begin on him. So Brown was sent for, and when he came the sick man began to say, in a voice as meek as Moses's, that he wanted to die at peace with all his fellow-creatures, and he hoped he and Brown could now shake hands and bury all their enmity. The scene was becoming altogether too pathetic for Brown, who had to get out his handkerchief and wipe the gathering tears from his eyes. It was n't long before he melted, and gave his hand to his neighbor, and they had a regular love-feast of forgiveness. After a parting that would have softened the heart of a grindstone, Brown had about reached the room door when the sick man rose up on his elbow and called out to him: ‹ But see here, Brown; if I should happen to get well, mind, that old grudge stands.› So I thought that if this nation should happen to get well we might want that old grudge against England to stand.»

It was a singular sequel to this conversation that the officer to whom he was then speaking became Mr. Lincoln's successor in the Presidential chair, and carried out this determination by securing a settlement of the account known in history as the «*Alabama* claims,» and the payment from England of fifteen and a half millions of dollars as compensation for damages inflicted upon our commerce.

The President now went aboard his boat to spend the night. The next morning he wandered into the tent of the headquarters telegraph-operator, where several of us were sitting. He pulled out of his pocket a telegram which he had received from the Secretary of War, and his face assumed a broad smile as he said: «Well, the serious Stanton is actually becoming facetious. Just listen to what he says in his despatch: ‹Your telegram and Parke's report of the scrimmage this morning are received. The rebel rooster looks a little the worse, as he could not hold the fence. We have nothing new here. Now you are away, everything is quiet and the tormentors vanished. I hope you will remember General Harrison's advise to his men at Tippecanoe, that they can «see as well a little farther off.»›»

MR. LINCOLN'S KINDNESS TO ANIMALS.

THREE tiny kittens were crawling about the tent at the time. The mother had died, and the little wanderers were expressing their grief by mewing piteously. Mr. Lincoln picked them up, took them on his lap, stroked their soft fur, and murmured: «Poor little creatures, don't cry; you 'll be taken good care of,» and turning to Bowers, said: «Colonel, I hope you will see that these poor little motherless waifs are given plenty of milk and treated kindly.» Bowers replied: «I will see, Mr. President, that they are taken in charge by the cook of our mess, and are well cared for.» Several times during his stay Mr. Lincoln was found fondling these kittens. He would wipe their eyes tenderly with his handkerchief, stroke their smooth coats, and listen to them purring their gratitude to him. It was a curious sight at an army headquarters, upon the eve of a great military crisis in the nation's history, to see the hand which had affixed the signature to the Emancipation Proclamation, and had signed the commissions of all the heroic men who served the cause of the Union, from the general-in-chief to the lowest lieutenant, tenderly caressing three stray kittens. It well illustrated the kindness of the man's disposition,

Digitized by Google

and showed the childlike simplicity which was mingled with the grandeur of his nature.

SHERIDAN'S FINAL ORDERS.

GENERAL GRANT had sent word to Sheridan, whose troops were now crossing the James, to come in person to headquarters, and early on the morning of March 26 he arrived. Rawlins and several other officers were in front of our quarters at the time, and upon seeing Sheridan, who had been separated from us for so long a time, we hurried forward to greet him. Rawlins, in his enthusiasm, seized both of Sheridan's hands in his own, wrung them vigorously, and then went to patting him on the back. Sheridan returned all the greetings warmly, and Rawlins now informed him that General Grant had made up his mind to send the cavalry through to join Sherman, destroying all communications as they went. Sheridan looked greatly annoyed at this information, and Rawlins agreed with him that such a move ought not to be made. Sheridan was told that the general-in-chief was awaiting him in his quarters, and went in and had a long talk. The general showed him the written instructions which he had prepared, and to which Rawlins had just referred. They directed him to proceed with his cavalry around Lee's right, and then to move independently under other instructions. Sheridan felt convinced, from what was said verbally, that he was expected to cut loose and move down to Sherman's army. Some of the staff now entered the room, and found Sheridan arguing against the policy of such a move. When he rose up to go, the general followed him out and had a few words of private conversation. We learned afterward that he told Sheridan that the part of the instructions to which he objected was merely a blind; that he intended to end the contest at once where we were, and that Sheridan was to operate against Lee's right, and be in at the death. He said: «In case the operations of the cavalry should not be an entire success, the people would take it for granted that a definite movement which they had been expecting had been a complete failure, and they would be greatly discouraged. So I wanted the impression to prevail that a different movement had been contemplated. I really have no intention of sending you to Sherman.» This was the general's little secret, which he had kept from all of the staff, and revealed to the cavalry commander Sheridan only at the last moment. Sheridan was made happy by this conversation, and immediately told it to Rawlins, who was as much delighted as Sheridan himself.

LINCOLN REVIEWS THE ARMY OF THE JAMES.

IT was decided that upon this day Mr. Lincoln would review a portion of the Army of the James on the north side of the James River, and Sheridan was invited to join the party from headquarters who were to accompany the President. The boat started from City Point at eleven o'clock.

At breakfast General Grant said to me: «I shall accompany the President, who is to ride ‹Cincinnati,› as he seems to have taken a fancy to him. I wish you would take Mrs. Lincoln and Mrs. Grant to the reviewing-ground in our headquarters ambulance.» I expressed my pleasure at being selected for so pleasant a mission, and arranged to have the ambulance and two good horses put aboard the headquarters boat, which was to carry the party up the river. Captain Barnes, who commanded the vessel which had escorted the President's steamer, was to be one of the party, and I loaned him my horse. This was a favor which was usually accorded with some reluctance to naval officers when they came ashore; for these men of the ocean at times tried to board the animal on the starboard side, and often rolled in the saddle as if there was a heavy sea on; and if the horse, in his anxiety to rid himself of a sea-monster, tried to scrape his rider off by rubbing against a tree, the officer attributed the unseaman-like conduct of the animal entirely to the fact that his steering-gear had become unshipped. A naval hero not long before had borrowed a horse ashore, and attempted to make his seat firmer on deck by grappling the animal's beam-ends with his spurs, which caused the horse to run a little too free before the wind; and when the officer could not succeed in making him shorten sail by hauling in on the reins, he took out his jack-knife and dug it in the animal's flanks, swearing that if he could not bring the craft to in any other way he would scuttle it. Navy officers were about as reluctant to lend their boats to army people, for fear they would knock holes in the bottom when jumping in, break the oars in catching crabs, and stave in the bows through an excess of modesty which manifested itself in a reluctance to give the command, «Way enough!» in time when approaching a wharf.

The President was in a more gloomy mood than usual on the trip up the James. He spoke with much seriousness about the sit-

uation, and did not attempt to tell a single anecdote. As the boat passed the point where Sheridan's cavalry was crossing the river on the pontoon-bridge, he manifested considerable interest in watching the troopers, and addressed a number of questions to their commander. When the boat reached the landing on the north side of the river, I helped the two distinguished ladies who had been intrusted to my care into the ambulance, and started for the reviewing-ground, about two miles distant. The horsemen got the start of us and made good time; but as the road was swampy, and part of it corduroyed with the trunks of small trees, without much reference to their relative size or regularity of position, the ambulance could make but slow progress. Some additional springs had been put under it, and cross-seats arranged so as to make it ride more easily than the ordinary army-ambulance; but the improved springs only served to toss the occupants higher in the air when the wheels struck a particularly aggravating obstacle. Mrs. Lincoln, finding we were losing time, and fearing we would miss part of the review, expressed a wish to move faster, and I reluctantly gave the order to the driver. We were still on a corduroyed portion of the road, and when the horses trotted the mud flew in all directions, and a sudden jolt lifted the party clear off the seats, jammed the ladies' hats against the top of the wagon, and bumped their heads as well. Mrs. Lincoln now insisted on getting out and walking; but as the mud was nearly hub-deep, Mrs. Grant and I persuaded her that we had better stick to the wagon as our only ark of refuge. Finally we reached our destination, but it was some minutes after the review had begun. Mrs. Ord, and the wives of several of the officers who had come up from Fort Monroe for the purpose, appeared on horseback as a mounted escort to Mrs. Lincoln and Mrs. Grant. This added a special charm to the scene, and the review passed off with peculiar brilliancy. Mrs. Grant enjoyed the day with great zest, but Mrs. Lincoln had suffered so much from the fatigue and annoyances of her overland trip that she was not in a mood to derive much pleasure from the occasion. I made up my mind that ambulances, viewed as vehicles for driving distinguished ladies to military reviews, were not a stupendous success, and that thereafter they had better be confined to their legitimate uses of transporting the wounded and attending funerals.

Upon the return trip on the boat, the President seemed to recover his spirits. Perhaps the manifestation of strength on the part of the splendid Army of the James which he had witnessed at the review had served to cheer him up. He told one excellent story on the way back. In speaking of a prominent general, and the failure of the numerous attempts on the President's part to make the officer's services useful to the country, and the necessity finally of relieving him from all command, he said: «I was not more successful than the blacksmith in our town, in my boyhood days, when he tried to put to a useful purpose a big piece of wrought-iron that was in the shop. He heated it, put it on the anvil, and said: ‹I 'm going to make a sledge-hammer out of you.› After a while he stopped hammering it, looked at it, and remarked: ‹Guess I 've drawed you out a little too fine for a sledge-hammer; reckon I 'd better make a clevis of you.› He stuck it in the fire, blew the bellows, got up a good heat, then began shaping the iron again on the anvil. Pretty soon he stopped, sized it up with his eye, and said: ‹Guess I 've drawed you out too thin for a clevis; suppose I better make a clevis-bolt of you.› He put it in the fire, bore down still harder on the bellows, drew out the iron, and went to work at it once more on the anvil. In a few minutes he stopped, took a look, and exclaimed: ‹Well, now I 've got you down a leetle too thin even to make a clevis-bolt out of you.› Then he rammed it in the fire again, threw his whole weight on the bellows, got up a white heat on the iron, jerked it out, carried it in the tongs to the water-barrel, held it over the barrel, and cried: ‹I 've tried to make a sledge-hammer of you, and failed; I 've tried to make a clevis of you, and failed; I 've tried to make a clevis-bolt of you, and failed; now, darn you, I'm going to make a fizzle of you›; and with that he soused it in the water and let it fizz.»

It was nearly dark when the party returned to City Point. After dinner the band was brought down to the steamboat, and a dance was improvised. Several ladies were aboard, and they and the officers danced till midnight. Neither the President nor General Grant joined, even in a square dance, but sat in the after part of the boat conversing. Sheridan stayed overnight at headquarters, and started early in the morning for the cavalry headquarters on the Petersburg front.

(To be continued.)

IX.

THERE was silence in the town following the morning's excitement. Gunners were resting in the English camp, and no stone burst over the tile roofs. The lull of that booming made stillness quiver in the ears, and nobody trod past the gates. White clouds moved luminous across the blue. The low sky of France, unswept by wind, tempering its sunshine by a divinely bright grayness, lay brooding growths over that whole country, from the great plain of the Beauce north of Orléans, the granary of France in good times, where many horizons cannot contain the sheaves, to the long waste of the Sologne southward. Both were then unplowed and unplanted, trampled by hoofs, and turning green only with the irrepressible moist verdure of spring.

Jeanne lay asleep in a paneled room, which she shared nightly with the treasurer's little daughter, under a vaulted ceiling of blue stone with many weird white griffins cut on its arch. The sashes of three round-topped windows were opened inward. No sound came from the court, for Bertrand polished the armor with a piece of soft leather, and the joints of his own harness moved silently on rivets. When he spoke again, his voice did not mount to the sloping window-sills.

«Some of these knights complain that since Franciscan monks began to roam about the country, teaching people their doctrine, we have nothing but mysteries and revelations. In God's name, how can they ill-treat a pucelle who led them to-day past a cowed foe, that they have been running from ever since you and I were born?»

Pierre shook his head, and so freed himself of anxiety.

«I know nothing of these Southern humors. The best thing I have seen in France is that good well of St. Martin at Tours. I have been thirsting for it,» said Pierre, lowering his narrowed eyes to the basking ground, «ever since we came away.»

The two young men were startled by a cry through the open sashes:

«My arms! my arms! Quick! quick! my arms! The blood of Frenchmen is running on the ground!»

Bertrand gathered up the pieces of armor, and ran with Pierre through a long, narrow passage which led to Jeanne's chamber. She was standing in the middle of the floor, where she had leaped from the bed. Her eyes had the rapt look left in them by her visions. Her squire with swift fingers, and her brother with clumsier efforts, buckled on breastplate and backpiece. Thigh- and frontplates were adjusted, leaving the back of the leg free to press the horse; the feet covered with mailed shoes; the armpieces and gauntlets made fast; the helmet, the belt and sword. She flew to the courtyard. No Louis de Coutes was in sight with her horse. Pierre brought it, bitting its mouth and strapping on the high-backed saddle while Bertrand fastened the mailed housings. They helped her mount from the bench, and her squire flew back for her standard. There was no time to bring it forth; he passed it to her through the window.

«Follow!» she cried to them, as Pierre opened the gate; and both flung themselves on their horses. They began to hear a tumult and shouts of disaster eastward. They swerved behind her across one street, and flying horse-hoofs struck fire from stones paving that billowy, rising and falling, slightly bent thoroughfare to the old Roman road called Rue Burgundy. Bloody-headed citizens passed carrying wounded men. Bertrand shouted to Pierre through his teeth, as they rode knee to knee:

«The fools went out to take the bastile of St. Loup without her.»

A third of a league and three minutes brought them to the Burgundy gate, which was already open to let in a rabble of retreating French. On these came—archers and men-at-arms, captains, citizens, and crossbowmen, those mounted pressing in first, those on foot flying wild-eyed. And

Digitized by Google

after them, in full career, were the pursuing English.

Jeanne rose in her stirrups with the lift of an eagle, and raised her banner high above the panic-driven mob. Now was heard a woman's voice, a leader's voice, an angel's voice, bell-like, spreading its tones wave upon wave, until they seemed to reach the horizon, to ripple over the Beauce, to die away in the Sologne, to drive eastward far across the bastile of St. Loup:

«Amys! Amys! ayez bon courage! Sus! Sus! Ils sont tous nostres!»[1]

Like an arrow, the maid and the white banner shot through the Burgundy gate at the English, and they paused and wavered. The foremost pursuers shrank down bodily, and moved backward, facing her. At her sweet and terrible cry they turned, howling in English or Franco-Norman:

«The witch! The witch! To cover—the witch is let loose!»

The rallied French followed her. Those who had fled farthest ran wild with courage on her track. It had been their custom so many years to scatter before the English that the sight of English backs frenzied them. All the knights roused in the city joined in the pursuit; the Bastard of Orléans, with his retinue, came flying from the ducal house by St. Catherine's gate; the young Duke of Alençon, La Hire, De Xantrailles, De Metz, each with his men shouting to the rescue, flew over the Roman road, crossed the double moats, and scaled the works of St. Loup.

They drove, they slew, they swept the enemy. The maid was in the church around which the bastile was built, pulling refugees from the belfry, sending back prisoners. Everywhere St. Catherine's sword was seen as lightning. Shouts rang beyond Orléans and the English camp. Before the camp, roused by trumpets, could hurry reinforcements around the walls, St. Loup was taken, sacked, riddled, destroyed. The eastern stronghold of the English was gone.

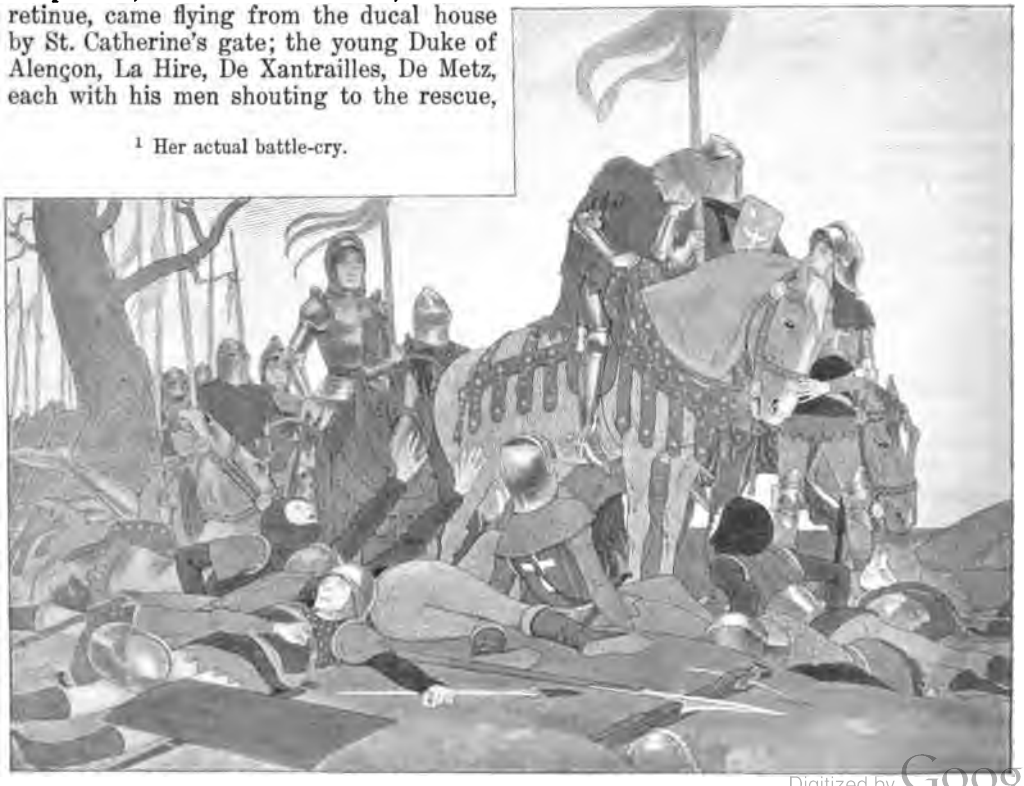
When it was finished, the sweating soldiers, flushed and roaring with success, abated the noise of their joy over France's first victory in years, for the pucelle was down on her knees protecting a dying Englishman.

«Let him alone!» she cried, striking a lance from his breast. «Do not hurt him any more! Why will they not go back to their homes? I cannot bear to see them die!»

This was the witch—this tender face, like the face of some dear maid at home, dropping tears under a lifted vizor. Her enemy died with this image upon his eyeballs.

But in the city all the bells rang, and people ran laughing through the streets.

[1] Her actual battle-cry.



JEANNE WEEPS ON THE FIELD OF BATTLE.

Now had their maid given proof that she was sent. St. Loup was taken, and the English were cut off from Jargeau. The soldiers would have lain upon the pavement and let her ride over their bodies. They were for going out to attack the Tourelles next morning, but became religious as soon as it was known that the maid desired to keep that day holy, it being Ascension day. «She is forever taking the *bon Dieu*,»[1] they said to one another; «her common food is nothing but bread and watered wine.»

Both besieged and besiegers knew the most important English fortress was that called the Tourelles, on the end of the bridge. The English, by spreading their forces from boulevard to boulevard over a space of nearly two leagues, diminished their strength; but the fort on the bridge was well manned.

The bridge, a stone structure of the twelfth century, had nineteen arches, and from the city gate of St. Catherine to the south shore was more than a thousand feet long. Beyond the fifth arch it rested on and crossed a narrow island, where a chapel, a hospital, and a few houses remained. Here some houses were built also upon the bridge, and they had been converted into a small bastile. Above the twelfth arch was a venerable cross, and at the end of the bridge was the strong fort of the Tourelles, separated from the Sologne side by a drawbridge, and guarded on land by both a bastile and a boulevard. The French fortified these towers for their own safety. The English had assaulted and carried the place in October. That same day their commander, Salisbury, was killed in it by a stone cannon-ball. The retreating French broke down those arches giving entrance to St. Catherine's gate, and their enemies barricaded the broken end. To retake the Tourelles would not only clear the blockade half-way around Orléans: it would cut the English off from the object of their siege, which was invasion south of the Loire.

«I shall be wounded to-day betwixt my neck and my breast,» said Jeanne, as her squire armed her the second morning after Ascension day. Bertrand's lips whitened and stiffened.

«How do you know that?»

«The counsel has told me.»

She seldom noticed him when he was girding her buckles, but this time she put her hands affectionately on his shoulders. As he stood level with her own eyes he trembled with unsteadiness, which the maid could not understand, and he breathed with the rise and fall of her own breast in its steel cuirass.

«Bertrand, I am growing to love you almost as well as I do Pierrelo,» she said, with large and open natural affection. «You have been a man since you came into France. You have seen I was born for this labor. And what if blood must go out of me this day? I have told the dauphin I cannot last above a year or two, and he had best make use of me. Have you ever thought it a good to die?»

«Yes, I have so thought it,» he answered, facing her steadily, his eyes swimming in rapture stolen from her touch. Jeanne had not a woman's sense of this great passion. She would as freely and honestly have laid her hands on the knight of Novelopont, who had just received back from the dauphin the moneys he had expended on her journey into France, or the Duke of Alençon, whom she had promised to keep safe for his young wife. She was a comrade to every man whose strength went with hers against the invader.

«I will tell you,» said Jeanne, in a whisper; «since these voices have come to me, there is such anguish of homesickness to be gone with them when they leave me that my spirit leaps at thought of death. Oh, think of being through—well through—with what we are obliged to undertake! Yet I am so alive,» laughed the maid. «I enjoy my body; I love my family, and my home, and this world; but more than anything else under the sky I love sacred France. Bertrand, if you could hear my heart beat, the sound would be nothing but ‹France—France—France—France!›

«The battle this day will go hard with us,» said Jeanne, removing her hands from her squire, and letting him put on her helmet. She pushed up the grotesque pointed vizor, and her voice, coming from the case of steel, was weirdly prophetic.

«It will not be until my standard touches the steep side of that boulevard that we can go in. I do not know when the moment will be, but I shall be told. Bertrand, I want you to bear my standard in the assault of the Tourelles; but do not press into the foss and let the banner float against the works until I tell you; it will do no good until the English are given into our hands.»

Early as it was, the bombarding had begun, though gunpowder was used in such insufficient quantities, and the cannon around Orléans were trained at such angles, that projectiles tumbled perpendicularly from the height to which they were thrown over the city. Orleans answered with the mouths of

[1] Sacrament.

Digitized by Google

its pieces through embrasures in the walls. Like other towns, Orléans could make its own gunpowder, mixing the parts, however, so that minimum force was generated in the burning. But there were no firearms to be carried by the marching soldiers. Archers and arbalétriers formed the most considerable portion of any body of troops. The rule throughout Christendom was to support any number of men-at-arms with three times as many archers.

Cavalry, as the word is now understood, did not exist. Men-at-arms and archers both went mounted or afoot, as their undertakings required, and in action they were necessarily separated and independent of each other. Soldiers who hewed with guisarmes and pole-axes, or drove with lances, hammers, and swords, could not be embarrassed by archers, over whose pickets and bodies they must ride or run from behind, and whose bolts they must risk after passing if both advanced together, for battle was then a mighty cluster of hand-to-hand duels. Knights, nobles, princes, and even kings, threw themselves at the head of their followers into these combats. No man stood in his place to be shot at; but he picked him out a lusty opponent, and if he had the good fortune, progressed foot by foot over fallen bodies into the enemy's ground.

At dawn that seventh day of May nearly every soldier in Orléans, obeying the maid, had gone shriven to mass. No lewd women had been allowed to join the march from Tours or Blois. The barracks were indeed like monks' cells, and every profane word was punished by discipline, at her orders, and herein the captains regarded their sovereign's command to submit themselves to her direction better than in matters of war.

One commander neglected the duty of confession, remembering it only as he galloped past the misty cathedral front with his retinue. He struck his mailed hip and swore, and Poton de Xantrailles, riding near him, laughed aloud.

«Hug thy holy bones and chuckle, Poton,» retorted La Hire. «A man that hath nothing but a clean conscience inside his armor, and gives his mind to handling a shield as thou dost, is safe anywhere.»

There was a glut of men at the Burgundy gate. Horses could scarcely move in the crowd. Jeanne's standard showed near the portal, and behind it, over the Bastard, was displayed the great red banner of Orléans, covered with needlework. The governor of the city, having received conflicting orders from that council held the day the troops entered, refused to open the Burgundy gate. He had been told that the attack on the English camp was to be made through Porte Renart, and he was not the man to give way, even though both pucelle and Bastard commanded him.

«Break his head with his keys, and throw him over the wall!» shouted La Hire, who, sputtering with the effort to keep back words unfit for the pucelle's ears, swore with tremendous zeal by the baton.

Orléans was surrounded by a foss which, under the gates, expanded to deep paved courts. As the Porte Burgundy was forced from within, the drawbridge fell with a clang, and the crowd burst out, gentler riders and less aggressive foot-soldiers being thrown backward by the recoil. Each captain sought to put in order again his retinue of twenty-five or thirty lances and seventy-five archers. Jeanne's confessor, who always rode with her as both priest and surgeon, was pushed on his palfrey, which replaced the jaded Domremy beast, across the front of La Hire's great horse.

«Behold the reward of swearing by the baton,» shouted De Xantrailles over the general discomfort. «La Hire hath not confessed himself, but he is permitted to go out with the broad side of a friar for a breastplate.»

«La Hire will confess himself now,» retorted Jeanne's convert. «Turn thee, Brother Pasquerel, for when we pass yon portal, adieu, religion. La Hire hath committed the usual sins of a man-at-arms, as well as he could behind the pucelle's back, who gives a man no chance even to wash his mouth with a good sweet oath, and he begs for absolution.»

The friar, reining alongside that squat, broad suit of armor, murmured at the casque which was inclined toward him. Whether he spoke forgiveness or reproof to the sinner, La Hire accepted it with a hearty «Amen.» He set spurs to his horse and shot through the gate.

«Now, God,» said he aloud and free-hearted, «be pleased to do for La Hire this day what La Hire would do for thee if he were God and thou wert La Hire.»

There was no longer a bastile of St. Loup to prevent the easy transportation of troops across the river. Boats landed the army on the south shore, where they had first halted. The English camp on the west side took no part in the action of this day, except continuing to bombard the city.

The little bastile called St. Jean le Blanc

Digitized by Google

had been taken by the French in a sortie on the day after Ascension, its garrison retreating to the bridge boulevard. This was the first time that Jeanne had seen chausse-trappes—small pieces of iron which, falling in any position, turned a foot-piercing point uppermost. The English threw chausse-trappes behind themselves, and every lance, English or French, had them as part of his equipment.

The French archers advanced within shot of the Tourelles, each carrying with him a tough, sharp picket to drive into the ground if such bristling defense should be needed against horses. With arrows laid in a row under his feet ready to the grasp, he sent his feathered shots into the bodies of the enemy. A horizontal snow-storm thus swept the Tourelles. Long practice was required to make an expert archer, while lances had only to drive and dare, to hew with guisarme or strike with hammer, protecting themselves with their pavas, or shields. Cross-bowmen also, setting their weapons point downward on the ground, and holding them with foot in stirrup and bow across their knees, while they whirled double handles to adjust arrows in grooves, shot bolts by a trigger which exceeded the strength of the human hand on a bowstring. The range of crossbowmen was much greater than the range attained by archers, though the English were said to excel them with good single yew bows and yard-long shafts.

Five hundred men fought in the Tourelles, and they were made a host by William Gladsdal, a mere squire, who, though far below other captains in social rank, had merited and received entire command of the south shore. He drew his force into the outwork or bastile on the bank, which was unusually steep from the bottom of the moat to the top of the earthen crest. Boiling oil, molten lead, stones, arrows, lances, axes, maces, or clubs fought down the ascending French. Carrying St. Loup by assault was a light feat of arms compared with driving a man like Gladsdal from his position. His men shouted insulting words at the witch of the Armagnacs. The noise of attack and repulse was terrific. Huge pincers dragged timbers from the bastile. The French, stooping forward with their shields slung over their backs for defense, ran up scaling-ladders to seize their enemies at the top; and again and again were the ladders flung down, with stones, molten lead, and boiling oil on the heads of the climbers. Shouts,—«England and St. George!» «France and St. Denis!» «Remember Agincourt!»—the cries of captains, the clang of axes on armor, the crack of oak when split, the twang of bow-strings, and the steady singing of arrows—all this confusion of battle was heard by Jeanne with swooning ears. From the first ladder planted she had fallen, with an arrow piercing that joint of her armor where the shoulder moved on the neckpiece.

A knight lifted her out of the ditch. She felt the jarring as he dragged her back from the press.

«You are hurt, pucelle; here, take my horse.»

«Who are you, messire?»

He threw up his vizor and showed his face. «De Gamaches, who flouted you in council. But I was mistaken in you, pucelle. Bear me no malice, and take my horse.»

«I bear no one malice, Messire de Gamaches, and I will gladly take your horse.»

Bertrand's arm steadied her in the saddle. She saw her banner half furled in his hand. She swooned in a vineyard beyond the ruined faubourg, the bolt of anguish still piercing her. Brother Pasquerel, and Pierre, and many more drew around her, hesitating to pull it out, though they took her armor off and bathed her face. The point stuck out behind her the length of her finger. She herself sat up and laughed, to take the anguish from their faces, and jerked it out, drenching her breast with blood. Pierre held her steadily, but Bertrand doubled forward on his knees and hid his eyes from that blood and from the sacred baring of her shoulder, which the friar oiled and bound up.

She prayed voicelessly, lying on the earth among the vines; and when the first faintness was past she rose to her knees.

The attack on the Tourelles had not begun until ten o'clock, all the troops being first conveyed across the river. It was afternoon when Jeanne noticed the decreasing noise of battle. Discouraged assailants, led vainly by the Bastard, D'Alençon, La Hire, and De Xantrailles, were drawing back from the Tourelles out of bow-shot, and in spite of their captains making for the boats.

«En nom De!» besought the maid, «run—bear word to the Bastard! Tell him to let them eat and drink and rest. The men are faint. When their strength comes again we will go in, for the place is ours.»

Noise of cannonading continued on the north shore, and smoke spread there like a stratum of tinted mist. The cannon in the Tourelles and the boulevard, which had done little execution in a hand-to-hand struggle,

Jeanne's Reception by the King after the Battle of Orléans.

now threw stones into the fields across the ruined faubourg. Perhaps the French, while they ate and drank such food as had been brought from the town, with missiles like small globes dropping about them, remembered, and cursed their leaders in remembering, that it was not the pucelle's counsel to attempt these works. She had wished first to attack the English camp, but, with good sense as strong as genius, made herself subservient to the captains.

All the western plain and river turned rosy as the sun slipped low. There was an old path winding into the trampled vineyard, and it became pink under the pink sky. The two towers of the Tourelles, one round, the other many-angled, swam aloft in a sea of yellowing light. That embankment by the river, where an unprotected battery had been taken the day before, betwixt St. Jean le Blanc and the bridge, stood up clean-cut in the magnifying air.

Gladsdal's garrison, serving their guns, and less troubled by the scattered French than by marksmen on the city walls, saw with astonishment that their assailants were again massing. More than that, they saw the white armor of the witch who had been killed rise up in the weird horizontal sunset light.

«There are white birds fluttering about her head!» some of them gasped to others; «do you see the white birds?»

«She was carried off with an arrow through her body, and here she comes at mad gallop!»

The maid dashed breakneck into the ditch, her banner carried by a squire racing beside her. It touched, it swept the earthen wall. Again that sweet bell-voice, which carried the soul of France to certain victory, rolled over the doomed Tourelles:

«Ayez bon courage! Ils sont tous nostres!»

Men-at-arms flung their shields over their backs, and plunged from ladder-tops into the bastile—archers, knights, captains, nobles.

They carried it; they forced the boulevard behind it. The English ran to the drawbridge to retreat into the Tourelles. At the Orléans end of the bridge the pucelle's voice was answered by rejoicing cries. St. Catherine's gate flew open, the garrison and citizens of Orléans running with timbers to cover the broken arches and assault Gladsdal on their side. Old Jehan of Lorraine, the master cannoneer, who had once fallen into English hands and lost his piece when it was trundled on its movable table outside the gates, danced in rapture on the wall; for the ball that he sent from his battery, as the boulevard was carried, cut away the Tourelles drawbridge under the English, and Gladsdal and his men were dashed into the river. On went the shouting French, casting across the gap planks torn from outworks. The Tourelles, the prisoners therein, the bridge, the battle, were theirs,

and they marched with the maid through St. Catherine's gate into Orléans.

«She drives the English, and then she weeps over them as they die,» exulted the soldiers. It had been indeed a great waste of life. «More prisoners should have been taken and held to ransom,» declared La Hire; «men who receive but eight deniers a day for military service need all the Englishmen they can catch.»

This often-described battle, which turned the tide of invasion and changed the history of the world, was ended; for next morning the English raised the siege, and setting fire to their line of remaining works, drew away. A blockade which had lasted eight months, and worn out all the military resources of the kingdom, was broken by the maid in three days. Te Deum was chanted in the cathedral, and people ran shouting in the streets all night long, for the bells rang without ceasing in Orléans.

X.

ON a warm afternoon late in July, when the sun was getting low behind the Domremy hills, Mengette watched skylarks rise from the ground. She had two flocks of geese on the uplands, her own and Isabel Romée's, and kept them apart, nipping grass, and from wandering into the young vines below, for all the vineyards were weighted with green grapes bunched near the earth. The vines were like bushes tied to stakes with wisps of straw. Wide, open fields spread along the ridge to an oak jungle southward. Once, when the young maids were racing on this ridge, Jehannette had seemed to blow like a leaf, outstripping them all, and they looked at her as at one who had died and come to life again. Mengette remembered that this had caused her to feel her first pang of separateness from her playmate. And now Jehannette, parted from Domremy but six months, was at Rheims making the dauphin to be crowned!

Jean Morel and Gerardin d'Épinal had brought the news from Châlons, where they saw her and the marching army. The siege of Orléans was raised, and the English had been driven from Jargeau, from Meung and Beaugency, and had been beaten in the battle of Patay. Where these places were Mengette did not know, but she had the words by heart. Jargeau, Meung, Beaugency, and Patay all taken in ten days! Jean Morel and Gerardin d'Épinal said that Jehannette was leading a host which increased every hour; for whoever had a horse clapped saddle on it and joined the cavalcade, bearing his own expenses. Troyes had opened its gates and surrendered to the dauphin and the maid—Troyes, where the treaty disinheriting him had been made by his mother and the English! Town after town delivered up its keys and returned to its natural allegiance. The pucelle, without a battle, was sweeping all the North into her sovereign's hands!

«'The Pucelle' is the name they give her,» said Gerardin, proud that Jehannette had held his child at the baptismal font; «and she goes like a great general, in cloth of gold, on magnificent horses, changing them so that they are never jaded. The soldiers have an awe of her as of something divine. In the field she sleeps in her armor, and the life of her body is hidden from them; yet she flung herself off her horse, and shook Jean and me both by our hands, as soon as she saw us. They say the dauphin would have kissed her when she came to him after raising the siege of Orléans, but not even he hath the effrontery to handle her. And how high is the look of her countenance! She laughs like little Jehannette yet, but I would as lief have St. Margaret's or St. Catherine's eyes on me as hers. She wears burnished mail so white that it shines dazzling, and has squires and servants to wait on her. We saw Pierre and Bertrand de Poulengy, and for confessor she hath the friar who set forth to the wars with Pierre. And everybody in Châlons looked once at the Dauphin Charles and his retinue of nobles, and all the time thereafter at the Pucelle.»

Jacques and Isabel had gone to Rheims, to see the dauphin crowned and to bring home their children. They had been absent more than a week. The curé and Jacquemine and Durand Laxart went with them, but Mengette felt quietly sure they would not return with Jehannette in their company; and if not with Jehannette, neither with Pierre. She endured vicarious pangs for her dear playmate uprooted from home, though how much worse it would be for Jehannette to come home and find Domremy so changed!

The curé and Jacques being both without horses, Durand Laxart took the priest in his cart, while Jacques had been obliged to borrow the Widow Davide's beast, which was grudgingly lent, though she would receive for the loan a measure of wine at the vintage. The journey from Domremy to Rheims was over sunny country, where the mud of spring was long dried up. But Jacques d'Arc was going to see a glorified daughter, and the

Widow Davide did not know where her Haumette was. Human bitterness grew in the woman at such raising up and pulling down. Mengette knew the Widow Davide's tongue began to work the very day Jean Morel and Gerardin d'Épinal brought their wonderful story. She was cross in her wine-shop when Domremy rang its church bell, and crosser when Greux, though Burgundian in its preferences, rung also for the maid of Lorraine. A rider spurred up the long ascent to Bury-la-Côte; and there Durand Laxart danced wildly in the street, and Bury-la-Côte rang its bell also. Thus from town to town up the Meuse valley sped news of the maid; and from Domremy to Vaucouleurs, where the people made a public procession of thanks, the bells, through which she heard her voices best,—the bells which were like her own pealing cry,—rang her victories.

As soon as the priest, excused from his offices, and Jacques and Isabel were on the road to Rheims, jealousy of the D'Arc family spread over Domremy like fog from the river. Its sinuous twistings were in every house, and Mengette saw the women turn their heads when she went toward Greux with her geese, instead of giving her a «good day.» The Pucelle's closed, shed-shaped home seemed to rouse antagonism. Mengette saw her neighbors pointing at it and laughing. They had once talked about Jehannette's visions, and all knew her long waiting and sorrow. Did it amuse them that she had burst from her years of preparation into swift, miraculous action, gaining for the French five great battles in two weeks, and leading the dauphin in victorious progress through a hostile country to his coronation? Mengette had no envy, and did not understand that the Pucelle's sudden rise before all Christendom might affect her neighbors like their own downfall.

The wine-shop door was shut in Choux's face, his cronies sitting with the cool garden under their eyes at the back of the house. Unused to being banished from the wine-shop without having his ear pinched, Choux waited in the street, hunched on the stone coping which surrounded the manure-heap; and the Widow Davide came out, and denounced him openly as a sorcerer with a voice from the devil, a consorter with people who did things by witchcraft. His own foulness made more wholesome by the stable odor in which he sat, he thrust his face at her, and called boldly on Valentin to torment her at night, which sent the Widow Davide clattering into the church for holy water and a cautious prayer or two against the evil eye.

Choux's face projected more and more like a beast's in front of his ears. Mengette's abhorrence of him in ebb and flow tossed her clean virgin spirit, but she held on to duty, and made regular confession of it. Father Fronte laid no penance on her, even when she owned to wondering if Choux would never die; for when his hissing grew unendurable, the old order of things lost their charm, and she reached the state of constantly desiring to have him under ground, tied in his last clean cap and deaf to voices. After Isabel's reproof he and Valentin had shrieked no more aloud, but they took to whispering; and Mengette's skin prickled all over when she heard them filling darkness with fierce sibilations, like a pair of colossal ganders. She knew there was a Valentin, though Isabel had scarcely believed in his existence and soon forgot him. Nightly, month after month, his invisible company oppressed the house and gave it an uncanny name. The priest privately exorcised him, and punished Choux by withdrawing the church's consolations for a time; but that old sinner no longer cared for the bon Dieu. Father Fronte began to regard him as a poor idiot, the sport of fiends, more to be pitied and endured than corrected.

Jacquemine now had much of Pierre's work to do, and sulked continually, being far from strong; and when Mengette gladly helped him, he could talk of nothing but his troubles. Yet, in spite of these things, Mengette never came on a day when she did not live with zest. The July afternoon put Domremy out of her head. Creamy air, smooth and soft upon the cheeks, strewed wisps of gray or opal color against green hills. The Meuse was nearly hid in bushes. She could see Jean Morel and Gerardin d'Épinal at work in their vineyards below the oak woods. These travelers, who had gone as far as fifteen leagues to Châlons, were behind in tying up the vines; but they worked with the stir of the world in their blood. They knew the vintage was going to be good, and declared the last Burgundian riders had trampled the march of Lorraine. As for that wicked Queen Isabel, she now sat in Paris quaking from morning till night, though the sun was there so hot that dunghills reeked; and what would she do when her crowned son turned from Rheims to march with the Pucelle on Paris?

A skylark rose from a wide level between the flocks of geese, wheeling and singing, sweet and lilting, until he was out of sight,

Digitized by Google

though his voice seemed as near as ever. Mengette stood with her face turned upward, searching for his dot of body against dazzling light; motes swam before her eyes in the upper air; then the lark appeared, wheeling downward. His rejoicing did not cease an instant. When higher than a hundred feet, he dropped like a stone, head downward, described one more circle, and alighted in the grass. All the time his singing was so joyful that it made Mengette laugh. He did not mind her near approach, but was up again, for pure gladness, and out of sight again, his voice bubbling in every direction over the sky; then down he wheeled and dropped, circled once more, and hid himself in the grass. So he kept it up until the sun was almost gone. Mengette's neck ached with supporting her back-tilted head while he was aloft, and her lips were stretched with the laughter of delight. She loved him, and had loved his fathers before him all her summers. Her dazzled eyes could hardly see the stony land mottled with specks of white.

Therefore when an outcry broke from Domremy street, in front of the church, she looked down the long hill shoulder, blind to its cause. Her own house and the garden behind it, crowded with growing things, were a blur till her eyes were fitted to the lower light. The black wheat, or buckwheat, which made her winter bread, was all in flower, a gray smear within the wall.

Mengette could hear Choux screaming her name, and her first startled thought was that the devil might be carrying him off. She felt her whole body blanch with fright. Then she began to see people running, and a man and a woman dragging Choux by the shoulders, his hump and heels scraping the ground. Domremy had risen against sorcery.

It was a sin, but Mengette's next thought was fear that the two flocks of geese might mix or stray or damage vines if she left them, so strong is the hold of small cares on poverty. But compassion, unready in her brain, was swifter in her muscles. Directly another flying figure added itself to the village mob. Mengette, breathless, dragged at Choux to liberate him from the mob's hands. Her neighbors, who knelt in church with her, were like wild beasts.

«Let go this sorcerer!» screamed Widow Davide; «we have had enough of voices and visions and witchcraft. Let them believe who will that Jehannette d'Arc doth her great miracles of siege-raising by the help of the saints. We know this old beast hath long communicated with devils. He ought to be burned; but fagots are too good to waste on him—we will drown him in the Meuse.»

Mengette put herself in front of Choux, who shrilled like a chicken with something in its neck. This spasmodic shriek, and his odor, and his prehensile, sucking grip, from which there was no escape, made her turn faint. With the ferocious self-preservation of age, he held her before him; and she felt his thumbs, which curved sharply backward with a claw at the end, sink their joints into her hips. His thick, bestial lower lip blubbered first at one side of her waist and then at the other, as he watched his antagonists. Mengette trembled.

«You have never been well liked yourself for harboring the old wretch,» warned the Widow Davide's nephew, who had helped drag Choux.

«It matters not,» answered Mengette.

«People despise you,» declared the Widow Davide, hands on hips, and nose thrust into the maid's ghastly face.

«It matters not,» answered Mengette.

«Let us have him, or we will throw you into the river with him.»

«It matters not,» answered Mengette, her tongue bound to one phrase; for she could not argue with them, or threaten them with the curé, or think of any good thing which might turn their minds. And there was old Simone of Greux, who could barely totter on two canes, licking his sunken mouth with fierce desire to slay, and shrilling, «Put them both in the Meuse!»

And there were the children who loved to stroke Mengette's milk-white gander, staring at her as at a cursed thing. She had early learned what is so hard for the young to learn, that many things must be endured alone. But there is no loneliness like isolation as the protector of an abhorrent thing. Some of the excited villagers drew back, touched to their souls by her hunted eyes. The rest, provoked by resistance, with frenzied clamor dragged both Mengette and Choux to the deep washing-pool.

Choux's throat closed to sound, and his face extended long and horse-like in front of his ears. Mengette could see it, though his hold on her back was not broken, as she struggled against the hands of her executioners until her petticoat and bodice were torn to shreds. Her lithe body twisting and her arms beating in the midst of a crowd were seen by Jean Morel and Gerardin d'Épinal in their vineyards. They ran shouting at the top of their voices.

Men who had been farther than Châlons

Digitized by Google

might not have prevailed at that time to stop unjust violence, but two dreadful things helped them—the sight of a maid's naked, scratched arms and breast and dropping petticoat, and news from Greux that the priest had already passed Bermont chapel on the Bury-la-Côte road which led from Rheims.

The crowd fell apart. Every woman was ready to cover poor Mengette and take her home. They began to blame one another, and those who had only stood and looked on went into their houses with a virtuous air, determined that the priest should know they had nothing to do with it. Choux and sorcery were forgotten. They all wished to be standing by their doors, or driving in the cows, or to be bringing great innocent panniers of lucerne on their backs, or gathering home the children and the geese, when they welcomed the priest as he returned along Domremy street.

But before the angelus rang, nearly every soul, warned out by Father Fronte's command, gathered in the church. Choux was not there. He crouched in his chamber; and Valentin was not heard to whisper all that night. Mengette was not there. She lay in her cupboard bed, and though it was July, the serge-covered down sack lay over her feet, for twilight brought in the coolness of the hills. Isabel Romée sat beside her, too exalted to feel that bitterness against her neighbors for their behavior which she must have felt if she had not been to Rheims.

But Jacques and Jacquemine were in the dark church, where almost invisible sinners cowered on the prayer-benches. The terrors of that religion whose rights of trial and punishment they had usurped hung over a pastoral people unused to public ferment. The Widow Davide knelt on the stone floor; she was often mourning her daughter there, and sank lower and lower in a contrite heap.

Two candles only lighted the altar. The curé came out of the sacristy, and taking one of them, ascended a pulpit near the center of the church, and set it on the reading-desk before him. White groins and arches were half discernible overhead. In one transept was an image of St. Catherine, and there Jehannette d'Arc used to pray. The priest led his people through a short benediction service, and then he said:

«I have heard all that you attempted to do this day to Choux, who is a sinner, and to Mengette, who would have perished a martyr. And why were you moved to it? I know your hearts, full of jealousy and envy. You were not mad against sorcery: you were mad against royal favor that hath not been shown to you. None of you have complained of any damage done to you by Choux; but when my back is turned you rise up to put him to death, and shamefully misuse an innocent maid, because of your spite and malice.»

The church was very still. Jacquemine, in his place, felt fierce to punish these peasants who had not been to Rheims.

«I have been to Rheims,» said Father Fronte. «I have seen our dauphin crowned a king; I have seen the Pucelle, who grew up among us with holy visions in this valley, where some of you run to violence, stand before her sovereign to be questioned what she desired for all her services. She asked but one thing: 'Take the tax forever off Domremy and Greux.' The king takes the burden of tax off Domremy and Greux. Your priest and Jacques d'Arc bring you the news. I have no more to say. Go home.»

The congregation did not stir. Father Fronte also stood still in the little circle of candlelight. He could hear their labored breath. They all, like one great sorrowful child, burst into weeping, and wept aloud.

XI.

ISABEL could hear that contrite noise in the church through Mengette's open door and windows. Both women understood it, but they continued their talk about Rheims. Isabel had brought home all the geese from the uplands, and given evening bread and drink to this prostrate family as well as her own. The hill twilight of home filled her heart to the brim. Mengette's slight outline was stretched in exhaustion under the down sack, which she drew to her armpits as the air grew cooler, her face shining white above it. The pot-hanger dangling from the back of her fireless chimney was lost in the dark, and both door and windows framed nothingness. She forgot her trouble in the splendor of a realized vision, which Isabel could not keep from painting on the Domremy night.

«So all hath been fulfilled. While we spun or sewed or worked in the vineyards, the months have changed Jehannette like many years. At first I did not know her in her armor. We all stood to see the king and his troops enter Rheims on Saturday evening, for he received his worthy anointing on Sunday; and there was my child riding at his side with a white banner, so glorious a creature, the people so adoring her with cries and weeping, that I hid my face against a wall, and shook with a kind of palsy, and saw not

Digitized by Google

her brother; he rode behind her. But when she came flying to the inn where we slept,—for she was lodged with the king's company at the archbishop's château,—and with her head bare cast herself into our arms, Jacques fainted down upon the floor. She kissed him and tended him. I could see she was our same Jehannette. She inquired for you, and named everybody in Domremy. Her heart was set on coming home with us, since her task was fulfilled at Rheims; but the king and all the army held to her with pleadings, and reproached her for desiring to turn back while the English are still in France.»

«And Pierrelo, also—he was well?» put in Mengette.

«Well and ruddy, and all a soldier. Pierrelo hath become wasteful, living among nobles; but he paid into Jacques's hand the money which our horse brought in Tours, and more besides, from spoils and ransoms of the English. Jehannette will not take either spoils or ransoms, or money from the king, except to pay her household. The king would have given honors to both Jacques and Durand Laxart; but they would have nothing, so he made our Jacquemine bailiff of Vaucouleurs. Messire de Baudricourt hath joined the army with his retinue, and he and Durand were made to tell over and again the story of her setting out for France. Durand Laxart boasted a thousand times, ‹And I carried her to Vaucouleurs!› wandering around the fair streets, beside himself and laughing aloud. Jehannette gave him her old bodice and petticoat that she hath carried with her on all her journeys, having no longer hope of wearing them again. And he sat with the things across his knees, and looked at her in her mail, the tears running down his face, the king himself having said that no man had done more for France than Durand Laxart.

«The king hath a pleasing, fair presence, and he is but four years older than Jacquemine. He kept his vigil in the cathedral all Saturday night, as the custom hath ever been on a sovereign's last night before coronation; and outside in the great square were crowds rejoicing. All night long, also, the workmen hung banners and tapestries and cloth of gold, and there were chimes like thousands of bells ringing together.»

«Does that great cathedral where the kings are crowned seem to be more than a church?»

«Outwardly it is like a carven cliff of stone, and took my breath from my throat at the first sight. Within, when a few voices chant, the sound swells until an army seems chanting; but when an army doth chant, the mighty rolling volume is like nothing I shall hear again on this earth. Also, there were wheels in wheels of tinted light shedding glory. The pillars are set up as they would support the sky, and all our family could sit on the base of one. Besides these seats around the pillars, three rows of stone benches are formed by the rise of the walls above the pavement.

«Then there was the procession of the Sainte Ampoule containing the holy oil, which an angel brought from heaven for anointing our kings. Priests carried it under a canopy—a little round flask the size of my thumb, but larger about the bottom and shoulders, and smaller about the middle and top, all crusted with red and green gems, with a stopper of gold. Out of this did the archbishop anoint the king on his head, his shoulders, within the joints of his arms and the palms of his hands, slits being cut and embroidered in his robe to this use. It was all done according to ancient custom. And then did two nobles lift the crowned king in his chair, and show him to the people. He was proclaimed, and chimes and voices and music of instruments rolled in the arches; and I, being with Jacques within the choir, could see my child stand on the lowest step of the high altar with her banner. O Mengette, I am the happiest woman in France, whatever comes of all this, for it is clear I am the mother of a deliverer; but it was at first hard for me to believe that St. Michael stooped to our garden, and St. Catherine and St. Margaret continually instructed her.»

«You believe it now, godmother?»

«Have I not seen with my own eyes the things resulting therefrom? They are more wonderful to me than the coming of saints.»

Before next dawn Mengette was crossing the moist, dark lane to milk her godmother's cows, knowing that Isabel would be weary from the journey. It was not light enough to see artichokes standing stiff like huge green dahlias in the village gardens, or even to distinguish poppies thick in little squares of wheat, their crimson heads embroidering the yellow mass; but all hidden sweetness was on the air, and the smell of the yellow linden flowers was a complete delight. Thus the sleeping Domremy, the dew-reeking, half-seen, natural Domremy, made up to Mengette for the cruelty of its inhabitants. She did not wish to meet a living soul, and was seeking her work in the end of the night to avoid the earliest risers; for Mengette had wild instincts, and felt the scratches on her

outraged breast branding her with disgrace. That her neighbors had been called to public rebuke and public repentance made no difference to her. She hated no one, but she desired to make a retreat from the world, and it was fortunate that Gerardin d'Épinal had hired her to work in his vineyard that day.

The D'Arc house was not built to shelter its own cattle, like other cottages, but had a thatched stone stable beyond its garden. Oxen and cows, brought carefully in to repose for the night under shelter, sighed their content in the darkness; and Mengette, as she entered, made haste to say, «God and St. Bridget bless you!» so the cows would not kick over the milk.

She shivered with the lonesome chilliness of early morning; but at mid-forenoon the warm land glowed about her, a fervid breath rising from the earth. When Mengette had employment, her geese were obliged to remain shut up in their own end of the house, quavering as if their nostril-holes scented the delicious summer landscape outside; for Choux avoided that common employment of old people and children, and would not lead a goose out to graze.

When all laborers paused for the mid-forenoon meal, Jacquemine d'Arc came among the low vines searching for Mengette. She did not stand up until he detected her bare head above her strange clothes; for, her every-day wear being shredded to rags, she was obliged to fall back on her mother's chest.

Jacquemine was in his best, and he chose his way like a magistrate, so that Gerardin d'Épinal at the other side of the vineyard, whose experience as a traveler was considerable, might feel his new dignity. Gerardin chuckled in his piece of loaf as he crunched it with hard teeth, and silently prophesied about the people of Vaucouleurs, and their submission to a bailiff like Jacquemine d'Arc. «He will go in with a strut and a bellow, like a little bull of the Vosges,» laughed Gerardin; «and come out over the wall, tossed by bigger horns than his own. Bertrand de Poulengy is of no greater stature than Jacquemine, yet he doth fill the eye like a man, while this creature might as well be a bush, so little regard have people to his humors. Doubtless the king laughed in his royal sleeve at his new bailiff; but Vaucouleurs will count it an ungracious return for sending him the Pucelle.»

Some regret for the hard-working maid who was bound by contract to Jacquemine also glanced through the peasant's mind. «She could make a better marriage,» he reflected, «particularly now, while such indignation is felt for her; but even the Pucelle cannot turn this poor brother into a husband to be desired of any maid.»

«I am going to Vaucouleurs,» was Jacquemine's greeting.

Mengette remembered when his father had spoken the same words, and he had afterward accused Jehannette of disgracing the family. She looked up quickly from the knife and lump of bread in her hands, and he was shrewd to perceive her thoughts.

«Because the king made me bailiff of Vaucouleurs when I was in Rheims,» he said, coloring helplessly, «I did not on that account stint speaking the truth to my sister. I told her plainly the people here in Domremy said she raised sieges by witchcraft.»

Mengette's sunburnt cheeks whitened, and she looked down. She had no spirit left. His words did not dispraise the people of Domremy, but she blamed him little; he was himself happy. The elfish naughtiness of this lad whom she had helped to rear, his spites and frank self-love and jealousies, had always touched her pity; but the shock which her traditions had received unsettled her even toward Jacquemine. She wished she had hid herself at Bermont spring instead of coming to work in the vineyard.

«Will you stay in Vaucouleurs?»

«I shall live there. A bailiff is not like a captain of a town, who may live where he pleases; but he must set up his house among the people he governs. I am no fool,» said Jacquemine, with a twist of his foxy head. «This great ha-hu of Jehannette's may not last. My brother Jean will get wind of it at Vauthon, and his wife's family will urge him to make his profit out of it; but I am the eldest, and the first honor is by right offered to me. Bailiffs are not bailiffs merely to amuse themselves. I intend to squeeze Vaucouleurs.»

«What was done for Pierrelo?»

«Oh—Pierre—he hath everything like a great noble. You should see him caracole on a horse. And he hath put on clothes and armor that swell his person to increased bigness. ‹La! I am the brother of the Pucelle!›—that is all his thought. Doubtless he told the dukes and captains she had no elder brother, for they knew nothing about me.»

«I would I could see him and Jehannette.»

Jacquemine's sandy eyebrows drew together with resentment.

«It is plain you are not glad to see me, and

Digitized by Google

Durand Laxart's horse stands saddled ready for me while I climb up hither to set a day for our marriage. The bailiff of Vaucouleurs can marry when he pleases. We are no longer obliged to wait until Choux's death.»

To Mengette, whose world was scarcely a league square, such a translation to new spheres was blinding.

«O Jacquemine,» she cried out with a rush of joy, «I now want to leave Domremy.»

«It is soon arranged. There is Henri Royer in Vaucouleurs, who is well disposed toward us, and will help me to seek a suitable house. A bailiff is not to be lodged as common peasants lodge. I saw in Rheims in what excellent regard the citizens of the three estates are held. There are in this realm three ranks called the three estates, Mengette—the clergy, the barons and knights, and the citizens.»

«But what will your father do for help in his fields?»

«He will be obliged to hire a laborer. When he loses me he will lose a son indeed; but both my father and mother have spoken of the marriage. They see it will be necessary, and I have remained the last of their children.»

«How will Choux be received in Vaucouleurs, Jacquemine?»

«Choux will stay where he is. He can still sleep in your house, and my mother can feed him.»

Mengette thought about it. The lifting of her lifelong burden brought a deep breath of relief from her bosom; but the old custom, the old discomfort, the old duty, which her father had told her death alone could free her from, were drawn back with her next inhalation.

«No; I must not throw the care of him upon any one else.»

«He shall not go to Vaucouleurs—I will tell you that.»

«Then I must stay in Domremy, and still feed and shelter him.»

«Do you love old Choux?»

Mengette covered her face with one arm, and shuddered.

«Why, then, do you hold by him?»

Her eyes, as she opposed her lover, took again the hunted look.

«There is a pitying, Jacquemine, which is like religion. I cannot disregard it; happiness would turn to a curse.»

«Do you choose to stay here with him, working in the fields, rather than to go with me?»

«I cannot choose, Jacquemine; it was all settled without my choosing.»

He flung his nervous body a few steps from her, and looked back. «Then it is adieu between us.»

«Jacquemine, you came up here to quarrel with me. You scarce gave me a good day or a kiss on the cheek, and there was only Gerardin, who knows how long we have been betrothed. You were not like this before the king made you bailiff of Vaucouleurs; but it is true, I am not fit for your wife.»

She turned to her work, and he came back. They faced each other for more words, when Choux appeared, carrying his hump less lightly than before its bruising, to take his share of the forenoon meal from his feeder. The stealthy odor of him crept within the vine fragrance, and Jacquemine looked at him over one shoulder, and gave him the field.

Mengette yielded her knife and lump of bread to the old creature. The chief member of her foster family, the one through whom she had hoped for relatives and happiness, stalked on downhill, without again looking back, to claim for himself dignities and honors, and left her for life to this degraded company. Choux made little noises of satisfaction over his food, grunts and smacks of the palate, bestial, unlike the honest grinding and hearty human enjoyment of a peasant.

Mengette hid herself among the vines as far as she could from him, and knelt there, doubling her body forward, and weeping upon her knees.

(To be continued.)

Mary Hartwell Catherwood.

A WIND-STORM ON THE CARIBBEAN.

ONE day upon the white, brown-veinèd sand
Sped an aërial sprite. Fell news he bore.
Scarce had he passed when, lo! upon the shore
Struck in deep menace many a steel-clad hand
Of the wave-army. Then, 'twixt sea and land
Rose the stern strife, high raging more and more,
Till all the land lay sodden, wet, and sore,
And the sea-soldiers' plumes with fury fanned.
Caught in the conflict, hissed the snaky palm;
And far, far out among the gleaming host
Of billows rolled a ship that prayed for calm
And sunny havens. As a weeping ghost
She dripped and shivered till, like a sweet psalm,
The sea sang, and she saw the smiling coast.

Louise Morgan Sill.

CONCEALED WEAPONS.

«BUT, my dear,» said the admiral, «your aunt would surely be more helpful to you here than I.»

Marion looked out of the window, across the green grass of the campus, down the terrace, and over the sea-wall, from which the waters of the river spread away like a royal purple mantle, picked out with silver sails of pleasure-boats and straggling sloops. Before she replied she had mechanically counted over all the sails in sight.

«I don't know, uncle. I seemed moved to speak to you. But if you would rather not—»

«No, no, my dear; not at all. I was thinking only of you, and that a woman might better understand how to advise with you. However, I will endeavor to be as womanly as one avowedly a man of action may. And so young Arnold covets you, does he? He must have done so almost at first sight. Well, I don't blame him.»

He smiled into his niece's serious eyes, but her face remained unchanged, and the admiral went on with more gravity:

«If I had been blessed with daughters of my own, I should know better how to speak to you. As it is, you will have to help me a little. Should I draw you out gently, or straightly question you? What would you like me to do?»

«I should like to know all that you can tell me of Mr. Arnold.»

The admiral lifted his eyebrows slightly. His favorite cat had been sitting on the table by his elbow, and he whisked her away with his handkerchief, then straightened the papers which lay before him, and set his stick of sealing-wax, his pen, and paper-knife in a methodical row.

«I suppose,» he said dryly, «that the young woman of to-day is more sensible, and that I am an old fogy. In my generation she was the ‹lovely burden›; and if the burden sometimes outweighed the beauty, we at least had the theory of romance. To come to business, Marion, as I warned you on your arrival, I know but little of any one here, my present duty being still new. Regarding Mr. Arnold, I think it probable that you know more concerning him than I. Had I dreamed of his representing more than one in the dozen hovering about you, or had he spoken to me first, it would have been different. For his present, I can only tell you that he has led his class statistically and in spirit, and that he has passed through the furnace of a social favoritism unscathed. For his future I can prophesy as useful and brilliant a career as the government permits to an officer of its navy; but of his past, his people, and his private means, which is just the information I suppose you want, I know nothing whatever.»

As he ended the admiral looked up at his

Digitized by Google

niece's profile. She was sitting motionless on the couch opposite him, her hands folded on her lap, her eyes still gazing out of the window. There was an expression which he did not understand upon her face. The admiral's voice softened.

«I can, of course, find out all you wish to know concerning Mr. Arnold, Marion; but, except on one condition, I have no reason, no right, to pry into his affairs, and I am old-fashioned enough to feel that no one has the right to ask you the question which I must now ask, except the one being to whom your answer means everything. To me a woman is as the sphinx—to guess her heart's riddle is to dash her from her heights.» He rose to seat himself on the couch by Marion's side. «Your having no father, Marion, and the fact that your mother intrusted you to your aunt and me only after many misgivings, make me doubly responsible. Therefore—will you let me ask you if you love Mr. Arnold, my dear?» It was the admiral who blushed. Marion looked into his face with the same unbroken seriousness.

«I don't know, uncle.»

«You do not know! What does that mean, my dear? Do you want more time for consideration, or do you wish first to learn if it would be wise to let yourself love him?»

«I already know that nothing on earth could be more unwise for me.»

«Then, as I said, you know far more about him than I. Do you be my informant. Come, help me a little, my dear. I am only a rough old sea-dog, you know. You must teach me to be womanly with you. As an individual I believe in Mr. Arnold. Is it his parentage that is at fault?»

«Yes, his parentage.»

The admiral shook his head doubtfully. «Well, then,» he said with a half-smile, «you know just what you would have to face in your mother's opposition. To tell the truth, I should a little dread taking my share of it. ‹Thou shalt have ancestry› is her eleventh commandment.»

Marion moved restlessly. «I know. She would never give her consent to Mr. Arnold.»

The admiral held his gray-mustached upper lip between his finger and thumb, looking out thoughtfully at his niece from under his white eyebrows.

«How bad is it, Marion? After all, the service is a cloak for many sins of birth. I suppose Arnold himself confessed this shortcoming to you?»

«No; I learned it from his mother and sister.»

«His mother and sister, eh? Are they here?»

«They came yesterday for a week's visit.»

«And you have seen them?»

«Yes; I saw them to-day.»

Certain little lines that the admiral had noticed about his wife's eyes and mouth when in bodily pain he now recognized drawn in Marion's face, where they disturbed him. He raised his hand involuntarily as if to smooth them away, but Marion withdrew quickly. Her lip quivered.

«Not yet, please, uncle.»

«Go on, my dear,» said the admiral. «I understand. What were the mother and sister like?»

«It would be easier to tell you that they were unlike anything that might have been expected. You have probably seen them walking about the grounds—they are conspicuous enough. The daughter is a tall, unwholesome-looking parody on her brother. Her costume this afternoon was a number of ribbon-bows tacked together, apparently. She might as well have worn a crazy-quilt. The mother is a large woman. She dresses in black, and every article she wears is too small or too short. Her sleeves do not meet her gloves by three inches; the flesh sticks out between them like red bracelets. Her bonnet is too small also, and is tied tightly under her chin; her face seems to gush out between the strings—»

«Marion!» the admiral remonstrated. «Marion!»

His niece laughed unnaturally.

«I wanted you to see it all just as I did. If the bare description shocks you so deeply, what do you suppose the reality was to me?»

«I think I am more bewildered than shocked. I did promise you that I would try to be womanly; but not being a milliner, and, indeed, peculiarly ignorant of woman's dress, your description conveys about as little to me as the price of the materials would. And then, my dear, I did not expect to have to remind you that dress is not a criterion. These women may be provincial, and yet of good enough standing.»

«I thought of all that, but they are not from the provinces. They come from a large city.»

«You have talked with them, then? When did you meet them? Tell me your story in your own fashion. I will not interrupt you again.»

«I met them walking in the grounds when I was strolling this afternoon with Mr. Arnold. They were in a distant path, and he

Digitized by Google

could easily have avoided the introduction. It was of his own seeking. He seemed fond of them.»

«Do you place that to his discredit, Marion?»

«I don't know. I am not able to connect him with them as yet; they seem of another flesh and blood.»

«Is that all that you have to tell me about them?» asked the admiral.

His niece had paused. She went on slowly:

«No; that is not all. One of the officers passed us, and drew Mr. Arnold away for a few moments' talk. While he was gone the sister began telling me how they had planned their visit as a surprise to her brother, and how her father had meant to come with them, but some people ‹dropping in› had detained him at the last moment. I said that I was sorry, and all the rest that I should have said. I really behaved well, uncle.»

«I don't doubt that, my dear,» replied the admiral; «I don't doubt that for a moment.»

«I said I thought I should have let the people wait, and then she said no, I would not; for they had come to negotiate some rather important loans.»

The admiral's face brightened. «A broker! Come, that 's not bad at all. There 's nothing disreputable there, anyhow. Even your mother would have to acknowledge that.»

«So it seemed to me. I was thinking just that while the girl was speaking. She was mentioning further that her father was a property broker when the mother, who had moved aside, turned back again to tell me of her husband's disappointment, and how his eyes had filled with tears when they left him behind. They seem an affectionate family. She said he had to stay at home, for —» Marion lifted her eyes desperately to her uncle's face—«she said,» she repeated, «that he could not leave home because»—her voice rose hysterically—«because ‹a couple of folks that could n't wait dropped in,› and that a jewelry-store was ‹a precarious business, anyhow.›»

«What!» exclaimed the admiral, starting to his feet. «A property broker—a jewelry-store! But that can only mean pawnbroking! It can't be, Marion.»

«It is, uncle. The ‹properties› were jewelry. The mother seemed unconscious that she had betrayed a secret, but the daughter was deeply embarrassed. She tried to pass it all off, but—oh, it was horrible!—she only made the truth plainer.»

«A pawnbroker! And you tell me that his son has dared ask my niece to marry him!»

«No, uncle, no; pray listen to me. You yourself could not have been more careful than Mr. Arnold has been of his honor.»

The admiral paced the room, his eyes flashing. His face was on fire; his hands were alternately tugging at his white mustache and ruffling his thick white hair.

«His honor! What the devil do I care about his honor when my niece is in question? I beg your pardon, my dear; I spoke in heat, but, indeed, with provocation. A pawnbroker! Good heavens!»

«But, uncle, Mr. Arnold has never asked me to marry him. When he joined me again, we left his mother and sister, and he and I walked on together. He knew nothing of what had passed, but I was foolish and shaken, and had to rest on a bench, finally. I said it was the heat. I am afraid I was a little hysterical, for I startled him, and he had let me know that he cared for me before he realized what he was saying. Afterward he was as dismayed as you are now. Indeed, you must not blame him. He was terribly agitated, and asked nothing of me, except that I would forget all that he had no right to say until he could speak to you. He is coming to you to-night. Uncle, what shall you say to him?»

The admiral's walk ceased abruptly. «Say to him?» he repeated. «Poor boy, what can one say? If it were anything else on earth!»

Marion covered her face with her hands.

«You pity him,» she cried sharply; «you only pity him; but I—I—» She laid her arm on the side of the couch and bowed her head into it. The admiral paused before her. For a moment his hands hovered irresolutely above her shaken shoulders; then, throwing his palms outward with a gesture of helplessness, he straightened himself and walked away to the window. His back was still toward the room when he spoke:

«My child—» He cleared his throat and began again—«My child, we must take the world as we find it, not as we would like to make it. Mr. Arnold loves you, and if you love him, the question is, What can I do to comfort you? What can I say to him that is not too cruel?»

Facing his niece again, the admiral went on: «You see, I am perilously near being womanish when I promised you to be only womanly.»

As Marion raised her face, he seated himself on the couch near her, his hands on his knees, his head bent toward her. Though not touching her, his manner had tenderness sufficient.

Digitized by Google

«If it were any other occupation,» he reflected aloud; «if it were anything less grotesque and absurd, less the subject of ghastly pleasantries—»

«You can remind me of nothing that I have not already considered, uncle. It was the hideous absurdity of it all which made me ill out in the grounds. As I thought of it suddenly from that standpoint, I burst into hysterical laughter and tears. That was the beginning of my weakness and Mr. Arnold's self-betrayal. Oh, uncle, you don't think he ever helped his father, do you? I keep imagining him as a little boy doing the little things—making out the tickets, and arranging the shop-window. Do you think I should ever grow used to those associations, ever be happy in mingling with his family?»

The admiral started, and sat very erect upon the couch.

«Marion,» he said, «does this mean that you are seriously considering such a step?»

«I don't know, uncle. As I told you at first, I seem to have lost the power of thinking.»

«My dear child, if you have come to me to think for you, I can only repeat your own words to you, and repeat them with most solemn belief. Nothing on earth could be more unwise for you. It is an impossible position.»

«Yet you said the service was a cloak for many sins of birth. Other officers have come from the people. This would be our world, and it has seemed to me not overnice in such matters.»

«You have not been here long enough to see what underlies the veneer of official civility. Some things might be forgiven or concealed, but poor Arnold's disability is as a bar sinister that admits of neither. Your taking such a step is not to be considered. It means misery from the first. You, who are daintiness itself, and who have been protected from every wind that blows, can have no conception of the coarseness that you would have to endure daily. You could not stand it. Your every effort would be to wean your husband from his natural ties of affection, and from the hour you succeeded you would despise him. No, my dear; it is not to be thought of. If the utter sacrifice of yourself is not a sufficient reason to restrain you, remember your mother, and the blow it would be to her hopes for you.»

Marion's face hardened. «Mama! Her hopes for me will be blasted at anything far short of a coronet. She has not yet forgiven me that I am not the wife of a possible heir to one, with a sot for a husband.»

«In that matter you had my warm support, Marion.»

«I know. I did, uncle. You have always been kind to me. Of course mama would violently oppose Mr. Arnold; and do you know, I am ashamed that it is so, but the thought of the struggle with her nerves me when I might otherwise falter—why I don't know.»

The admiral drew back a little, scanning Marion's flushed face. Her features were exceedingly delicate; the force with which she had spoken had not brought out a coarse line.

«My child,» he said, «do you mean that? If your love alone does not nerve you to consider this step, nothing else should—least of all a mother's opposition.»

«Mama's opposition would not be for love of me. Mama ought to have been born a Celestial. As it is, I should have been piously sacrificed on her ancestral altar but for you, uncle, and what she still terms my wilfulness.»

«I know,» said the admiral. «And yet this would break her heart, Marion. It cannot be, my dear, both for her sake and for yours. It is quite out of the question.»

He spoke gently, and the words were not commanding. It was a certain finality in his voice, born of long and undisputed authority, that his niece answered with spirit.

«I think I shall decide to break mama's altars, at which I do not worship, rather than my own heart.»

The admiral looked up quickly. Their eyes met. He spoke shortly, almost sternly.

«You have decided, Marion?»

«I am deciding now.»

She sat with her finger pressed against her lips, her face grave, and her eyes downcast

The admiral rose to pace the floor, quarter-deck fashion, his arms folded on his breast. His favorite cat, uncoiling herself from a warm corner near the fire, ran to rub her head against his leg, as was her wont. Until her sharp wail roused him the admiral did not know that he had crushed her tail beneath his foot; even then, with an absent-minded «Excuse me,» he passed on, absorbed in his thoughts. Marion was wondering if, as it seemed to her, her presence was forgotten, when the admiral's walk ceased, and he seated himself at his table, where she had first found him. He spoke without looking up, his fingers occupied with a bunch of keys which he drew from his pocket.

«Marion,» he said, «I have been thinking

Digitized by Google

that, while a man attains his majority at a given period, as a rule a woman comes of age, early or late, with her first heartburn.) You know it is a time-honored custom that a son of the house should be introduced to the ghost or the skeleton of the family the day he comes of age. The rule might as well apply to a daughter. I mean now to show you our family ghost; but first, can you tell me the special line on which we hang our family pride?»

«The Eeliott line,» Marion answered, «spelled with two *e*'s and two *t*'s.»

Her voice was mocking, and the admiral smiled. He had selected a key from the bunch.

«You know your lesson well,» he said dryly. «The name might as well be spelled with three *e*'s and three *t*'s, while we are about it. It is the skeleton of the Eeliott family that you are to see. I keep it locked in this cupboard with this key.»

He unlocked the door of a closed compartment under his table, and drew out a long box of curious and irregular shape, covered with dull red leather, on which were stamped quaint arabesque figures in burnished gold. The odor of age about the case was strong. Marion drew back as the admiral laid it in her lap.

«You need n't be afraid,» he said; «it is only a paper ghost. Open the box, Marion.»

The inner-case lining, of heavy, gorgeously tinted silk decorated with a sprawling pomegranate pattern, protected a roll of parchment as yellow as ivory. Attached to the roll by mixed red and silver ribbons were two red seals. Marion touched the faded ribbons softly with her finger-tips.

«The Eeliott colors,» she said. The admiral tossed them to one side with a short laugh.

«Yes,» he repeated; «the Eeliott colors. Unroll the paper.»

As she lifted and unrolled the parchment Marion uttered an exclamation. The page shone out with all the glory that emblazoning gives in colors as fresh as the day they were painted. The text, broken here and there by rich initials, was crowned with the royal arms of England, the rose, and the royal ermine. On a corner of the skin, surrounded by festooned roses, hung the painted shield of the Eeliott family. Marion looked at the shield critically.

«Those are surely the Eeliott arms,» she said; «and yet is n't there something a little wrong about it?»

«A little,» said the admiral. «Read the writing, my dear,—read it aloud.»

Marion read the text from the top of the gorgeous page to the written signatures at the end:

To all and singular
to whom these Presents shall come Isaac Heard Esquire Garter Principal King of Arms and Thomas Lock Esquire Clarenceux King of Arms of the South East and West Parts of England from the River Trent Southwards send Greeting. Whereas Marion Eeliott wife of the Honorable Francis Herbert, by Letter to the Most Honorable C—— D——commonly called Earl of A——Deputy with the Royal Approbation to his Father the Most Noble A—— D—— Duke of C—— Earl Marshall and hereditary marshall of England requested the Favor of his Lordship's Warrant for an exemplifying and confirming to her and her Descendants the Arms of her reputed Father John Eeliott, Lord Knight of the Kingdom of Ireland deceased with such Variations as may be necessary according to the Laws of Arms.

And forasmuch as his Lordship did by Warrant under his Hand and Seal bearing date the twentieth day of March last authorize and direct Us to exemplify and confirm the said Arms accordingly. *Know Ye therefore* that We the said Garter and Clarenceux in pursuance of the Consent of the said Deputy Earl Marshall and by Virtue of the Letters Patent of our several Offices to each of Us respectively granted under the Great Seal of Great Britain do by these Presents exemplify and confirm to the said Marion Eeliott the arms following that is to say *Paly of six argent and gules a Bend Sinister engrailed counter-changed* as the same are in the Margin hereof more plainly depicted to be borne and used for ever hereafter by her the said Marion Eeliott and her Descendants according to the Laws of Arms without the Let or Interruption of any Person or Persons whatsoever.

In Witness whereof We the said Garter and Clarenceux Kings of Arms have to these Presents subscribed our Names and affixed the Seals of our several Offices the sixth day of April in the twenty—— year of the Reign of our Sovereign Lord George the Third by the Grace of God King of Great Britain France and Ireland Defender of the Faith &c: and in the year of our Lord One Thousand and seven hundred and——

The skin rolled itself together strongly, as though it still had life, as Marion laid it down.

«What does it mean?» she said. «I don't understand a word of it.»

«Your great-grandmother, Marion Eeliott, understood it,» said the admiral. «She understood it so well that she kept this locked in her closet to the day of her death, where I, as executor, found it. Why she did not burn the document is one of those things which are inexplicable. That no one in her lifetime saw it, save herself, I am almost

Digitized by Google

positive. Since then I know that my eyes alone have seen it, and now yours.»

«What does it mean?» Marion repeated.

The admiral bent forward to open the roll. He read a line aloud:

«‹The arms of her *reputed father.*› Reputed father! Don't you know what that means, Marion? Your great-grandmother, known as Marion *Eeliott*, had no such maiden name, and her crest might as well have been a bar sinister couchant, or three balls rampant, or anything else she chose to carry. You surely know the meaning of a bend sinister, my dear. We are not a mushroom family in the maternal line, but toadstool—old enough, in all conscience, and poison at the root.»

Marion drew the parchment toward her, looking again at the emblazoned shield with its fatal lines from left to right. The color rose in her face.

«Do you mean, uncle, that we are not—not legitimate?»

«I mean, my dear niece, that on our grandmother Eeliott's side we are not low-born, but base-born. That high name on which we hang our chiefest pride is our shame. That Lord Eeliott was the father of our ancestress is undoubted; who her mother was, the Lord, or more likely the devil, only knows. Would you care to hear the whole story, Marion, or does this kind of truth shock you? I thought you rather scornful of ancestry.»

«This is different, uncle. I thought we were at least of honest blood. I want to know all that you can tell me; but—no, I don't like it; it does shock me.»

«This story,» said the admiral, «has also a kind of humor about it, almost as grim as the story of Mr. Arnold's order of bar sinister. Your namesake and maternal ancestress did not like it, either. She was brought up in her father's American home as his daughter, presiding over his household, and arrogantly foisted upon the community, who accepted her for their own reasons, I suppose. Probably they were ignorant of her true position. When I found this document hidden away in the old lady's closet, among her silks and laces, I was sufficiently stirred to look up every scrap of writing bearing on the subject. Among a heap of old letters belonging to Lord Eeliott, I unearthed one from his father, written in England, and rather sardonically urging his son to sow all his wild oats on this side of the water, that the crop might not come up in the old country. Our ancestress was one of those blades. How many others there were of Lord Eeliott's crop, who knows? Before leaving America Lord Eeliott married his daughter to your great-grandfather, with a bribe thrown in of so many thousand pounds down. That, too, I read between the lines of the papers I ran through. Ancestors are not unlike sleeping dogs, Marion. It is better to let them lie, as a rule. If the first Marion Eeliott had been wise enough to do so, she would have been spared the mortification of this parchment. You have seen her portrait, my dear?»

«Yes; and I cannot imagine her humbled. Uncle, are you sure that all this is true?»

«You have the parchment before you. I have to look at it to convince myself sometimes, after listening to your mother's talk of our family history on the Eeliott side. Old Marion Eeliott grew to think it could not be true, and that humility and the pit whence it came were not for such as she. Others had forgotten, and she would forget. After her father's death she evidently conceived the idea of quartering his arms with her husband's. She must have written to England, to the Heralds' College, claiming them. Heaven knows what influences and what money she brought to bear. That the college is incorruptible is well shown here. What do you suppose were her feelings as the covered parchment unrolled? *Her reputed father, and a bend sinister.* Do you think she saw the grim humor of it, Marion?»

Marion was looking seriously at the parchment.

«I cannot tell, uncle. To me it is only shameful. And so this is what mama has been worshiping all these years. Why did you never tell her?»

«Why should I overthrow her altars? Up to this time there has been no reason for doing so. And so you see no humor in the story? Well, perhaps Mr. Arnold may, as we recognize humor in his. Here, my dear; you have my permission to use this parchment as you choose. It is your weapon, and with it you are well armed for your battle with your mother.»

He rolled the parchment as he spoke, and returning it to its box, laid the case in Marion's hands. She received it mechanically, looking up surprised.

«I—what am I to do with it?»

«Marry Mr. Arnold, if that is what you really desire. Why not, now that you know the truth about yourself? Before you opened that case you had a certain family tradition to live up to; now you are freed. If you care for Mr. Arnold enough to forgive his three

balls rampant, and submit your bar sinister couchant for his forgiveness, I don't see that any one can interfere. If your mother opposes you too strongly, you have only to lay this before her to seal her lips.»

Marion lifted her eyes searchingly to the admiral's face.

«Uncle,» she asked, «why have you done this?»

The admiral winced slightly. «Why, my dear?» he replied. He rose, and laid his hand on Marion's head, meeting her earnest gaze. «Why? Because I want you to realize that it is wholly in your power to marry Mr. Arnold or not, just as you desire. If he were not a gentleman by nature, I would not have run this risk. He is a gentleman, if to be one is to know what is due to others and to render it, to know what is due to himself and to expect it. Beyond a certain point, parents can do nothing if their child chooses to marry the hangman or the man to be hanged. As for you, Marion, if you wish to marry Mr. Arnold, what renders it possible lies there in your hands. Take it away with you, my dear, and make your own use of it.»

As he spoke he pointed to the case, which still lay loosely in his niece's grasp.

Without a word, Marion lifted her eyes, for a moment looking full into his. There was no wavering on either side. With a quick gesture she caught up the box and laid it on the table by her uncle's hand; yet the movement was curiously deliberate. She did not look up at the admiral as she passed him on her way from the room.

The admiral sat motionless at his desk, the case before him, and his favorite cat climbing up to his knee. As the door closed he slowly leaned back in his chair, drew a deep breath, and wiped his brow with his handkerchief.

«'T was as I thought,» he muttered: «opposition was her buoy. A shred of it left her to cling to, she 'd have plunged in headlong.»

He laid his hand on the cat's furry head, more as if gaining comfort from the touch than bestowing it. There was a kind of shame in his fine old face.

«And I promised her to be womanly!» he said aloud. «I was feline! Pussy, I crave your pardon. You at least show your weapons in the moment of scratching, don't you?»

Margaret Sutton Briscoe.

URSULA.

I SEE her in the festal warmth to-night,
Her rest all grace, her motion all delight.
Endowed with all the woman's arts that please,
In her soft gown she seems a thing of ease
Whom sorrow may not reach or evil blight.

To-morrow she will toil from floor to floor
To smile upon the unreplying poor,
To stay the tears of widows, and to be
Confessor to men's erring hearts. . . . Ah me!
She knows not I am beggar at her door.

Robert Underwood Johnson.

UP THE MATTERHORN IN A BOAT.

BY THE AUTHOR OF «A DAY IN TOPHET,» «A JUDICIAL ERROR,» ETC.

WITH PICTURES BY GEORGE WRIGHT.

PART II.

«I OFFERED SOME TO JABEZ.»

THE milky island over our starboard side seemed to sink gradually. We first lost sight of the cotton-wool waves around its cliffs, then the chalk cliffs themselves, then the snowy summits. There was nothing but the sun and the *Cloud Queen* left in space.

Jabez was still cheering for the United States. He gathered in his breath to the point of explosion, and discharged volley after volley of barks at the flag, at the balloon overhead, at salient points in his own recollection of things he had not had time to do real justice to before. The rebound from each volley cast him back against the sides of the craft like a gun overcharged with powder; and presently, having barked at everything in sight, and several invisible subjects, he sat down lolling, and searched the horizon for some new topic.

«It is possible,» said Hill, removing his pipe for a moment, «that we may be rather uncomfortable up there. Glaisher experienced a semi-paralysis at the height of five and a half miles, and lost consciousness altogether at six. Coxwell suffered from cold, but retained the possession of his faculties sufficiently to pull the valve-rope and release gas enough to lower them into a warmer temperature, where both revived. Now in case I should lose my head or become incapable of directing the *Cloud Queen*, and you find that you also experience warning sensations, try to remember this: the third switch, marked ‹No. 3,› sets the suction-pump at work, and that would pull us down without loss of gas. Don't touch the valve-rope except as a last resort, for I shall have to release the pressure very materially within the next few minutes in order to prevent our being torn to pieces by the gas inside. You see, as the external air becomes lighter and its pressure decreases, the expansive force of the confined gas becomes proportionately greater. That is the chief danger we have to fear at this height—unless we should both become unconscious and freeze to death.»

Neither prospect was attractive. Hill replaced his pipe, fumbled about under the seat, and drew out two thick Scotch blankets. He handed one to me, wrapped the other about himself, and turned up his collar. Then he threw a switch on the board before him, and I heard the paddle-wheel begin to whir-r-r in the balloon above us.

«It *is* getting cold,» said he, looking at his thermometer as if to assure himself that such a conclusion was justifiable. Cold! it was cold! We smoked our pipes out, and presently fell to slapping our sides with our hands, as coachmen do on winter days when the frost bites. Jabez liked it at first, but as it grew colder and colder he realized the futility of trying to get out a winter coat on such short notice, and took refuge under the blanket.

«Feel queer?» asked Hill.

I consulted my feelings, and replied in the negative.

«Well, I should n't wonder if we stood it pretty comfortably. You see, we 've been cruising around in high altitudes all day, and getting used to rarefied air. It 's as easy to get used to as a rare beefsteak; all you want is a little practice—though I have felt pretty sick myself practising, and at that time I saw a man die on the mountains in South America. We had gone up that infernal little railroad from Lima to Chicla—ever been there? Well, passengers who fail to stop on the way

Digitized by Google

up and get used to short rations of air find it pretty hard foraging at the top. You feel just like a fish out of water—gasping for breath, and no breath to be had at any price. It 's an awful sensation; it 's drowning in the air. I 've never had any use for angling since then: I know too well how the fish feels when he drowns out of water.»

The sky about us grew bluer and bluer, and even the sun had long since ceased to appear natural. It was a great deal easier sitting still than making any effort, but I crawled over to the edge, rested my chin on the taffrail, and looked down. The mountains lay in corrugated ridges under us, streaked with infinitesimal chasms lying like hair-lines on the surface. Everything had shrunken, and objects on the earth might have been at the small end of a telescope.

«I think it is time,» said Hill, «to put on a little fuel.» He took a flask out of his pocket, poured some of its contents into a glass, and handed it to me. It was good old brandy, and it tingled my blood into warmth. I offered some to Jabez, who was shivering, and looking as if he would like to know when the next train left for Chamonix; but he reproached me with his eyes for trying to corrupt a temperance dog who was six miles away from home.

«Now,» said Hill, «unsling your glasses and make the most of time. You will probably never have another chance like this to look at the pygmean world. There is the republic of France; and there is the domain of the little king—though all domains look little at this height, and all kings look not at all. Now come over to this side. There is Humbert's territory—Humbert's and the Pope's. And now look over in that direction—over Kaiserward. Do you see that little slab of country just over that farther hummock of ground? That 's Alsace-Lorraine; there have been more scraps over that territory than over a contest for mayor of Mudville. Would you give Jabez for the whole of it, up here? Off in those dim distances lie Germany and England. The Turk is busy kicking up shines just over in the other direction; and past that little blot of deep blue—like an overturned ink-bottle—Africa lies beyond the Mediterranean. I wish we had a Lick telescope. Great guns of Washington! I *wish* we could get high enough to see America.»

Of course I echoed the sentiment. We had been annoyed by the constant necessity of clearing the fog of our breaths from the lenses, and now, lowering my glass a moment for that purpose, I was startled when I glanced at Hill. His nose was quite white. For a moment I thought he was feeling the effects of the high air, but the next minute I realized that it was cold instead.

«Great Scott!» I exclaimed, «your nose is frozen.» He put his hand up to his face, with a start, and looked at me.

«So is yours,» he said. It was true. We abandoned our survey of Europe and devoted our attention to ourselves. I thought of the Alps down below.

«No wonder the earth freezes her noses poking them up into the air like this.» But Hill interrupted me with a yell that brought Jabez out from under the blanket like a catapult shot, and even made me jump. Our aëronaut was dancing about the boat until it rocked.

«We 're up forty-three thousand feet!» he declaimed. «Good for America! Good for the greatest country on earth!» (It was noticeable that as European nations diminished in size the value of America invariably grew in importance.) Hill dropped into his seat with a thud, and gazed at the register with admiration. «That beats the Dutch!» he exclaimed presently in an awe-struck tone. He looked at me, at the balloon, at Jabez, and back again to his instruments. But pretty soon his face clouded. He again looked at the balloon—anxiously this time. I looked too, but could see nothing unusual. Hill clutched his instrument and bent over it.

«According to this infernal machine, we are descending at the rate of a mile a minute,» he said.

«I don't believe it,» said I.

«I hope you 're right,» he answered; «but I observe we no longer hear the paddle-wheel revolve, and I should like to know when in Sam Patch it stopped—and me not know it!»

The facts were plain enough. I became aware that an ominous silence reigned where the whir of the wheel had previously sounded, and I also knew that we had both been so excited that neither one of us could say when it had actually stopped. It might have been two or three minutes before; at any rate, it had stopped. I looked overboard. Mont Blanc was rising beneath us, and I felt justified in respecting the conclusions of the machine on the dropping question.

They say that when a man is drowning he reviews all the scenes in his past life in a few seconds, crowding the events of the long, slow years together into the moment or two he believes he has left, and that he thinks

Digitized by Google

with wonderful clearness. I have no doubt whatever but that in the two or three minutes that followed while we sat waiting for the crash we both did the same, though I am bound to testify for Hill that whatever his thoughts were, there was no trace of anxiety or apprehension on his countenance. His eyes were fixed upon his instruments, and the two or three remarks he made were in his ordinary tone. As for myself, I had been so recently above the clouds, I had seen the old civilized world reduced to such a pygmy by distance, I had been so imbued by the thought of the littleness of the biggest greatness, that I appeared to myself too much of an atom to take serious account of. I felt no terror; rather a quickened interest—a wonder if the end of all things to me as a unit of the human universe would come in the next few minutes.

«I hope the instruments won't be smashed,» said Hill, with great earnestness. «Confound it! I wish I could be sure. If we can only drop somewhere in the track of mountain-climbers, or a herder, or somebody—*any*body to find these reports and take them back! They would be of the greatest possible interest to science.» He had been scribbling busily in a little book, and this he now slipped under a projection of the keyboard before him. «Is n't it strange,» he added, «that the frailest things, like feathers or pieces of paper, survive a fall of three or four miles without injury, while flesh and blood, or metal even, are not to be found?» He sighed profoundly, but I knew the sigh was not for himself, but rather for his records.

It was impossible for me to tell whether we were descending at the terrific rate registered. So far, after the first sensation of upward flight, after getting away from sliding things by which to reckon like a Chinaman's slate, we might have been motionless, for all I knew. The temperature had grown suddenly warmer, as I knew from the way my nose ached. It felt as chilled fingers or toes do when brought suddenly into the warmth of a room, and I could see by the way Hill nursed his that the prospect of immediate eternity had not altogether distracted his attention from the ache in his anatomy. Presently he said very quietly:

«There! we 've struck the aërial gulf stream. I guess we are safe enough now. We are not going down anything like so fast.»

This was true enough, but we were sinking into night. We had long since got out of range of the sun, and as the gray old earth rolled over in its airy bed it grew darker and darker under its own shadow. I could see that Hill was straining his eyes, and as I looked out I caught a glimpse of Mont Blanc near at hand—Mont Blanc only a stone's throw away, as grim and ghostly in the darkness as the specter of the Brocken. Then I was suddenly aware of little, fine, granular bits of snow falling on my face and hands. In a few seconds we were in the midst of great white flakes whirling about us like big feathers, and all sight of mountains, or anything at hand save these noiseless companions, was blotted from view. Hill was fumbling with his switches and buttons, but without avail. There appeared to be no response from any of them, if I might judge from the absolute silence into which we sank deeper and deeper.

«Why don't you fire off your light-gun?» I asked.

«The confounded thing does n't work, or I would have done so long ago. That 's the trouble with electricity: it 's as liable to go back on you as a fickle girl.»

He scratched a match, and in that brief moment of illumination we were able to distinguish nothing but softly falling flakes against a blank wall of impenetrable darkness. Its light also shone upon Hill's face anxiously inspecting his instruments, and upon the snowflakes like a swarm of ghostly bees in the background.

«We are falling very gently,» said he, presently; «but I should like to know why we have n't hit something. With Mont Blanc as near as it looked, we should have struck terra firma five minutes ago. We must be drifting away in this cloud.» But even as he spoke the snow ceased, or we passed out of the belt of it. At the same moment we were aware that the *Cloud Queen* had met with some obstruction. She was grounding somewhere, but, curiously enough, the top part, or balloon proper, was grounding first. We had not felt a jar or vibration in the craft in which we sat, but there were raking sounds overhead, and bits of snow and ice fell upon us. Jabez regarded these as assaults from unseen enemies, and resented them accordingly. There was a peculiar property in the sound of his barking now, as if it came back from a wall. We were sure that we were on the mountain-side. At no time had the sounds of contact above been sufficient to arouse alarm, and now they ceased altogether. Everything was silent again for a minute or two, and then we felt the *Cloud Queen* ground in reality on the bottom. There were two or

Digitized by Google

three soft bumps, a lurch or two, and everything was quiet.

«I had a tallowed wick here somewhere,» said Hill, lighting another match and hunting about for it. «Wait until I find it, and we

«HILL CLAMBERED OUT OF THE BOAT.»

will soon see where we are, to say nothing about getting the light-gun in order.»

When the wick finally flared up I saw a glittering wall of ice, as sheer as a house, at my right. There was another wall of blue ice at the left, and as high as we could see at both sides these icy cliffs extended. Forward and back of us there seemed to be caverns stretching away, and a great pile of soft snow, or what appeared to be new-fallen snow, lay just ahead. There was evidently some sort of projecting eave over us, and we had come down the side that was not obstructed by that roof or eave. Perhaps its protruding edges were what the *Cloud Queen* had brushed on her way past. Hill clambered out of the boat in silence, taking the wick with him. Jabez followed, sniffing curiously at everything he passed; and I stretched my stiff legs, while man and dog went down the gorge together, casting long shadows behind, but striking off innumerable sparks as the light of the taper was caught by and reflected from hundreds of glittering projections and irregularities in the icy walls. They went only a little way, and then Hill returned and stood beside me.

«Well, I 'll be hanged!» he exclaimed. «Where do you suppose we are?»

«Give it up.»

He looked at me reflectively, and then at the ball of wick in his hand.

«As near as I can make out,» he said, «by the aid of this lightning-bug of a lamp, we are at the very bottom of the very deepest crevasse in all Mont Blanc.»

I suppose I looked blank myself; at any rate, the sight of my face set him off. He leaned against the ice behind him, and laughed until the taper flickered and shook in his grasp.

«Talk about ballooning!» he exclaimed when he had recovered his equanimity. «When I invited you to go into the air with me, you did not expect my invitation also included side-trips into the earth and down wells, did you? I don't wonder you look dazed; but just hold the light, man, while I gear up the machinery a bit. I don't know how it is with you, but what *I* want is tea.»

He set to work cheerfully, and presently the fumes of a good supper arose appetizingly. The electric current once in order, he also gave me an exhibition of the light-gun's powers that seemed nothing short of magical. That singular invention defied all known laws for the transmission of light, and I could see what a terrible illuminating-engine it might become in the hands of an enemy in a balloon, for instance, inspecting at his leisure the fortifications beneath him. By a combination of the lenses, the workings of which he never explained to me, he could throw ahead what appeared to be globes of light, detached from the light in the gun, to all appearances, and yet illuminating like lamps as they passed through the air or remained motionless, suspended against or over anything he wished specially to inspect. The effect of these luminous and, to all appearances, independent bodies of light was weird and ghostly in the extreme, and I could imagine the consternation one of them would create in a fortress. To be sure, the life of a light-ball was only a few seconds if the operator wished to avoid any visible connection with it; but, as Hill said, that was «worlds for photographic purposes.»

«I adjust the focus,» said he, «at a hundred feet, we will say. Then, by an arrangement of the refracting crystals inside, I produce a round, concentrated globule of intense light, which is magnified from one to a thousand times by the lens, according as I set it, and deposited, as you might say, upon the wall of darkness one hundred feet ahead of the muzzle of the light-gun. If one could get high enough in the rare and purified air to work direct with the luminiferous and cosmic ether, with a light-gun of sufficient power, it would be possible to produce moons—say a moon for each county, eh? ‹No more oil-lamps or gas- or arc-lights on street corners, but moons for everybody—every man his own moon-maker.› How would that read for an ‹ad.›?»

Digitized by Google

«First-class,» said I; «but how about clouds?»

Hill sighed profoundly. «That 's the trouble,» said he. «We all know how clouds hoodoo a real, simon-pure, genuine moon product; and as artificial moons would have to be made above the cloud strata in order to take advantage of the ether with luminous possibilities—well, somebody has got to invent a process by which clouds can be dispelled, before county moons can be put on the market. But I am more interested just now in the supper market.»

I felt that I was, too; and as Jabez never yet preferred a moon to a beefsteak, we all agreed upon that subject, and ate our well-cooked meal in a palace the like of which no Mogul king ever dined in. And afterward we slept very comfortably in spite of our frost-bites, for the ice-cavern seemed warm by contrast with the cold we had suffered from in the sky. Next morning I was awakened by the sound of hammering on metal directly over my ears, and opened my eyes to see Hill at work upon his crippled inventions.

«That is the rising-gong,» said he, as I started up.

«Is it? It sounds to me more like Cramp's shipyard. I suppose it would be inappropriate to say, 'The top av the morning to yez,' would n't it?»

«The top! It looks to me more like the bottom of everything—morning, day, mountain, the whole terrestrial business, in fact. Just cast your eyes up, my friend, and tell me how you think we ever got down here, and, what would be more to the point, how you think we are ever going to get out of here.»

I looked up, and saw a thin blue ribbon of sky no wider than a lady's belt—or so it seemed to my inexperienced eyes. Yet there lay the balloon, or reclined, rather, apparently full of gas, but altogether lacking buoyancy. It was half supported by the sides of the crevasse, and the ice-walls that had seemed so close together in the night were in reality far enough apart to admit a bag capable of carrying ninety thousand cubic feet of gas, although less than half this quantity had been actually used, as more would have been dangerous when making allowance for the expansion caused by outside air-currents of different temperatures.

«Do you remember asking me what was to hinder the gas from congealing in high altitudes?» asked Hill.

«Yes; and you said that you were going to paddle it around—to keep it churned up; and you also propounded a conundrum about the relative weights of ice and water.»

«That 's right,» said Hill; «there 's nothing the matter with your memory yet. Well, I 'm blessed if that congealing process is not precisely what has taken place. The minute the paddle stopped Jack Frost got to work. That bag might just as well be filled with ditch-water so far as any self-sustaining property goes.» He took off his cap and rubbed his head, in thoughtful contemplation of the spectacle before him. «Look here,» he added, giving the valve-rope a jerk. There was no hiss of escaping gas, no shrinkage of the enveloping fabric.

We were in a strange, green sort of twilight at the bottom of the crevasse, and the walls about us might have been glass,

«HE LEANED AGAINST THE ICE.»

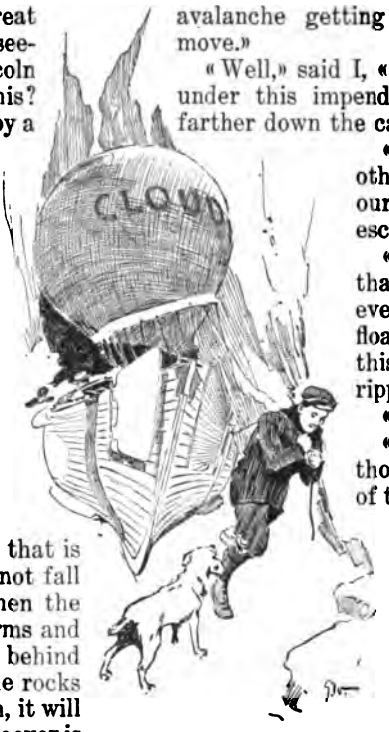
they were so clear and transparent. At the extreme top we could detect an overhanging, eave-like mass, beautifully curved and chiseled at the edges by the wind. After a while the sun shone upon it, and we concluded that it was the mountain-side of our roofless cavern, and that the opposite edge was possibly much lower. We also discovered that the crevasse was wider just there than anywhere else, curving at both sides like a round well. Into that well—the only spot in all the Alps, probably, where such an object as the *Cloud Queen* could have descended—it had been our luck to drop.

Digitized by Google

«Do you remember, a great many years ago,» asked Hill, «seeing a schooner aground in Lincoln Park in just such a way as this? She had been driven ashore by a great storm that wrecked many similar craft, but it was her luck to be carried by the waves through the only spot along the whole lake front where there was no breakwater. We have accomplished pretty much the same feat.»

It did indeed appear so, and the *Cloud Queen* looked to me to be a great deal worse off than the schooner had been.

«You see that overhanging eave up there?» continued Hill. «Do you know what that is? That is destruction; that is the foot of a glacier. It may not fall to-day, nor to-morrow; but when the time comes, and the sun warms and melts the accumulating mass behind sufficiently to loosen it from the rocks to which it is at present frozen, it will start upon its journey, and whoever is down here might much better be elsewhere. A part of it will inevitably be swept over the fissure mouth above, carried by its own momentum; but a cataract of ice and snow will pour down—enough, perhaps, to fill this well up as though it had never been.»



«WE DRAGGED THE BOAT.»

I must confess that this revelation shook my spirit more than the prospect of immediate destruction had the night before.

«Of course,» added Hill, probably seeing me change color, «as I said, it may not fall to-day, nor to-morrow, nor while we are here. But that is just the point. I have explored this fissure in both directions, and so far as I can see, our chances of getting out are about equal to a beetle's in a glass jar. You see,» I —he smiled grimly,—«it 's only one of those errors of human judgment to which we are all liable. When I started for the clouds I naturally took no outfit for climbing; in fact, I could have made only a limited provision for that sort of expedition—like wings and gum shoes, for instance, and you know the market for wings is poor. But mountain-climbing—that 's different. We need—and we lack —ice-axes, nails in the soles of our shoes, guides, ropes, experience, and a few other important items. We 're about as well off for mountain-climbing as we are for cloud-climbing; and in the meantime there 's the avalanche getting ready—packing up to move.»

«Well,» said I, «we need not camp right under this impending doom. We can go farther down the cañon, as it were.»

«That 's true; but, on the other hand, the balloon is our only visible means of escape, so far as I can see.»

«You don't mean to say that you think the balloon, even if it could be made to float again, could get out of this narrow place without ripping itself to pieces?»

«She got down that way.»

«To be sure; but look at those jagged sides. Some of those projections are like knife-blades.»

«They were just as sharp last night,» persisted Hill, doggedly.

«Yes; but suppose there were cuts in the bag; you would n't know it now. How can you find out with certainty until the gas thaws?»

«I've inspected the bag pretty thoroughly, and there is not a thread cut, to the best of my belief.»

«I hope you 're right. If you are, it simplifies our getting out of this predicament.»

«Ah,» said Hill, sighing and shaking his head, «there 's the rub! Instead of simplifying our unfortunate position, it complicates it. How long do you suppose it would take to thaw forty or fifty thousand cubic feet of congealed gas,—in an ice-house, at that,—and at what expenditure of electrical force? Now my storage-battery contains only enough power to refill the balloon once, with an allowance of enough amperes to keep the light-gun supplied with force, or the descending-pump, and to boil an occasional tea-kettle. If I exhaust half the force thawing the congealed gas, I shall have remaining only enough watts to half fill the balloon—which would not mean sufficient buoyancy to float it.»

«Cheerful prospect!» said I, sitting down on the edge of the boat. «How many days did you say you provisioned for?»

«Six—not reckoning Jabez. His rations reduce the *per diem* to about four. However, we can only hope, like Mr. Micawber, that 'something will turn up.'»

«It would be more apt to turn down here.»

Digitized by Google

«That's right. But let us breakfast. Things won't look so gloomy on full stomachs.»

I helped him to detach the chains from the balloon, and we dragged the boat far enough away to be, as we calculated, out of range of the avalanche when it should conclude to start on its trip. Then we cooked our breakfast and discussed the situation.

«Here 's another thing I did n't mention,» said Hill. «You know what a confounded row the generator makes when at work, but you may not know that avalanches are sometimes started by sounds; the slightest vibration in the air may shake them off their perches when they are poised for falling. Why, in some Alpine villages the ringing of church bells is prohibited during the avalanche season; and I have heard experienced guides dilate upon the necessity for silence at some points on the mountains known to be particularly menaced by that sort of danger. Climbing-parties are cautioned to step lightly and to speak in whispers. Now if that glacier overhead is balancing for flight, how would the noise of the generator affect it, do you think?»

«Well,» said I, «if the crack of a twig, or the sound of a human voice, a cough, or a sneeze, or the ringing of one of those twopenny Alpine bells, can alarm a full-grown avalanche, I see no reason why the whole mountain should not slide off its base when you start the generator going.»

«That 's just about it,» said Hill, resignedly.

We ate our breakfast, and started out to explore the ice-gorge to its end, hoping to find some means of egress. As nearly as we could determine by the compass,—which might be deflected by mineral deposits in the mountain, for all we knew,—the crevasse ran northwest by southeast from the spot where the balloon had fallen. In some places the ice-walls seemed to meet overhead, and in no place was there a wider opening at the top than that well-like hole over the *Cloud Queen*. We decided its length to be perhaps three quarters of a mile, or a mile; but this was only at the bottom. At the top it was bridged here and there, and probably appeared to be a number of deep crevasses rather than the one deep slit in the ice and rocks we had found it to be. At one end there was a narrow, perpendicular wall of rock that we could have climbed had it not overhung at the top like the branches of a tree. A monkey could not have escaped by it. At the northern end there was nothing but ice-walls, as bare and smooth as glass. Irregular piles of ice and snow, varying in depth, and showing by their formation that they had poured down from above, lay here and there along the bottom of the fissure. This gave color and foundation to Hill's theory of what might be expected from that quarter, and we took great pains to drag the boat and its supplies to a place free from these indications and with no overhanging eaves. We discussed various plans, abandoning them all as impracticable; and so the first day passed. It was a short day, for it grew dark very early down where we were, and the night was the longest I ever experienced. We did not sleep well, although we had nothing to fear from avalanches at night.

«HE AMUSED HIMSELF WITH BITS OF ICE.»

Jabez was the only one of the family who had a good time. He had nothing to worry about, and so maintained a cheerful spirit—as almost any one can in those circumstances. He amused himself with bits of ice or rock, growling and barking like a whole kennelful of dogs, even when I expostulated with him and told him he was liable to scare up an avalanche when he least expected or wanted it. When we organized exploring expeditions in the hope of finding some overlooked rift in the rock through which we might crawl to freedom, he pioneered ahead, stopping now and then to wave an encouraging tail, and to bark with undiminished ardor; but even his voice sounded unnatural down there. We imagined it had lost its tone of merry hope. Anything he said or we said sounded as sepulchral as saying «Boo!» in a barrel.

We were at lunch on the second day when something fell, striking the wall near by with a sharp clink. We both sprang to our feet.

Digitized by Google

The falling object had buried itself in the snow so quickly that we could not see what it was, but concluded it could have been only some small rock. But Jabez was not content with suppositions. After the manner of his race, he determined to investigate this performance by digging out whatever had presumed to intrude itself into his own special domain. He was hard at it when another object fell, striking the balloon squarely on top, and bounding off into a deep drift of snow on the other side, and Jabez made for it with furious barks, not, however, until he had dug out the first meteoric visitor, and flung it with a growl and a shake of the head against the wall. Again there was a sharp, metallic ring, and Hill sprang forward.

«ENGLISH.»

«Good heavens!» he exclaimed, picking it up, «it 's an ice-ax!»

We hurried over to the spot, looking anxiously up for further foreign visitors. Jabez had answered the question. The snow was flying over his back as we approached, but seeing us, he at once stopped his vigorous digging, seized something between his teeth, and pulled at it with all his might. It was a piece of Scotch tweed of a tan plaid pattern, and it was attached to some resisting body. Hill took one look at it before we too fell to digging.

«English,» said he,— «I'll bet a keg of nails!»

(To be continued.)

Marion Manville Pope.

A PERSON AND A PICTURE.

THE field was yellow and brown; behind the stone wall was another field full of blackberries and sweet-fern, and then came black pine-trees and a blue sky.

I had come out to watch Louis Riel paint a picture. Louis, as you know, is a very great artist, who is asked to decorate libraries, go to dinners, and all that; and it is considered no end of a fine thing to be allowed to see him paint. But why he wished to paint the things I have described puzzled me, and I said so.

«To begin with,» said Louis, «the subject is absolutely nothing; and secondly, I can make anything out of nothing» (Louis values himself); «and in the third place, when a man lives by doing certain things, he must do those things when he receives a remunerative offer from somebody else.»

«To be sure,» said I; «but who in goodness wants a picture of two ugly fields and some ugly pine-trees?»

«That is a question I decline to answer,» said Louis; «but I will tell you why the person wants the picture.»

«Go ahead,» said I; «will the person be sane?»

«The person,» said Louis, «is a particular friend of mine. Do you mind picking up that brush? I can't bend over without upsetting things. Thanks. Well, the person is a very particular friend of mine—»

«As you were saying,» said I.

«Do you care to hear the story?» said Louis.

«How long is it?» I asked.

«Because, whether you want to hear it or not, I 'm going to tell it to you for the mere pleasure of hearing myself talk.»

«Oh, very well,» said I, lying back comfortably in the grass.

«You must listen, though,» said Louis, «because it 's a very sentimental story.

«It began about ten years ago to-day. It was in the afternoon—the person, my friend, said it was in the afternoon—that he first came to this field. He never told me why he came, and it does n't make any difference, but he came; and he sat on that stone wall—just the part I 'm doing now; and while he sat on the stone wall a girl came into the next field to pick blackberries.»

«A girl,» said I; «think of it!»

«She was a very pretty girl,» continued Louis, «because the person is one of the best

Digitized by Google

judges in the world, and he told me so. She was just eighteen.»

«How old was the person?» I asked. «Fifty?»

«The person was just twenty-two.»

«And you 're thirty-two—and it was ten years ago. Go on.»

Louis paid no attention.

«The person,» said he, «talked with the girl, and helped her pick blackberries.»

«Most improper,» said I. «Who was the girl?»

«She was a farmer's daughter, and she taught school in winter—»

«And talked with anybody that came along,» said I.

«The person was very good-looking,» said Louis, squeezing out some ultramarine.

«Go on,» said I.

«And he came to the field every day till the end of his vacation.»

«Did the blackberries last?» I asked.

«There were many blackberries,» said Louis; «and when the person left there were still a few on the vines.»

«Tell me more about *before* the person left.»

«The person was very young and foolish; in fact—»

«He asked her to marry him?»

«He asked her to marry him.»

«And she said she would?»

«Yes, she said she would; but she said he must wait a year to see if he still cared about her.»

«The results of higher education,» said I.

Louis shrugged his shoulders, pityingly.

«Was the person allowed to see her during the year?» I asked.

«No, he was not; and he was to write only at the very end of it.»

«Sensible girl! I have money that says he never wrote.»

«It 's mine, then, because he did.»

«Well, what happened?»

«She did n't answer.»

«The person was playing in great luck,» said I.

«The person came down by the first train, and they told him that the girl and her family had gone away to visit an aunt, or something; and as they did n't know where the aunt lived, the person could n't follow.»

«Well?» I asked.

«The person went abroad with his family, and wrote several times, and got no answer; and that 's all. Only he wants a picture of the place, and so I am painting it for him.»

«The girl is probably married to some lusty farmer,» said I.

«I think the girl is dead,» said he.

Louis turned his head to one side, the better to see what he had done.

«She must have been very unhappy after the person left,» said I. «What do you suppose she did?»

«I imagine she picked the rest of the blackberries.»

«Of course,» said I. «I 'm going to sleep.»

Louis went on painting, and I watched him between half-closed lids.

I saw him turn pale and drop his brush.

«What 's the matter?» I asked hurriedly.

«Look! It 's she!»

I raised myself till I could see over the stone wall. A woman was beginning to pick blackberries into a tin pail.

«How do you know it 's she?» I asked; «you never saw her.»

«Of course not; but I think it is. I 'm going to ask.»

«Oh, you know her name?»

«Yes; the person told me.»

Louis ran, and leaned over the stone wall.

«I beg your pardon,» said he; «are you Mildred Bartlette?»

«Not any more,» said the woman, and went on picking blackberries.

Louis came and stood before his picture, and he looked from it to the sky.

«I think the light is not very good,» said he; «let 's push along.»

We walked on in silence for some time.

«Are you going to finish the picture?» I asked.

«I think I shall not finish it,» said he.

«But the person who ordered it?» I objected.

«He is a very particular friend of mine, and if I tell him he does n't want it, why, he will understand that I mean it for his good.»

«Yes,» said I; «what 's the use of roses and lavender?»

We walked on in silence for some time.

«Do you suppose the woman is still picking blackberries?» I asked.

«She was when I last saw her,» said Louis; but I 'm very sure he spoke without thinking.

Gouverneur Morris, Jr.

TOPICS OF THE TIME

Is the Senate Justly Criticized?

FLIPPANT and unreasoned attacks upon any branch of our government are greatly to be deprecated. They tend to bring American institutions into popular contempt; they discredit authority and discourage patriotism. At the same time it is evident that there is equal or greater danger in the withholding of legitimate criticism. If evils are not seen, understood, and denounced, they will grow till the injury may be well-nigh irreparable.

For a number of years that body which the fathers first called the «second branch» of the Federal legislature, and which is now called the Senate, or «upper house,» has been the subject of popular suspicion and ridicule. Its conspicuous defenders have, unfortunately, come more frequently than otherwise from within its own membership. It has become the fashion to berate the Senate. To so great an extent has this been the case that there are many who forget that the Senate still contains not only able, but upright and public-spirited senators, men who are most unjustly included in any general condemnation.

There are several occasions for the criticism. One is the fact that the Websters, Clays, and Sumners are no longer living; that the Senate contains no men of comparatively first-class caliber. Even if this is acknowledged to be true, the fact would not in itself be sufficient to excuse the present popular disdain of the Senate. A senator could very well retort that the Grants, Shermans, and Sheridans, and the Emersons, Lowells, and Longfellows, have also passed away. It may be true that the average of ability is lower, but it would require a detailed and elaborate comparison to make such a fact clearly evident. Under this head a legitimate criticism might be suggested in the averment that the Senate—indeed, our whole political life—has, under the boss system in politics, fallen into such disrepute that the upper house of Congress is not as attractive as formerly to men of commanding abilities. But in such a criticism cause and effect would be inextricably confused.

Again, and here criticism is not easily thrown aside, it is held that the senatorial representatives of some of the States, of some, even, that are considered the most important, are intellectually and morally inferior and unfit; that, indeed, the very presence in the Senate of certain of these men is in itself an outrage and a scandal. When men of the character mentioned not only help to make up the membership of a legislative body, but are able to take a prominent, and at times a commanding, position in its councils and in its decisions, we come at once upon a reasonable ground for public

not only that such men have become members of the body,—apparently in good, regular, and influential standing,—but the means by which certain of them reached their positions reflect dishonor upon the chamber to which they belong. For if it is seen that the boss, the demagogue, and the corruptionist may obtain, and do obtain, by chicanery and corruption, seats in a representative assembly, and especially if it is seen that such members are sometimes not less, but more powerful than others, then it is inevitable that the respect for that assembly should diminish among the people.

Another occasion for criticism lies in the rules and customs of the body itself, whereby single senators or a small group undistinguished for wisdom or character, may delay, and even defeat, the most pressingly needed legislation. Instances of disastrous obstruction have been of late years so conspicuous that they are constantly in the minds of the people, and they are coupled with, and not palliated by, other notorious instances of the very absence of that «coolness, system, and wisdom» which, according to the expectation of Madison, were to distinguish the proceedings of the Senate as compared with those of the lower house of Congress.

Public opinion being the power behind all government, it is especially important that that part of the government which legislates should be keen to discriminate between, on the one hand, ignorant clamor, selfish propagandism and demand, and, on the other, that intelligent, disinterested, and genuine public opinion which it is imperative that legislators should regard. One reason for prejudice against and reasonable criticism of the Senate is based upon the fact that of late years it has in its action proved more subservient to the former than to the latter influences. It is true that the actual drawing of the arbitration treaty, its popular indorsement, and its indorsement by a majority even of the Senate, constitute a great victory for the humane principle involved; and yet the lukewarmness of many senators who voted for the measure, and its final rejection owing to its failure to obtain a two-thirds vote, are truly alarming symptoms of the indifference of our «upper house» to the enlightened public opinion of the country, no matter how widely and decisively expressed.

The length of the term of a senator, being half as long again as that of the President, was intended, of course, to have a conservative tendency. What this device has lately tended to conserve is that «courtesy of the Senate» which, added to the senatorial share in Executive appointments, has given rise to rapacious attacks upon the prerogative of the National Executive. The length of the senatorial term has created a «good-fellowship» resulting in that mutual accommodation or log-rolling which constitutes one of the most notorious causes of complaint against the upper chamber.

It is interesting to note that some of the most conservative of the makers of the Constitution desired that

Digitized by Google

the Senate should not only give equal representation to the several States as such, but that it should also especially represent property. It was even suggested that the President should be worth not less than one hundred thousand dollars, a judge fifty thousand, and congressmen a proportionate sum. One member of the convention wished «the Senate to bear as strong a likeness as possible to the British House of Lords, and to consist of men distinguished for their rank in life and their weight of property.» This was not because of devotion to merely selfish property interests, but for the same reason that some of the fathers of the republic desired that the voters of the United States should be freeholders, believing that they would be «the best guardians of liberty.»

It was Benjamin Franklin who said, in opposition to the property qualification for members of the government: «If honesty is often the companion of wealth, and if poverty is exposed to peculiar temptation, the possession of property increases the desire for more. Some of the greatest rogues I was ever acquainted with were the richest rogues.» The property qualification was not adopted; but although there are probably not as many very rich men in the Senate as is popularly supposed, there has grown up, strangely enough, a property representation in the Senate, not at all in the interest of liberty and good government. There seems, indeed, to be color for the suspicion that the old method of corporations, capitalists, and speculators, in employing professional lobbyists or attorneys for either corrupt or legitimate legislative uses, has been in part, though not wholly, superseded in the State legislatures and in Congress. In the case of State legislatures it is well known that nowadays a great deal of «protection» is secured to corporate or large private interests by means of so-called political contributions (really blackmail) to the State bosses, whose creatures in the legislature can be relied upon for services in emergencies. A corporation magnate either has himself elected by a subservient legislature to the United States Senate, or he procures through local committees the election of senators who are sure to take a favorable view of legislation in which he and his friends are interested. There is probably much less bribery of the old-fashioned, brutal kind in Congress than there was thirty years or so ago; there is less corruption there in general. There are few men in the Senate who are under gross suspicion; but there are, in addition to these, senators whose conduct in relation to legislation in which they or their backers are interested may be said, in the language of moderation, to be indelicate; there are enough of both classes to create scandal, and largely to account for the wide and most unfortunate ill repute into which the Senate has fallen.

One of our leading and most thoughtful statesmen, still active in politics and affairs, said the other day that he had no desire to enter the Senate; he could do his work outside of it, and would not then be subject to the ill repute that attaches to that body. He thought the Senate deserved its present most unfortunate reputation—a reputation more unfortunate for the country and for our system of government than for the particular body or individuals affected.

We have no desire to overrate existing evils in the Senate or elsewhere in our machinery of government. If one representative body in America is, for the time being, neither in its membership, methods, nor action what it should be, it is the fault more of the people than of the system, though a more popular system of electing senators may be desirable. As for the people, they are not fairly represented by the Senate as a whole only because they refuse to take political matters to heart, except in great emergencies. No one has a right to criticize the Senate, or anything else of which he thinks ill in national, State, or city government, unless he himself is doing his full duty as a citizen. Indifference, neglect, on the part of the voter account for most of our troubles. The people of the cities are beginning to take hold of local government more generally and with greater earnestness. Perhaps it is by this way that will come our deliverance from the evils of our national politics.

The Forest Commission's Great Public Service.

At first glance it might seem that the action of Congress during the extra session, in suspending all but two of the Western forest reserves, proclaimed by President Cleveland on the 22d of February on the recommendation of the Forest Commission of the National Academy of Sciences, was a staggering defeat of this important cause. On closer consideration, we do not share this opinion. Mr. Cleveland's action was not only patriotic in itself, but, following upon the reserves previously proclaimed by himself and by Mr. Harrison, it sets a standard of progress which will be constantly in the mind of President McKinley, upon whose administration the responsibility now rests of dealing with this belated and critical problem. To the objection that the plan for the reserves was of too great extent (posterity will doubtless pronounce it blamable moderation) the reply is that some such large scheme was needed to arouse the public, and especially the West, to consider at all the need of a conservative policy toward the national forests. This objection was doubtless expected by the commission, in view of the fact that the lands are still unsurveyed, and the mere rectification of their frontiers would have disappointed nobody. The hardships upon the settler might easily have been repaired without suspending the reserves. That these hardships should have existed is an indictment of Congress in general for its long-continued neglect to enact a just administrative system for the reserves, and particularly of certain Western senators who have defeated it.

But if the Senate has not been convinced,—and again the House of Representatives has proved itself the more conservative body,—the country is being rapidly educated. The net result of the several debates in the two houses is that every community in the Northwest has been busy with the discussion of the subject; and while, for the most part, the drift of sentiment has been in opposition to the reserves, yet after the clamor of the small and noisy class of those who are for «the old flag and an appropriation,» has subsided, the good sense of the self-sustaining American will assert itself. It will then be discovered that, after all, the truest friends of the West are not the so-called «practical» men who are willing to draw upon her dwindling forest capital until it is exhausted, but the alleged «theorists» who wish to see it

Digitized by Google

securely cared for in a way that will yield interest for all time. In fact, the poor-settler argument, which was urged upon Congress with lacrymose sentimentality and a wordy sort of patriotism very like «flapdoodle,» should have fallen to the ground before the known willingness of the friends of the reserves to provide for all reasonable local needs.

For all agree that forests do not exist simply to give greater variety to a map. They are of use solely to minister to the needs of the people. What could be more «practical» or more liberal in its consideration of the settler and miner than the view of the province of these reserves as set forth by the «theorists» of the Forest Commission? We quote from their report to the Secretary of the Interior on May 1, 1897:

A study of the forest reserves in their relations to the general development and welfare of the country shows that the segregations of these great bodies of reserved lands cannot be withdrawn from all occupation and use, and that they must be made to perform their part in the economy of the nation. According to a strict interpretation of the rulings of the Department of the Interior, no one has a right to enter a forest reserve, to cut a single tree from its forests, or to examine its rocks in search of valuable minerals. Forty million acres of land are thus theoretically shut out from all human occupation or enjoyment. Such a condition of things should not continue, for unless the reserved lands of the public domain are made to contribute to the welfare and prosperity of the country, they should be thrown open to settlement and the whole system of reserved forests abandoned. Land more valuable for its mineral deposits, or for the production of agricultural crops, than for its timber, should be taken from the reservations and sold to miners and farmers, the mature timber should be cut and sold, settlers within or adjacent to the boundaries, unable to procure it in other ways, should be authorized to take such material from reserved forests as is necessary for their needs, and prospectors should be allowed to search them for minerals.

And yet, in the face of this declaration, which is embodied in the legislation adopted, an alliance of the West and the South succeeded in rallying twenty-five votes in favor of the total abolition of the reserves. This is all the more remarkable because the vote was taken at the very time when Congress was giving great attention to the relief of the sufferers by the Mississippi floods, the chief object to be attained by the reserves being the prevention of similar calamities. It was the blind leading the blind. Mr. Cable's remark that «a man may be depended upon to shoot away from the uniform he has on» seems to be in need of revision.

An even greater public service on the part of the commission is the thorough treatment of the forest problem in the report from which we have quoted. This is the first time, we believe, in the official history of the government when there has been anything like an adequate grappling with this question. The report covers succinctly the whole field, with significant reference to the costly experiments of other countries in retrieving calamities similar to those which are impending here, and sets forth with graphic detail the unceasing dangers which menace the forests from fire, nomadic sheep-husbandry, and the depredations of mines and lumber companies. This would, however, be of little value were it not supplemented by the proposal of a practical system of forest preservation, both temporary and permanent, carefully thought out by men whose business it has been to make a study of this topic. The heart of this system is *control which rests on the moral and physical support of the army*. This was to have been expected: for, indeed, there can be no other conclusion when it is considered that the dangers to be provided for are those which largely involve in the rank and file intelligent police service, and in the administrative officers cultivated intelligence, firm adhesion to duty, and removal from temptations to corruption. All these qualities experience shows to be characteristic of the army. No progress can be made that is not based on the fundamental principle that local control of national interests is invariably bad control. The system recommended by the commission, while it would admit of the enlistment of local forest guards, would insure a trained and intelligent supervision on the part of army officers—a desideratum, in our opinion, not to be obtained from any system of civil administration.

It is to be hoped that Congress will not consider that its duty to the forests ends with the suspension of the new reserves and the enactment of a system of temporary rules for the old. The question should be studied in exactly the spirit in which it has been studied by the commission, and it should be recognized that the problem is one of such enormous importance as to justify a prompt but careful working out in legislation of the principles recommended by the report. When it is remembered that the members of the commission—of whom Professor Charles S. Sargent is chairman—have given their eminent services without compensation, they should at least receive at the hands of Congress the gratitude and compliment of consideration for their ideas.

Meantime, as the subject is likely to be before the people from now until the 1st of next March, when the act of suspension is to terminate, we may renew our hope that it will receive also from the commercial and educational institutions of the country the attention commensurate with its importance. The report of the Forest Commission is to be obtained from the Secretary of the Interior, and it ought to be in the hands of every newspaper, board of trade, chamber of commerce, scientific body, and educational institution in the country.

Memorable Words.

MANY things combined to make the ceremonies connected with the unveiling of St. Gaudens's monument to Robert Gould Shaw on Memorial day, in Boston, an occasion of unusual significance and importance. As the readers of the June CENTURY had special opportunity to learn, not only were the deed and the hero, or rather the heroes, well worthy of a splendid memorial, but the monument itself was well worthy of the persons and the action commemorated. The latter is a point often curiously neglected, it being apparently, in the opinion of many promoters of such memorials, an absolutely unimportant detail, as if one statue were as good as another. The general interest in, and universal praise of, so noble a work of art as this by St. Gaudens should be the means of setting a standard in the matter of public monuments which committees cannot disregard.

It was one of the felicities of the occasion that the sculptor was not overlooked, as is frequently the case. Again and again the heartiest acknowledgment was made of the evident fact that a masterpiece of modern

Digitized by Google

art had been that day displayed to the admiration of men. It was felt that the words of the mother of the hero, gracefully quoted by Colonel Lee of the Monument Committee, expressed the literal truth when she said to the sculptor: «You have immortalized my native city; you have immortalized my dear son; you have immortalized yourself.»

Then, again, the parade was a model of its kind, not tediously extended, but appropriate and suggestive in all its details, including as it did the New York Seventh Regiment, of which Shaw was a member, and including also veterans, white and black, who had been associated with him in the field.

Again, the proceedings in Music Hall were of a high order. Fortunate the State and city whose officials can take their natural parts in such exercises as these with such rare dignity and ability! Functions of this sort are among the duties of public officials, and it should not have to be remarked as exceptional when the participation of so-called «public functionaries» on public occasions of this character proves to be entirely satisfactory. And yet, in our day, how often are great States and great cities represented in like ceremonies in a manner to make self-respecting and patriotic citizens ashamed!

Governor Wolcott's address was as stirring as it was brief, as was also that of Mayor Quincy, who, in this passage, uttered with eloquence a profound sentiment:

It is not often those whom the world esteems the most successful or the greatest who leave the most valuable examples and lessons to posterity. It is rather the man whose life or death touches some deep chord of universal sympathy,—appeals to the imagination or the sentiment of all mankind. When far greater soldiers are forgotten, our descendants will still cherish the memory of the gallant youth who fell with «his hurts before,» leading a hopeless charge, blazing the path of freedom for a race in bondage.

Professor William James, whose brother was associated with Shaw in the Fifty-fourth Massachusetts Regiment,[1] while tenderly picturing the youth who fell at Fort Wagner, made the occasion memorable by adding to the praise of the heroes of war solemn and timely words, exquisitely chosen, that hold the true lesson of Shaw's pathetic and glorious career:

Ages ago war was the gory cradle of mankind, the grim-featured nurse that alone could train our savage progenitors into some semblance of social virtue, teach them to be faithful one to another, and force them to sink their selfishness in wider tribal ends. War still excels in this prerogative. . . . Man is once for all a fighting animal; centuries of peaceful history could not breed the battle instinct out of us; and military virtue is the kind of virtue least in need of reinforcement by reflection, least in need of orator's or poet's help.

What we really need the poet's and orator's help to keep alive in us is not, then, the common and gregarious courage which Shaw showed when he marched with you, men of the Seventh Regiment. It is that more lonely courage which he showed when he dropped his warm commission in the glorious Second to head your dubious fortunes, negroes of the Fifty-fourth. That lonely kind of valor — civic courage, as we call it in peace times — is the kind of valor to which the monuments of nations should most of all be reared; for the survival of the fittest has not bred it into the bone of human beings as it has bred military valor; and of five hundred of us who could storm a battery side by side with others, perhaps not one would be found ready all alone to risk his worldly fortunes in resisting an enthroned abuse. The deadliest enemies of nations are not their foreign foes; they always dwell within their borders. And from these internal enemies civilization is always in need of being saved. The nation blest above all nations is she in whom the civic genius of the people does the saving day by day, by acts without external picturesqueness; by speaking, writing, voting reasonably; by smiting corruption swiftly, by good temper between parties, by the people knowing true men when they see them, and preferring them as leaders to rabid partizans or empty quacks. Such nations have no need of wars to save them. Their accounts with righteousness are always even; and God's judgments do not have to overtake them fitfully in bloody spasms and convulsions of the race. . . .

The lesson that our war ought most of all to teach us is the lesson that evils must be checked in time, before they grow so great. The Almighty cannot love such long-postponed accounts, or such tremendous settlements. And surely he hates all settlements that do such quantities of incidental devil's work. Our present situation, with its rancors and delusions, is the direct outcome of the added powers of government, the finances and inflations of the war. Every war leaves such miserable legacies, fatal seeds of future war and revolution unless the civic virtues of the people save the state in time. Shaw had both kinds of virtue. As he then led his regiment against Fort Wagner, so surely would he now be leading us against all lesser powers of darkness, had his sweet young life been spared.

But the most significant feature of the occasion was the appearance, as one of the chief orators, of a member of the colored race—one who, though born a slave, is now recognized as one of the country's most thoughtful and useful educators and genuine patriots. If there were any in that audience in whose minds lingered a question as to the wisdom and utility of Shaw's magnificent self-sacrifice, that question was answered not only in the words, but in the known character and career of the speaker, Booker T. Washington. It may easily be imagined how moving were words like these spoken at such a time and place:

Not many days ago, in the heart of the South, in a large gathering of the people of my race, there were heard from many lips praises and thanksgiving to God for his goodness in setting them free from physical slavery. In the midst of that assembly a Southern white man arose, with gray hair and trembling hands, the former owner of many slaves, and from his quivering lips there came the words: "My friends, you forget in your rejoicing that in setting you free, God was also good to me and my race in setting us free." But there is a higher and deeper sense in which both races must be free than that represented by the bill of sale. The black man who cannot let love and sympathy go out to the white man is but half free. The white man who would close the shop or factory against a black man seeking an opportunity to earn an honest living is but half free. The white man who retards his own development by opposing a black man is but half free. The full measure of the fruit of Fort Wagner, and all that this monument stands for, will not be realized until every man covered by a black skin shall, by patience and natural effort, grow to that height in industry, property, intelligence, and moral responsibility where no man in all our land will be tempted to degrade himself by withholding from his black brother any opportunity which he himself would possess. . . .

If through me, an humble representative, nearly ten millions of my people might be permitted to send a message to Massachusetts, to the survivors of the Fifty-fourth Regiment, to the committee whose untiring

[1] Adjutant Garth Wilkinson James was wounded at Fort Wagner, but not fatally.

Digitized by Google

energy has made this memorial possible, to the family who gave their only boy that we might have life more abundantly, that message would be, Tell them that the sacrifice was not in vain, that up from the depths of ignorance and poverty we are coming, and if we come through oppression, out of the struggle we are gaining strength. By the way of the school, the well-cultivated field, the skilled hand, the Christian home, we are coming up; that we propose to invite all who will to step up and occupy this position with us. Tell them that we are learning that standing-ground for a race, as for an individual, must be laid in intelligence, industry, thrift, and property, not as an end, but as a means to the highest privileges; that we are learning that neither the conqueror's bullet, nor fiat of law, could make an ignorant voter an intelligent voter, could make a dependent man an independent man, could give one citizen respect for another, a bank-account, nor a foot of land, nor an enlightened fireside. Tell them that, as grateful as we are to artist and patriotism for placing the figures of Shaw and his comrades in physical form of beauty and magnificence, that, after all, the real monument, the greater monument, is being slowly but safely builded among the lowly in the South, in the struggles and sacrifices of a race to justify all that has been done and suffered for it.

One of the wishes that lay nearest Colonel Shaw's heart was that his black troops might be permitted to fight by the side of white soldiers. Have we not lived to see that wish realized, and will it not be more so in the future? Not at Wagner, not with rifle and bayonet, but on the field of peace, in the battle of industry, in the struggle for good government, in the lifting up of the lowest to the fullest opportunities.

Sergeant Carney, next to Shaw, was the hero of Fort Wagner. Though shot twice, he crawled from the battle-field to the hospital, declaring, in his anguish, that the colors held aloft in his hands had never touched the ground. When the speaker turned to this dusky hero, then upon the stage, the excitement, the acclamations, made a scene long to be remembered.

In the mere accomplishment of oratory, in the power to speak rather than read, in the skill to seize and bear along the minds and the emotions of listeners, in dramatic climax, it was the colored man who excelled. But the substance of Washington's address was of such generous and noble quality that the art with which it was delivered becomes a matter of secondary importance.

We have spoken before of the verification of Motley's prediction that song and art would long exalt the fame of Shaw. Another American poet has added a wreath of stately, most musical, and fitting verse to the tributes already dedicated to his memory. The later poem is not to lay upon a grave, but to decorate a monument. Aldrich's «Ode» does not, like the earlier verse, celebrate death, but heroic life and «undying youth»:

A pean, not a knell,
For heroes dying so!
No need for sorrow here,
No room for sigh or tear,
Save such rich tears as happy eyelids know.
See where he rides, our Knight!
Within his eyes the light
Of battle, and youth's gold about his brow;
Our Paladin, our Soldier of the Cross,
Not weighing gain with loss—
World-loser, that won all
Obeying Duty's call!

OPEN LETTERS

General W. F. Smith at Petersburg.

IN the April CENTURY the author of «Campaigning with Grant» says of «W. F. Smith's Attack on Petersburg,» the italics being mine:

Smith at half-past seven threw forward his troops in strong skirmish-lines. After a short struggle the enemy was forced back from his intrenchments in front of our center and left, and Smith's second line then made an attack upon the rest of the works. The Confederates were now driven back at all points, four guns were captured and turned upon the retreating troops, and *before dark* the whole line of intrenchments, about two miles long, had been carried, and three hundred prisoners and sixteen pieces of artillery captured.

Now, if I started at half-past seven to do all that work, it could not have been finished before dark, and time and darkness are important elements in the question. There is no foundation for that assertion as to time, for it was after nine o'clock before the assault was over. The assertion that I captured the whole line of intrenchments is also without foundation. From near the Jordan's Point road to the Appomattox, on the left, the enemy's works were intact, and their capture occupied the army several months. That very portion of the works, as will be seen, was the subject of a suggestion with reference to the disposition to be made of Hancock's troops on their arrival. I quote with reference to Hancock:

The head of Hancock's troops reached a point a mile in the rear of Hinks's division . . . about half-past six, and two divisions of Hancock's corps were ordered to push on and coöperate in the pending movement. Hancock himself rode forward to where Smith was, to learn the exact situation and participate in the attack; and though senior in rank, waived his rights in this respect, and left Smith in command of the operations, for the reason that he was more familiar with the ground and the movements of the troops up to that time. It was now after dark, and Smith contented himself with ordering up the two divisions of Hancock's corps to occupy the works which had been captured. This was not accomplished until about eleven o'clock *and the object of the movement had failed.* . . . It was a moonlight night; Kautz and Hinks were quite familiar with the country; . . . a bold dash . . . would undoubtedly have secured the prize, and made a vast difference in the campaign which followed.

The entire statement as to Hancock's command, and its participation in the movement of that day, is wholly

Digitized by Google

erroneous. The records say that. About four o'clock P. M. of June 15, 1864, under authority from General Grant, I wrote a note to General Hancock, detailing the situation, and suggesting that he should assault with his command in the vicinity of the Norfolk and Petersburg Railroad—that is, on the left of Hinks, who held the left of my infantry line. General Hancock received that despatch at 5:40 P. M., and he states that two of his divisions were massed on the *left and rear* of General Hinks at 6:30 P. M. This was about half an hour before I began the assault, and the locality was precisely the one from which I had suggested that his attack should be made. General Hinks wrote to me afterward that during the progress of his assault he had offered to send a staff-officer to the general of Hancock's leading division to guide his division to the portion of the line on the left which he (Hinks) could not cover in his assault. Of this, however, I at the time knew nothing, as I was engaged in making the assault on the strong bastion in front of Brooks's division. In my note to Hancock I had not asked him to support me directly, but to go in and carry out an attack beyond my reach. I did not see General Hancock until my assault was over, and after I had returned from the front, having while there given Hinks orders to reverse the slopes in the rear of the captured works to put him in a defensible position; and that order was not given until after the reception of official despatches from the signal-stations announcing many reinforcements arriving in Petersburg. The statement that Hancock waived rank is utterly without foundation. That I knew nothing of the arrival of Hancock's troops, and that I did not see him until after nine o'clock, are shown by the fact that at that hour, and after the receipt of despatches announcing the arrival of reinforcements to the enemy, I signaled to Butler: «I must have the Army of the Potomac reinforcements immediately.» I should certainly not have sent such a despatch after I knew that Hancock's troops were at hand, or after my interview with him. The assertion that I gave orders to Hancock's troops is without foundation. The record shows what orders were given, and who gave them; and according to my report made on the 16th of June, Gibbon's division did not relieve my colored troops until midnight. The troops of General Kautz were of no service to me during the assault. (See his report.[1]) Hinks and his command did excellent service.

The following statement is also made in the article:

> General Smith said that before taking the last works that *he had captured, he had heard rumors* that the enemy was crossing the James to reinforce Petersburg.

In my note to Hancock I said: «General Lee is reported crossing at Chaffin's Bluff.» There was no rumor about this; it had come from the signal-station at Cobb's Hill, and was a report as to facts. At 6:50 P. M. the following message was sent to me: «A train of fourteen cars loaded with troops just passed toward Petersburg. The enemy also appears to be sending troops *on the roads west of Petersburg*. Another train of twenty-two cars has just passed toward Petersburg loaded with troops.» On the same page of the War Records are two other signal despatches—one of 7:30 P. M., saying, «A train of thirteen cars has just passed toward Petersburg; also a heavy gun by the turnpike»: and one of 8:30 P. M.: «Two trains have passed toward Petersburg. Too dark to see what they were loaded with, or the number of cars.» At 9:30 P. M. I received the following while at the extreme front: «Hancock has been ordered up by General Grant's and my orders. Another army corps will reach you by 10 A. M. to-morrow. It is crossing. *They have not got ten thousand men down yet.* Push on to the Appomattox.» This last was from General Butler. Now, are these rumors, as the author of «Campaigning with Grant» states? As I had not ten thousand men in the morning, and had lost several hundred, I should have been reckless to have plunged into the woods, in an unknown country, at ten o'clock at night, to meet such a force as was reported by Butler and his signal-officers, besides having to attack, before reaching the Appomattox, a town where every house was a fortification, and all this in the middle of the night. In addition to the Confederate reinforcements reported as arriving, the sixteen pieces of artillery which I had captured indicated the presence of a goodly number of men.

Farther on the paper says that General Grant

> had just reason to feel grievously disappointed over the failure of the admirable plan conceived for the capture of Petersburg. . . . It was no wonder that he felt keen disappointment when Smith's command failed to seize the golden opportunity he had prepared; but brilliant generals, like eminent sculptors, in executing their best conceptions sometimes find that their tools break in their hands.

If Grant had «an admirable plan conceived for the capture of Petersburg,» and had set me as the agent to carry out that plan, he knew on the morning of June 16 whether or no I had «failed to seize the golden opportunity he had prepared.» At 1 P. M. of that day Mr. Dana, Assistant Secretary of War, telegraphed to Secretary Stanton as follows: «I went over the conquered lines with Grant and the engineer officers. The works are of the very strongest kind, more difficult even to take than was Missionary Ridge at Chattanooga.» In a paper written by Colonel Lyman of the staff of General Meade, he (Colonel Lyman) states that General Grant, on leaving the captured works on the 16th, met General Meade, and called out: «Well, Smith has taken a line of works stronger than anything we have seen this campaign. If it is a possible thing, I want an assault made at six o'clock this evening.» (Military Historical Society of Massachusetts.) On the 17th, at 11 A. M., still a day later, Grant telegraphed to Halleck: «The Eighteenth Corps (Smith's) was transported from White House to Bermuda Hundred by water, moved out near to Petersburg the night of its arrival, and surprised, or rather captured, the very strong works northeast of Petersburg before sufficient force could be got in there by the enemy to hold them.» On July 1, 1864, sixteen days after the assault on Petersburg, Grant wrote a long letter to Halleck, saying: «I have feared that it might be necessary to separate him [General Butler] and General Smith. The latter is really one of the most efficient officers in service, readiest in expedients, and most *skillful in the management of troops in action*. I would dislike removing him from his present command unless it was to increase it, but, as I say, may have to do it yet if General Butler remains.» On the 6th of July, at 10 A. M., twenty-one

[1] Vol. XL, Part I, p. 729, Official Records.

Digitized by Google

days after the assault on Petersburg, Grant telegraphed to Halleck as follows: «Please obtain an order assigning the troops of the Department of Virginia and North Carolina serving in the field to the command of Major-General W. F. Smith, and order Major-General Butler, commanding department, to his headquarters, Fort Monroe.» This request, granted, would have put me in command of the Army of the James. On the 7th of July the order was published in these words: «The troops of the Department of North Carolina and Virginia serving with the Army of the Potomac in the field under Major-General Smith will constitute the Eighteenth Army Corps, and Major-General William F. Smith is assigned to the command of the corps. Major-General B. F. Butler will command the remainder of the troops in that department, having his headquarters at Fort Monroe.» By the telegrams and letters from Grant from the 16th of June to the 7th of July, is it not shown, beyond any doubt whatever, that he was persistent in his efforts to increase my command, and not acting as toward one with reference to whom «displeasure was aroused»? Is there any indication that he thought his tools had broken in his hands? The quotations above made are from Grant's writings in the War Records.

In the May CENTURY the paper «Campaigning with Grant» says that General Grant

was constantly embarrassed by some of his subordinates. General W. F. Smith was engaged in quarrels with his superior officers as well as with his associates. An acrimonious personal warfare was progressing between Butler and him. . . . Grant finally made up his mind that he would either have to relieve General Smith or several prominent commanders, and the result was that Smith was given a leave of absence, and was never recalled.

On June 21 I forwarded to headquarters some correspondence with General Butler, and asked to be relieved from duty in the Department of Virginia and North Carolina, which request was not granted. On July 1 Mr. Dana telegraphed to Secretary Stanton: «Butler is pretty deep in controversial correspondence with Baldy Smith, in which Grant says Butler is clearly in the wrong.» On the same day Grant wrote to Halleck as already quoted, adding a suggestion that Butler be given a command where «there is a dissatisfied element to control.» This suggestion was not deemed practicable, and General Grant on July 6 telegraphed to Washington, asking for an order putting me in command of the troops then in the field under Butler, and ordering Butler to Fort Monroe, and this order was issued on July 7.

About July 1, I applied for leave of absence on account of my health, which was very much impaired, and received the following letter from General Grant:

CITY POINT, July 2, 1864.

GENERAL W. F. SMITH:

Your application for leave of absence has just come to me. Unless it is absolutely necessary that you should leave at this time, I would much prefer not having you go. It will not be necessary for you to expose yourself in the hot sun, and if it should become necessary, I can temporarily attach Humphreys to your command.

U. S. GRANT.

These extracts and orders show conclusively, from General Grant himself, that up to the publication of the order of the 7th I was not embarrassing General Grant by my quarrels; and as the only contention I had had was with General Butler, not having had even the shadow of a quarrel with any other «superior officer or associate,» I cannot understand how such an error should have crept into such a paper.

W. F. Smith.

«Scientific Kite-Flying»—An Acknowledgment.

IN the symposium on scientific kite-flying in the May CENTURY, in which reference is made to the work at the Blue Hill Observatory, no mention is made of Mr. A. Lawrence Rotch, the director of the observatory. It should be known to your readers that no continuously and graphically recording instruments had ever before been elevated into the air by means of kites until the work was taken up at Blue Hill; that no such records were anywhere else available for scientific study when THE CENTURY articles were written; that the work at Blue Hill is the most thorough exploration of the free air within a mile of the ground ever made in any manner; and that all the deductions concerning the conditions of the air were drawn by the staff of the observatory. Finally, and most important of all, this investigation was carried on, in connection with the other work of the observatory, with the private fortune of Mr. Rotch, for the sole purpose of increasing the world's fund of scientific knowledge.

H. Helm Clayton,
Meteorologist of the Blue Hill Observatory.

IN LIGHTER VEIN

A Scientific Dilemma.

DEAR LADY: My duties as head of the college,
Professor of science and general knowledge,
Metaphysics, including psychology
(Also including, perhaps, biology),
May try my lately recovered strength
Unless—but I 'll tell you the matter at length.

A couple of months or more ago
I was overworked, as perhaps you know.
My plans for the moment were quite upset;
The doctor ordered me off. We met.

You, of the kindest of hearts the possessor,
Wandered about with the grave professor,
Protesting that after the youth Byronic,
You found him a healthful mental tonic.

We chanced on a bench that a thoughtful mechanic
Had cut in a rock (which is plainly volcanic)
O'erlooking the sea. In the air one discerns
Both saline and floral solutions in turns;
Whilst the thrush (ornith., of the family Merulidæ)
Sings with a grateful and soothing garrulity.

Here would we sit, and while you regarded
The bay, with its islets and points interlarded,
The flora, etc., that mark the vicinity,
I was considering mental affinity.

With you by my side, I chanced to detect
In the moon an unusual lunar effect,
Most peaceful, most restful. I showed it to you.
You noted the fact, and observed how the dew,
Like a coverlet woven of clouded glass,
Was tenderly spread and tucked in o'er the grass,
Then approved by a glance from the setting sun
Ere withdrawing his warmth, his day's work done,
To sink to his rest in the distant sea.
All this you observed, and you showed it to me.
And I further noted, concerning the sun,
When his next day of work was but just begun,
How in kissing the meadow he gently withdrew
This soft, spreading sheet—and I showed it to you.

Why every work upon natural history
Lacks these phenomena did seem a mystery
Till I discovered and proved to be true
One datum astounding unnoted by you;
Viz.: that our careless and unsystematic
Observances, neither dynamic nor static—
Impressions, mere play of an unemployed hour—
Were hidden from *two* eyes, but patent to *four!*

'T was plain as a star in a cloudless night
That we had combined our physical sight;
And then I conceived, with reckless celerity,
A thought that savored, perhaps, of temerity.

What would result if we two combined
Our *mental* sight in a single mind?
'T was plain, our powers of realization
Would double without deterioration.
And carefully hiding from you my intent,
I started at once to experiment.

I tried to reduce—I beg pardon, submit—
My mental horizon to yours, to fit
My thoughts in the track of your psychical range;
And, behold! they evinced instantaneous change.

That I fully succeeded in merging my mind
In yours was quite proved by a curious kind
Of regard for your welfare. I found I respected
Your tiniest whims, while mine I neglected;
Or rather it seemed that your aims had grown
To be, as a matter of fact, my own;
And, science ignoring, I rested a season,
Content to observe without caring to reason.

Shortly, however, with growing concern
And restless impatience, I hungered to learn
If our combination of mental strength
Was affecting *your* thoughts. To my joy, at length
You seemed to evince, after struggles terrific,
An irksome attention to themes scientific,
As though for the moment your mind were full
Of my vocation—and found it dull.

Such a discovery truly I knew
Meant eternal fame, and I fairly flew
For the earliest train, forgetting that I
Had quite omitted to bid you good-by—
For which I apologize. Reaching the town,
I sorted my data and wrote them down;
But ere they were read to the College of Science
I longed to feel able to bid defiance
To possible error, and deemed it best
To subject my idea to a further test.

Imagine my feeling of utter dismay
As I found that my thoughts (which were miles away)
Still lingered beside the deep blue sea,
While a thrush still sang from the maple-tree
(Saccharine; genus— Wait! am I assified?
Do I forget how the maple is classified?),
While the setting sun spread a mirror of dew
From which to reflect soft rays—on you!
And I suffered from curious perturbations
(Pectoral, taking the form of pulsations)
Which never as yet have been given a name;
For never as yet have conditions the same
Combined to arouse in the human breast
A similar state of excited unrest.

My theory is that, subjecting my mind
Too completely to yours, they have intertwined;
And while I am chained to themes unprolific,
You, I suppose, have become scientific.

'T is very disquieting. Can you suggest
Some remedy that, at the least, we might test?
I 'm almost unhinged, while you have attained
The knowledge for which I have struggled and strained—
A knowledge to you but a burden, a care.
Its loss means for me scientific despair,
Through which I discern a strange suspicion
(Not founded on reason, but intuition)
That, somehow or other, our minds' delinquity
May be ascribed to a lack of propinquity.

Walter D. Robinson.

Waiting in the Wings.

(AMATEUR THEATRICALS.)

I STAND behind a painted tree,
And watch my long-haired lover flee
From fearful ills that threaten him.
He is so handsome, such a lord,
By all the gazing girls adored;
For his sake pretty eyes are dim:
But he thinks not of all these things,
But of me, waiting in the wings.

And now behind the footlights bright
I stand amid the dazzling light;
The people all applaud and shout.
A painted face bends over mine,
And calls me «love» with raptures fine:
But let not my own dear one doubt
That 't is to him my whole heart sings—
To him who 's waiting in the wings.

And now together, hand in hand,
A robber and a queen, we stand,
And gaze into each other's eyes.
Though he 's an outlaw bold and bad,
And I 'm a queen dethroned and sad,
He has no curses, I no sighs.
This is the joy the evening brings—
Together, waiting in the wings.

Marion Evans.

Fishin'.

TALK about your kinds o' sport,
Fishin' alwis was *my* forte!

July mornin', still an' faire,
Harness up the ol' gray mare—
Start at four o'clock, we 'll say,
So 's to reach the crick by day.

Ketch your minnies at the dam,
More 'n fifty at a slam;
Then wade down below the shoals;
There you 'll find the fishin'-holes.

Let your cork go driftin' down
Where the current eddies roun'—
Down to where the willer tips
Thet above the river lean,
Long an' slim like buggy-whips,
Tap the water with their green.
Hol' your breath an' wait, an' then
Ketch yourself half listenin'
To a bird that shouts an' sings
'Cause the sun hes teched its wings.

Zip! your cork goes out of sight!
Whiz! your line 's a-pullin' tight!
Give him time to get his gait—
Now you 've got him, shore es fate!
Easy—easy—let him run—
Let him fight an' have his fun!
Now! pull in! he 's comin' back—
Don't ye 'low 'im any slack!

Work him over to the shore—
Get him safe upon your string—
Hurry back an' try for more—
Fishin' jes beats anything!

Bass quit bitin' by an' by,
When the sun gets good an' high;
Then 's the time to take a rest,
Eat a bite, an' smoke, an' jest—
Lyin' there beneath the trees—
Drowse, an' dream, an' take your ease.

Pecker-wood upon a limb,
Jay-birds laughin' down at him,
Redbird on the other shore
Hollerin' fer «Tee-a-dore!»
Bumblebees a-whizzin' by—
Ev'rything seems pr'tty nigh
Keepin' up a kind o' tune
Fitten' to the summer noon.
An' I jes lay back an' sing,
«*Fishin' does beat anything!*»

Don't git home till kinder late;
Sary, waitin' at the gate,
Looks at all my fish an' says
She won't scold *this* time, she guess',
An' she 'lows she never see
Sech a fisherman es me.
Then she gets me up a snack;
Says she 's glad that I got back
'Thout a-gitten' killed er drown'
An' my body never foun'.
Then when Sary's say is said
I jes mosy off to bed,
Tired es a hunted deer;
Droppin' off to sleep, I hear
Katydids thet rasp an' sing—
Fishin'—jes—beats—anything.

Albert Bigelow Paine.

«They 'll Never Miss Me.»

LUCINDY JANE, aged thirty-five,
Was the most unselfish girl alive.
«Mother was sick, and father was pore,»
But she managed to keep the «wolf from the door.»
Her brothers and sisters, «real gifted,» she said,
«Had to be schooled and clothed and fed.»
So she did the washing, and scrubbed the floors,
And mended the clothes—did all the chores.
When the boys forgot the Sunday's wood
She split it herself, as well as she could.
If they asked her to go to a huskin' or bee,
She said, «I 'm too busy; they 'll never miss me.»

Old Deacon Calkin, fervent and thin,
Took every occasion to «jist drop in
To talk to Lucindy,» her soul to win.
«'Cause workin' on Sunday 's a dreffal sin:
It 's breakin' the law of God,» he said;
«And 'll bring down judgment on your head.
When the last trumpet's thunders roll,
And all the sky is a written scroll,
You 've got to face the Almighty then,
And render account, with the sons of men.»
Lucindy heard with her quiet smile,
Mending the last week's wash the while.
«I b'lieve, my soul, Deacon Calkin,» said she,
«That the Lord knows all about Sunday and me.
Don't talk about none o' your ‹glories to be,›
And ‹trumpets› and ‹scrolls› and ‹judgments› to me.
If ever I 'm laid in a long, cool grave,—
A poor old, tired, and worn-out slave,—
They may blow all the trumpets from Dan to Bershee:
I 'll just keep shady as shady can be,
And lie there and *rest;* they 'll never miss me.»

THE CENTURY MAGAZINE

VOL. LIV. SEPTEMBER, 1897. No. 5.

ROYALISTS AND REPUBLICANS.

NOTES OF A PARISIAN.

WITH PICTURES BY A. CASTAIGNE.

I.

THE château of Frohsdorf, where the heir of Henri IV and of Louis XIV passed his last days in a peaceful twilight, was a massive building, square, without architectural beauty, but set in a harmonious landscape of woods and hills. One reached it by way of Vienna; and all the employees of the railways, and the peasants round about, knew the faithful adherents of the Legitimist party. Every year saw them return, almost at a fixed date, to pay the tribute of a sincere and zealous and wholly Platonic attachment to their prince. German customs and the German tongue accompanied the visitor to the threshold of the door; once beyond it he was in France. Portraits of the Bourbons adorned the great staircase—Louis XVIII in the ermine mantle, Charles X in his coronation robes, and (more touching) Louis XVI, Marie-Antoinette, and Louis XVII, the child-martyr. Here and there was the escutcheon of the three fleurs-de-lis, gold on a blue ground. The servants were French. All this but increased the sense of exile which assailed the visitor on entering. Residents in foreign countries generally adopt some of the native habits; a few of the bibelots of the country usually find a place by the side of objects brought from afar. Here, the determination everywhere visible to have nothing but French things about seemed like a mute protest against the accomplished fact.

When I first had the honor of seeing the Count de Chambord, he was in his sixtieth year. It was in 1880, three years before his death. As I was a very young man at the time, I accompanied my parents, and not being expected to join in the conversation, I had the better opportunity to observe my surroundings and to listen to all that was said. Persons who were to be received in audience at Frohsdorf waited to be admitted in a large salon, furnished and curtained in faded red velvet banded by tapestry of an obsolete fashion. These pieces of tapestry were the handiwork of the Duchess d'Angoulême, who was called «Madame la Dauphine» in the reign of Charles X. The poor princess, over whose youth the Temple prison and the tragedies of the Revolution had thrown so dark a shadow, had died in exile, expelled from her native land by a second revolution. It was said that in the last years of her life she concealed a few diamonds and loose pieces of money in her work-bag as a provision against the possibility of having to flee once again without resources or shelter. From the room furnished with her needlework the visitor passed into a second salon, where he was presented to the Count and Countess de Chambord. This

formality accomplished, every one sat down. The room had not an air of elegance, nor did elegance enter into the habits of the *châtelains*, if their dress could be taken as a sign. The Countess de Chambord, who was both plain and deaf, cared little about her toilet and gave it no attention; and she had exercised in this respect, as in many others, an influence upon her husband. As if in constant anticipation of the uniform which it was never to be his fate to wear, the Count de Chambord had come to pay no heed whatever to the cut of his clothes. The Princess's deafness kept her from taking much share in the talk; but she smiled now and then, or spoke a few casual words. The Count de Chambord, on the other hand, talked a great deal. He was quick and witty at repartee, and enjoyed humor in conversation. His blue eyes, which were very keen and bright, could flash at such moments. His remarks about people could be sarcastic, but they were never ill-natured. He was a thorough Parisian, and loved to expand freely amid his little court of faithful friends, who took turns in performing about his person what they called *le service d'honneur*. He gave one the impression of seeming then to forget, for a brief interval, the hard fate which, making him the depositary of a fallen principle, condemned him to stand aside, a passive spectator, while the procession of the living passed before him. The extreme regard which he had for his dignity prevented him from ever unbending for long at a time. The least reference to politics sufficed, in any case, to darken his mood. It brought him back to the sense of a tedious duty, of an existence which had no outlet. How long did he retain the hope of reconquering his throne? I had, as I looked at him, almost the certitude that he had ceased to harbor any illusions as to the possibility of a restoration. It is probable that he had lost hope toward 1856, when Napoleon III was at the summit of his fortunes, and that it awakened in him again after the empire had come to lamentable ruin with the Franco-Prussian war. But the conviction was soon forced upon him that France, instead of coming nearer to him, was drawing farther away from him every day. From that time on he had one idea only—to maintain his house and its principles above all parties, beyond the reach of intrigues, safe from assault; to enforce universal respect for them, and to bury them intact and spotless.

Life at Frohsdorf had never been gay, and toward the last it had become very dull. The Count de Chambord had been a great rider and hunter (his lameness had come from a fall from his horse), but he had been compelled to give up all such outdoor exercises. The household's daily diversions, outside of the mail from France, which brought little but political news, were few and tame. They consisted of walks in the clipped alleys of the grounds, of drives through the environing valleys, of services in the castle chapel, in which hung a portrait of St. Louis, and of audiences accorded to an occasional visitor. The meals were quickly disposed of; the subjects of conversation at these times were not varied, and the one topic which would have seemed most natural, namely, the French political situation, was generally eschewed. The gentlemen in waiting of the «service of honor» had always the resource, once they had withdrawn to their own apartments in the evening, of scanning the Paris newspapers for the latest gossip of the new play at the Palais Royal or the new novel by Daudet; in the anticipation of a speedy return to the banks of the Seine and the asphalt of the boulevards, they found the solitude of Frohsdorf supportable. It was different with the exile. France had been open to him since 1870, but he knew that his presence there might cause disturbances, and he kept away. He was morally exiled, as well, in this habitation where everything still retained the provisional character of the first few years. The tenants of the castle had installed themselves casually, as if for a brief sojourn. The sojourn had now lasted nearly forty years, and yet they had never consented, by settling themselves more completely, to give it the stamp of a definitive abode. By an irony of fate, the name of their retreat signified «joy-village» (*Froh-dorf*). Yet how fittingly might Dante's words have been inscribed over the entrance: *Lasciate ogni speranza!* (Abandon all hope!)

The master of Frohsdorf, since he could not be King of France, was content to be Count de Chambord. He judged the title to be worthy of him. The magnificent château of Chambord had been offered to him, by national subscription, the year of his birth, and he could not have borne a name more truly French. In speaking to him one addressed him simply as Monseigneur. He did not like to be designated as Henri V, albeit he had been proclaimed king in 1830, and several acts had even been executed under his authority. He never permitted, in speaking or writing, the words «Sire» or «Your majesty.» In all such matters he showed tact as well as wisdom. But his followers

COUNT DE CHAMBORD RECEIVING A ROYALIST DEPUTATION IN FROHSDORF PARK.

Digitized by Google

would have preferred a bolder and less scrupulous chief. They sought perpetually to push him beyond legal limits. For a long time they talked much of a *coup d'état*, of an appeal to the army, of a sudden appearance in Paris. Later, when the Pretender's age had rendered all such designs more than ever unrealizable, the royalists took refuge in exuberant and sterile manifestations. They congregated on fixed dates—on July 15, the Prince's fête-day, and on September 29, his birthday. Royalty was proclaimed on all these occasions, not only as a right, but as a fact; declarations were made that it was close at hand. The opportunity was improved to draw up violent indictments against the republic. To monarchy was attributed the power of healing all social ills, even as a mere touch of the king's hand had once, in the popular superstition, had the power to cure all persons afflicted with the «king's evil.» The functions of July 15 were more particularly of a religious nature. On September 29 there were banquets, to which a democratic character was given. They took place at Paris in some cheap restaurant in the workingmen's quarter. In the provinces the fête was celebrated in some granary, festooned with greens and with white sheets covered with the fleurs-de-lis cut out of gold paper. The notabilities of the Royalist party were present, and presided with a sort of smiling condescension. Landed proprietors hired big carriages, and appeared with their farmer tenants and the servants of their household. A royalist journalist, who had come from Paris, addressed the assemblage over the dessert, and, the joviality of the repast aiding, his burning peroration was followed by cries of «Vive le roi!» Many of those indulging in the cries did not fail to vote, all the same, for the republican candidates at the next elections. Finally an «address to the king» was proposed and enthusiastically approved.

These love-feasts did not greatly disturb the government, but they excited the sarcastic remarks of the Orleanists, and caused them to smile with pity. The monarchical party was divided, until about the year 1880, into two well-defined camps—that of the Legitimists and that of the Orleanists. There had been no open breach since 1873, when the Count de Paris had repaired to Frohsdorf, and become formally reconciled to the Count de Chambord; by doing so Louis Philippe's grandson had seemingly renounced, in a way, the revolutionary rights which had descended to him from his grandfather, in order to become the heir presumptive of the Count de Chambord, his cousin, who was childless. Though the two princes might be reconciled, their partizans were not. Some were faithful to the white flag, others rallied around the tricolor; and this difference in the color of the flag was the symbol of many other differences of ideas and of temperament. The Orleanists were like those heirs who, while they are sure of eventually coming to their own, find it slow in arriving, and cannot refrain from showing some impatience in consequence. They had a ferocious joy, ineffectually concealed under feigned emotion, in the news of the Count de Chambord's illness. The progress of his malady was rapid, and it soon became known that a fatal issue was inevitable. The Legitimists lost their heads, and accused the iron chancellor, Bismarck, of having had the Prince poisoned. It was the same accusation that had been formulated a few months before by the republicans with regard to the death of Gambetta. The period which followed the decease of the Count de Chambord was one of increasing disillusions. It had been so continually reiterated among their adherents that the Orléans princes would «do something» as soon as they had «the right,» that every one had ended by believing that they would. Now that the right was theirs as the sole representatives of legitimacy, they did nothing. Very little reflection sufficed to show how impossible it was that they should do anything. One may conspire against a sovereign, overthrow a monarchy. What power can be used against a republic based on the ballot? To all Pretenders the republic replies: «You wish to take my place? Very well. You have the right to do so. Get a majority. Get them to elect you.» An electoral majority large enough to modify the constitution in favor of the individual to whom democracy gives its confidence, that is the only chance in a republic. General Boulanger might have attained his end in that fashion, and even he failed. With the Count de Paris it was out of the question. He could not at any time have commanded a sufficient number of votes. And it would have been incompatible with his dignity as Pretender to sue for them in person.

Moreover, the Count de Paris, as the son of a prince who had proclaimed his devotion to the French Revolution, and of a Protestant German princess whose mind was both liberal and enlightened, had received, partly from his mother and partly from circumstances,

Digitized by Google

an education as little as possible adapted to make him a fit representative of the principle of «divine right.» His mother, early left a widow, had brought him up with a view to a life the uncertainties of which weighed upon her. That life, in effect, proved to be neither very opulent, for the possessions of the Orléans family were confiscated by Napoleon III, nor very interesting, for more than half of it was passed in the monotony and depression of exile. In addition, the Count de Paris had seen American civilization at close quarters in the War of Secession, and when he returned to England had become interested in trades-unions, and had studied their mechanism. These were not occupations likely to win for him the sympathy of the Faubourg Saint-Germain, that being the quarter of Paris where chiefly resides the old Legitimist aristocracy. It acknowledged him, nevertheless, as the new head of the monarchical party according to the law of monarchical succession, and even accepted his standard, the tricolored flag, which it could not ask him to abandon. But he was compelled to pay for this concession. His name was that of his grandfather, Louis Philippe. From then on he was to sign his letters «Philippe» only, so that it might be well understood that if ever he were king he would take the title of Philippe VII, and not of Louis Philippe II. He was obliged to grant audiences, to reorganize «Royalist committees,» to subsidize the newspapers which served his cause—in brief, to do all that is incumbent upon a Pretender and a party chief. The nobility treated him as if he were the actual sovereign. Letters came from the provinces, in which fathers of families whom he had never seen asked «his consent upon the marriage of their sons,» as had formerly been the custom at court. Balls and receptions of royal state were given in his honor. On entering he passed through a hedge of halberdiers, powdered lackeys, and chasseurs bearing lighted torches. For the rest all this was harmless enough. Public opinion paid no heed to it. The resolutions of the «committees» were purely Platonic, the Royalist newspapers had few readers, and the electoral indications showed little change. The government continued, therefore, to be unmoved. It was only disturbed when occurred, in quick succession, the marriages of Princess Marie d'Orléans, daughter of the Duke de Chartres, to Prince Waldemar of Denmark, and of Princess Amélie, daughter of the Count de Paris, to the Duke of Braganza, who was a little later to become king of Portugal. It was one of the favorite arguments of the Royalists that the alliances contracted by the sons, brothers, nephews of a sovereign consolidate political ties, and that while republican France was condemned to isolation in this regard, monarchical France would have the means of forming close friendships with foreign nations. Although the future was to deprive this argument of all force, circumstances at the time gave it some validity. The first of these princely marriages took place at the Château d'Eu, the summer residence of the Count de Paris, situated near Dieppe. The Queen of Denmark and several royal highnesses were present, but the ceremonies had a private character, nevertheless. The second marriage was celebrated at Lisbon, but it was thought well to have it preceded at Paris by an enormous reception, which was essentially of a political nature. This was in the spring of 1886. Invitations, the wording of which recalled the habits of courts more than those of private individuals, were sent to all persons having any relations with the Prince. The reception was brilliant—too brilliant, for this time Parliament took umbrage, and passed a law which exiled alike the two Pretenders, the Count de Paris and Prince Jerome Napoleon, and their eldest sons, the Duke d'Orléans and Prince Victor Napoleon.

I had the honor of seeing the Count de Paris again, in England, on December 1 of that same year. He did not look like the same man. He had grown a beard, which changed him greatly. His face showed a certain sadness. The fête at Paris, the Lisbon ceremonies, the excitement of the discussions relative to the exile law, and of the final vote upon it, the departure for England, and the manifestations of which he had been the object upon that occasion, had induced a sort of factitious excitation within him. He had sailed from the neighborhood of Eu, acclaimed by Royalists who had come from Paris, and by the peasants of the countryside, who had long known him, and he had been told so often that his exile would but serve his best interests, that France would soon recall him, etc., that he had allowed himself to be convinced. His good sense had now regained the upper hand. He could not but see how indifferent to his fate was public feeling in France, and the belief that his position as Pretender, in spite of himself, would cost him his peace of mind, and that he would die in exile, was strong upon him.

After a short stay at Tunbridge Wells, the

PRESIDENT CARNOT IN HIS STUDY.

Digitized by Google

Count de Paris had taken up his abode at Sheen House, a large dwelling just outside of London, near Richmond. It was not far from Orléans House, rich for him in memories of his youth, of his marriage, of days in which his lot had been more modest, perhaps, but also happier. Sheen House had been hired furnished. I noticed that everything about it had the same provisional look that I had observed at Frohsdorf. The large drawing-room was thoroughly English. A tricolored silk flag with a gold fringe was the only token reminding the spectator of the Odyssey of the tenants of the house. They had made no effort as yet to convert this chance place of residence into a home. But the *gentilshommes de service* were there, and the correspondence, and the whole artificial and fictitious course of life which surrounds a king without a throne in a foreign land, had begun at Sheen House, as formerly at Frohsdorf.

The Count de Paris talked to me a long time that day about the English universities. He was on familiar ground, and he appeared disposed to take up his study of the labor question in England where he had left it. But he had forgotten that a great change had taken place in the mean time, and that in becoming the depositary of the monarchical heritages he had also become the slave of his adherents and the sport of parties. He continued to be so to the day of his death. His instructions issued at electoral crises were uncertain and vacillating. He intoned the praises of liberty and of imperialism, of parliamentary government and of monarchical despotism in turn. The youngest and most enterprising members of the Royalist party induced him, against his will, to form an alliance with General Boulanger, and the defeat of the Boulangists impaired his prestige. He was never consoled for having lost the right to reside at the Château d'Eu, where his life had had the large freedom of that of a great landed proprietor. There was at Eu a collection of portraits representing the princes and princesses of the house of Orléans. Among them was the portrait of the d'Orléans who voted for the death of Louis XVI, his cousin, and who, during the revolution, was called Philippe-Égalité. When the Count de Paris showed a visitor of distinction through his gallery he would designate this personage in passing with a «That is my unfortunate grandfather.» In the intimacy of daily life, however, the little princes were wont to speak of their ancestor as «grandpapa Égalité.» This detail illustrates the homelike atmosphere of cozy familiarity in which the future Duke d'Orléans grew up, with his sisters, the two eldest of whom have become, one the Queen of Portugal, and the other the Duchess d'Aosta, and his brother, the young Duke de Montpensier. The Count de Paris adored his children. He occupied himself personally with their education, and took part in their games and sports, as did also the Countess de Paris, who was a good horsewoman and fond of hunting.

Of all the members of the Orléans family, none as yet has had so marked a physiognomy as the Duke d'Aumale, third son of King Louis Philippe. His name is closely connected with the conquest of Algiers. He was almost constantly in Africa during his father's reign, and on various occasions covered himself with glory in attacks upon the Arabs. The old Prince de Condé, who had no children, made him heir to all his fortune, and bequeathed to him, among other estates, the château of Chantilly. There he lived, surrounded by the marvelous collections which he had formed, and which are to go to the French Academy now that he is dead. The Duke d'Aumale laid the sword aside for the pen, and became an historian. The Academy opened its doors to him, and Chantilly once more became what it was in the days when Bossuet pronounced his famous «funeral oration of the Prince de Condé»—the home of arts and of letters. All the celebrities of France have been received under the roof of Chantilly; every distinguished foreign guest who went to France was seen there likewise. The Duke d'Aumale took pleasure in himself showing his art collections on such occasions. He had many things restored at Chantilly,—the entrance-railing, the porch, the vestibule, the great staircase with its wrought-iron balusters, the chapel, the ball-room, the library,—and all with faultless taste and extreme care.

Two sons were born to the Duke d'Aumale of his marriage with the Princess of Salerno, the Duke de Guise and the Prince de Condé. They both died in early youth. The Duke d'Aumale was left alone. His brothers and nephews surrounded him with interest and affection; but it was the Academy chiefly which took the place of a family to him. It was under the dome of the Institute, with his illustrious colleagues about him, that he was really happy. Hence the gift of Chantilly to the Academy, to be converted into a museum after his death. It is said that the Duke d'Aumale had but one regret, and that was that he could not have had an active part

Digitized by Google

in political life. He proved in more than one instance that his sympathies were republican; but the name he bore prevented him from aspiring to govern the republic. Would he have made a good President? There is every reason to believe it. The French, however, know by experience that the republic in the hands of a prince becomes, perforce, the antechamber of monarchy.

II.

No little curiosity was felt in Paris when President Carnot's first reception occurred at the Élysée. He was the fourth President which the republic had had since its foundation. M. Thiers had never lived at the Élysée, the seat of government during his Presidency having been at Versailles. But his receptions had remained legendary. He retained in official life all his bourgeois habits. Jules Simon, with that delicate raillery, gentle and inimitable, which gave character to his most insignificant anecdotes, was telling me one day how M. Thiers, at a large breakfast, had drawn toward him a fruit-dish which ornamented the middle of the table, and in which were some choice peaches, and had prepared to sever one of these, saying to his neighbor, «Shall I give you half of my peach?» Mme. Thiers had been looking at the peach with an indignant air. «I thought,» said Jules Simon, «that she was angry with her husband for not having known enough to wait for the servants to pass the fruit. But that was not the trouble. Not able to contain herself longer, she exclaimed, ‹But, *mon ami*, those peaches are for dinner!› And docilely the President restored the peach to the fruit-dish.»

Under Marshal MacMahon everything changed. The government had returned to Paris. All the aristocracy, among whom the Marshal had many friends and relatives, repaired to the Élysée. The result was the anomalous fact that the *habitués* of the dwelling of the President of the republic were principally anti-republicans. The Royalists insisted on considering MacMahon as one of themselves, and looked to him to do something toward the reëstablishment of monarchy. When they became persuaded that their hopes were chimerical, they kept away more and more; and when M. Grévy was elected in MacMahon's place they stopped going to the Élysée altogether. M. Grévy remained in power for nine years. Reëlected at the expiration of his term, at the end of seven years, he was forced into resigning, two years later, on account of scandals in which his son-in-law was implicated. M. Grévy did not like to receive. The two official balls which he gave every winter were great bores to him. He never accepted an invitation to dinner, and escaped, as soon as summer came, to the Jura Mountains, where he owned a bit of land of which he was extremely fond. He had some pet ducks in a pond in the Élysée gardens, one of which, called Bébé, was the object of his particular predilection. When he had thrown them some bread-crumbs and played his daily game of billiards, he went back to his work and his books. His intelligence was very broad and subtile, and he kept himself rigorously abreast of all political matters. It has since been realized that he exercised a much more moderating and pacifying influence than he seemed to do at the time. The life about him was, however, colorless and monotonous in the extreme. Its most exciting events were the fencing matches which the President's son-in-law, who was a fanatical fencer, organized every Sunday morning in the hot-houses of the palace. The public complained bitterly of M. Grévy's parsimony. That the chief of the state or any of his ministers should economize on their salary is a thing which is not admitted in France. In the United States the salary of such high functionaries is a species of compensation for the time they devote to the welfare of their country. In France it is a subsidy furnished them in order that they may be in a position to represent the nation with dignity and brilliancy. The individual is paid in the United States; in France the function. Thence this point of honor, that the salary should be spent, and not turned into capital.

M. Carnot was elected President December 1, 1887. He was an outsider. No one had had much faith in the success of his candidacy, for the other candidates, MM. Jules Ferry, Freycinet, and Floquet, were better known, in spite of the celebrity attached to the name of Carnot; in spite, also, of the fact that M. Carnot himself had been a deputy for many years, besides having been minister several times. But the new President enjoyed among his colleagues a reputation for such scrupulous honorableness that votes turned in his direction without much difficulty. The receptions of the Presidency assumed at once a stamp of elegance and distinction. Under M. Grévy invitations to the Élysée balls had come to be sought chiefly by functionaries of the inferior orders. The standard had been lowered little by little. Men in shabby coats and wo-

Digitized by Google

men in high-necked silk gowns had passed in line before the chief of the state. Parisian society, always sarcastic, was greatly amused by all this. The «high-necked silk gown» had come to be one of its grievances against the government. The descriptions which the «Figaro» began to give of the transformations taking place at the Élysée interested the Parisians, therefore, strongly. Mme. Carnot presided over these changes with the charm and exquisite tact which have gained for her so many friends. The President showed himself everywhere; he opened exhibitions, he laid corner-stones, he dedicated monuments, and for every one he had a pleasant word and a smile. The ambassadors gave dinners in his honor. The first to do so was Count Hayos, ambassador of Austria-Hungary. He occupied an hotel in the Avenue de l'Alma at the time. It was an official dinner. Baron de Mohrenheim, the Russian ambassador, ventured a step further. He gave a large reception at which the official world and the Faubourg Saint-Germain were brought face to face. It was the first time in ten years. I still see that soirée as clearly as if I were there. The guests, after paying their respects to their hosts, passed through a large salon, where stood the President, surrounded by his officers. Near him sat Mme. Carnot. I entered at the heels of the Duke de Dondeauville, who bowed profoundly. The President, who had been his colleague in the Chamber, held out his hand. Behind me came the Marquis de M——, who deliberately turned his back on M. Carnot, under pretense of looking at a picture hung against the woodwork, and remained for some seconds in that position, his hands under the tails of his coat. I suppressed a strong desire to box the ears of this ill-bred person, whom I knew, and of whom I had, in any case, always entertained a sufficiently poor opinion. The President did not move a muscle, except to smile imperceptibly. He was so perfectly above all such insults!

Incidents of this kind, for the rest, presently ceased. Even outside of the constantly increasing number of those who rallied around the republic and in the monarchical circles, it became customary to treat M. Carnot, wherever he was met, with the respect to which he was entitled. And this was not the least of the services which this great citizen rendered his country, that he caused the supreme magistracy to be universally considered. Animosity toward him personally was laid aside, but it continued to be active enough toward other members of the Republican party, who well deserved the esteem even of their most violent political adversaries. In the first rank of these one must place Jules Ferry. When he appeared people vanished as if he had been a leper. His personal acquaintances slipped away in order to avoid speaking to him. Others affected not to see him. At the beginning of the winter of 1889 I found myself at an entertainment at Washington. My host talked to me for some time, and gave vent to the full force of his execration of a certain prominent politician. A little later I saw this politician himself, sitting on a sofa, in quiet conversation with several people. «Your hatred of Mr.—— does not go so far as to make you close your doors against him,» I observed to Mr. ——. «Oh,» he replied, «I detest him *politically*, and he knows it; but that is no reason I should ill-treat him *socially*.» Certainly there was no reason that the Parisians should «ill-treat socially» the great minister who, in spite of a few errors, accomplished so much. What had they to reproach him with? His private integrity was never called in doubt by any one. Even had his political course been mistaken, does one cover a man with insults for political faults? Jules Ferry was of too large a soul, and his philosophy was too proud, to admit of his fleeing before the tempest. He stood his ground and braved it out. Caricatures of him, scattered broadcast, had made his face everywhere familiar in Paris. The consequence was that he encountered indignities at every step—anonymous indignities, coming from the mass of the people, and which perhaps he preferred to the icy politeness of drawing-rooms where he was left to himself in contemptuous isolation. His wife's tenderness lightened these trials, and at last the hour of justice came. He was made President of the Senate in the early part of 1893. Three weeks later he died, almost suddenly, of an affection of the heart, which had been terribly aggravated by the attempt upon his life of which he had been the victim, and by the public animosity with which he had been pursued.

As I sat in the gallery of the Chamber of Deputies, one day, I amused myself by mentally reconstructing a government of the Right. I imagined that the monarchy had been reëstablished, and that the Count de Paris, now Philippe VII, King of France, had intrusted to me the task of forming a ministry, distributing its portfolios among his partizans. To my great surprise, I could not

Digitized by Google

succeed in drawing up a proper list. Everybody can be a minister, of course, and some of those whom one might choose at random for the office would not fill it worse than many others, provided they were not called upon to deal with situations of exceptional delicacy. But that was not what I was looking for. Nor was I looking for men who would be the equals of Gambetta and of Jules Ferry, for both were personalities quite out of the ordinary. I was searching the monarchical ranks for men with the force of character of MM. Dupuy, Spuller, or Burdeau; for men of the ability and tenacity and the capacity for hard work of MM. Méline, de Freycinet, Bourgeois, Goblet; for men of the financial competency of M. Rouvier, the diplomatic talents and science of M. Hanotaux, the wisdom and breadth of view of M. Challemel-Lacour. I could not discover them. Never before had the complete inferiority of the monarchical party in this respect come home to me more forcibly. What was the cause of it?

The great Chamber of the Palais Bourbon, with its somewhat pretentious decorations, its somewhat theatrical aspect, was before me. Nearly all the deputies were on their benches, for some serious struggle was in prospect. The Left, very numerous, infringed upon the Center. It was the visible incarnation of the republican principle and its incessant progress. The Right, much reduced, was still represented by the chiefs of the party, by those who, either because of their position or their past, impose themselves, in a way, upon their constituents. Off there, at the extreme left, was the little group of revolutionary socialists awaiting the hour in which they were to play a decisive rôle. Well! A mere glance at all those deputies there assembled sufficed to explain the decadence of one of the parties as compared with the other. With few exceptions, the line of demarcation seemed to me social far more than political. On the one side sat indolence; on the other, industry. On the right sat the men of leisure, Parisians whose activities are devoured by the thousand futilities of Parisian existence, *flâneurs* of the boulevards, who gossip at the club, dine out, look in at the theaters, and devote to public affairs whatever time they have left; and country gentlemen who hunt, drive four-in-hand, organize fêtes, preside at agricultural fairs, and follow only from a great distance the movement of universal progress. I observed their elegance, their well-groomed persons, the cut of their coats, which had come from the best tailors. On the other side were men who work, who had risen from below, sons of workingmen or small employees, who had made a place for themselves by will power and perseverance. One was a lawyer, another a physician, a third an engineer or a professor. The club-man and the self-made man, the society man and the worker, sat facing each other, and the victory of the second took on the aspect of a thing that was necessary, irrevocable, that could not be reversed.

It is difficult for Americans to understand the march of political events in France, and their details, because they lose sight of the struggle between the aristocrat and the democrat. One must have been a spectator of this struggle to comprehend its effects. Many of those who still have monarchical beliefs will only admit that the great rural proprietors, or at most the great industrial magnates and the great bankers, can have the pretension to govern their country. The idea that a lawyer, a doctor, a journalist, has any right to sit in the Chamber or the Senate seems to them absurd.

And as for this lawyer, this doctor, this journalist, being called upon, for instance, to receive the Emperor of Russia in the name of France, that is what they absolutely cannot away with!

III.

I MET, the other day, on the Boulevard des Italiens, two friends, one of whom is a monarchist, the other a republican. Both were in high spirits. «*Mon cher*,» exclaimed the first, «monarchy is an accomplished fact! Who will now dare to tell us that the country wants a republic? Consider the enthusiasm excited by the Emperor of Russia's visit! At sight of Nicholas II the monarchical sentiment has reawakened in the breast of Frenchmen. . . . I repeat, monarchy is an accomplished fact!» Thereupon the second, holding me by the button of my coat: «*Mon cher*, the republic has, from now on, nothing more to fear. It is indestructible. The homage of the most powerful sovereign in Europe has demonstrated its strength. Who will dare to tell us that the republic has no prestige?» My friends were right, both of them, and also wrong. The Czar's visit has done no good to the monarchical cause, but it is not certain either that it will do good to the republic. A republican régime is a régime of labor, not of festivities; of reason and forethought, not of enthusiasm and vivid impressions. It must look to itself for

stability, and in this stability it must find its strength. The capital of a republic cannot become the favorite resort of kings and emperors without an influence being exerted on public manners and habits by the fact. A people which has maintained the republican form of government perseveringly, through innumerable dangers and difficulties, does not certainly revert to the principle of heredity. But it is always confronted by this temptation—to abdicate the liberties of which it is every citizen's duty to avail himself into the hands of chiefs. Thinking of these things, I had reached the Place de la Madeleine. I stood under the windows of that great and much-loved philosopher who was taken away from the affection of his friends, and the admiration of all, only a few months ago. Had Jules Simon been alive I should once again have climbed his five stairs to hear what the experience of his old age, which had remained so youthful, might have to say on these problems of our time. And he, surely, laying aside his piles of papers, letters, and pamphlets, would have told me, in a few suggestive and luminous sentences, what he had learned from the past and what he foresaw for the future. This it was—this double outlook upon yesterday and to-morrow, this preoccupation with the connection between past events and events to come—that, in my estimation, distinguished his genius. He could tell a story as few men can; he could *hope*, also, in spite of his eighty years, as few of the youngest can hope. Hope is not a virtue in America; it is a habit. In France the hopeful are the exception. But Jules Simon had always been hopeful, both for himself and for his country. They had lived through bad days together. Persecuted by Napoleon III because of his opposition to the coup d'état of 1851, he had been obliged to wait for the disasters of 1870 before occupying the place in political life to which his talents entitled him. To be made minister immediately after September 4, that was scarcely alluring. His memory of that dark period was vivid, but remarkably calm. I never heard a bitter word escape his lips. Jules Simon had seen every shade of opinion revolve around him. At one time he had been regarded as a dangerous radical, then as an ardent republican, then as a moderate. «Wait a little while,» he said to me, last year, «and I shall have become an acknowledged conservative; and all with almost no change of stand on my part.» It was true. He had not moved; he had always defended the same liberal ideas and urged the same reasonable solutions. He would perhaps have resigned himself to accept a monarchy had he thought it capable of affording a warrant of superior order and liberty. He preferred the republic because he believed it to be stronger, more resistant, more supple and durable.

When Taine, Simon's illustrious colleague at the Academy, began his «Origins of Contemporary France,» his preferences turned in the direction of imperialism. But his ideas underwent a modification when he came to his analysis of the genius of Napoleon. It is generally felt that Taine was rather severe in his treatment of the great emperor, and that he might have spared him certain criticisms. His book wounded the Bonapartists keenly. Princess Mathilde, the sister of Prince Jerome Napoleon, was a friend of Taine. She sent him her card, with the formula P.P.C.—*pour prendre congé*—to signify that their relations were at an end. Taine wittily translated it *pour prouver colère*, and brought the laughers over to his side.

Taine's salon was «neutral.» Royalists and republicans alike met there, for politics were rarely discussed. The talk turned on literature, science, progress, the evolution of ideas. Taine's hospitality was of the most delicate sort, and as a host he was well supported by his wife and daughter, for whom no subject of conversation was too high. While looking up information for his own work, during the week, he would collect a hundred details which might be of use in the special work of such or such a one of his guests; and Monday evening, when they arrived, he would go from one to another, generously distributing his knowledge, and adding to it the germs of new and fruitful ideas, which each might bear away with him and eventually develop. Taine's life was far from having been as stationary as Jules Simon's. His mental evolution never ceased. He seemed to be ascending an endless staircase, with long pauses at each landing, where he might conscientiously classify his recent observations. To one thing only did he tenaciously cling, and that was «method.» His microscope never left him.

He regretted that he had not been able to apply his method to American civilization. He looked always for the ensemble in the detail. He loved vast undertakings, but he treated them minutely. And America was too far away. It drew him and fascinated him, but since he could not study it at close quarters, he realized that it escaped his investigations. He divined that it presented a

Digitized by Google

mass of social problems which are not even clearly enough defined in Europe to call for a solution. His curiosity was alive to its phenomena, which have no counterpart in the history of peoples. The rapid growth of the United States, their new conceptions of government and society, were matters to him of perpetual wonder and reflection. Jules Simon likewise turned his eyes frequently, in surprise and admiration, toward the New World. In his youth, and in Taine's, no one, Tocqueville notwithstanding, had foreseen the great intellectual and moral impetus which has transformed the United States. I once received from the venerable Dr. McCosh of Princeton a volume which he asked me to deliver to Jules Simon. He had written within it a flattering dedication to the French philosopher. In giving this volume into Jules Simon's hands, I described to him, as best I could, the buildings, the trees, the mental life, the habits and peculiarities, which render Princeton, and several other American universities, unlike any other spot on the globe. «Yes,» he cried, «that is the America which will really give the Old World something to think of—when the Old World shall have discovered it.» He referred to the common European ignorance of the force and intensity of the university movement in America.

Jules Ferry had foreseen this movement, in a measure, at the close of the civil war. He had even intended to devote serious study to it. But his political career never allowed him to put his project into execution. As to President Carnot, of the many topics which he permitted me to discuss with him on more than one occasion, none interested him more than the subject of the intellectual relations between the United States and France. And that is why I gave the name of Carnot to the students' annual debate on contemporary French politics which I instituted between the universities of Berkeley and Palo Alto at San Francisco, and at Tulane University, New Orleans. And the «Carnot medal» is already popular in California and Louisiana.

I never had any conversation about America with the Count de Paris. But he must often, during his career as Pretender, have recalled the days when he fought in the admirable troops that came together at the appeal of the immortal Lincoln. He had seen the great struggle of the American people, its valor and its indomitable energy, near at hand. He may have said to himself that a man might be proud to rule such a people. . . .

But one does not *rule* the American people. . . . One governs it—if it be quite willing.

Pierre de Coubertin.

ELUSIVE PRESENCE.

AND didst thou come, thou long-lost, longed-for one,
That day when, thinking not of thee, I cried
For respite from my foes on every side—
Didst point the refuge whither I could run?
And didst thou come, that evening drear and dun,
When, thinking not of thee—too sorely tried,
I looked and saw the western clouds divide,
And the fair setting of the full-orbed sun?
And didst thou come on that dark, sighing dawn,
Shadowed with troubles of the day to be,
When, suddenly, obeying thy still call,
Were all those surging fears dismissed and gone!
And dost thou come all hours, and blessing all,
Except the hour when most I think of thee?

PRISONERS OF STATE AT BORO BOEDOR.

THE fact is not generally appreciated that there are ruins of Buddhist and Brahmanic temples in middle Java surpassing in extent and magnificence anything to be seen in Egypt or India. There, in the heart of the steaming tropics, in that summer land of the world below the equator, on an island where volcanoes cluster more thickly and vegetation is richer than in any other region of the globe, where earthquakes continually rock and shatter, and where deluges descend during the rainy half of the year, remains nearly intact the temple of Boro Boedor, covering almost the same area as the great pyramid of Gizeh. It is ornamented with hundreds of life-size statues and miles of bas-reliefs presenting the highest examples of Greco-Buddhist art—a sculptured record of all the arts and industries, the culture and civilization, of the golden age of Java, of the life of the seventh, eighth, and ninth centuries in all the farther East—a record that is not written in hieroglyphs, but in plainest pictures carved by sculptor's chisel. That solid pyramidal temple, rising in magnificent sculptured terraces, that was built without mortar or cement, without column or pillar or arch, is one of the surviving wonders of the world. On the spot it seems a veritable miracle.

It is one of the romances of Buddhism that this splendid monument of human industry, abandoned by its worshipers as one cult succeeded another, and forgotten after the Mohammedan conquest imposed yet another creed upon the people, should have disappeared completely, hidden in the tangle of tropical vegetation, a formless, nameless, unsuspected mound in the heart of a jungle, lost in every way, with no part in the life of the land, finally to be uncovered to the sight of the nineteenth century. When Sir Stamford Raffles came as British governor of Java in 1811, the Dutch had possessed the island for two centuries; but in their greed for

gulden had paid no heed to the people, and knew nothing of that earlier time before the conquest when the island was all one empire, the arts and literature flourished, and, inspired by Hindu influence, Javanese civilization reached its highest estate; nor did the Hollander allow any alien investigators to peer about this profitable plantation. Sir Stamford Raffles, in his five years of control, did a century's work. He explored, excavated, and surveyed the ruined temples, and searching the voluminous archives of the native princes, drew from the mass of romantic legends and poetic records the first «History of Java.» His officers copied and deciphered inscriptions, and gradually worked out all the history of the great ruins, and determined the date of their erection at the beginning of the seventh century. At this time Sir Stamford Raffles wrote: «The interior of Java contains temples that, as works of labor and art, dwarf to nothing all our wonder and admiration at the pyramids of Egypt.» Then Alfred Russel Wallace said: «The number and beauty of the architectural remains in Java . . . far surpass those of Central America, and perhaps even those of India.» And of Boro Boedor he wrote: «The amount of human labor and skill expended on the great pyramid of Egypt sinks into insignificance when compared with that required to complete this sculptured hill-temple in the interior of Java.» Herr Brumund called Boro Boedor «the most remarkable and magnificent monument Buddhism has ever erected»; and Fergusson, in his «History of Indian and Eastern Architecture,» finds in that edifice the highest development of Buddhist art, an epitome of all its arts and ritual, and the culmination of the architectural style which, originating at Barhut a thousand years before, had begun to decay in India at the time the colonists were erecting this masterpiece of the ages in the heart of Java.

There is yet no Baedeker, or Murray, or local red book to lead one to and about the temples and present every dry detail of fact. The references to the ruins in books of travel and general literature are vague or cautious generalities, absurd misstatements, or guesses. In the great libraries of the world's capitals the archæologists' reports are rare, and on the island only Dutch editions are available. Fergusson is one's only portable guide and aid to understanding; but as he never visited the stupendous ruin, his is but a formal record of the main acts.

We had applied for new *Toetlakings-Kaarts*, or admission tickets, to the interior of the island; and as they had not arrived by the afternoon before we intended leaving Buitenzorg, we drove to the assistant resident's to inquire. «You shall have them this evening,» said that gracious and courtly official, standing beside the huge carriage; «but as it is only the merest matter of form, go right along in the morning, ladies, anyhow, and I shall send the papers after you by post. To Tissak-Malaya? No? Well, then, to Djokjakarta.»

We took train for the first day across the Preanger Regencies, through the greenest and most gloriously beautiful tropical scenery ever found or possible to be imagined; spent the night in the vast Doric-porticoed *passagran*, or government rest-house, at Tissak-Malaya; left, with only a tantalizing hour at the most picturesque *passer*, or outdoor market; and rode for a long, hot day across the swamps and low-lying jungles of the *terra ingrata* of middle Java. Just before sunset we reached Djokjakarta, a provincial capital, where a native sultan resides in great state, but poor imitation of independent rulership. We had tea served us under the great portico of the Hotel Toegoe, our every movement followed by the uncivilized piazza stare of some Dutch residents—that gaze of the summer hotel that has no geographic or racial limit, which even occurs on the American littoral, and in Java has a fixedness born of stolid Dutch ancestry, and an intensity due to the tropical fervor of the thermometer, that put it far beyond all other species of unwinking scrutiny. The bovine, ruminant gaze of those stout women, continued and continued past all provincial-colonial curiosity as to the cut and stuff of our gowns, drove us to the garden paths, already twinkling with fireflies. The landlord joined us there, and strolled with us out to the street and along a line of torch-lighted booths and shops, where native products and native life were most picturesquely presented. Our landlord made himself very agreeable in explaining it all, walked on as far as the gates of the sultan's palace, plying us with the most point-blank personal questions, our whence, whither, why for, for how long, etc.; but we did not mind that in a land of stares and interrogative English. He showed us the carriage we could have for the next day's twenty-five-mile drive to Boro Boedor—«if you go,» with quite unnecessary emphasis on the phrase of doubt. He finally brought us back to the portico, disappeared for a time,

Digitized by Google

and returning, said: «Ladies, the assistant resident wishes to meet you. Will you come this way?» And the courteous one conducted us through lofty halls and porticos to his own half-office parlor, all of us pleased at this unexpected attention from the provincial official.

MOUNT SALAK, FROM THE RESIDENT'S GARDEN, BUITENZORG.

A tall, bony-faced man in the dark cloth clothes of ceremony, with uniform buttons, waved a semi-military cap, and said curtly: «Ladies, it is my duty to inform you that you have no permission to visit Djokja.»

It took some repetitions for us to get the whole sensation of the heavens suddenly falling on us, to learn that a telegram had come from official headquarters at Buitenzorg to warn him that three American ladies would arrive that afternoon, without passports, to visit Djokja.

«Certainly not, because those Buitenzorg officials told us not to wait for the passports —that they would mail them after us.» Then ensued the most farcical scene, a grand burlesque rendering of the act of apprehending criminals, or rather political suspects. The assistant resident tried to maintain the stern, judicial manner of a police-court magistrate, cross-examining us as closely as if it were testimony in a murder trial we were giving, and was not at all inclined to admit that there could be any mistake in the elaborately perfect system of Dutch-colonial government. Magnificently he told us that we could not remain in Djokja, and we assured him that we had no wish to do so, that we were leaving for Boro Boedor in the morning. The Pickwickian message from Buitenzorg had not given any instructions. It merely related that we should arrive. We had arrived, and the assistant resident evidently did not

know just what to do next. At any rate, he intended that we should stand in awe of him and the government of Netherlands India. He «supposed» that it was intended that we should be sent straight back to Buitenzorg. We demurred, in fact refused—the two inflammable, impolitic ones of us, who paid no heed to the gentle, gray-haired elder member of our party, who was all resignation and humility before the terrible official. We produced our United States passports, and quite the same as told him that he and the noble army of Dutch officials could have it out to the finish with the American consul; we had other affairs, and were bound for Boro Boedor. He waved the United States passports aside, curtly said they were of «no account,» examined the letters of credit with a shade more of interest, and gave his whole attention to my «Smithsonian passport,» or general letter «to all friends of science.» That beautifully written document, with its measured phrases, many polysyllabic words in capital letters, and the big gold seal of St. Gaudens's designing, worked a spell; and after slowly reading all the commendatory sentences of that great American institution «for the increase and diffusion of knowledge among men,» he read it again:

«Hum-m-m! Hum-m-m! The Smithsonian Institution of Washington—National Geographic Society—scientific observation and study — anthropology — photography — G. Brown Goode, acting secretary! Ah, ladies, since you have such credentials as *this*,»—evidently the Smithsonian Institution has better standing abroad than the Department of State, and G. Brown Goode, acting secretary of the one, is a better name to conjure with away from home than Walter Q. Gresham, actual secretary of the other,—«since you come so highly commended to us, I will allow you to proceed to Boro Boedor, and remain there while I report to Buitenzorg and ask for instructions. You will go to Boro Boedor as early as possible in the morning,» he commanded, and then asked, «How long had you intended to remain there?»

«That depends. If it is comfortable, and the rains keep off, we may stay several days. If not, we return to-morrow evening.»

«No, no, no!» he cried in alarm; «you must stay there at Boro Boedor. You have no permission to visit Djokja, and I cannot let you stay in my residency. You must stay at Boro Boedor or go back to Buitenzorg.»

DRAWN BY HARRY FENN. AFTER A PHOTOGRAPH.

RICE-FIELDS.

To be ordered off to the Buddhist shrine at sunrise put the pilgrimage in quite another light; to be sentenced to Nirvana by a local magistrate in brass buttons was not like arriving there by slow stages—meditation and

Digitized by Google

reincarnation; but as the assistant resident seemed to be on the point of repenting his clemency, we acquiesced, and the great man and his minions drove away, the bearer of the *pajong*, or official umbrella of his rank, testifying to the formal character of the visit he had been paying. The landlord mopped his brow, sighed, and looked like one who had survived great perils; and we then saw that his sight-seeing stroll down the street with us had been a ruse, a little clever scouting, a preliminary reconnaissance for the benefit of the puzzled magistrate.

We left Djokja at sunrise, with enthusiasm somewhat dampened from former anticipations of that twenty-five-mile drive to Boro Boedor, «the aged thing» in the Boro district of Kedu Residency. We had expected to realize a little of the pleasure of travel during the barely ended posting days on this garden island, networked over with smooth park drives all shaded with tamarind-, kanari-, teak- and waringen-trees, and it proved a half-day of the greatest interest and enjoyment. Our canopied carriage was drawn by four little rats of ponies, driven by a serious old coachman in a gay sarong and military jacket, with a huge lacquered vizor or crownless hat tied on over his *battek* turban, like a student's exaggerated eye-shade. This gave the shadow of great dignity and owlish wisdom to his wrinkled face, ornamented by a mustache as sparsely and symmetrically planted as walrus whiskers. He held the reins and said nothing. When there was anything to do, the running footman did it—a lithe little creature who clung to a rear step, and took to his heels every few minutes to crack the whip over the ponies' heads, and with a frenzied «Gree! G-r-r-*ee! Gr-r-r-e-e-e!*» urge the mites to a more breakneck gallop in harness. He steered them by the traces as he galloped beside them, guided them over bridges, around corners, past other vehicles, and through crowds, while the driver held the reins and chewed betel tobacco in unconcerned state. We rocked and rolled through beautiful arched avenues, with this bare-legged boy in gay petticoat «Gr-r-ree-ing» us along like mad, people scattering aside like frightened chickens, and kneeling as we passed by. The way was fenced and hedged and finished, to each blade of grass, like some aristocratic suburb of a great capital, an endless park, or continuous estate, where fancy farming and landscape-gardening had gone their most extravagant limits. There was not a neglected acre on either side for all the twenty-five miles; every field was cultivated like a tulip-bed; every plant was as green and perfect as if entered in a horticultural show. Streams, ravines, and ditches were solidly bridged, each with its white cement parapet and smooth concrete flooring, and each numbered and marked with Dutch preciseness; and along every bit of the road were posted the names of the kampongs and estates charged to maintain the highway in its perfect condition. Telegraph and telephone wires were strung on the rigid arms of cotton-trees, and giant creepers wove solid fences as they were trained from tree-trunk to

A MOHAMMEDAN MOSQUE.

tree-trunk—the tropics tamed, combed, and curbed, hitched to the cart of commerce and made man's abject servant.

Every few miles there were open red-tiled pavilions built over the highways as refuges for man and beast from the scorching sun of one season and the cloud-burst showers of the rainy half of the year. Twice we found busy passers going on in groves beside these rest-houses—picturesque gatherings of men, women, and children, and displays of fowls fruits, nuts, vegetables, grain, sugar, spices, gums, and flowers, that tempted one to linger and enjoy, and to photograph every foot of the passer's area. The main road was crowded all the way like a city street, and around these passers the highway hummed with voices. One can believe in the density of the population—twenty-four million people on this island of 49,197 square miles, about the size of the State of New York—when he sees the people trooping along these country roads; and he can well understand why every foot of land is cultivated, how even in the benevolent land of the banana every one must produce something, must work or starve. Men and boys toiled to the passer, bent over with the weight of one or two monstrous jackfruits or durians on their backs. A woman with a baby swinging in the *slandang* over her shoulder had tied cackling chickens to the back of her belt, and trudged on comfortably under her umbrella; and a boy swung a brace of ducks from each end of a shoulder-pole, and trotted gaily to the passer. The kampongs, or villages, when not hidden in palm and plantain groves behind fancy bamboo fences, were rows of open houses on each side of the highway, and we reviewed native life at leisure while the ponies were changed. The friendly, gentle little brown people welcomed us with amused and embarrassed smiles when our curiosity as to sarong-painting, lacquering, and mat-weaving carried us into the family circle. The dark, round-eyed, star-eyed babies and children showed no fear or shyness, and the tiniest ones—their soft little warm brown bodies bare of ever a garment save the cotton slandang in which they cuddle so confidingly under the mother's protecting arm—let us lift and carry and play with them at will.

We left the main road, and progressed by a narrower way between open fields of pepper, manioc, indigo, and tobacco, with picturesque views of the three symmetrical and beautiful mountains, Soembung, Merbabo, and Marapie, the first and largest one as pure in line, as exquisite and ideal a peak, as Fujiyama, and Marapie, the «fire-throwing,» a sacred peak in Buddhist times, when cave-temples were hewn in its solid rock and their interiors fretted over with fine bas-reliefs. A group of people transplanting rice, a little boy driving a flock of geese down the road, a little open-timbered temple of the dead in a frangipani grove—all these, with the softly blue-and-purple mountains in the background, are pictures in enduring memory.

A gray ruin showed indistinctly on a *hill*-top, and after a run through a long, arched avenue we came out suddenly at the base of the hill-temple. Instead of a mad, triumphant sweep around the great pyramid, the ponies balked, rooted themselves past any lashing or «Gr-r-ree-ing,» and we got out and walked under the noonday sun, around the hoary high altar of Buddha, down an avenue of tall kanari-trees, lined with statues, gargoyles, and other such *recha*, or remains of ancient art, to the passagran, or government rest-house.

The deep portico of the passagran commands an angle and two sides of the square temple, and from the mass of blackened and bleached stones the eye finally arranges and follows out the broken lines of the terraced pyramid, covered with such a wealth of orna-

TRANSPLANTING RICE—WITH TEMPLE OF THE DEAD AND FRANGIPANI GROVE IN THE BACKGROUND.

Digitized by Google

ment as no other one structure in the world presents. The first near view is almost disappointing. In the blur of details it is difficult to realize the vast proportions of this twelve-century-old structure—a pyramid the base platform of which is five hundred feet square, the first terrace walls are three hundred feet square, and the final dome rises to a height of one hundred feet. Stripped of every kindly relief of vine and moss, every gap and ruined angle visible, there was something garish, raw, and almost disordered at the first glance, almost as jarring as newness, and the hard black-and-white effect of the dark lichens on the gray trachyte made it look like a bad photograph of the pile. The temple stands on a broad platform, and rises first in five square terraces, inclosing galleries, or processional paths, between their walls, which are covered on each side with bas-relief sculptures. If placed in single line these bas-reliefs would extend for three miles. The terrace walls hold four hundred and thirty-six niches or alcove chapels, where life-size Buddhas sit serene upon lotus cushions. Staircases ascend in straight lines from each of the four sides, passing under stepped or pointed arches the keystones of which are elaborately carved masks, and rows of sockets in the jambs show where wood or metal doors once swung. Above the square terraces are three circular terraces, where seventy-two latticed *dagobas* (reliquaries in the shape of the calyx or bud of the lotus) inclose each a seated image, seventy-two more Buddhas sitting in these inner, upper circles of Nirvana, facing a great dagoba, or final cupola, the exact function or purpose of which as key to the whole structure is still the puzzle of archæologists. This final shrine is fifty feet in diameter, and either covered a relic of Buddha, or a central well where the ashes of priests and princes were deposited, or is a form surviving from the tree-temples of the earliest, primitive East when nature-worship prevailed. The English engineers made an opening in the solid exterior, and found an unfinished statue of Buddha on a platform over a deep well-hole;

ON THE SECOND TERRACE.

Digitized by Google

and its head, half buried in debris, still smiles upon one from the deep cavern. A staircase has been constructed to the summit of this dagoba, and from it one looks down upon the whole structure as on a ground-plan drawing, and out over finely cultivated fields and thick palm-groves to the matchless peaks and the nearer hills that inclose this fertile valley of the Boro Boedor—«the very finest view I ever saw,» wrote Marianne North.

Three fourths of the terrace chapels and the upper dagobas have crumbled; hundreds of statues are headless, armless, overturned, missing; tees, or finials, are gone from the bell-roofs; terrace walls bulge, lean outward, and have fallen in long stretches; and the circular platforms and the processional paths undulate as if earthquake-waves were at the moment rocking the mass. No cement was used to hold the fitted stones together, and other Hindu peculiarities of construction are the entire absence of a column, a pillar, or an arch. Vegetation wrought great ruin during its buried centuries, but earthquakes and tropical rains are working now a slow but surer ruin that will leave little of Boro Boedor for the next century's wonder-seekers, unless the walls are soon straightened and strongly braced.

All this ruined splendor and wrecked magnificence soon has an overpowering effect on one. He almost hesitates to attempt studying out all the details, the intricate symbolism and decoration lavished by those Hindu builders, who, like the Moguls, «built like Titans, but finished like jewelers.» One walks around and around the sculptured terraces, where the bas-reliefs portray all the life of Buddha and his disciples, and the history of that great religion—a picture-Bible of Buddhism. All the events in the life of Prince Siddhartha, Gautama Buddha, are followed in turn: his birth and education, his leaving home, his meditation under Gaya's immortal tree, his teaching in the deer-park, his sitting in judgment, weighing even the birds in his scales, his death and entrance into Nirvana. The every-day life of the eighth century is pictured, too—temples, palaces, thrones and tombs, ships and houses, all of man's constructions, are portrayed. The life in courts and palaces, in fields and villages, is all seen there. Royal folk in wonderful jewels sit enthroned, with minions offering gifts and burning incense before them, warriors kneeling, and maidens dancing. The peasant plows the rice-fields with the same wooden stick and ungainly buffalo, and carries the rice sheaves from the harvest-field with the same shoulder-poles, used in all the farther East to-day. Women fill their water-vessels at the tanks and bear them away on their heads as in India now, and scores of bas-reliefs show the unchanging customs of the East that offer sculptors the same models in this century. Half the wonders of that great three-mile-long gallery of sculptures cannot be recalled. Each round disclosed some more wonderful picture, some more eloquent story, told in the coarse trachyte rock furnished by the volcanoes across the valley. Even the humorous fancies of the sculptors are expressed in stone. In one rilievo a splendidly caparisoned state elephant flings its feet in imitation of the dancing-girl near by. Other sportive elephants carry fans and state umbrellas in their trunks; and the marine monsters swimming about the ship that bears the Buddhist missionaries to the isles have such expression and human resemblance as to make one wonder if those primitives did not occasionally pillory an enemy with their chisels, too. In the last gallery, where, in the progress of the religion, it took on many features of Jainism, or advancing Brahmanism, Buddha is several times represented as the ninth avatar, or incarnation, of Vishnu, still seated on the lotus cushion, and holding a lotus with one of his four hands. Figure after figure wears the Brahmanic cord, or sacrificial thread, over the left shoulder; and all the royal ones sit in what must have been the pose of high fashion at that time—one knee bent under in tailor fashion, the other bent knee raised and held in a loop of the girdle confining the sarong skirt. There is not a nude figure in the whole three miles of sculptured scenes, and the costumes are a study in themselves; likewise the elaborate jewels which Maia and her maids and the princely ones wear. The trees and flowers are a sufficient study alone; and on my last morning at Boro Boedor I made the whole round at sunrise, looking specially at the wonderful palms, bamboos, frangipani-, mango-, mangosteen-, breadfruit-, pomegranate-, banana-, and bo-trees—every local form being gracefully conventionalized, and, as Fergusson says, «complicated and refined beyond any examples known in India.» It is such special rounds that give one a full idea of what a monumental masterpiece the great Buddhist *vihara* is, what an epitome of all the arts and civilization of the eighth century those galleries of sculpture hold, and turn one to dreaming of the builders and their times.

No particularly Javanese types of face or figure are represented. All the countenances

DRAWN BY MALCOLM FRASER.

THE RIGHT-HAND IMAGE AT MENDOET.

Digitized by Google

are Hindu, Hindu-Caucasian, and pure Greek; and none of the objects or accessories depicted with them are those of an uncivilized people. All the art and culture, the highest standards of Hindu taste and living, in the tenth century of triumphant Buddhism, are expressed in this sculptured record of the golden age of Java. The Boro Boedor sculptures are finer examples of the Greco-Buddhist art of the times than those of Amravati and Gandahara; and the pure Greek countenances show sufficient evidence of Bactrian influences on the Indus, whence the builders came.

Of the more than five hundred statues of Buddha enshrined in niches and latticed dagobas, all, save the one mysterious figure standing in the central or summit dagoba, are seated on lotus cushions. Those of the terrace rows of chapels face outward to the four points of the compass, and those of the three circular platforms face inward to the hidden, mysterious one. All are alike save in the position of the hands, and those of the terrace chapels have four different poses accordingly as they face the cardinal points. As they are conventionally represented, there is Buddha teaching, with his open palm resting on one knee; Buddha learning, with that hand intently closed; Buddha meditating, with both hands open on his knees; Buddha believing and convinced, expounding the lotus law with upraised hand; and Buddha demonstrating and explaining, with thumbs and index-fingers touching. The images in the lotus bells of the circular platforms hold the right palm curved like a shell over the fingers of the left hand—the Buddha who has comprehended, and sits meditating in stages of Nirvana. It was never intended that worshipers should know the mien of the great one in the summit chalice, the serene one who, having attained the supreme end, was left to brood alone, inaccessible, shut out from, beyond all the world. For this reason it is believed that this standing statue was left incomplete, the profane chisel not daring to render every accessory and attribute as with the lesser ones.

Humboldt first noted the five different attitudes of the seated figures, and their likeness to the five Dhyani Buddhas of Nepal; and the discovery of a tablet in Sumatra recording the erection of a seven-story vihara to the Dhyani Buddha was proof that the faith that first came pure from the mouth of the Oxus and the Indus must have received later bent through missionaries from the Malay Peninsula and Tibet. The Boro Boedor images have the same lotus cushion and aureole, the same curls of hair, but not the long ears of the Nepal Buddhas, who in the Mongol doctrine had each his own paradise or quarter of the earth. The first Dhyani, who rules the paradise of the Orient, is always represented in the same attitude and pose of the hands as the image in the latticed bells of these upper, circular or Nirvana terraces of Boro Boedor. The images on the east side of Boro Boedor's square terraces correspond to the second Dhyani's conventional pose; those on the south walls, to the third Dhyani; the west-facing ones, to the fourth Dhyani; and the northern ones, to the fifth Dhyani of Nepal.

There are no inscriptions anywhere in this mass of picture-writings, and when the British engineers came to Boro Boedor, in 1814, the inhabitants of the nearest village had no knowledge or traditions of this noblest monument Buddhism ever reared. Ever since their fathers had moved there from another district it had been only a tree-covered hill in the midst of forests. Two hundred coolies worked forty-five days in clearing away vegetation and excavating the buried terraces. Measurements and drawings were made, and twelve plates from them accompany Sir Stamford Raffles's work. After the Dutch recovered possession of Java, their artists and archæologists gave careful study to this monument of earlier civilization and arts; and Herr Brumund's scholarly text, completed and edited by Dr. Leemans of Leyden, accompanies and explains the great folio volumes of four hundred plates, after Wilsen's drawings, published by the Dutch government in 1874. Since their uncovering the ruins have been kept free from vegetation, but no other care has been taken. In this comparatively short time legends have grown up and local customs have become fixed, and Boro Boedor holds something of the importance it should in its immediate human relations.

For more than six centuries the hill-temple was lost to sight, covered with trees and rank vegetation; and when the Englishmen brought the great sculptured monument to light, the gentle, easily superstitious Javanese of the neighborhood regarded these *recha*—statues and relics of the ancient, unknown cult—with the greatest reverence. They adopted them as tutelary divinities, as it were, indigenous to their own soil. While Wilsen lived there the people brought daily offerings of flowers. The statue on the first circular terrace at the right of the east

Digitized by Google

staircase, and the secluded image at the very summit, were always surrounded with heaps of stemless flowers laid on moss and plantain-leaves. Incense was burned to these recha, and the people daubed them with the yellow powder with which princes formerly painted and even humble bridegrooms paint themselves on festal days, just as Burmese Buddhists daub gold-leaf on their shrines, and, like the Cingalese Buddhists, heap champak and tulse, jasmine, rose, and frangipani flowers, before their altars. When questioned, the people owned that the offerings at Boro Boedor were in fulfilment of a vow or in thanksgiving for some event in their lives—a birth, death, marriage, unexpected good fortune, or recovery from illness. Other worshipers made the rounds of the circular terraces, reaching to touch each image in its latticed bell, and many kept all-night vigils among the dagobas of the Nirvana circles. Less appealing was the custom, that grew up among the Chinese residents of Djokjakarta and its neighborhood, of making the temple the goal of general pilgrimage on the Chinese New Year's day. They made food and incense offerings to the images, and celebrated with fire-works, feasts, and a general May-fair and popular outdoor fête.

After the temple was uncovered the natives considered it a free quarry, and carried off carved stones for door-steps, gate-posts, foundations, and fences. Every visitor, tourist or antiquarian, scientist or relic-hunter, helped himself; and every residency, native prince's garden, and plantation lawn, far and near, is still ornamented with Boro Boedor's sculptures. In the garden of the Magelang Residency, Miss Marianne North found a Chinese artist employed in «restoring» Boro Boedor images, touching up the Hindu countenances with a chisel until their eyes wore the proper Chinese slant. The museum at Batavia has a full collection of recha, and all about the foundation platform of the temple itself, and along the path to the passagran, the way is lined with displaced images and fragments, statues, lions, elephants, horses; the *hansa*, or emblematic geese of Buddhism; the *Garovda*, or sacred birds of Vishnu; and giant genii that probably guarded some outer gates of approach. A captain of Dutch hussars told Herr Brumund that, when camping at Boro Boedor during the Javanese war, his men amused themselves by striking off the heads of statues with single lance- or saber-strokes. Conspicuous heads made fine targets for rifle and pistol practice. Native boys, playing on the terraces while watching cattle, broke off tiny heads and detachable bits of carving, and threw them at one another; and a few such playful shepherds could effect as much ruin as any of the imaginary bands of fanatic Moslems or Brahmans. One can better accept the plain, rural story of the boy herders' destructiveness than those elaborately built up tales of the religious wars, when priests and people, driven to Boro Boedor as their last refuge, retreated, fighting, from terrace to terrace, hurling stones and statues down upon their pursuers, the last heroic believers dying martyrs before the summit dagoba. Fanatic Mohammedans in other countries doubtless would destroy the shrines of a rival, heretic creed; but there is most evidence in the history and character of the Javanese people that they simply left their old shrines, let them alone, and allowed the jungle to claim at its will what no longer had any interest or sacredness for them. To this day the Javanese takes his religion easily, and it is known that at one time Buddhism and Brahmanism flourished in peace side by side, and that conversion from one faith to the other, and back again, and then to Mohammedanism, was peaceful and gradual, and the result of suasion and fashion, and not of force. The old cults faded, lost prestige, and vanished without stress of arms or an inquisition.

With five hundred Buddhas in near neighborhood, one might expect a little of the atmosphere of Nirvana, and the looking at so many repetitions of one object might well produce the hypnotic stage akin to it. The cool, shady passagran at Boro Boedor affords as much of earthly quiet and absolute calm, as entire a retreat from the outer, modern world, as one could ever expect to find now in any land of the lotus. This government rest-house is maintained by the resident of Kedu, and every accommodation is provided for the pilgrim, at a fixed charge of six florins the day. The keeper of the passagran was a slow-spoken, lethargic, meditative old Hollander, with whom it was always afternoon. One half expected him to change from battek pajamas to yellow draperies, climb up on some vacant lotus pedestal, and, posing his fingers, drop away into eternal meditation, like his stony neighbors. Tropic life and isolation had reduced him to that mental stagnation, torpor, or depression so common with single Europeans in far Asia, isolated from all social friction, living, human interests, and natural sympathies, and so far out of touch with the living, moving world of the

Digitized by Google

nineteenth century. Life goes on in placidity, endless quiet, and routine at Boro Boedor. Visitors come rarely; they most often stop only for *riz tavel*, and drive on; and not a half-dozen American names appear in the visitors' book, the first entry in which is dated 1869.

I remember the first still, long lotus afternoon in the passagran's portico, when my companions napped, and not a sound broke the stillness save the slow, occasional rustle of palm-branches and the whistle of birds. In that damp, heated silence, where even the mental effort of recalling the attitude of Buddha elsewhere threw one into a bath of perspiration, there was exertion enough in tracing the courses and projections of the terraced temple with the eye. Even this easy rocking-chair study of the blackened ruins, empty niches, broken statues, and shattered and crumbling terraces, worked a spell. The dread genii by the doorway and the grotesque animals along the path seemed living monsters, the meditating statues even seemed to breathe, until some «chuck-chucking» lizard ran over them and dispelled the half-dream.

ON THE UPPER CIRCULAR TERRACE—THE LATTICED BELLS, OR LOTUS-BUD DAGOBAS.

In those hazy, hypnotic hours of the long afternoon one could best believe the tradition that the temple rose in a night at miraculous bidding, and was not built by human hands; that it was built by the son of the Prince of Boro Boedor, as a condition to his receiving the daughter of the Prince of Mendoet for a wife. The suitor was to build it within a given time, and every detail was rigidly prescribed. The princess came with her father to inspect the great work of art, with its miles of bas-reliefs and hundreds of statues fresh from the sculptor's chisel. «Without doubt these images are beautiful,» she said coldly, «but they are dead. I can no more love you than they can love you»; and she turned and left her lover to brood in eternal sorrow and meditation upon that puzzle of all the centuries—the Eternal Feminine.

At last the shadows began to stretch; a cooler breath came; cocoanut-leaves began to rustle and lash with force, and the musical rhythm of distant, soft Malay voices broke the stillness that had been that of the Sleeping Beauty's enchanted castle. A boy crept out of a basket house in the palm-grove behind the passagran, and walked up a palm-tree with that deliberate ease and nonchalance that is not altogether human or two-footed, and makes one rub his eyes doubtingly at the unprepared sight. He carried a bunch of bamboo tubes at his belt, and when he reached the top of the smooth stem began letting down bamboo cups, fastened one at the base of each leaf-stalk to collect the sap. Everywhere in Java we saw them collecting the sap of the true sugar-palm and the toddy-palm, that bear such gorgeous spathes of blossoms; but it is only in this region of middle Java that sugar is made from the cocoa-palm. Each tree yields daily about two quarts of sap that reduce to three or four ounces of sugar. The common palm-sugar of the passers looks and tastes like other brown sugar, but this from cocoa-palms has a delicious, nutty fragrance and flavor, as unique as maple-sugar. We were not long in the land before we learned to melt cocoa-palm sugar and pour it on grated ripe cocoanut, thus achieving a sweet supreme.

The level valley about Boro Boedor is tilled in such fine lines that it seems in perspective to have been etched or hatched with finer tools than plow and hoe. There is a little Malay temple surrounded by graves in a frangipani grove near the great pyramid, where the ground is white with the fallen «blossoms of the dead,» and the tree-trunks are decked with trails of white and palest

Digitized by Google

pink orchids. The little kampong of Boro Boedor hides in a deep green grove—such a pretty, picturesque little lot of basket houses, such a carefully painted village in a painted grove,—the village of the Midway Plaisance, only more so,—such a set scene and ideal picture of Java, as ought to have wings and footlights, and be looked at to slow music. And there, in the early summer mornings, is a busy passer in a grove that presents more and more attractive pictures of Javanese life, as the people come from miles around to buy and to sell the necessities and luxuries of their picturesque, primitive life, so near to nature's warmest heart.

All the neighborhood is full of beauty and interest, and there are smaller shrines at each side of Boro Boedor, where pilgrims in ancient times were supposed to make first and farewell prayers. One is called Chandi Pawon, or more commonly Dapor, the kitchen, because of its empty, smoke-blackened interior resulting from the incense of the centuries of living faith, and of the later centuries when superstitious habit, and not any surviving Buddhism, led the humble people to make offerings to the recha, the unknown, mysterious gods of the past.

Chandi Mendoet, two miles the other side of Boro Boedor, is an exquisite pyramidal temple in a green quadrangle of the forest, with a walled foss and bridges. Long lost and hidden in the jungle, it was accidentally discovered by the Dutch resident Hartman in 1835, and a space cleared about it. The natives had never known of or suspected its existence, but the investigators determined that this gem of Hindu art was erected between 750 and 800 A. D. The workmanship proves a continued progress in the arts employed at Boro Boedor, and the sculptures show that the popular faith was then passing through Jainism back to Brahmanism. The body of the temple is forty-five feet square as it stands on its walled platform, and rises to a height of seventy feet. A terrace, or raised processional path, around the temple walls is faced with bas-reliefs and ornamental stones, and great bas-reliefs decorate the upper walls. The square interior chapel is entered through a stepped arch or door, and the finest of the Mendoet bas-reliefs, commonly spoken of as the «Tree of Knowledge,» is in this entranceway. There Buddha sits beneath the bo-tree, the trunk of which supports a pajong, or state umbrella, teaching those who approach him and kneel with offerings and incense. The angels overhead, the birds in the trees, and the lambs on their rocky shelf, listening to the great teacher, and the figures, are worked out with a grace and skill beyond compare. Three colossal images are seated in the chapel, all with Buddha's attributes, and Brahmanic cords as well, and the long Nepal ears of the Dhyani ones. They are variously explained as the Hindu trinity, as the Buddhist trinity, as Buddha and his disciples, and local legends try to explain them even more romantically. One literary pilgrim describes the central Adi Buddha as the statue of a beautiful young woman «counting her fingers,» the mild, benign, and sweetly smiling faces of all three easily suggesting femininity.

One legend tells that this marvel of a temple was built by a rajah who, when once summoned to aid or save the goddess Durga, was followed by two of his wives. To rid himself of them, he tied one wife and nailed the other to a rock. Years afterward he built this temple in expiation, and put their images in it. An avenging rival, who had loved one of the women, at last found the rajah, killed him, turned him to stone, and condemned him to sit forever between his abused partners.

A legend related to Herr Brumund told that «once upon a time» the two-year-old daughter of the great Prince Dewa Kesoumi was stolen by a revengeful courtier. The broken-hearted father wandered all over the country seeking his daughter, but at the end of twelve years met and, forgetting his grief, demanded and married the most beautiful young girl he had ever seen. Soon after a child had been born to them, the revengeful courtier of years before told the prince that his beautiful wife was his own daughter. The priests assured Prince Dewa that no forgiveness was possible to one who had so offended the gods, and that his only course of expiation lay in shutting himself, with the mother and child, in a walled cell, and there ending their days in penitence and prayer. As a last divine favor, he was told that the crime would be forgiven if within ten days he could construct a Boro Boedor. All the artists and workmen of the kingdom were summoned, and working with zeal and frenzy to save their ruler, completed the temple, with its hundreds of statues and its miles of carvings, within the fixed time. But it was then found that the pilè was incomplete, lacking just one statue of the full number required. Prayers and appeals were useless, and the gods turned the prince, the mother, and the child to stone,

Digitized by Google

and they sit in the cell at Mendoet as proof of the tale for all time.

With such interests we quite forgot the disagreeable episode in the steaming, provincial town beyond the mountains, and cared not for Toetlakings-Kaart or assistant resident. Nothing from the outer world disturbed the peace of our Nirvana. No solitary horseman bringing reprieve was ever descried from the summit dagoba. No file of soldiers grounded arms and demanded us for Dutch dungeons. Life held every tropic charm, and Boro Boedor constituted an ideal world entirely our own. The sculptured galleries drew us to them at the beginning and end of every stroll, and demanded always another and another look. A thousand Mona Lisas smiled upon us with impassive, mysterious, inscrutable smiles, as they have smiled during all these twelve centuries, and often the realization, the atmosphere of antiquity was overpowering in sensation and weird effect.

Boro Boedor is most mysterious and impressive in the gray of dawn, in the unearthly light and stillness of that eerie hour. Sunrise touches the old walls and statues to something of life; and sunset, when all the palms are silhouetted against skies of tenderest rose, and the warm light flushes the hoary gray pile, is the time when the green valley of Eden about the temple adds all of charm and poetic suggestion. Pitch-darkness so quickly follows the tropic sunset that when we left the upper platform of the temple in the last rose-light, we found the lamps lighted, and huge moths and beetles flying in and about the passagran's portico. Then lizards «chuck-chucked,» and ran over the walls; and the invisible gecko, gasping, called, it seemed to me, «*Becky! Becky! Becky! Becky! Becky! Becky!*» and Rebecca answered never to those breathless, exhausted, appealing cries, always six times repeated, slowly over and over again, by the fatigued soul doomed to a lizard's form in its last incarnation. There was infinite mystery and witchery in the darkness and sounds of the tropic night—sudden calls of birds, and always the stiff rustling, rustling of the cocoa-palms, and the softer sounds of other trees, the shadows of which made inky blackness about the passagran; while out over the temple the open sky, full of huge yellow, steadily glowing stars, shed radiance sufficient for one to distinguish the mass and lines of the great pyramid. Villagers came silently from out the darkness, stood motionless beside the grim stone images, and advanced slowly into the circle of light before the portico. They knelt with many homages, and laid out the cakes of palm-sugar, the baskets and sarongs, we had bought at their toy village. Others brought frangipani blossoms that they heaped in mounds at our feet. They sat on their heels, and with muttered whispers watched us as we dined and went about our affairs on the raised platform of the portico, presenting to them a living drama of foreign life on that regularly built stage without footlights. One of the audience pierced a fresh cocoanut, drank the milk, and then rolling kanari and benzoin gum in corn-fiber, lighted the fragrant cigarette, and puffed the smoke into the cocoa-shell. «It is good for the stomach, and will keep off fever,» they answered, when we asked about this incantation-like proceeding; and all took a turn at puffing into the shell and reinhaling the incense-clouds. The gentle little Javanese who provided better dinners for passagran guests than any island hotel had offered us came into the circle of light, with her mite of a brown baby sleeping in the slandang knotted across her shoulder. The old landlord could be heard as he came back far enough from his Nirvana to call for the boy to light a fresh pipe; and one felt a little of the gaze and presence of all the Dhyani Buddhas on the sculptured terraces in the strange atmosphere of such far-away tropic nights by the Boedor of Boro.

WHEN we came «gree-ing» back by those beautiful roads to Djokja, and drew up with a whirl at the portico of the Hotel Toegoe, the landlord of beaming countenance ran to meet us, greet us with effusion, and give us a handful of mail—long, official envelops with seals, and square envelops of social usage.

«Your passports are here. They came the next day. They are so chagrined that it was all a stupid mistake. The assistant resident at Buitenzorg telegraphed to the resident here to tell the three American ladies who were to arrive in Djokja that he had posted their passports, and to have every attention paid you. He wished to commend you and put you *en rapport* with the Djokja officials, that you might enjoy their courtesies. Then the telegraph operator changed the message so as not to have to send so many words on the wire, and he made them all think you were some very dangerous people whom they must arrest and send back. The assistant resident knew there was some mistake as soon as he saw you.» (Did he?) «He is so chagrined. And it was all the telegraph

Digitized by Google

operator's fault, and you must not blame our Djokja residency.»

Instead of mollifying, this rather irritated us the more, and the assistant resident's long, formal note was fuel to the flame.

LADIES: This morning I telegraphed to the Secretary-general what in heaven's name could be the reason you were not to go to Djokja. I got no answer from him, but received a letter from the chief of the telegraph, who had received a telegram from the telegraph office of Buitenzorg, to tell me there had been a mistake in the telegram. Instead of «the permission is not given,» there should have been written, «the papers of permission I have myself this moment posted. Do all you can in the matter,» etc. Perhaps you will have received them the moment you get this my letter.

So I am so happy I did not insist upon your returning to Buitenzorg, and so sorry you had so long stay at Boro Boedor; and I hope you will forget the fatal mistake, and feel yourself at ease now, etc.

Evidently the little episode was confined to the bureau of telegraphs entirely, the messages to consul, secretary-general, and Buitenzorg resident all suppressed before reaching them. Certainly this was no argument for the government ownership and control of telegraphs in the United States. There were regrets and social consolations offered, but no distinct apology; and we were quite in the mood for having the American consul demand apology, reparation, and indemnity, on pain of bombardment, as is the foreign custom in all Asia. Pacification by small courtesies did not pacify. Proffered presentation to native princes, visits to their bizarre palaces, and attendance at a great performance by the sultan's actors, dancers, musicians, and swordsmen, would hardly offset being arrested, brought up in an informal police-court, cross-questioned, bullied, and regularly ordered to Boro Boedor under parole. We would not remain tacitly to accept the olive-branch—not then. The profuse landlord was nonplussed that we did not humbly and gratefully accept these amenities.

«You will not go back to Buitenzorg now, with only such unhappy experience of Djokja! Every one is so chagrined, so anxious that you should forget the little contretemps. Surely you will stay now for the great *topeng* (lyric drama), and the wedding of Pakoe Alam's daughter!»

«No; we have our Toetlakings-Kaarts, and we leave on the noon train.»

And then the landlord knew that we should have been locked up for other reasons, since sane folk are never in a hurry under the equator. They consider the thermometer, treat the zenith sun with respect, and do not trifle with the tropics.

Eliza Ruhamah Scidmore.

«JACK.»

THERE 'S more than instinct in the jocund play
Of «Jack,» the little Scot, dear as a child.
Alas! that arrogance has so misstyled
The intelligence of brutes, and said them nay
At this life's close. Denying them, there may
Be no Supreme law such as man has filed
Against them. I could well be reconciled
To share with all of them a judgment-day
And life eternal. Not a blasphemous thought
(Witness, O Thou who knowest me) is mine:
But this dog's life, so innocent, is fraught
With intimations of such high design
That I could wish we never had been taught
To think man only holds the spark divine.

John H. Boner.

(BEGUN IN THE NOVEMBER NUMBER.)

HUGH WYNNE, FREE QUAKER:

SOMETIME BREVET LIEUTENANT-COLONEL ON THE STAFF OF HIS EXCELLENCY GENERAL WASHINGTON.

BY DR. S. WEIR MITCHELL,
Author of «Far in the Forest,» «Roland Blake,» etc.

WITH PICTURES BY HOWARD PYLE.

XXVIII.

BY the 7th of September Marquis Lafayette was holding the neck of the peninsula of York. A more daring man than Cornwallis would have tried a fall with this army, but he waited for a fleet to relieve him, and behold! none came save that of De Grasse. By September 26 sixteen thousand men were added to those of the marquis, and lay about Williamsburg. Our quiet old hawk had my lord in his clutches, and meant no long delay.

Not to be in advance of the army, his Excellency, who left Philadelphia before us, lingered a few days on the way to visit the home he had not seen for six long years, and we of the staff followed him the day after. Both in town and on the march through Delaware I was occupied as I had never been in my life. The French marched with us, and to keep things straight duplicate orders in both tongues were needed, and there were notes, letters, and despatches to be done into French or English. An aide who spoke French fluently was apt to be in the saddle whenever his pen was not in use.

The life was to me of advantage, because I came daily into contact with officers, young and old, who had seen the finest company in Europe, and from whom there was much to learn. It is Chastellux, I think, who has said that Mr. Washington possessed the charm of such manners as were rare among our officers. With these gentlemen, our allies, the way of doing every little act of the life of society seemed to have been studied and taught, until these gracious and amiable forms were become, as one may say, a part of the man.

No wonder they found us clumsy fellows. Too many of our gentry were not in the war, or were opposed to it. Many regiments were strangely officered, and this, as Graydon says in his memoirs, was especially the case as to the New England troops. But a man with no manners and with brutal habits may fight as well as a marquis.

Now toward the close of the war, if we were still as to looks but a Falstaffian contingent, the material in men and officers had been notably sifted, and was in all essential ways fit for the perilous service to which we were about to address ourselves.

At Mount Vernon we camped—we of the staff—in and out of the house, and were bountifully fed, nor did I ever see his Excellency more to advantage than here. He personally looked after our wants, and lost for a time much of the official reserve with which he guarded himself elsewhere.

At table after dinner he was in the habit of asking one of his aides to propose toasts for him. The day before we left, as we were about to rise from table, Colonel Tilghman said, «One more toast, with your permission, Excellency,» and cried out, «My Lord Cornwallis, and may he enjoy the hospitalities of our army!»

Our host laughed as he rarely did, saying, «We must first catch our fish, Mr. Tilghman.»

I ventured to say, «He is in the net already.»

His Excellency, looking round at me, said gravely, «Pray God the net hold good!» After I had offered the toast of Lady Washington's health, and our thanks for the pleasant days of rest and good cheer, he left us, desiring Mr. Tilghman to see that we had wine enough.

On the 14th we reached Williamsburg. The army rapidly came in by divisions, French and American. Before the 25th we had from the fleet cannon and intrenching-tools, and all our available force was to hand.

I can make clear in a few words the situation of the enemy. The peninsula of York lies between the James and the York rivers. On the south bank of the latter sits the little town of York. Seven redoubts surrounded it. The town was flanked right and left by deep ravines and creeks falling into the York River. Intrenchments, field-works, and abatis, with felled trees, lay to landward.

Gloucester Point, on the opposite shore of the river, was well fortified, and before it lay a small force of British war-ships, the channel being obstructed lower down by sunken

Digitized by Google

vessels. The French fleet held the river below the town, and we the peninsula.

On the night of the 25th, after a brief visit to the fleet, our chief lay down in the open under a mulberry-tree with one of its roots for a pillow, and slept well, as was audible enough to us who lay at a distance.

That night his lordship abandoned his outworks and drew within the town. We seized these lines next day, losing Colonel Scammel, formerly of the staff, in whose amusing songs and gay talk our chief had used to take much pleasure. On the 28th the armies marched twelve miles down the peninsula, and camped two miles from the town, driving in the pickets and some parties of horse.

By October 1, the weather being fine, we had completed a half-moon of intrenchments, resting at each wing on the river. Two advanced redoubts we threw up were severely cannonaded, so as to interrupt the men at work.

His Excellency, somewhat anxious, came out of his tent, and calling Mr. Tilghman and me, who were writing, rode forth, followed by his faithful black Billy, whom we used to credit with knowing more of what went on than did we of the staff. Mr. Evans, a chaplain, was fain to see more of the war than concerned him, and came after us. As we approached, Billy, riding behind me, said as the cannon-shot went over us:

«Dem redcoats is p'intin' us mighty well.»

Then a shot ricochetted, striking the ground in front and covering us with dust. Mr. Evans, who was standing by, and had now seen quite enough of it, said, «We shall all be killed,» and then looked ruefully at his new beaver, well dusted and dirty.

«You had better carry that home to your wife and children,» said the chief. «This is not the place for you, sir.»

Neither was it much to my own liking, and I was not sorry when we rode back.

On the night of the 9th of October his Excellency put a match to the first gun, and for four days and nights a furious cannonade went on from both sides.

Late on the night of the 10th Jack came to my tent, and we walked out to see this terrible spectacle, climbing a little hill which lay well away from our lines. For a time we were quite alone.

A monstrous dome of smoke hung over the town. Now and then a gust of sea wind tore it apart, and through the rifts we saw the silver cup of the moon and the host of stars. We lay long on the hillock. I suppose the hour and the mighty fates involved made us serious and silent. Far away seventy cannon thundered from our works, and the enemy's batteries roared their incessant fury of reply.

Presently I said, «Jack, how still the heavens are, and under them this rage of war! How strange!»

«Yes,» said Jack; «once I said something of this tranquilness in the skies to our great Dr. Franklin. He is very patient with young fellows, but he said to me: 'Yes, it is a pleasing thing, even to be wrong about it. It is only to the eye of man that there is calm and peace in the heavens; no shot of cannon can fly as these worlds fly, and comets whirl, and suns blaze; and if there is yonder, as with us, war and murder and ravage, none can say.' It all comes back to me now,» said Jack, «and I thought to tell you.»

«It is a terrible sight,» said I, as the great tumult of sound grew louder. «Let us thank God the cause is a just one.»

«And there are the stars again,» said Jack, «and the moon.» And we were silent once more, watching the death-struggle of a failing cause.

Our own mad world was far other than at peace. The great bombs rose in vast curves overhead, with trails of light, and, seeming to hesitate in mid-air, exploded, or fell on town or ship or in the stream between. As we looked, awe-struck, hot shot set fire to the *Charon*, a forty-four-gun ship, nigh to Gloucester, and soon a red rush of fire twining about mast and spar rose in air, lighting the sublime spectacle, amid the crash of guns, the rattle of musketry, and multitudinous inexplicable noises, through which we heard now and then the wild howl of a dog from some distant farm-yard.

At last the war-ship blew up, and a wonderful strong light lighted the town, the river, and the camp. As it fell the dog bayed again, a long, sharp, wavering cry.

This seemed to me to impress Jack Warder more than anything else in this din of war. He said now and again, «There is that dog,» and wondered what the beast thought of it all. It is curious upon what the minds of men fix on grave occasions. I meant to ask Jack why he spoke over and over of the dog when before us was the bloody close of a great historic tragedy: a king humbled; a young republic at sword-point with an ancient monarchy.

It seemed to me a man's mind must grow in the presence of such might of events. The hill, a half-mile from the lines, was a good vantage-ground whence to see and hear.

Digitized by Google

Jack and I smoked many pipes, and, as he was not for duty in the trenches, lay here most of that cool October night, wrapped in our cloaks. Sometimes we talked; more often we were silent, and ever the great cannon roared from trench and bastion, or were quiet awhile to let their hot lips cool.

Once Jack fell to talk of how he and I were changed from the quiet Quaker lads we had been, and did I remember our first fight, and Colonel Rupert Forest, and Master Dove? That greater master, War, since then had educated and broadened us. He was more philosophic than I, and liked thus to speculate; but of Darthea he said never a word, though we spoke of many things that memorable night.

At last, when it was near to dawn, Jack jumped up, crying, «Oh, confound that dog!» He had, what I never had, some remnant of the superstitions of our ancestors, and I suspect that the howl of the poor beast troubled him. I guessed at this when he said presently, «I suppose we shall have to carry the place by storm.»

«Now don't tell me you will get hit,» said I. «You always say that. There are enough dead men to set every dog in Virginia a-howling.»

Jack laughed, but I had shamed him out of any desire to repeat his predictions of disaster, and with the signal-rockets in air, and the resounding thunder of this storm of war ever rising and falling, we went at last to our tents.

For two or three days his Excellency kept me busy; but since, except every third or fourth day, Jack had no active work, his diary at this time is very fully kept. I see from its pages that he thought over and over in this leisure of what we had so largely discussed on that night when we lay upon the hill.

«October 11,» I find written.—«Hugh and I had a long talk over our own lives. It is a good thing and wise at times to take stock, as merchants say, of one's self and of one's friends. Indeed, if a man could contrive a moral likeness of his inner self such as he may have of his body, and this at different ages, it were an interesting and perhaps, too, a useful thing. It might much surprise him as the years went on. I think of myself as not so changed as Hugh. I am indeed more shy. As time goes on I arrange to hide it. I am less ambitious. Duty seems to me more and more a thing which I must do by reason of habit, that being strong with me owing much to the constant example set by my friend's life. If I have in me something of the woman's nature, as Mistress Wynne used to declare, I do not now so much dislike the notion. It may explain why, as I mature, nothing in life seems to me so greatly to be desired as the love of my fellows. If I think a man I esteem has no affection for me, I will fetch and carry to get it. Thank God I need not for Hugh. For him I would give my life, should he want it, and what more can a man do for his friend? Yes, there is a greater test, but of that I need not think, since she does not love me, nor ever could I think to win her love.

«My Hugh is a big handsome fellow nowadays, builded to be of the bigness of his father, but cleaner fashioned, from early use of his muscles. He has the strong passions of these hot Welsh, but is disciplined to control them, though not always. He is more serious of late, and has thoughts which surprise me, and show that his mind has grown. I used to think he was too abrupt with people, but he has a gift I have not—the power to capture the fine ways which these French gentlemen possess, so that nowadays he has quite lost the stiff ways in which we were brought up. But this art I have not, nor ever shall have.»

Now all this is more or less true, and as I have said whatever was ill of myself, I like to let another, if a too partial judge, say of me, for the flattery of our blood, what may one day pleasure my children to read.

On the night of the 12th of October our second parallel was opened by Baron Steuben's division, in which was Jack's command. It brought us within three hundred yards of the enemy's works. Here our people, while at the labour of digging, were greatly annoyed by the flanking fire of two redoubts, one on each side, and lying nearly as far out to right and left as were now our advanced trenches.

On the 13th Colonel Tilghman came to ask me to write the needed orders for an assault on these two redoubts. He told me that Marquis Lafayette had asked that his own aide-de-camp, Captain Gimat, should lead the storming-party of Americans from the troops for duty on the 14th, but Lieutenant-Colonel Hamilton had insisted on his own right to this honourable risk, he being, on the day set for the assault, in command in the trenches.

This officer, my lifelong friend, had, in February of '81, resigned from the staff, of which resignation too much has been said. It in no way affected the regard for him which our chief entertained, and the occasion of his

Digitized by Google

leaving the staff was not one, I thought, to justify my friend in so doing, as indeed I made bold to tell him.

He had now written a spirited letter to our chief, claiming the right of command, as he had that day the tour of duty in the trenches. His Excellency, with his strong sense of justice, had decided in Mr. Hamilton's favour, and it was thus settled that he should head our assaulting column, and the marquis have command of the whole detachment, which was to be made up of picked men from the divisions for duty in our works.

I wrote the required orders, and set them forth in the orderly-book. The same day toward nightfall Jack appeared at my tent. He said his company was selected to be of the assault, adding, with a fine colour and very cheerful, that here in a packet were letters he had writ to his father and to my Aunt Gainor, and here, too, another—this with a little hesitation—for Miss Darthea.

I laughed, and said I was a bad person to be his executor, as I meant in some way to contrive to be of the party; how, I did not yet know. He begged me not to risk myself on a business out of my line of duty, but I was firmly set as to the matter, and he went away more serious than I thought worth while. In fact, I was tired of the every-day sameness of staff-duty and incessant letter-writing.

Later in the evening I was sent for to the tent of his Excellency. I found him with the Comtes de Deuxponts and de Rochambeau. I was wanted to act as interpreter. Although his Excellency could comprehend what was said, he possessed no such knowledge of French as to be able to speak it.

The business was soon despatched, and as I lingered the general asked what other matter needed attention. Upon this I replied that I greatly desired to be of the storming-party.

He returned, «I presume of course, sir, that you are not for duty on the 14th?»

I said, «No.»

«Then your business is with the staff. I am unwilling to permit gentlemen to step aside out of their work.» He spoke in his usual deliberate manner, and with a certain sternness such as he well knew how to assume.

I saluted, but stood still a moment, and then said, «I trust, Excellency, that I have fulfilled my duties to your satisfaction.»

«Entirely. I should have made it plain to you had it been otherwise.»

«And I have never asked a favour of your Excellency. I have been twice wounded, have had no home leave for four years, and have spent five months in a British jail.»

I saw a faint smile come over his grave face. «You boys are all alike. Here is Colonel Hamilton in a rage because the marquis would have given his place to Captain Gimat, and now it is an obstinate Welshman must go and get into mischief. I wish the whole army had your spirit, sir.»

I ventured to observe that Colonel Armand had been permitted to serve as a volunteer, and that I had hoped that I too should be allowed a like favour.

His Excellency smiled, and returned, «As a volunteer, Mr. Wynne—well, as a volunteer. Ask Colonel Hamilton. I trust that is satisfactory. Are the orders and detail all made out?»

I said yes, and, thanking him, went away.

Colonel Hamilton, whom I saw early on the 14th, was as much surprised at the result of my request as was I, and was pleased to say he should be glad of my company, and would I be on hand in the trenches before dark?

The French of the old regiment D'Auvergne, which that night won the right to be called D'Auvergne *sans tache*, were to carry the redoubt to the right of the enemy's line. The Baron de Viomenisle was to lead them. Gimat was to have a chance with us.

«There are Connecticut men, and Massachusetts and Rhode Island men, with a reserve from Pennsylvania. The North has the whole business,» said Hamilton, «and your friend Warder has the luck to be with us.»

The redoubt Number Ten on the enemy's left, and nearest the river, fell to us, and Hamilton by no means meant that we should be later in the work than our allies.

I am forced to be thus particular because, although in God's providence I knew it not, I was about to pass through another crisis of my adventurous life. Before dusk I was in the trenches, and lying down amid a crowd of silent men. Hamilton walked to and fro among them, seeing that all were ready, and at last tied a piece of surgeons' bandage around my left arm, a precaution also taken as to the men, that they might be distinguished in the darkness from the enemy.

Pioneers with fascines and ladders were a little later put out in front of the trenches, and with them the sappers and axemen under Captain Kirkpatrick. Within the crowded trenches and behind them the detachment of four hundred men lay ready.

It was cold, and a drizzling rain would

Digitized by Google

have made it needful, under ordinary circumstances, to keep the pans of the muskets dry; but all loads were drawn, and the marquis meant to trust to the bayonet alone. Jack was afoot, and in his gay fashion was saying something merry to his men. I heard the marquis cry, «Silence!» in queer English, and down the line I could hear officers repeating his order.

For a little while all was still.

«Good-by,» said my Jack. His hand was damp, and shook.

«You dear old idiot!» said I.

It was now close to eight, and of a sudden our cannon ceased. I dimly saw, a few yards away in the deep trench, the marquis looking back toward our camp. The enemy, glad, I dare say, of a chance to cool their guns, also stopped firing. I wished to heaven this horror of waiting were over.

Then a rocket rose high in air over our camp. «Ready, men!» said Hamilton, while I drew my long Hessian blade.

Six bombs in quick succession rose and went over us. I heard the marquis cry out, «*En avant!* Forward!»

«Forward, sappers!» cried a voice in front.

«Come along, boys!» cried Jack. And not giving the sappers more than time to scramble up, we were off in a swift rush through the darkness. The quickly formed line broke irregularly, as we ran over the space between us and the abatis, the sappers vainly trying to keep ahead.

As we rushed forward, my legs serving me well, I saw that they in the redoubt knew what was coming. A dozen rockets went up, Bengal fires of a sudden lighted their works, a cannon-shot went close to my head, and all pandemonium seemed to break loose.

At the stockade, an hundred feet from their works, our men pushed aside the sappers, and tore down the rude barrier, or tumbled over it. They were used to fences. Here Gimat was hurt, and Kirkpatrick of the pioneers, and a moment later Colonel Barber.

The hundred feet beyond were passed at a run, and the men with fascines cast them into the ditch. It was already half full of the wreck the cannon had made in the earthwork. We jumped in, and out; it was all mud and water. Ladders were set against the parapet, but the slope was now not abrupt, having been crumbled away by our guns, so that most of us scrambled up without delay. I saw Captain Hunt fall, the enemy firing wildly. If Sergeant Brown of the Fourth Connecticut, or Mansfield of the Forlorn Hope, were first on the parapet, I do not know. Hamilton got by me, and I saw him set a foot on the shoulder of a man, and jump on to the top of the redoubt. Why more or all were not killed seems to me a wonder. I think if the enemy had been cooler we had been easily disposed of. I saw the girl-boy leap down among the bayonets, and we were at once in a hurly-burly of redcoats, our men with and after us.

For a little there was fierce resistance and a furious struggle, of which I recall only a remembrance of smoke, red flashes, yells, and a confusion of men striking and thrusting. A big Hessian caught me a smart thrust in the left leg—no great hurt. Another with his butt pretty nearly broke my left arm, as I put it up to save my head. I ran him through, and felt that they were giving way.

To left and right was still a mad struggle, and what with the Bengal fires still blazing, and a heap of brush in flames at one side of the redoubt, there was light enough to see. Near about me was a clear space, and a pause such as occurs now and then in such a scrimmage. There were still men who held back, and to whom, as I pushed on, I called, «Come on! We have them!» A great wind from the sea blew the smoke away, so that it was easy to see. As I called out to the men who hesitated on the outer slope, as some will, I heard before me a voice cry, «This way, men!» and, turning, caught sight of the face of Arthur Wynne. He too saw and knew me. He uttered an oath, I remember, crying out, «At last!» as I dashed at him.

I heard ahead of me cries for «Quarter! quarter!» The mass of striving men had fallen back, and in fact the business was at an end. I saw Jack run from my left toward me, but he stood still when he saw what was happening, and instantly, as he came, Arthur and I crossed swords. What else chanced or who else came near I knew not. I saw for the time only that one face I so hated, for the heap of brush in the work was still blazing.

As is true of every Wynne I ever knew, when in danger I became cool at once. I lost no time, but pressed him hard, with a glad sense that he was no longer my master at the game. I meant to kill him, and as he fell back I knew that at last his hour had come. I think he too knew it. He fenced with caution, and was as cool as I. Just as I touched him in the right shoulder I felt a wounded Hessian clutch my leg. I fell squarely backward, my cousin lunging sav-

Digitized by Google

agely as I dropped. I had been done for had not Jack struck up his blade as I lay, calling out:

«Coward!»

I was up in a moment, pretty savage, and caught sight of my Jack fencing with my man, as calm as if we were in old Pike's gallery. As I stood panting—it was but a moment—I saw Jack's blade whip viciously round Arthur's and pass through his breast, nearly to the guard.

My cousin cried I know not what, fell to one side, and then in a heap across a dead grenadier

«Better I than thou,» cried Jack, blowing hard. «He will play no more tricks. Come on!»

With a glance at my enemy I hurried past him over dead and wounded men, a cannon upset, muskets cast away, and what not.

«This way, Wynne,» said the marquis. «*C'est fini!* Get those fellows together, gentlemen.»

Our men were huddling the prisoners in a corner and collecting their arms. A red-faced New Hampshire captain was angrily threatening Major Campbell, the commander of the redoubt, who had just surrendered. Colonel Hamilton struck up the captain's blade, or I do believe he would have killed the major. He was furious over the death of Colonel Scammel, who was greatly beloved, and had been killed by Hessians after having given up his sword.

It was over, and I went back to see what had become of Arthur. He was alive, and having dragged himself to the inner wall of the redoubt, was now seated against it. Jack soon found a lantern, and by its light we looked at Arthur. He was covered with blood, but was conscious, and stared at me with dull eyes, without power to say a word.

«Take care of him, Jack,» said I, and went away down the crumbled slope and through the broken abatis, while overhead the bombs howled with unearthly noises and the cannonry broke out anew.

I was still angry that I had not killed the man, and went off to my tent in no very happy state of mind, so tired in body that I could not sleep for hours.

Says Jack, «October 15.—I can never cease to be thankful that, when we had them driven like scared sheep into the far side of the redoubt, I ran back to see what had become of Hugh. It was but a minute I had missed him, and when I saw him slip I had only just time to catch that devil Arthur Wynne's blade. He was used in old days to play with me like a child, but either I am become more skilful or he was out of practice, for I knew pretty soon that he was delivered over to me, and had small chance to get away unhurt. If my friend had killed him,—and that was what he meant, I fear,—would Darthea ever have married Hugh? I know not, but it has been ordered otherwise. There was indeed a way opened, as Friends say. A nice Quaker I am become!»

I was not of his opinion that night. Just before reveille I fell into a broken slumber. I awakened in a sweat, having dreamed that I had put a sword through my cousin, and was troubled that Jack was to tell Darthea. Thus it came to my mind—dulled before this with anger and unsatisfied hate—that I had made a fortunate escape. The morning brought wisdom. I was beginning to think that all was not well between Darthea and Arthur Wynne, and that to kill him would do anything but add to my chances with a woman so sensitive, nor would it much improve matters that his death had come out of the unhappy chances of war.

When in happier mood I began to dress at dawn, I found my left arm very stiff and sore. I must have been much distracted over night not to have felt it, and not to have seen that I was seriously bruised; my breeches were starched stiff with blood from a bayonet-prick. Jack's quarters were on the extreme right, and as soon as the lines broke after morning drill I rode over to find him.

He told me that Dr. Rush was come to camp the day before with other surgeons, and that Arthur was in a tent and cared for by our good doctor, who informed Jack that his sword had traversed the right lung, but had not gone through, as it seemed to me it must have done. The doctor thought he might possibly get over it. Out of his affection for my aunt he would see that Arthur had such care as she would desire for one of her kin, but was it not a most unfortunate accident?

«I assured him,» said Jack, «that it was most lamentable, but might have been worse—as I intended it should be,» added Jack, with a grin. He then asked me had I heard of that good Free Quaker, Colonel Forest, who had taken Major Campbell, saying, «I advise thee to surrender, or thou wilt repent it, d—— thee!» to the delight of Hamilton, who must tell his Excellency that night, having supped with him on his return.

I made haste to write to my aunt, and was able to send our letters North with the general's despatches to Congress. I said nothing

Digitized by Google

of my own encounter with Arthur, but made mention of Jack's affair as one of the chances of war.

Dr. Rush dressed my arm, and I went back to duty with the member in a sling, and aching like mad. His Excellency, seeing my condition, asked me if my right arm was in good order, but made no reference to the left. After I took his commands for the morning he said, seeing me limp, «Were you much hurt?»

I said, «No; I ran against something sharp in the bastion.»

He smiled, and that was the end of the matter. Fair women and brave men were to his Excellency's liking.

This was my last of active warfare. The marquis tried his hand at a sally, and made ready too late to get away over the York River; but the sally came to nothing, and the belated effort to run to still less.

I neglected to say that the French, having come to the abatis, waited in line while the pioneers used their axes to clear it away. Meanwhile, thanks to too good discipline, they suffered severely. As we rushed the whole thing, we lost far less. «It was very fine and *en règle*,» said Hamilton, «but I like our way better.» And so, I think, do I.

The good doctor liked to come to my staff tent in those days, to talk to me or to others. He seemed to think it necessary to inform me as to my cousin, and I dare say thought me cool about him.

«And if, doctor, I had stuck him through the left side?» said Jack, lying at ease on a bearskin in my tent.

«In that case,» said our doctor, in a quite professional way, «the heart or the great arteries had like enough been pierced.»

«And what then?» asked Jack of the doctor, who was sitting on the camp-bed.

«Probably death would have occurred.»

On this Jack looked up with those innocent eyes, and, pushing back the blond locks, said: «It is a great thing to know anatomy. If only I had made a little study of that science, Dr. Rush, I might have had better success at this pig-sticking business we call war.» The sly humour of the fellow set Hamilton to laughing, but the doctor did not smile.

«It might have been better for Hugh's cousin,» he said.

«Yes,» said Jack, sweetly; «perhaps.»

As they talked I was automatically putting into fine French a letter of his Excellency to Count d'Estaing, and I took in readily what was passing. When Jack said, «Perhaps,» I cried out, «It would be a fine thing, doctor, to have all this saving knowledge on both sides, so as to know where not to hurt one another.»

Hamilton was on the side of Dr. Rush. «It were more to the purpose,» he said, «to sit down and not to go to war at all.» This was set forth demurely, the colonel seeing how serious a dose our fun was for the great physician, who did somewhat lack the capacity to discover the entertainment to be found in this manner of jesting.

He returned gravely that this was his opinion, and that had he his way, war and drinking of spirits should alike cease.

To this we agreed in part as one man, for of war we were tired enough. As to the other matter, we did not mention it. To think of such a revolution was too astonishing in those days, nor have we come to it yet.

After that the doctor discussed Arthur's case with much learning and evident satisfaction. I might like in a day or two to see Captain Wynne. I was of opinion that it would do him harm, and when the great doctor said, «Perhaps, perhaps,» Jack began discreetly to talk war, and asked where was General Gates.

But by this time our doctor had become cautious. His favourite commander was dismissed with a word or two, and so our chat ended, Mr. Hamilton and the physician going away together, each pleased with the other, and, despite some differences in politics, to remain lifelong friends.

On the 17th of October, the Marquis Cornwallis having had a stomach full of fighting, and having failed of his schemes to get away across the York River, beat a parley, and after some discussion signed the articles of capitulation. The soldiers were to remain prisoners in Virginia and Maryland, the officers were to return to Europe upon parole. The beaten army at two on the 19th came down the road between the French and our lines, with the colours in their cases, and the bands playing a British march; for it is of the etiquette of such occasions that the captured army play none but their own tunes. Some wag must have chose the air, for they marched by to the good old English music of «The World Turned Upside Down»; such must have seemed sadly the case to these poor devils.

As I was of the staff, I was privileged to see well this wonderful and glorious conclusion of a mighty strife. Our chief sat straight in the saddle, with a face no man could read, for in it was neither elation nor

Digitized by Google

show of satisfaction as the sullen ranks came near.

At the head of the line rode General O'Hara. He paused beside our chief, and begged his Excellency to receive the excuses of my Lord Cornwallis, who was not well enough to be present, which no one believed nor thought a manly thing to do.

His Excellency bowed, trusted it was not very serious, but would not receive General O'Hara's sword. With quiet dignity he motioned him to deliver it to Major-General Lincoln, who now had these grateful amends for the misfortune of having had to surrender his own good blade at Charleston.

After this the long array of chagrined and beaten men went by, and, returning to York, were put under guard.

A day or two later a letter of my aunt's informed me of the disorder my father's condition had brought about on his tobacco-plantation in Maryland. This caused me to ask for leave, and, with the understanding that I might be recalled at any time, I received permission to be absent two months.

I set out on November 5 for Annapolis, with two horses and my servant. Arthur Wynne, being found unfit to go to Europe with the rest, was taken a week later by our doctor on a transport to the Head of Elk, and thence by coach to Philadelphia. There, as I heard, the doctor took him to his own house, much amazed that Mistress Gainor would not receive him. Arthur won the good doctor, as he did most people, and, despite all expectations, was said to be mending fast, being much petted by the Tory ladies; but if Darthea had seen him or not I did not then learn.

My affairs in Maryland, where we had many slaves and large interests, kept me busy until near the close of December, when I set out to rejoin the staff in Philadelphia, my leave being up.

During this winter of '81 and '82 my duties were light, and except to write a few despatches daily, and to attend his Excellency on occasions of festivity, I had little to do save to look after my father's affairs.

It is now fit that I return to the narration of such things as immediately concern my personal interests. Arthur Wynne was able to ride out by the end of January, as I heard, for I did not chance to see him. My father remained much as he had been for a year.

Darthea, to our great surprise, on Captain Wynne's return became desirous to yield to
nt and to go to New York. My aunt
e would get them a pass through our
the Jerseys; but this proving difficult,
they stayed in and about the city, spending much time at their old home in Bristol. Darthea was so clearly unwilling to see me that I was fain to give it up, and accept what I could not better. When I said I was sorry she wished to go away, my Aunt Gainor replied that I was a fool, and would never be anything else. I asked why, but she was away from my question at once, and went on to tell me what officers were to dine with her that day, and did his Excellency like Madeira? and why was her doctor so fond of quoting Mr. Adams's letters from Holland, where he now was on a mission, with his nasty sneers at Virginians and Mr. Washington? She gave me no time to reply. Indeed, this and much else I saw or heard in those days was quite beyond me.

My aunt's way of dismissing a question she liked not was to pour out matters which were quite irrelevant, when to stop her was altogether past hope. I had learned to wait. She, at my desire, made Jack her aid in her affairs, as I was fully occupied with my father's neglected business. Now, too, she was busy finding Jack a wife, and would tell me all about it, striding to and fro, and with vast shrewdness and humour discussing the young women we knew.

«Cat» Ferguson was very humble, and the Chews in great favour with his Excellency. I was fain to dismiss my wonder as to Darthea, and, unable to recur to the question I had asked, I went away to headquarters in the great Chew house in Third street.

The town was gone wild with feasting and dinners, and as the general liked his staff to attend him, I had more of these engagements than I cared about.

Arthur, still weak and on parole, lingered; but why he did not get permission to go to New York, as had been easy, I could not well understand.

In February, '82, I came home to my father's one morning at an earlier hour than usual, and to my surprise heard my cousin's voice.

«I fear, sir, I am not understood. I came for the deed you promised me.»

My poor father, a huge, wasted framework of a big man, was looking at him with lacklustre eyes. He said, «My wife will be with us presently. Wilt thou stay for dinner?»

I went in at once, saying, «I am more than amazed, sir, to see you here. As to the deed you would have stolen—»

«What!» he cried.

«I said ‹stolen,› sir. As to the deed you would have stolen from a man too feeble in

Digitized by Google

mind to guard his own property, I have only this to say,—» amid constant duties it had gone from my mind,—: «I shall put no obstacle in the way of your seeing it.»

«I have no other purpose,» he said quietly —«none. To you I could not go, and, sir, if you choose to consider my effort in any other light than an honest one, I have no more to say. We have enough causes of difference without that.»

«Quite enough,» said I. I was beginning to lose grip of my patience. «Quite enough. That they were not settled long ago an accident alone prevented.»

«I am not, sir, in a way fitly to answer you. Neither is this a place nor a presence for this discussion.»

«At least we can agree as to that,» said I; «but I did not seek it. At my own leisure I shall have to ask you certain questions which, as a gentleman and a man of honour, you will find it hard to answer.»

«I fail to comprehend,» he returned, with his grand air, looking all the better for his paleness.

I said it was not now needful that he should, and that in future he would understand that he was no longer a welcome guest.

«As you please,» he said.

I thought he showed little anxiety to hear at length what was in my mind.

Meanwhile, as we spoke, my father looked vacantly from me to him and from him to me, and at last, his old hospitable instincts coming uppermost, he said, «Thou hast not asked thy cousin to take spirits, Hugh.»

Arthur, smiling sadly, as I thought, said: «Thank you, none for me. Good-day, Cousin Wynne,» and merely bowing to me, he went out, I ceremoniously opening the door.

I had said no more than I intended to say; I was resolutely bent upon telling this man what he seemed to me to be and what I knew of his baseness. To do this it was needful, above all, to find Delaney. After that, whether Darthea married my cousin or not, I meant that she should at last know what I knew. It was fair to her that some one should open her eyes to this man's character. When away from her, hope, the friend of the absent, was ever with me; but once face to face with Darthea, to think of her as by any possibility mine became impossible. Yet from first to last I was firm in my purpose, for this was the way I was made, and so I am to this day. But whether I had loved her or not, I should have done my best out of mere friendship to set her free from the bonds in which she was held.

I had heard of Delaney as being in the South, but whether he had come out alive from the tussles between Morgan, Marion, and Tarleton, I knew not. On asking Colonel Harrison, the general's secretary, he told me he thought he could discover his whereabouts. Next day he called to tell me that there was an officer of the name of Delaney at the London Inn, now called «The Flag,» on Front street, and that he had been asking for me. I had missed him by five minutes. He had called with despatches from Major-General Greene.

To my joy this proved to be the man I wanted, nor was it surprising that he should thus luckily appear, since the war was over in the South, and a stream of officers was passing through Philadelphia daily to join the Northern army.

For a moment he did not know me, but was delighted when I named myself.

I said I had no time to lose, and asked him to meet me at my aunt's in the afternoon. I much feared that Arthur would get away before I was ready to talk to him.

Delaney had received my last letter and had answered it, but whither his reply went I cannot say. At all events, he had lingered here to find me. When we met at my Aunt Gainor's that afternoon, it took but a few minutes to make clear to her the sad tale of Arthur's visit to the jail.

My friend had no sooner done than the old lady rose, and began as usual to walk about, saying: «You will excuse me; I must think of this. Talk to Hugh.» What there was to think of I could not see.

Delaney looked on amused, and he and I chatted. She was evidently much disturbed, and while the captain and I talked, I saw her move a chair, and pick up and set down some china beast. At last she said: «Come in at nine to-night, Mr. Delaney. I want to think this over. I have still much I desire to ask you. It deeply concerns my nephew in a way I cannot now explain to you. May I have the privilege of another half-hour?»

Delaney bowed.

«Of course I do not want you, Hugh,» she added.

When you have known a woman as long as I had known my aunt, there are sometimes hints or warnings in her most casual expressions. When my aunt said I was not wanted that evening I knew at once that she was meditating something out of the common, but just what, I did not think to ask myself. My Aunt Gainor was all her life fond of what she called inventing chances, a fine phrase,

Digitized by Google

of which she was proud. In fact, this sturdy old spinster liked to interfere authoritatively in the affairs of men and women, and believed that for this she had a special talent, which in fact she discovered no inclination to bury; but what now she had in hand to do I knew not.

She was deeply grieved for a season to find that her plans went awry, or that men were disappointed, or that women would not go her way. «When she hurts you,» said Mrs. Ferguson, «she is like a child, and has a dozen silly devices for doctoring your wounds. We have fought many times, and made up as often. There is no real malice in her,» which was true.

Jack Warder once remarked in his lively way that Mistress Wynne had a richly coloured character. I fear it may have looked at times very black to some and very rose-tinted to others, but assuredly never gray in its tones, nor other than positive.

With me she took all manner of liberties, and with Darthea too, and if ever she were in doubt if it were well to meddle in our affairs I know not. A vast richness of human love and an urgent desire of rule lay underneath the life she showed the outer world of quadrille and dinners and gossip.

When she hurt us, or, as Darthea said, broke her china in trying to wash it, she fell back on our love with a quite childlike astonishment that what was come out of affection should give rise to resentment.

With a slight puzzle in my mind I went away with Delaney to dine at the London Coffee-house, which now showed our own new flag, where so often I had passed in under the cross of St. George.

«We have a new St. George now,» said Mr. John Adams, in one of those ill-natured letters to Dr. Rush which filled my aunt with rage. «*Sancte Washington, ora pro nobis.*» The Massachusetts statesman admired *our* grave and knightly St. George, but there are those who cannot fly a kite without the bob-tail of a sneer—which is good wit, I think, but not my own; it was Jack said that.

When Delaney left me to call again upon my aunt, I little dreamed of what part she meant him to play. He left the town early next day, and had it not been for Jack I should not for a long while have known fully what an hour brought forth.

«On the afternoon of February 28 of this 1782,» says Jack's diary, «I got a note from Mistress Wynne asking me to see her on business at nine. I found with her, to my pleasure, the good fellow Delaney, and was able to thank him for the service he had done us all in his noble care of Hugh. We talked over our battles, and presently comes in Darthea, whom now we see but rarely, for reasons best known to herself.

«I do believe Hugh has given up his love-affair as a thing quite hopeless, and no wonder. I think she still sees that rascal of an English captain, and perhaps he will not have her keep up a closer friendship with such as no longer desire his own acquaintance.

«Mr. Delaney was, like all men, charmed with Miss Peniston, and the talk went on busily enough, the young woman in good spirits and the captain most amusing.

«By and by he spoke quite naturally of the horrors of their life in the provost's prison, and upon this Darthea, becoming of a sudden seriously attentive, listened with fixed gaze. Our hostess, seeing her chance, said: ‹I meant to ask you more of that to-day, but my nephew hates even to hear of it. How long were you there?›

«‹I was taken at Germantown like Mr. Wynne, and was kept until June. After Wynne nearly killed that rascal Cunningham things were worse than ever.›

«‹And was Hugh so very ill?›

«‹He could not have been worse to live at all.›

«‹And was there no inspection amidst all those horrors? Do you suppose Sir William knew nothing of them? I can hardly credit that.›

«Darthea looked round at Mistress Wynne. She had been unusually silent. Now turning to Delaney, she said, with slow articulation: ‹I also am curious, Mr. Delaney. We heard many rumours and some unpleasant facts. Could Sir William Howe have known? I cannot think it.›

«‹But he must, after the inspections, and there were three to my knowledge.›

«‹Indeed?› said Mistress Wynne. ‹'T is most strange!›

«Delaney hesitated, not liking, I suppose, to mention Arthur, her cousin, of whose close relation to Darthea, however, he was not aware.

«‹And one,› Mistress Wynne went on, ‹was, I hear, made by our kinsman.›

«‹Yes,› said Delaney, ‹and that did certainly amaze me. Captain Wynne—›

«‹Captain Wynne!› exclaimed Darthea, and, turning her head, she looked sharply at Mistress Wynne and then at me. I think that Delaney, being unfamiliar with her habits of speech, did not notice how strange was the tone in which she added, ‹We all know Mr. Arthur Wynne.›

«‹Indeed!› said Delaney; ‹but of course I might have known that.›

«‹Yes, yes! I interrupted you. Pray, go on; it is most interesting.›

«‹Very,› said Mistress Wynne. And now I saw what a wicked trap our spinster-fox had laid for poor Darthea. Delaney, a bit puzzled, glanced at me. I made no sign. It must not stop here.

«‹It is a queer story, Miss Peniston, and not much to the credit of his Majesty's officers.›

«‹What next?› said Darthea.

«‹Oh, the tale is brief and brutal. I was seated on the straw one day, with Hugh's head in my lap, putting water on his forehead and trying to quiet him, when the turnkey came in with an English officer. This gentleman looked about him at the few left alive, asked carelessly who broke the window-panes, and then suddenly seemed to notice Hugh. He asked who was this poor devil. The turnkey said, «Name of Wynne, sir.» Then the captain stood still a moment, staring at us, and, as if curious, bent down, asking me what Hugh was saying. Now my poor friend was muttering over and over, «Dorothea! Dorothea!»—some woman's name, I suppose, but what woman he never told me.›

«At this I saw Darthea flush, but perhaps remembering that Mr. Delaney might know her only as Miss Peniston, which was the fact, she controlled herself and said quickly: ‹He asked his name? Are you sure he asked his name? Could there have been no mistake?›

«Delaney looked the surprise he no doubt felt, and replied, ‹Yes; of that I am sure.›

«‹Do you think,› said Darthea, ‹he knew how ill Mr. Hugh Wynne was?›

«‹Certainly; I heard the turnkey tell him that a day or two would see Hugh in the potter's field with the rest. The doctor had said as much. This was true; he had told me it was useless for him to return, and indeed I thought so too. They buried a half-dozen a day. When told that this man Wynne had jail-fever, the captain seemed in haste to leave. At the door he turned and took another look at Hugh, and then went out. I asked his name next day, but the turnkey laughed, and said it was none of my business. I had a fancy that the inspector desired to remain unknown. I was sure of this when, a few days after, I described the officer to Hugh, who was then quite himself. When Hugh said at last, «Had he a scar over the left eye?» and I said he had, Hugh cried out in a rage that it was his cousin, and would talk of nothing else for days. I fear there can be no doubt that the inspecting officer was Captain Arthur Wynne.›

«‹Horrible!› exclaimed Mistress Wynne. ‹Incredible!›

«‹Yes; it seems to me a quite inconceivable thing, but I am certain, though the man looked a gentleman all over.›

«‹He looked a gentleman all over,› said Darthea, with strange deliberateness of speech.

«This while Mistress Wynne sat drawn up, her face set, and one hand moving on the arm of the chair, just the same queer trick her brother had. As for me, I watched Darthea. It was a merciless plot, and may have been needed; but in truth the way of it was cruel, and my heart bled for her I loved.

«As she spoke her tones were so strange that Mr. Delaney, who was clearly but an innocent though sharp tool, said: ‹I beg pardon, Miss Peniston. These sad stories are too dreadful to repeat. Miss Wynne would have it—›

«But Darthea was now quite lost to the common ways of life. She went on like a person questioning herself, as it sounded to me. ‹Arthur Wynne asked his name. Is that so?›

«Delaney said, ‹Yes,› now, as I saw, quite troubled, and wishing himself out of it, I dare say.

«‹And he knew he was in rags, starved, dying, and he left him?› continued Darthea. ‹He left him—to die.›

«‹Yes; but—›

«‹No matter. I must hear all—all!› she cried sharply—‹all! I am the person most concerned.›

«‹Darthea!› then exclaimed Miss Wynne, alarmed, I suppose, at her wild manner and breaking voice.

«But Darthea went on. ‹This is my business, madam. You are sure, sir? This is no time to trifle. I—I am—I must know! I must know! Would you say this to Captain Wynne were he here? Answer me, sir!›

«‹Certainly I would, Miss Peniston.›

«‹Mistress Wynne,› said Darthea, rising, ‹I have been brought here to let a stranger see my—my weakness. It is plain. Did you think I could hide it, madam? Pardon me, sir. You have done me a cruel service. I—I thank you. I bid you good-evening, Mistress Wynne. Was there no other way, no kinder way, to tell me? Will you take me home, Jack? I—I am tired.›

«We had all risen with her at the beginning of this last speech, I troubled, Miss Wynne very red, and only fit to say over and over, ‹Darthea! Darthea!› Mr. Delaney annoyed, and lacking knowledge of the situa-

Digitized by Google

tion; all of us awkward and confused save Darthea, who passed out into the hall, followed by Miss Wynne, and saying as she went forth, ‹I will never forgive you, madam, never! never! You are a wicked old woman! I shall never speak to you again. I did not think it.›

«I walked in silence beside her to Mrs. Peniston's home. ‹Thank you, Jack,› said she, in a sweet, low voice. ‹You did not know, did you, of this sad story?›

«‹Yes, dear lady, but of this disgusting plot, no.›

«‹But why did you, who are my friend, and Mr. Hugh Wynne, and all of you, leave me in the dark as to this—this man?›

«I said quickly that it was not well to have told her until Mr. Delaney could be found. He had but just now come. She had seemed to trust Captain Wynne's story; Hugh's was but the hearsay of a man just out of a deadly fever. We had waited.

«As I spoke, she stood with her calash bonnet fallen back, clear to see by the full moonlight, and looking with intent face across Arch street, as it might be with envy of the untroubled dead of generations who lay around the meeting-house. As I ended, she said:

«‹I have been a fool, Jack, but I loved him; indeed I did. Is there more? I know Hugh hates him. Is there more?›

«‹Too much, too much, Darthea,› I said.

«‹Then come in. I must hear all—all.› And she knocked impatiently.

«Presently we were in the parlour. ‹Fetch a light,› she said to the black who opened for us. When we were alone and seated, she said quietly: ‹Jack, you are my only friend. I do trust *you*—oh, entirely. Now what is it? I must know all. Why has Hugh Wynne been silent? It is not like him.›

«‹I have already told you why. Partly because, Darthea, you were away, or would not see us. That you know. Partly because Hugh had only his own word to give; but this I have told you.›

«‹Yes, yes,› she cried; ‹but what else?›

«‹I think,› said I, ‹knowing him well, that Hugh meant, when once he had Delaney's evidence, to tell his cousin face to face, and so force him to release you.›

«‹That is my business, not his,› she broke in. ‹What has Hugh Wynne to do with it? Am I a child?›

«‹It had been the kinder and the manlier way,› said I. ‹Now there is no need; but Hugh will be furious with his aunt.›

«‹I am glad of that. What else is there? You are hiding something.›

«‹There was that scene in the garden, Darthea.›

«She coloured at this. ‹Yes, I know; but there were reasonable excuses for that, and no one had time to think.›

«‹Two people had, Darthea.›

«‹We will let that pass, Jack. Don't play with me.›

«Then, driven to the wall, so to speak, I told her of the sad revelation André had made to Hugh, and how, being Hugh's enemy, Arthur had been base enough to involve him in an affair which might have been his ruin.

«‹Yes, yes,› she said, ‹I see; but who could know, or who think to use such knowledge?›

«I was taken aback at her seeming to have any doubt. I coldly set myself to tell her of Arthur's double-dealing about the estate, and of how he had made Hugh's father believe he was minded to consider the ways of Friends, and at last of how he had borrowed money and had set poor Hugh's half-demented father against him. I did not spare her or him, and the half of what I said I have not set down. The Arnold business I did return to, seeing that it struck her, or seemed to, less than it did me; for to my mind it was the worst.

«‹Darthea,› I said, ‹how could a man of honour or even of good feeling put any gentleman in such peril of worse than death? There were Tories enough to have done his shameful errand. But oh, dear Darthea, to suggest to send on such business an open, frank enemy,—his cousin too,—that was too bad for the lowest and vilest!›

«‹Hush!› she said, ‹I know enough. You have been both brave and good. You are the best man I know, Jack Warder, and the kindest. I wish I loved you. I am not worthy of you. Now go away.›

«I obeyed her, and this was so far the end of a miserable affair. What Hugh will say to Miss Wynne, God knows. As for me, I have given a rascal his dues; but I cannot do this and not tell him to his face what I have said behind his back.

«This was at night, but I had no better counsel in the morning.

«I went to find Mr. Delaney, but he was gone, having, as I heard later, put on paper what he had seen and heard in the Provostry.»

(To be concluded in the next number.)

THE DAYS OF JEANNE D'ARC.

BY MARY HARTWELL CATHERWOOD,
Author of «The Romance of Dollard,» «The White Islander,» etc.

WITH PICTURES BY BOUTET DE MONVEL.

XII.

«POTON DE XANTRAILLES is love-lorn,» said La Hire, with a wink at his friend's back; for the tall knight mounted and rode off to St. Denis without waiting for him. La Hire's own courser was held ready by a page, but he lingered, spreading himself and his cloak upon a chair, and holding a cup in his fist on the table where he had been drinking. He sat before the door of his quarters in the crowded lane of La Chapelle, which was then a small faubourg outside the ramparts of Paris. There was a stretch of fields to the city walls on the southern horizon.

«Since Poton hath been appointed governor of Coucy his mind runs to serious things, —mass and confession,—so that he hath no longer any stomach for good company. Take warning by Poton, Messire d'Arc, and let thoughts of women alone. La Hire never looks at a woman,» said the old sinner, rolling his eyes behind his chair, where Pierre could see a red petticoat half concealed by his wide cloak.

«What have we in La Chapelle or St. Denis to make a man love-lorn, Messire la Hire?» the pucelle's brother asked, laughing. He knew well whose black eyes snapped near the knight's broad shoulder. Though women of her class were forbidden the camp, he had many times seen Haumette Davide, gorgeous from a summer among Burgundians, slip about behind his sister's back. And he had talked with her, half in contempt and half in pity, loving the familiar sound of the whistling Domremy «*oui*,» which is like «whist!»

Pierre sat his horse with drawn rein for the pastime of enjoying La Hire's embarrassment. But he added in seriousness:

«Messire de Xantrailles is only cast down like the rest of us because we are kept idle in camp.»

The knight struck the table until his wine-flask staggered.

«We ought to take Paris to-morrow. By my baton, La Hire is tired of this. The king and La Trémouille have sat in St. Denis a week, holding the pucelle in leash, bemoaning the expenses of an army they keep idle; while the Duke of Bedford in Paris laughs at them, having a hundred and twenty thousand livres tournois a month as his revenue drawn from France.»

In his excitement La Hire raised and shook his arm, twitching the cloak farther off Haumette. Her reminder caused his face to fall into sudden distortion, and he arranged his draperies in haste; but in serious conference with the soldier Pierre forgot to be amused by the bacchanal. He looked through a passage left between houses at meadows sweeping away to the Seine, which, after cleaving Paris, makes a bend northward. He could not see the distant river, but all the fields were spread with September glory of pale-pink and pale-blue crocuses, star-cloth, a prodigal carpet for mailed feet and trundling artillery and the chafing of coursers' hoofs. Pierre could smell, above the barn-yard odors of this stone village crowded with many horses, a piece of wild mignonette he had stuck in his corselet because it reminded him of Domremy. There the little brownish-yellow blossom twinkled all summer, overclothing the sward in every direction.

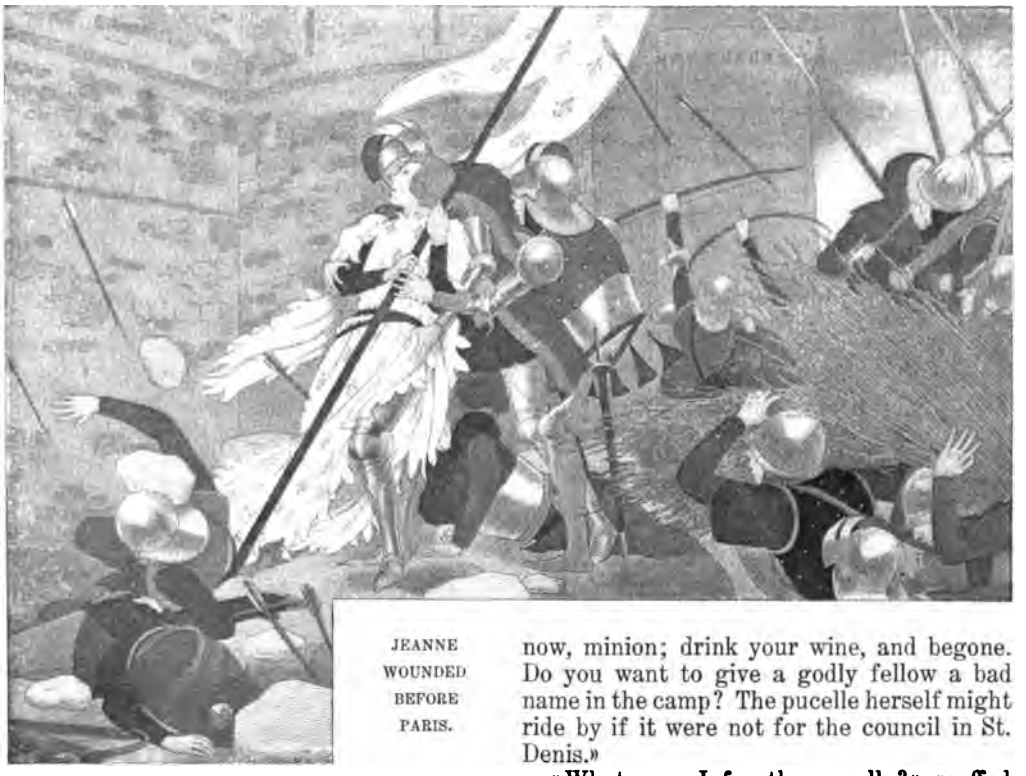
«Messire la Hire, is La Trémouille part English?»

«No; but he is wholly bad French. Hark ye, my lad, who was Georges la Trémouille before the king took him up? Nothing but a dependent of the Duc de Richemont, and for being placed at court by that noble he hath bred enmity betwixt his patron and the king. He had a sister married to a low Scot little better than a stable-boy. You remember,» cried La Hire, with pleasure in bringing the facts to Pierre's own experience, «the little maid that embroidered the pucelle's standard in Tours?»

Pierre did remember her, to the roots of his hair. He sat his horse, helplessly detected in a feeling which La Hire had not the eyes to see.

«That was the Scotchman's daughter, the child of La Trémouille's sister. She hath been left on his hands by the Scotch painter's death since we marched from Rheims.»

Digitized by Google



JEANNE WOUNDED BEFORE PARIS.

«Who brought news of the Scotch painter's death, messire?»

«A messenger from the queen to the king, that I myself saw in St. Denis yesterday. His name—»

«But where now is the demoiselle?»

«Oh, she is with her grandmother in Loches; and the favorite's elder sister, De Beuil's wife, hath already stirred herself to tie the young calf to the royal crib. The Scotch demoiselle is now our queen's new maid of honor. Bring in all nations,» blustered La Hire. «France is meat for every crow on earth. By my baton, if the good Lord came down to France in these days, he would turn robber like the rest!»

Pierre felt strong need to slap La Hire's red face, where unshaven hairs bristled with general aggressiveness; but taking up the glove for the La Trémouille family against his friend was such madness that he put himself beyond another word by spurring off suddenly for St. Denis. Charles had appointed a council to consider an attack on Paris,—the king was not slack in holding councils,—and Pierre's duty was to attend the pucelle.

«It is time La Hire himself took to horse,» declared the knight, in a flurry of haste, bouncing around on his chair. «Come out now, minion; drink your wine, and begone. Do you want to give a godly fellow a bad name in the camp? The pucelle herself might ride by if it were not for the council in St. Denis.»

«What care I for the pucelle?» scoffed Haumette, resuming her seat on the table, and filling the cup she had carried into hiding. «Did I not know her in Domremy? She is no better than I am. Must I hide whenever the D'Arc family make a procession? No, by my faith! The Davides are as good as they are.»

«Ho!» cried the knight, starting up and seizing her by the shoulders. «Down again, Haumette! Squat, toad! Yonder comes the pucelle.»

«Let her squat before me,» retorted Haumette, holding stubbornly to the table.

«But it is the pucelle.»

«I also,» said Haumette, defiantly—«I am a pucelle of Domremy. There be two of us, Messire Broadback.»

La Hire's face became dinted all over, as if every fat pore opened its mouth in consternation. «Oh, get thee behind me, Sathan! By all the batons in Christendom, see the minion flaunt!»

He snatched his cloak, and bolted into the house out of sight. Haumette sprang upon the table. Her wide-featured, snapping-eyed beauty took on unspeakable insolence. «Bring here the horse,» she commanded La Hire's page; and not being hindered by his master, he led it to the table, and Haumette bestrode it. The courser reared, but the page still held

Digitized by Google

its huge iron bit, restraining its power, while she with the bridle directed its course.

Jeanne came riding beside the king from the direction of Paris, where they had been inspecting the ramparts, with a small escort. Her face was marked by weariness and discouragement. She wore instead of her helmet a hat with turned-up brim cut in battlements, which encircled her forehead like a crown. Wind and sun had taken away some of her whiteness, and anguish was growing in the hazel eyes from royal inertia; but she was a divine sight, which men remembered, and afterward described according to their diverse spirits.

The triumphal march of that glorious summer which had given back to their king Soissons, Château-Thierry, Compiègne, and many another town, with wide stretches of northern country, which had terrified the Duke of Bedford from Paris to Normandy, and back again to Paris, and had drained new levies of men from England, was now to be wholly lost or wholly consummated by its ending at Paris. The regent had been cautious about risking decisive battle, but Charles had outdone his invaders, so that English and French armies only touched in a skirmish near Baron, by Senlis. «Paris,» said the Duke of Bedford, «is the key of France.» And Charles seemed loath to stretch out his hand and seize the key of his realm. He could not advantageously use what was in loyalty given to him, while the Regent of England, in order to carry on war, was strong-handed enough to lay a tax even on the small pay of his soldiers.

All the hopelessness of Jeanne's colossal task took physical shape in a woman of the camp shocking against her with an ill-guided and struggling courser. She looked up from her saddle-bow at an impudent face defying her even to cleanse the troops. Her eyebrows drew together, her nostrils quivered, her hand brought up the sword of Fierbois like a flash, and smote it flat across Haumette Davide's back. The blade parted in two. One piece fell under the feet of La Hire's horse, and Jeanne stared silently at what remained on the hilt in her hand.

«By my faith!» said Charles, reddening with displeasure, «you have broken the sword of Fierbois on a camp-follower. Are there no cudgels in La Chapelle?»

She heard whispers behind her and outcries in the houses. The maid had broken her miraculous sword; it was a bad omen! La Hire's page picked up the fragment, still holding the snorting courser on which Haumette Davide clung and cowered; and Jeanne tried to fit the parts together. The camp armorer came running, but he shook his head at the sight. Those old blades which could be bent around the body—the making of them was a lost art, and the mending of them was an art yet undiscovered.

Jeanne left the sword in his hands without a second look. Her eyes dwelt on the creature she had struck. It was not her instant recognition or piteous repentance which pierced Haumette Davide. Nor was it her blinding greatness that made the depraved one crouch before her. It was some nameless power, some revealing of light from another world.

When Jeanne d'Arc had passed on, Haumette slipped from the horse and crept to a secluded place where she could sit on one of the cylindrical stones bestowed at wall sides to keep wheels from chafing.

«I wish she had run me through with her sword,» said Haumette; «it would be too good for such as I am, but her sword would not be hurt.»

Next day Paris was assaulted. At night the maid was brought by a rabble of troops wounded into La Chapelle, having met her first defeat. It was like a rout, where no knight could collect his retinue, and horses clashed harness with one another in the low evening light coming across level plains. The young Duc d'Alençon was beside her. She rode with her head on her breast, unaware that one mailed foot occasionally dripped blood through the clumsy iron stirrup.

Jeanne's victories had been culminations of effort. When the French flagged after long fighting, and their enemies also relaxed effort, then the spirit seemed to come mightily upon her. At early morning assault was made on the Porte St. Honoré, and lasted until evening. Straining with all her might, Jeanne yet waited for that certain sign that Paris was given to her, when the king and La Trémouille sounded a retreat. It was then twilight. Jeanne, without heeding the trumpet, led on in the midst of din and crash. Two knights, being sent for the purpose, seized her and forced her upon her horse. «En nom Dé, we are about to go in!» pleaded the struggling pucelle. But the tide of retreat had set out, and it carried her along.

«Take this not to heart,» urged D'Alençon, leaning toward her. «We will try Paris on another side. What do you think of the bridge of boats across the Seine at St. Denis? You shall see Paris nearer than you

Digitized by Google

have yet seen it, and by the left bank, though we ride far to strike where a stroke is least expected.»

«The bridge of boats was well planned; but, fair duke,» said Jeanne, throwing up her vizor, and showing the deep lights of her eyes to this companion in arms, «the city was ours this night. We should have gone in through the breach we had made. It was almost taken.»

«A night's rest and comforting of the bolt-wound in your foot will not come amiss. Without waiting on councils, we will take our people and dash across to a new attack at dawn. If your wound proves too sore, send me instant word by your page, pucelle.»

«The wound shall not hinder me; I scarce knew I had it until they pulled me from the breach. We will ride early, fair duke, and that must be a loud trumpet that recalls us to-morrow.»

She was ready to laugh, with the prospect of directly renewing the assault. And the La Chapelle woman in whose house and bed-chamber she slept rose astonished, in the dark of the morning, to bring her the bread and watered wine on which she broke her fast. A young maid with a pierced foot in bandages and oil, she dressed in haste like joy itself, to go out through fog across a bridge of boats, to be shot at again by all the archers of Paris!

Bertrand de Poulengy came with her armor, and as he drew the straps with practised fingers she promised him relief.

«We will take Paris to-day, Bertrand; and afterward, by exchange of prisoners, we must get poor D'Aulon back. You have had double labor since he fell into the hands of the English at Baron. I grieve for poor D'Aulon.»

«I also,» said Bertrand, with gentle irony —«I grieve for poor D'Aulon.»

«I do esteem him, Bertrand.»

«I also,» said Bertrand. «As soon as the English had him my esteem rose. If they will only keep him, I shall in time love him like a brother.»

Jeanne glanced over her shoulder at her squire, who was diligent with her buckles.

«Indeed, D'Aulon never grieved me. But I have done myself more discomfort than any other has ever done me, by breaking the sword of Fierbois. It can never be mended. Oh, Bertrand, I did not come to the wars to break the sword of Fierbois on poor Haumette Davide!»

«Let it go, and heed it not,» said the squire, bringing her belt with a strong sword which she had taken the day before at the Porte St. Honoré. «Here is one that answers as well to give good blows and clouts with.»

She had herself thrown the long-sleeved levite over her mail, and as he knelt with her girdle, her unusually piteous face broke him down in his vow. He seized her hands and kissed them, and trembled with uncontrollable passion. The touch of her was so sweet to him, and ease from his long self-restraint was so blessed, that he held her with strength until she wrenched herself loose, throwing him forward upon his palms.

The squire stood up and faced her, his blue eyes dauntless with the rage of his love. Jeanne turned her back on him.

«I will go to Haumette Davide,» spoke Bertrand. «She is at least a woman. She will speak a word of pity to a wretch that has not had his torment eased in three long years. My faith, as well as the sword of Fierbois, shall be broken on Haumette Davide!»

He flung himself into the humid dawn, where fog trailed like wet threads in La Chapelle street between his face and the face of Louis de Coutes, who held Jeanne's courser.

The page gave little heed to the squire. Holding the bridles of war-horse and palfrey, he waited in haggard excitement to deliver news to the maid. Jeanne brought out her casque, which Bertrand had left unlaced, for Louis de Coutes to carry behind her on his saddle-bow. The squire was nowhere to be seen, and even Pierre failed to attend her. The low sky trailed on roofs, and drops of humidity began at once to dim her mail like an overcoating of minute beads.

«The Duc d'Alençon and Messire Pierre d'Arc have both gone to St. Denis,» said the page, without waiting for her inquiry.

«They are in haste, but by hard riding we shall overtake them. Are the troops all stirring?»

Louis stood bareheaded before her. The hair curled about his neck. «Pucelle, they went to the king. They bade me tell you the bridge of boats is cut adrift. No one can now cross to attack Paris.»

«When was this thing done?»

«Last night.»

«By whose command?»

«The king's.»

Jeanne's face stiffened; but she said directly: «The bridge of boats—en nom Dé, let it go; we can enter elsewhere than by the bridge of boats. We shall go in by the breach made yesterday at the Porte St. Honoré. Why has the duke gone to the king? He should be riding down hither with his troops. Mount, and after him! I think the men are

Digitized by Google

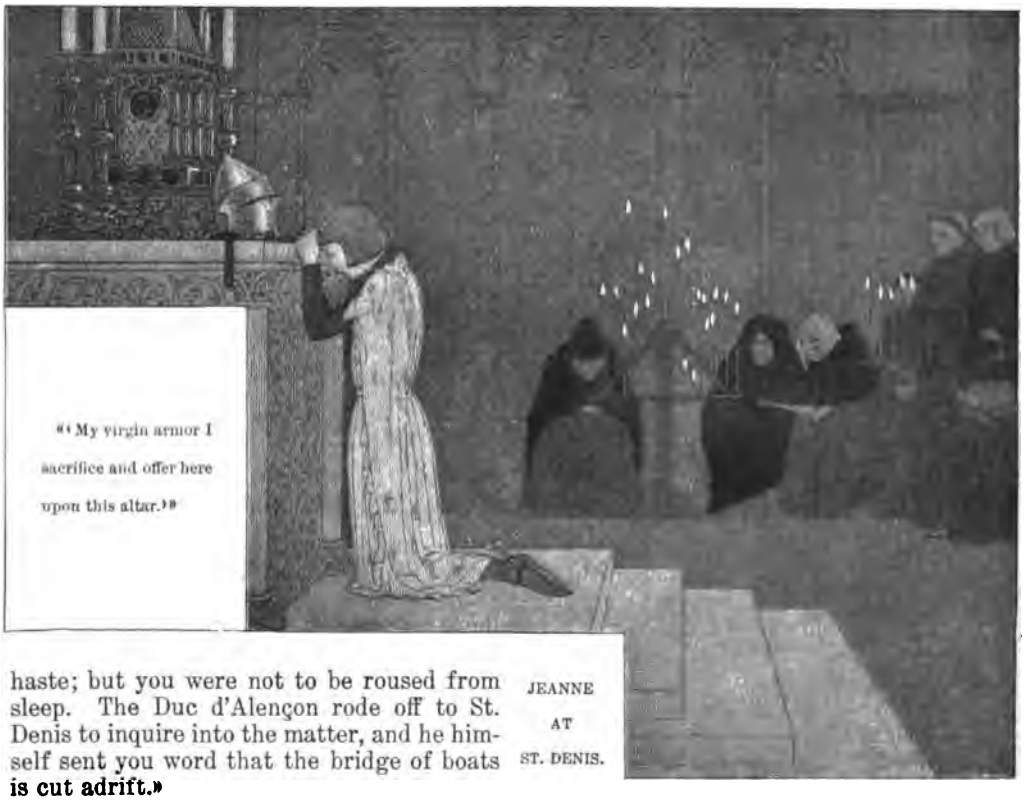
all mad this morning. We have no time for councils and visits of ceremony.»

«But, pucelle,» disclosed the page, «King Charles has ordered a retreat from Paris.»

The stern maid put her attendant on his defense.

«Am I to believe this story? Who left St. Denis in the night with such commands from the king?»

«His majesty's own herald. And there was



JEANNE AT ST. DENIS.

haste; but you were not to be roused from sleep. The Duc d'Alençon rode off to St. Denis to inquire into the matter, and he himself sent you word that the bridge of boats is cut adrift.»

«The king has ordered a retreat from Paris?»

«It is the truth, pucelle.»

Jeanne put her arm on her courser's neck, and leaned with all the weight of her mail. She gasped as if some one had struck her in the breast; and Louis de Coutes, forced to be purveyor of this cruelty, was ready to curse his sovereign. Yet the courtier's instinct to make his own advantage out of another's discomfiture was boldly alert in his look. He was sorry for the military leader, but he was fiercely glad the woman had met a rebuff which might make her kind. The boy's eyes filled with honest tears, and he slid to his knees, holding the bridles in his arm.

«O my great mistress, I am of good family. Look not on me as your horse-boy. By our Lady, I can hold back no longer! I shall soon be knighted, and no woman need then despise me as a husband.»

«Stand up!» said Jeanne. «Have you no regard for your hose, furnished by a poor king who has just been forced to throw away Paris?»

«If I stand up at no kinder bidding, it will be to lay your squire low.»

«Go to the king, Louis de Coutes, and tell him I now have no need of a page. Ask him any favor he can do you for my sake. We shall part at St. Denis.»

The enraged boy followed her as she took her own bridle from him to mount. «I will not be turned off like a varlet!» His large, light eyes and loose lips and the thick tip of his nose seemed distended by aggressiveness.

But he knew he had banished himself from the maid, and her reserve, as she looked down from the saddle, chilled him and sealed his mouth. She thanked him for his service, commended him again to the king, and rode off. Louis de Coutes struck the earth-stains on his shins, and glanced at neighboring windows. La Chapelle was stirring in the sullen dawn. He could do nothing but mount

Digitized by Google

is palfrey and follow at a distance, debarred rom his page's duties.

Early as it was, the abbey of St. Denis, vhere the king lodged, showed preparations or departure. Charles carried with him such uxuries as he could, and he never for any nilitary consideration omitted a dinner or a night's rest. But he was as near eagerness as his phlegmatic nature ever approached to be done with the campaign and on the southward road.

To retreat from the capital without taking it at that time meant to disband the army. Officers and their retinues signed indentures of service for a specified number of months, and without reënlistment they could not even go into winter quarters to be at the disposal of the sovereign, though many knights and nobles, among them La Hire, De Xantrailles, and the Duc d'Alençon, would retire into the North to hold towns and fortresses.

Seldom had so much been done by loyal subjects for an impoverished monarch. The pucelle herself had acted as his treasurer, husbanding his means to the utmost, and holding the retinues of his captains so devoted to her that they would have served for nothing but their bread. Those Northern cities that had returned to their allegiance needed the protection of the capital. Charles left them to shift for themselves. Master of Paris, where the Duke of Burgundy was the most popular man in the kingdom, he might have treated successfully with that alienated vassal.

The west door of the cathedral of St. Denis opened from a mean street crowded with many little shops. Jeanne entered it lame-footed, coming from her interview with the king, about the middle of the forenoon. Within she sat down on the steps which form a short terrace to a vast expanse of floor. Opposite, far away, stood the great altar bearing up a gold Christ between two tall candles. Echoes resounded in the Gothic arches from a service in one of the chapels. Jeanne set her helmet, which she still carried, on the floor beside her, a polished headpiece, like the top of a knight embedded in stone.

The king had commanded her to follow him to Bourges. Already the retreat from Paris was begun, though it would have to be covered by troops, and La Chapelle and St. Denis would not be entirely evacuated for several days. She leaned her face on her hands, too sore in body and spirit to creep down for a prayer before the nearest altar. A tardy sun was beginning to make glimmers through the clearstory windows high above.

Her enemies, of whom she had scarcely thought in the ardor of war and the fatigue of many marches, now pressed her in defeat, and seemed to follow her under the arches of St. Denis. The Regent of England and the Duke of Burgundy Jeanne left out of account. They were to be met in open field. But there was La Trémouille, covert and mocking, a man who had never been earnest in anything except the pursuit of his own pleasure. He had done as much to bring the campaign to naught as if he held secret league with the English. La Trémouille had also prevented the queen from journeying to Rheims, thus robbing her of coronation. And there was La Trémouille's friend, the Count-Bishop of Beauvais, who had some little quarrel against her concerning horses bought of him by her household, and perhaps a larger hatred for that most unreasonable of all reasons—jealousy of power. Moreover, there was the Archbishop of Rheims, the favorite's brother, who had taken that same strange attitude toward her. «En nom Dé!» whispered Jeanne, «if they thought more of the king's dignity, and less of their own, it would be the better for France.»

But there, also, were her friends, scores, thousands, men, women, children, stout knights and nobles and men-at-arms. Answering the silent roll-call of her need, one of them entered the cathedral. The inner door swung shut behind him. He was, like herself, all armed except his head, and carried a plumed hat in his hand when he saw her. The knight who had refused to follow her standard at Orléans was first to seek her in defeat at St. Denis.

The maid's eyes met his in a long gaze of sorrow. He stooped to one knee to talk with her. Their low voices did not spread from one little circle of sound in the echoing cathedral.

«Has anything further befallen us, Messire de Gamaches?»

«No, pucelle. I come to beg that there be no adieus betwixt us two.»

«Why, we must all part, Messire de Gamaches. But I tell you, and I have been informed truly, however it may go with you and me, there will not be an Englishman left on the soil of France within seven years.»

«God send there be no favorites left, either. Do you desire to follow the king?»

«I would far rather go home and tend my sheep, messire, which you would have had me do at Orléans!»

«You do not forget that I rebelled against following your standard before it had led us to so many victories?»

Digitized by Google

«I remember you offered me your horse when I took my first wound.»

«Not my horse alone, but my lands and myself I am ready to offer you now. Pucelle, I am of good family, though scarce your equal in arms.»

«Messire de Gamaches, there be plenty of women in France for wives. You may easily choose among them; I never saw a more accomplished knight. But I was born to other uses. The king had best employ my time, for it will not be long.»

«I have a regard for you, pucelle, that I have for no other, man or woman. We have been captains together, and I had liefer be commanded by you than by any other. When you take the field again I will follow your standard.»

«Messire, you have given me the only comfort I have had this day. When the king has so many good men ready in his hand, how can he disperse them? But it is the favorite's doing.»

«Yes, the apricots like little red apples will be past their season in Bourges, if La Trémouille makes no haste to disband the army. I have heard him mourn the loss of them, together with his ease.»

«Yet he tilted well by Senlis, messire.»

«A man must sometimes shiver a lance, or age will come on him in his youth. Pucelle, I am loath to let you go south to yonder court.»

Jeanne gave him both her hands in farewell. Their gauntlets met with a metallic sound. She thought, «When shall I see such goodly arrays of men gathered again?» Her eyes swam, her chin quivered. As these companions in arms had met, so they parted, with a long look of sorrow. The closing door swung silently behind De Gamaches, and Jeanne limped slowly down the steps, helmet in hand.

No more would that casque lead like a star in assaults. It had been broken by a stone at Jargeau. She traced the closed seam which an armorer had skilfully made.

One old woman with kerchief-bound head, and a wrinkled man in blue smock, knelt at their prayers. Pattering with unceasing lips, they watched the glittering figure, already loved in St. Denis, pass along the cathedral wall. Jeanne felt her wound to faintness as she descended to the crypt under this church, where all the kings of France, from Dagobert, were buried. Low stone galleries wound about vaults and chapels in which the great gray coffins were enshrined. Charles had given up these as well as his capital to the enemy. She dragged her foot along the stone path, or leaned her forehead against the side of a cold arch. The crypt was deadly chill.

Another mailed tread followed her, and she saw Poton de Xantrailles coming, tall and well-thewed, thin-faced and sharp-eyed, but downcast, as though he bent his head to escape the top of the crypt. Like all the captains, he was ready harnessed, for a general attack on Paris had been intended by way of the bridge of boats.

Jeanne felt her heart unendurably swelling toward the scattering army. De Xantrailles, with the gentle manners of courts, controlled himself, and gave her first a message from the king, who would know, since she had dismissed her page, young Louis de Coutes, if she desired to have Louis's brother Raymond instead.

«En nom Dé,» answered Jeanne, «let me have no more of the De Coutes family.» She laughed. «The knights are dispersing, and Paris is thrown away, and we must take thought only of pages. But understand well, I do not blame my king, Messire de Xantrailles.»

He stood high above the maid. His vizor was lifted. De Xantrailles had witnessed the glories of the court of Burgundy—a duchy that outdid many kingdoms in splendor, where tournaments were oftener celebrated than anywhere else in Christendom, and chivalry, instead of falling to decay, was at its height. But loyalty which excused the lax relinquishment of a kingdom he had not often seen.

«Have you heard the cause of this sudden retreat?» he inquired.

«No, messire.»

«Charles has just completed making a truce with the Duke of Burgundy until Easter.»

«The only truce with the Duke of Burgundy should be made at the point of a lance! He showed his sovereign nothing but contempt when a message was sent from Rheims beseeching him to throw in his lot with his people. The English only desire to use him.»

«You had scarce left the king, pucelle, when a knight came riding from Paris with sixty followers to join the royal party. He says the city was never so ready to yield. But we have made truce with Burgundy, so we go home.»

Tears, always ready in Jeanne from childhood, gushed down the oval cheeks. She turned and sobbed against the wall. Oh, it was bitter to be ruined at the goal by a courtier's misgovernment!

Digitized by Google

«Jeanne,» said De Xantrailles, trembling in the voice, «I am appointed governor of Coucy, the strongest fortress in France. I am of good family.»

The maid drew her breath sharply at these ominous words.

«I will demand you of your brother Pierre, and also of the king, as any maid should be demanded. Come with me to Coucy. The wife of De Xantrailles may at least live apart from a court ruled by the favorite.»

«En nom Dé, what ails these men?» cried Jeanne. «Have you all agreed to take pity on a poor scourge of England because she is thrown aside, and house her since she has no field for her arms? But I know why you come to me with tears in your eyes, thinking comfort may be found in marriage. It is the cry of France rending every one of us.»

She set her casque on the floor, and took him by both gauntlets, as she had taken that other good knight, De Gamaches. Her companion in arms worshiped her silently, without daring to draw her nearer his mailed body.

As if she could not bear any further words of parting from captains who felt this general bereavement as she felt it, Jeanne snatched up her helmet, and limped away from De Xantrailles along the crypt.

Behind the choir of St. Denis, and back of the great altar, was a little chapel to the Virgin. Bertrand de Poulengy was kneeling there. He heard a halting step behind him, and turned and saw the maid. With her eyes fixed on the statue, she began to unbuckle her armor. Exhausted and ghastly, and struggling with her unaccustomed task, she yielded him back his office of squire without a word of reproach, standing in the stained light which poured over her from high windows.

«I went to Haumette Davide,» he whispered to the maid. «She is going home to her mother with De Metz of Novelopont, when he has taken leave of you. Will you call me D'Aulon hereafter—the squire who never caused you any discomfort? Let me take his place while he is a prisoner.»

«I have no longer need of squire or armor,» answered Jeanne; «yet I cannot well do without you.»

«That is enough for me.»

«You are fit to approach this altar?»

«I am not unfit.»

The squire helped her carry all the pieces of her armor and place them about the feet of the statue. Jeanne knelt, and lifting her sword by the blade in both hands, with the cross-hilt over her head, placed it upon the altar.

«My virgin armor I sacrifice and offer here upon this altar. It is the cry of France!»

XIII.

«LITTLE king of Bourges» though Charles VII was called by his enemies, he had no palace there, and was obliged to use the château of his uncle, the Duc de Berri, who retired for the winter to another outside the walls. The château of Bourges was a wide, stately pile of stone, blackened instead of bleached by age, seated among threading streets and crowding houses, half-way up a slope of land at the top of which stood St. Étienne's cathedral. Common soldiers and attendants entered the château from the street below by a court opening into guard-rooms. But the Chevalier du Lys turned in at one of the great gates which, standing opposite, made a crossing street of the paved court fronting the palace.

Pages were always hastening up or down the stone steps, and horses waiting in the court, except at this hour when night fell and candle-light began to glimmer. A torch burned at each side of the steps, struggling with foggy air, and the stones were slippery with hardening moisture under the chevalier's feet. He passed through half-deserted ante-chambers,—for at dusk the king still sat at table,—and through long vaulted corridors to the great hall where the court assembled for its evening diversions. Sconced candles were already lighted along the pillared walls, and logs roared in the chimney. It was a mighty chimney, carved all around with stone oak-leaves. Half a dozen knights could have spurred into it, elbow to elbow, without grazing their casques on the top. Its swelling breast withdrew upward to a many-timbered ceiling. And there the firelight twinkled on polished joists, while below it spread a river of shine along the floor, partly bridged by three figures in front of the hearth.

The chevalier saw that they were his sister and the young demoiselles Agnes Sorel and Madeleine Power. They did not see him. Even Jeanne was dwarfed by the size of the great room. His heart gave a leap, and, uncertain whether he should enter while they three talked by themselves, he stood at the door holding his hat in his hand. The beauty of Agnes Sorel when wrath stirred her was like coruscating light. But he paid no attention to her or to what she said. He looked at

Digitized by Google

Madeleine Power. As soon as the Chevalier du Lys had received his patent of nobility, supported by a grant of land near Orléans, and had ceased to be called Pierre d'Arc, he asked one more favor of the king, without which the first two were thrown away upon him. But he was made to understand that La Trémouille had already contracted the demoiselle Power in a suitable alliance.

Jeanne and Madeleine stood with their arms around each other. All of Agnes's hair was drawn up from her clear forehead under a hennin, and her cheeks burned scarlet with excitement.

«This hour a thing hath been said to me,» exclaimed Agnes, with a pretty catch of her breath as she spoke, which was nobody's but Agnes Sorel's, «such as never should be said to maid by the mother-in-law of a king.»

«But Queen Yolande is very good-natured,» Madeleine objected. «I never heard her speak amiss.»

«Oh, her Majesty of Sicily intends me high honor, no doubt. But I was not brought up in a court. We are better nurtured at Loches.»

«What did she say?» inquired Jeanne, seeing the statecraft of Queen Yolande, and her latest attempt to juggle troops and men out of nothing for the siege of La Charité after the dispersion of the army.

«I will not tell you. It was an insult also to my king. Only a year ago so eager was I to come to court that I could scarce wait until my kinswoman resigned her place to me, and now I am sick to my soul of base creatures trying to ruin their sovereign before all Christendom. Any woman would set what wit she had against it. Look not over-conscious, demoiselle; we do not choose our relations in this world.»

«I never chose any but my father,» returned Madeleine.

«Poor child, you will choose no more, shut up in the queen's nunnery apartments. Oh, if I were queen of France I would come out of seclusion, and no other woman should share with me the rousing of the king.»

«He is wedded to Bourges and Sully,» said Jeanne, wistfully looking at the fire. «The sight of Paris should have roused him.»

Agnes Sorel laughed.

«Pucelle, I believe you see nothing in this court but the length and strength of men's legs and arms idling out of armor. Aside from war, you are as simple as an infant.»

The Chevalier du Lys heard this as he stood aside bowing deeply to let the king pass, and he knew it was so. Many soft-shod feet trod the pavement as the crowd of courtiers flocked after the king, who leaned on La Trémouille's arm. Silks and satins shone lustrously, nor were slashed sleeves wanting, to show robes of linen underneath. Pierre had heard De Xantrailles say that linen, and especially clean linen, was a luxury everywhere in France, except at the court of Burgundy.

He fell into the tide of human presences. Charles's household soon gave themselves up to the newly invented diversion of card-playing. The queen had a religious dislike of what she called idle bits of paper, and absented herself from the salon where the game was nightly played. Marie of Anjou, though an unusually compliant wife in many ways, had not the sympathetic breadth of her mother, Queen Yolande, who dealt with zest and fluttering hands, relaxing a mind filled with schemes for establishing the throne of France.

Little ceremony was observed; Charles demanded none of the worship which his cousin of Burgundy exacted. Seated at many small tables, with many small piles of coin at stake, the courtiers filled the room with hum of voices and laughter. Alan Chartier, the court poet, wandered from table to table, as it was his custom to do, holding a lute in the curve of his arm. The king had Agnes Sorel for his partner, and La Trémouille and his queen's latest maid of honor for his opponents. La Trémouille wasted no attentions on his niece, and Madeleine was first seen in hall that night after her winter of mourning. She learned her part doubtfully. Pierre could see her eyebrows drawing together. She lifted her black eyes and met his gaze with silent greeting, and this was all the greeting they two had been allowed since he came to Bourges. In his comings and goings from his lodgings in the street Trois Pommes, a little place near the city wall, and in the cathedral and palace corridors, he had watched for glimpses of Madeleine. Yet even at the lax court of Bourges she was so celled and restricted that he saw her only at a distance. After the rejection of his suit he had gladly followed his sister from court to her brief restricted campaign eastward. The Chevalier du Lys felt how alien his sister and he were with their new patent of nobility.

If Charles had concluded a treaty with the king of Scotland for help in his wars, it would have cost him the duchy of Berri or the county of Évreux. Jeanne d'Arc had cost him nothing, and was a greater terror to his foes, and with her thrifty peasant hand had doled his

Digitized by Google

war funds to the uttermost advantage. The least he could do for her was to rank her among nobles, so a patent was conferred on her and all her family. The heralds made her a coat of arms, giving her the masculine shield instead of the feminine lozenge, and the device of the crown upheld on the point of her sword between royal fleurs-de-lis. Du Lys was the new name of her family. But she made no change in her banner, and said to the heralds: «I remain Jeanne d'Arc. My father's name is good enough for me, though my brothers may like the other.»

During this dreary winter of her chained inactivity, a woman named Catherine of Rochelle came to court with visions; and there was news of a shepherd boy in the mountains who promised to do for the king what Jeanne had undertaken, and to do it better. The favorite also bestirred himself, and found employment which would take the maid out of his sight for a while. She was sent to take St. Pierre-le-Moutier, southeast of Bourges, which she took as by miracle, and La Charité, northward, which was so strongly fortified with watch-towers as to resist a siege. Bourges engaged her octrois, and Orléans also sent her succors, says a chronicle, but the court provided nothing. The ground was frozen hard, slippery with frost, and showers of crystals filled the air like diamond-dust. Jeanne was glad to have armor again upon her body, though it was an ill-fitting suit obtained from the Duc de Berri, and glad to be afield and see the sun describe his little arc in the south. But La Charité had to be abandoned. Once her spirit rose beyond control, and she rode, with her squire and her brother and a few attendants, to Orléans and Jargeau and Montfaucon. There the people still thought of France. But she heard what almost slew her. The state of the country was now worse than it had been before she took up arms. Invaders and robbers were alike made bold by Charles's withdrawal from the North; and the English forced exile or death on defenseless people who would not forswear their loyalty. Whole villages stood tenantless, the inhabitants having journeyed into other countries. Pestilence also followed the long famine. Everywhere the earth, rank with centuries of foul accumulations, yielded up their odor to dampness. It was told her that wolves prowled even in Paris, that skeletons of children lay on dunghills, and the cry of wandering wretches could be heard in the night—«I am dying of cold and hunger!» Yet Paris was then the pleasantest city in France, with covered bridges and orchards, vineyards and towered fortresses. The Bastille stood among trees. That winter trenches were cut and bodies laid in the ground like corded wood.

Pierre could see the intrigues about him. He knew that Queen Yolande constantly threw Agnes Sorel in the king's way, and that the Queen of France was resigned to desperate measures against La Trémouille. He saw the eyes of that young maid of honor, defiant against her pursuer, yet melting constantly in helpless tenderness upon the king. He saw and enjoyed the jealous rage of La Trémouille, who brought counter-forces to bear in a war suited to a favorite's talents; and many another hand-to-hand encounter Pierre could see betwixt courtiers sleepy-eyed with dissipation.

But Jeanne saw nothing. Whenever she came into hall, a supple, noble figure, her rapt gaze moving from face to face, she was a rebuke, being above all martial glory the maid, virgin in mind and person—the maid of France.

«Why should the paschal lamb be paraded?» was spitefully said behind her back. «Turn it out again to its native grass.»

«Oh, Jeanne d'Arc!» a courtier would groan to some face within the screen of a fan. «La-la! I am so sick of this pucelle. She can take pleasure in no human pursuit, but must be praying or riding and fighting. A lover would be more to the purpose at her age, but she will not even make love. The king might amuse himself better with a dwarf.»

Yet the maid laughed in fellowship and without bitterness when she came back flushed from St. Pierre-le-Moutier, or from rushing through the winter air on her courser. Her face was not sad, but it wore the puzzled look of one constrained to waste on lower things a space of time given for robust action. Housing and trivial amusements were hard for her to endure, when the pulse of France was again reviving in the North.

Jeanne remained leaning against the chimney, being left out when tables were set for cards. She was richly dressed, as the king required her to be, wearing over the fine cloth of her chevalier's costume a crimson velvet levite. The long, loose sleeves almost covered her hands, on one of which she wore the ring her father had given her at Rheims. A lean child like a wolf stood near, and watched her with sharp eyes, seeming to measure her capacity for war, and sagely to appreciate her as one of the engines for extending his future kingdom. A servant of the queen's bedchamber did reverent battle

Digitized by Google

with him to draw him from this spectacle for the night. But he escaped out of this person's hands with slippery ease, and roved at will among the tables.

Then Alan Chartier approached, playing softly on the lute he carried a chanson which Jeanne remembered. She met his eyes quickly. The court poet was this winter too often at her heels; yet she had sympathy with him, as one seeking also for expression, and sometimes falling into great sadness with life.

«What will you do with me, pucelle?» asked Alan Chartier, making accompaniment to his words on the lute-strings. «You have got a mastery over me that grows from day to day.»

«God be praised for that,» laughed Jeanne. «I have, then, at least one man-at-arms.»

«There is a woman soul in me, and in you there is the soul of a man. Will you put me to the further disadvantage of suing for your love?»

«*Nenni*,» answered Jeanne, using the strong peasant negative. «That I will not, messire.»

«The pucelle hath just received a declaration from Alan Chartier,» remarked Agnes Sorel to Charles. «He plays that purring tune when his affections are about to make a spring.»

«Jumps the cat that way?» responded the king, glancing up the room. His stunted dauphin, the wolf-like child, crept behind Agnes, and tweaked hairs on her white neck below the hennin.

«It was merely the Dauphin Louis amusing himself,» said a smiling dame at the next table to her, as she recoiled in pain.

«If the nurse does not remove that boy, I trust God may!» Agnes responded; and Charles himself laughed. But she caught a gentle caution from the smooth-shaven, clear-cut face of Jacques Cœur, the silversmith of Bourges, whose many favors to the king gave him access at any time to court. His friendly smile checked her impatience with a child to whose making had gone a mad grandfather and a corrupt and selfish grandmother.

Pierre dealt his cards indifferently. He had been shoved beside the wall to fill a table far from Madeleine Power, and cared little whether he won or lost coin. He could perceive what was befalling Agnes Sorel in spite of her strict bringing up; and with the complete rebellion of youth, he declared to himself that happiness bought at any price was better than such misery as his. Madeleine Power had never thought of him. She was promised in marriage to another man whose name he could not learn. And after he had watched for her with heartsick patience so many months, she glanced at him once, as at any varlet.

The evening waxing later, card-tables were put aside for dancing, and Pierre followed his sister into the upper corridors of the palace. Jeanne also had lodged in the street Trois Pommes, and afterward with the wife of Jacques Cœur; but this being the eve of the court's departure to Sully, she slept in the palace. They walked in silence, both having lost the fresh joy of life, until Pierre opened the door of a small tower chamber which Jeanne shared with a maid of honor. She kissed him on his cheeks, and said:

«Good night, Pierrelo. Be early in the saddle. Sully-sur-Loire is the château of La Trémouille; but at least we go toward Compiègne, where I have reason to believe our people may now be fighting.»

«You saw the demoiselle Paure in the hall, Jehannette?»

«Yes; both before and after the king entered.»

«Does the queen go to Sully?»

«The queen goes, but Madeleine Paure does not.»

Hatred of Sully that instant entered Pierre.

«I love her as if she were our Catherine, Pierrelo. But put all thoughts of marriage out of your head until France is better at ease.»

«Since no marriage is made for me, how can I do otherwise?»

«I did my best for thee, Pierrelo, though it is a marvel to me how men can desire to wed when they have no country. But here in this court they think of nothing but lute-playing and the talk of lovers. Are there not enough starving families now in France without founding more?»

«Jehannette, in some ways you do not grow at all, but remain a child.»

«That part of me which does not grow is not needed,» reflected Jeanne.

«But why does the demoiselle Paure remain here, if the queen goes to Sully?» inquired Pierre, desiring to find some excuse for remaining himself.

«She does not remain here. She goes to Loches, where her family are about to celebrate her marriage.»

Pierre turned sick. «Who is the man, Jehannette?»

«Young Louis de Coutes!» Jeanne smiled in the face of his misery. «That froward lad, my page. But he is of good family, as he him-

Google

self assured me; one of the richest in Touraine, the demoiselle Agnes says, and the king will early knight him for good services.»

«Louis de Coutes! No wonder her family were close-mouthed with the bridegroom's name. A boy—a scribe fellow that wrote your letters and set down your accounts!»

«He is mine own age, Pierrelo, and much older in nobility than a chevalier called Du Lys.»

«He shall not have her! Doth she like this marriage, Jehannette?»

«I did not ask her,» answered Jeanne, with such candor that the miserable chevalier smiled.

«That insolent Louis de Coutes who drew sword against Bertrand at St. Denis!»

«Did he so?»

Pierre sent the whistling Domremy yes betwixt his lips. «And Bertrand gave him the wound that has kept him out of court this winter, while his family arrange for him this marriage. Louis de Coutes hath despite against us.»

«If it had not been Louis de Coutes, it had been some other man not a peasant from the march of Lorraine. We could not hope that the favorite would make any alliance with us. I have caused a letter to be sent to Tours asking that five hundred livres tournois be voted by the city to the marriage portion of Messire Paure's daughter. He painted my banner. It is the only reward I have ever asked for my services to France, except the lifting of the tax from Domremy.»

A candle in the chamber shone on Pierre, showing his hardening face, which had matured since the wind along the Meuse blew rings of hair over his forehead. The tan of a military summer was cleared from his lovable features by partial housing. A reckless look sprung into his gray eyes.

«I will not care. It shall be nothing to me.»

«Oh, Pierrelo, I wish we could go home!»

Pierre gave her a sidewise glance. «But what would we do in Domremy now, Jehannette? For me, it is my wish to go where La Hire and De Xantrailles and the Duc d'Alençon are. I would see some more fighting.»

Jeanne herself laughed eagerly. «Has Bertrand made all our preparations for the journey to-morrow?»

«He forgets nothing. I left him polishing your old mail.»

Pierre kissed his sister on both her cheeks, bade her good night again, and turned to leave the palace.

A few torches were fastened along the stone walls, overlaying with a new smear of blackness the breath of past torches as chill drafts of air flowed by. His echoing steps brought him nearer the staircase, and there Madeleine Power met him, running up from the hall below. They both paused and looked at each other, and Pierre knew she had come on purpose to intercept him. He heard the music. A wave of color carried the hardness from his face, and left it pliant with all that a man cannot say. To see her so near at hand was to be enthralled into forgetting what had happened and what might come.

This demoiselle in court dress was more a woman than the maid in her mother's old clothes at Loches, or the peasant who carried water from St. Martin's well. Pierre looked his last on her black eyes and bright hair. Madeleine was made small and perfect like an ivory miniature. A perfume as sweet as linden flowers went with her, conquering the rankness of the torches.

«Chevalier du Lys, I have something which belongs to you, and I would not return it by any other hand than my own.»

Pierre felt the old palace strike cold through him as he remembered the horse-money at Tours. There were the coins showing through the silk netting of a new purse. His voice and hands shook, but he made a doubtful face over his examination of it.

«This does not belong to me, demoiselle.»

«You have forgotten, but I have not. You dropped a bag in my pannier at Tours. At first I thought it was a miracle of the blessed St. Martin; but when my father heard about you he knew better.»

«If St. Martin parted his cloak to a miserable beggar, would he fail of gifts to pilgrims?»

«St. Martin gave only at need, chevalier. He knew my mother's family would not let my father and me starve.»

«Do you want me to take this purse?»

«It is clear the money is yours.»

«Then keep it as a peasant's offering to his lady's marriage.»

Her face fell. She looked at the hilt of his sword.

«It is ungentle to remind me of marriage.»

«I have been told that your marriage is soon to be celebrated.»

«There is much, chevalier, that I would like to ask your advice about. My father said you were a man to be trusted. But you have avoided me ever since you came to court.»

«Avoided you, demoiselle? I have watched for you every day.»

«If you had watched for me you must have found some way to show me kindness. I have

Digitized by Google

no friend now, chevalier. With the exception of the pucelle, there is no woman I love at court, and I see her seldom. No one in the world has need of me as my father had.»

The innocent child who had walked with him into St. Martin's cave, holding to his hand because the place was dark, looked at him again through the eyes of this maid of honor. He could hear his own heart pounding, and the rival with whom her marriage was to be celebrated passed out of his mind.

«Demoiselle Madeleine, I myself have such need of you that I swear to be your bachelor for life. Because my proposals were thought unfit for you, that shall make no difference with me.»

«You made proposals for me, chevalier? When did you make proposals?» Her face was white and haughty. It disturbed Pierre, but he answered with hardihood:

«As soon as I was raised to a rank which made the proposals possible.»

«My family refused them?»

«Your family refused them.»

Madeleine heard her aunt De Beuil ascending the staircase behind her on almost silent feet. She had expected to be followed as soon as she was missed. But she looked at Pierre with a swift and silent and hopeless acknowledgment.

Long after she had been walked in disgrace to the queen's apartments through the tunnel-like corridors of the palace, he stood leaning against the wall, stupefied by unreasonable joy, and trying to recall the flash which had fallen upon him. His mind went no further than that look, and he wrapped himself in the thought of it when he passed out through the palace gates.

There were few lights in the close-built town, on hillocks or in valleys where roofs pressed together. Pierre glanced up at the Roman towers where Jacques Cœur's new château was to be founded. No wonder the king loved Bourges. How pleasant and hospitable was the province of Berri! There had been a forecasting in his mind that, in spite of all drawbacks, some good awaited him in Berri.

(To be concluded in the next number.)

Mary Hartwell Catherwood.

A CHOPIN FANTASY.

ON REMEMBRANCE OF A PRÉLUDE.

COME, love, sit here and let us leave awhile
This custom-laden world for warmer lands
Where, 'neath the silken net of afternoon,
Leisure is duty and dread care a dream.

(*The music begins.*)

That cliff 's Minorca, that horizon Spain.
There in the west, like fragrance visible,
Rises the soft light as the sun goes down
Till half the sky is palpitant with gold.
Follow it eastward to the gentle blue,
With faith and childhood in it, and the peace
Men agonize and roam for. See that fleet
That flutters in the breeze from the Camargue
Like white doves, huddled now, now scattering.
(They say all native boats are homeward bound
Against to-morrow's annual festival.)
What peace there is in looking from this height
On palms and olives, and the easy steps
By which the terrace clambers yonder hill!
How dark those hollows whence the roads of white
Ascend in angles to the high-perched town!
Needless the music of the convent bell:
'T is vespers in the heart as in the air.
This is the hour for love, that, like the breath
Of yonder orange, sweetest is at eve.

Digitized by Google

Here, safe entwined, what could be wished for two
Hid in an island hidden in the sea?
Now let me lay my head upon your lap,
And place your rose-leaf fingers on my lids,
Lest, catching glimpse of your resplendent eyes,
My ardor should blaspheme the coming stars!

. . . . .

How fast it darkens! One must needs be blind
To know the twilight softness of your voice.
And Love,—not blind, but with a curtained sight,—
Like one who dwells with Sorrow, can discern
The shading of a shadow in a tone.
There 's something troubles you, my sweet-of-hearts,
A hesitance in that caressing word;
Nothing unhappy—a presentiment
Such as from far might thrill the under-depths
Of some still tranquil lake before a storm.
Be happy, love, not ponder happiness.
Unerringly I know your woman's soul,
Content to have your happiness put off
Like well-planned feast against to-morrow's need,
And more enjoyed in planning than in use.
But oh, we men, God made us—what was that?
A drop upon your hand? Perhaps a tear
Lost by an angel who remembers yet
Some perfect moment of th' imperfect world,
And goes reluctantly her way to heaven,
Still envious of our lot? Another drop!
Why, 't is the rain. Stand here and see that sky—
Blackness intense as sunlight. What a chasm
Of silver where that lightning tore its way!
That crash was nearer! Here 's our shelter—quick!
Now it 's upon us! Half a breath, and—there!
No wonder you should tremble when the earth
Sways thus and all the firmament 's a-reel.
Tremble, but fear not—Love created Fear
To drive men back to Love, where you are now.
What rhythmic terror in the tideless sea
That wildly seeks the refuge of the rocks
From unknown dangers (dangers known are none)!
God! did you see within the headland's jaws
That drifting sail? Wait the next flash and—look!
Oh, heaven! to cruise about a hundred coasts,
Safe past the fabled monsters of the deep,
To break supinely on familiar shoals
Where one in childhood digged a mimic grave!

. . . . .

Thank God for those few, momentary stars,
And that slow-lifting zone of topaz light,
Like parting guest returning with a smile.
We care not now that the insatiate storm
Plunges with leaps of thunder on the east.

(*The music ceases.*)

Give me thy hand, dear one, though unto pain
I crush it to be sure that this be dream,
Knowing 't was Death that passed, and oh, how near!

CRUELTY IN THE CONGO FREE STATE.

CONCLUDING EXTRACTS FROM THE JOURNALS OF THE LATE E. J. GLAVE.

WITH PICTURES AFTER PHOTOGRAPHS TAKEN BY THE AUTHOR.

JANUARY 17, 1895. Left Nyangwé, and reached Bayongé, below which the river closes and bursts about in narrowed limits, splitting its currents on small islands, and tumbling over sunken rocks. The Wagenia paddlers display good sense in navigating these waters. They have picked out the few possible channels, and with powerful strokes pass through the wild waters without danger, carrying a canoe over treacherous whirls and bubbling rapids which extend for about two miles.

January 18. Owing to the rain, I was forced to remain at Bayongé to-day. This is a post under Lemery. The natives have complained that they are compelled to bring rubber, which is bought by the officers of the Congo Free State; half of the price paid goes to the mgwana, or chief, of the district, and half goes to the natives. Many villages refuse to bring rubber; then they are attacked, and killed, or taken prisoners. While I was at Bayongé an expedition sent by Manahutto, under the orders of Lemery, arrived after having a fight with natives on the other side of the Wazimba. Many natives are said to have been killed, and thirty prisoners taken, mostly women. Lemery has compelled the natives to shift their settlements from the interior and to build on the shore of the river, to supply food, canoes, etc., their villages being convenient camping-places.

After seven hours' paddling I reached Mgwana Ndegé's. He is an energetic little fellow, representative of the Congo Free State. On my way to-day I shot several hippopotami. There was a herd of about twenty occupying the comparatively still and shallow waters at the head of an island. I took my canoe down below, then went ashore, and cut a way through the tangled bush of the island till I reached a spot suitable for shooting. I killed at least six; this number we saw flounder about helplessly, and plunge with weaker and weaker bounds till they sank. As the skies threatened rain, and there was no camping-place within one hour's traveling, I moved down stream to Mgwana Ndegé's, then sent back my canoes to pick up the dead animals. Upon their arrival, about six in the evening, they found that two had already risen; one had been cut about the neck and shoulder by thieving natives, who fled at the approach of my men. The two dead brutes were brought to camp, arriving about eight o'clock. It not being practicable to cut up the meat at night, I made slits in the skin and tied the brutes fast by ropes. Not having a moon, we were unable to watch for the other carcasses which might rise and pass down the stream; thus I am certain we lost at least four animals.

January 19. This morning I set the men to work cutting up the beasts, a big crowd of natives, active and inactive, taking part in the operations. With some stout creepers made fast to slits in the beast's skin, the smaller was hauled bodily up a steep bank into a village by a big crowd of natives. The larger was found to be too heavy, so we cut off the hind legs while it was in the water. I gave Ndegé for his people one carcass, leg, shoulder, neck, and head, and gave them orders to drag their meat away to a distance from where my men were cutting up the meat. A tremendous lot of harmless wrangling accompanied the cutting up. Considering the number of knives busy at work at very close quarters, I cannot understand how many were not badly cut. In the belly of the big hippopotamus we found a large copper ball, fired into the beast in the past. In spite of serious warnings, the natives persisted in trying to steal meat from my men's portions, so wild are they to get a feed of meat—a very rare treat for them. It is a filthy sight to see a band of Africans cutting up a beast, pushing and struggling, their bodies spattered with blood and filth, slashing fiercely to get as much as possible, all the time shouting and mumbling, the sickening hubbub gradually decreasing till all the meat is shared.

January 20. Owing to the quantities of meat my men had smoked, the loads were so augmented that there was delay in getting everything packed. The river is now wide, with swampy islands in the channel, generally under water; there are plenty of waterbirds, shrikes, and fish-eagles, and in the woods one hears the notes of the blue pheasant. We passed three successions of rapids

to-day, but none difficult. We got paddlers from the villages on the shore who knew the eccentric channel. With experienced hands, a deeply laden canoe with six inches freeboard can pass safely.

Upon arriving at Nsendwé, I found my third hippopotamus entire—bones, skin, and meat. It had been found by Makula Melende, who recognized that it had been killed by a white man; so took it to Piana Gogorro, the Congo Free State representative at Nsendwé. I shared the large beast with the natives, and bought a few fowl with meat. The posts everywhere are in good condition, and a credit to Lemery. There are no longer grass roofs; grass is scarce; the roofs are of broad leaves. The natives are friendly and well in hand. Those along shore are Wagenia, stalwart fellows, good-tempered and peaceful. Telegraphing by drum is much in use. They are busy at it all day, and everybody seems to understand. When I decided to sell meat for fowls, the natives telegraphed the news to their friends, who perfectly understood the message, and brought their fowls.

There was a scare to-night. I put the goats and fowls in a large empty house. About midnight there issued forth a medley of goat-crying and fowl-screeching; immediately the sentry divined leopards, and fired his gun off at the house, I think. Then about fifty people turned out, men, women, and children, all screaming that there was a leopard among the goats. About a dozen men were armed. I jumped out of bed, and loaded my gun with big shot, the most effective against leopard at night. The crowd was surrounding the doorway. I kept in the background, not risking my person in front of the men's rifles, which are handled, in a state of excitement, in the most erratic manner. (Two or three days ago, when I was shooting, a Sierra Leone man discharged his rifle carelessly close to my head, the gun going off before he was ready.) The crowd circled about the door, five yards away; a small boy, not more than seven or eight, snatched a firebrand from the hands of a bearded man, and very pluckily opened the door of the house and entered, followed by a soldier with a loaded rifle. No leopard! A goat, tied to a post, and a fowl, also corded, had got foul of each other, and each started its respective music, joined by others; hence the fear of leopards. The crowd dispersed, but remained in knots discussing the incident, and sleep was impossible for an hour, when my bloodthirsty threats quieted down the excited Africans. It was a very plucky thing on the part of the small boy to enter the house;

LIEUTENANT RUE AND HIS BANGALA SOLDIERS IN A DUGOUT.

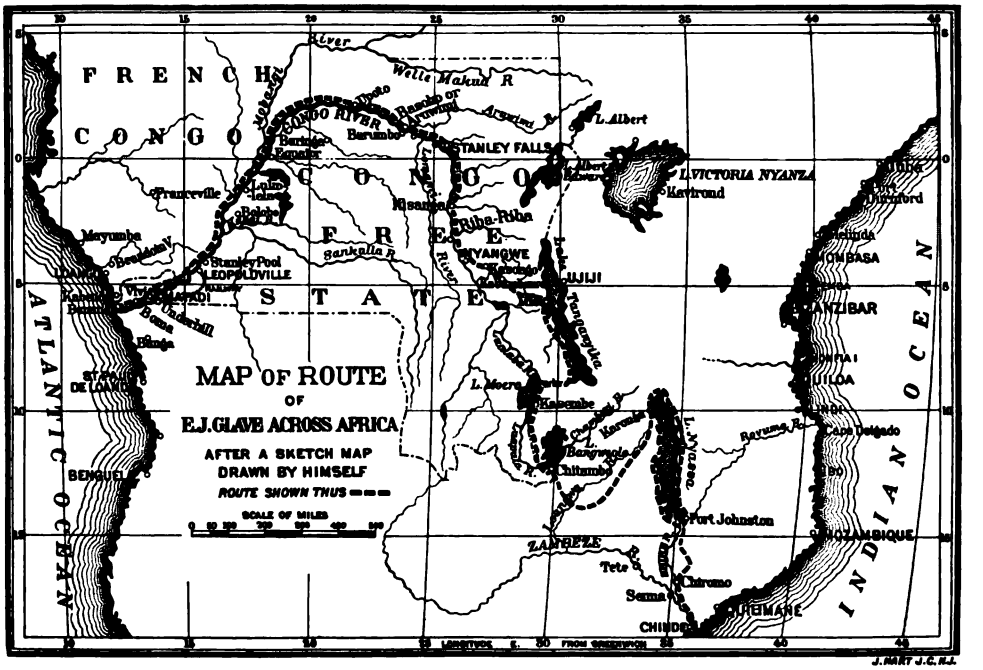
for had there been a leopard inside, he would have been struck down immediately.

The banks of the Lualaba [the Congo] are now a rich mass of verdure to the water's edge, the wine-giving, oil-producing palm with feathery silver-gray stems being prominent. The moist verdure gives one the idea of density, not merely a slim line of timber along the river's banks, but a land of dense forest with a way cut through it by the Lualaba. There is a good deal of swamp-land in the forest; both in the villages of Mwana Ndegé and Fundi Ismali there are swampy pools harboring croaking frogs immediately at the back of the settlement. The colors are a variety of greens and rich red. The river here is about half a mile wide. There are many islands, large and small, some thickly timbered, others merely clothed with grass. Rubber abounds; elephants are scarce. There are many small villages a little back from the river-banks. One sees all day long canoes floating here and there, and narrow paths cut in the steep banks, where natives get their water. The land bordering the river has generally steep banks, sometimes of clay and often of rock; more often than not, dense foliage reaching right to the water's edge hides the nature of the banks. Everywhere the natives are friendly and polite; and, thanks to the education received from Lemery, they are all well disciplined and submissive to the white man's demands. At every camping-place the native chief, or mgwana, brings presents of fowls, eggs, bananas, palm-wine, etc., enough for one's self and one's men. This they are required to do by order of Lemery. It is optional whether one gives a present or not, but I have always done so.

January 20. Reached the native chief Malonga's Fundi Ismali. The gentle hippopotamus is cunning: he hides away in the daytime, and when least expected makes a nocturnal visit to a rice-field or a patch of maize, his single meal greatly diminishing the fruitfulness of the crop. He performs these little tricks with no clumsiness such as his body suggests. The hippopotamus is often looked on as clumsy, but he is an artful dodger, mentally and physically; his thick body, short legs, and bulky head can be used very adroitly. The natives are not lazy, good-for-nothing fellows. Their fine muscular powers are obtained by hard work, sobriety, and frugal living.

January 24. Reached Riba-Riba; found Lieutenant Rue, a non-commissioned officer in the Belgian army, and a fine fellow; his companion, Van Ril, is absent on business to arrange a quarrel between chiefs. . . . Rue has built excellent dwellings; he produces stores of rubber a month, and one thousand pounds of ivory. There is good discipline in the station. The chain-gang is always a disgusting sight to me in the stations on the

Zone Arabe, as those confined are generally old women reduced to skeletons by want of liberty, hard treatment by the negro sentries, and hunger. The policy of the Arabs is being rather too closely followed, and the natives are treated with the utmost severity. Five women who had deserted were in chains at Riba-Riba; all were cut very badly, having been most severely chicotted, or flogged.



Lemery does not flog much, and uses only the bastinado for women. Women ought not to be flogged; this is the one thing to find fault with.

The native villages are attacked if they won't work in some way for the good of the land. Some are required to cut wood for station purposes; others to search for rubber; others for ivory; some to serve as soldiers for six or seven years. This is good, for when once broken in, the natives continue to work. It is no crime, but a kindness, to make them work. By the system of forced labor they gain cloth, etc., and by a little hard work can soon become rich. The state also makes a profit, increasing its finances so as to enable it to continue the occupation of the land, which means the saving of the natives from the slavers. For what it has done for the natives the Congo Free State has a perfect right to get some profit out of the land. The measures adopted are severe, but the native cannot be satisfactorily handled by coaxing; he must be governed by force. Hangings are now quite frequent on the state stations in the Zone Arabe; the administration is quite different from the treatment of the natives on the Congo. At Kabambarré there is a tree upon which a lot of people have been hanged—natives, Wangwana, and soldiers. At Kasongo I saw no construction for this purpose. At Nyangwé and Riba-Riba there is a wooden frame which has often served the purpose.

Here at Risari's there is one of those ugly constructions for hangings. It is said that three natives were hanged by Rue because they would not work salt for the Congo Free State. The natives have not a very gay time of it. Before the whites came the Wangwana and Arabs were their masters; but now the Congo Free State authorities favor the Wangwana element far more than the natives, and the Wangwana and the Arabs have accorded to them the authority of bygone days, with tremendous power, which is most unmercifully employed. When a village does not consent to make rubber, the mgwana of that particular district is empowered to fight the offending village, and to kill and take prisoners, which is quite general. Kibangula had just returned to Kasongo at the time of my arrival, having been engaged on a

devastating exploit, burning, killing, and taking prisoners, two hundred of whom were brought to Kasongo station, being principally the people of Piana Kiteté, who at the time of my visit to his village, just after a fight, came and gave me a goat, and asked me why he was attacked, his villages burned, his people rendered homeless, some killed, others, like himself, driven to hiding in the mountains. Wangwana and Arabs, to my mind, may be employed in small positions of authority, but at each station the number of capable whites should be much increased. This would lead to speedy peace and the rapid development of the resources of the country.

Left Risari's at 6:30. How different now is a trip down the river from Nyangwé, compared with the time when Stanley opened the road! The explorer's figures with regard to the commercial opportunities were scorned, but they have been more than justified. Heroic as has been the work of Dhanis and others, nothing has equaled Stanley's success in founding the line of poorly armed garrisons from Banana to the falls. He had tremendous and mysterious dangers to face. Stanley built the house, and others pointed the bricks. The formation of the Congo Free State was Stanley's conception.

Mosquitos were found occasionally at Kasongo, but nets were not necessary. At Nyangwé the mosquito-net was necessary, as the insects became very troublesome after dark. At Riba-Riba I felt none, and only an occasional tormentor between Nyangwé and Riba-Riba, at the different Wangwana posts. Health at these places is generally good now, but at first the stations built on the sites of Arab settlements were unhealthy.

All along the route since leaving Kasongo there have been multitudes of palm-trees, and most delicious palm-wine is to be had everywhere. We have had lightning sometimes in blinding, flashing ribbons; at other times sheet-lightning, which plays incessantly, flickering behind banks of rain-clouds, lighting up the heavens, silvering the outline of the darkened mass. We see strange birds every day: the blue peacock, with a note like liquid pouring from a bottle; the dark-brown, white-breasted fish-eagle, perched on an overhanging bough, awaiting a chance to pounce down on a finny morsel; numberless hornbills screeching; gray parrots, to the call of which my parrot, «Billy,» incessantly replies; and small birds of gorgeous plumage. Ashore there is a goodly stock of butterflies; but there are no representatives of the insect world of fascinating disposition. Mostly one's acquaintance with the insect world is not pleasant.

The chicotte of raw hippo hide, especially a new one, trimmed like a corkscrew, with edges like knife-blades, and as hard as wood, is a terrible weapon, and a few blows bring blood; not more than twenty-five blows should be given unless the offense is very serious. Though we persuade ourselves that the African's skin is very tough, it needs an extraordinary constitution to withstand the terrible punishment of one hundred blows; generally the victim is in a state of insensibility after twenty-five or thirty blows. At the first blow he yells abominably; then quiets down, and is a mere groaning, quivering body till the operation is over, when the culprit stumbles away, often with gashes which will endure a lifetime. It is bad enough, the flogging of men, but far worse this punishment inflicted on women and children. Small boys of ten or twelve, with excitable, hot-tempered masters, are often most harshly treated. At Kasongo there is a great deal of cruelty displayed. I saw two boys very badly cut. At Nyangwé and Riba-Riba boys are punished by beating on the hands. I conscientiously believe that a man who receives one hundred blows is often nearly killed, and has his spirit broken for life.

Salt is found now in great quantities in the interior from Nyangwé and Riba-Riba. It is extracted from saline ground by filtering. Nyangwé receives three hundred pots a month, each pot holding three or four pounds of good salt. Nyangwé supplies Kasongo and Riba-Riba. Below Riba-Riba salt is a very valuable commodity. Men are rationed with it to buy food. The money used between Kasongo and Nyangwé, and in the neighborhood of these places, is *mandiba*, or small mats of grass-cloth, iron axes, shoes, and salt.

We see now any number of ant-houses fixed up in the topmost branches of the trees, about the size and shape of an ugly foot-ball, undestroyed by the heaviest rains. Generally they are lightly fixed on the branch, but they resist all showers.

Before the arrival of the Arabs ivory had no value; the natives often did not store it. Having killed an elephant, they took only the meat; and when the Arabs came and, pointing to the ivory, wished to buy, the natives hunted about in the woods for ivory of elephants dead a long time, and big points were sold for a handful of beads, or a copper

MARKET-DAY AT WABUNDU.

The sellers remain in an inclosure made with rope; when they approach the rope with bananas, manioc, etc., the purchasers bid for the different parcels with beads, brass wire, tacks, and other popular objects of exchange.

or brass ornament. Kibongo was the first to settle after Stanley's passage; he is said to have bought immense stores of ivory; but all seem to have spent all they had. All the natives along here joined Tippu Tib on his way to Stanley Falls to establish himself, and they fought and took part in raids for him.

From Fundi Ahbedi's to Wabundu, just above the rapids, the country is precisely of the same nature as that we have been passing, but the banks are a little higher. The station of Wabundu, now named Pontherville, has been established six months only, but good progress has been made. The forest has been cleared away, temporary huts have been made, brick-making and tile-making started, and a good house has been nearly finished. Commandant Hancquet was chief, but died five weeks ago of liver trouble. Mr. Laschet, now in charge, is a good worker. I found the table excellent from every point of view, the boys spotlessly clean, all tableware the same, everything well served, things quietly done.

All Arabs have been permitted to retain their slaves. Laschet contemplates a journey into the interior to organize the rubber industry. The market at present is small, but native villages are building in the vicinity. Two days before my arrival two Sierra Leones were hanged by Laschet. They were sentries on guard, and allowed to escape, while they were asleep, a native chief who was prisoner and in chains. Next morning Laschet, in a fit of rage, hanged the two men. They were British subjects engaged by the Congo Free State as soldiers. In time of war, I suppose, they could be executed, after court martial, by being shot; but to hang a subject of any other country without trial seems to me outrageous.

February 10. Left Wabundu (Pontherville) to-day with Captain Hoppenroth, in one very large canoe and one smaller; after half an hour's paddling, reached the Wabundu rapids. All loads were taken out of the craft, which ran through the wild, rough waters without shipping a drop of water. Natives in the neighborhood of the rapids are very expert. These men command one's admiration

and respect; they render the state great service, for which occasionally they receive a present of cloth. The Wasongola are beautifully shaped, good-tempered, powerfully built fellows, generally with shaved heads; or, when there is a tiny crop, the head is shaved, leaving different designs; they are much tattooed on face and body. Most canoes are passed down the falls carefully, but to-day a crew ran the big canoe down the bewildering slant, singing as they went, and shipping but little water. It requires sterling qualities to accomplish this successfully.

My boy Tanganyika is generally half asleep; he wakes up occasionally, with an abrupt dive at me and a big blow at a gadfly. When he succeeds in killing my tormentor, he shows all his teeth for a few seconds with intense satisfaction, and relapses again into his comatose condition.

February 11. Left Bomanga at seven, and reached Benlilukula in four hours; about one and a half hours wasted during the exchange of paddlers. Each stretch of rapids has its particular paddlers, who take one through the wild stretches, every inch of which they know. The Wasongola paddlers are remarkable people in the rapids. We rushed past rocks and snags, just grazing them, at a terrific rate, the water boiling round us, shipping but little of it, turning sharp bends, avoiding sunken rocks, and plunging down glassy torrents.

There is good ground for coffee at Stanley Falls, where it grows prolifically. The station is on the north bank, just below the rapids and falls. In former times the station was on the south bank, but the tendency with the Arabs has been to the other side of the river. All ivory and rubber comes to the station of the Congo Free State. No matter how wide a road you make, the natives soon have in it a tiny foot-path, and tramp one after another in single file.

I have visited the Chopo Falls, about sixty yards wide and thirty feet high. They are magnificent—a miniature Niagara. A raging torrent sweeps down from a wide stretch of river (four hundred yards), tumbles six feet over a ledge between massive rocks, then moves on in an angry torrent, the rocky banks of the stream narrowing. At first the volume droops in a placid fall of six feet, and then plunges down twenty-four feet into the river-bed. From a distance of five hundred meters, or even less, the falls are obscured by the cloud of vapor constantly rising. The Chopo River flows into the Linde, and thence into the Congo.

This important stream is inhabited by the Lukeles, the principal natives in the vicinity of the falls of Wagenia. They are a bold water-people. They place their fishing-nets in the falls and rapids, and build great scaffoldings into the roughest waters, as the photographs I have taken show. The most dangerous rapids are just below the falls. The natives paddle through these right up to the falls; they spring out of canoes to the scaffolding to attend their nets and traps. Fishing-baskets are attached by cords to the scaffolding, and allowed to trail in the falls, the waters of which rush into the wide opening of the basket, carrying large quantities of fish. Occasionally the fishermen, who are always in force on the scaffolding, haul up the baskets and take out their catch. Men and boys walk about on the scaffolding in a wonderful way, without any supporting ropes. All cording used is composed of creepers from the forest.

February 19 or 20. I left Stanley Falls for Bazoko. The natives are compelled to transport in their canoes all state loads for nothing; also to provide work-people for the station, generally women; and each chief must bring a certain amount of fish. Occasionally they receive a small present of cloth.

The state conducts its pacification of the country after the fashion of the Arabs, so

DRAWN BY HARRY FENN.

A NATIVE SUSPENSION-BRIDGE.

the natives are not gainers at all. The Arabs in the employ of the state are compelled to bring in ivory and rubber, and are permitted to employ any measures considered necessary to obtain this result. They employ the same means as in days gone by, when Tippu Tib was one of the masters of the situation. They raid villages, take slaves, and give them back for ivory. The state has not suppressed

Digitized by Google

FISHING-SCAFFOLDS ON THE CONGO.

DRAWN BY HARRY FENN.

slavery, but established a monopoly by driving out the Arab and Wangwana competitors.

The state soldiers are constantly stealing, and sometimes the natives are so persecuted that they resent this by killing and eating their tormentors. Recently the state post on the Lomami lost two men killed and eaten by the natives. Arabs were sent to punish the natives; many women and children were taken, and twenty-one heads were brought to the falls, and have been used by Captain Rom as a decoration round a flower-bed in front of his house!

Basoko is in a serious position, surrounded by a powerful enemy, so close that they can hear their speaking-drums. It is the natural outcome of the harsh, cruel policy of the state, wringing rubber from these people without paying for it. The revolution will extend.

Leaving Romée, we passed down the north bank; found all the villages deserted. At Bazoko the *Stanley* stays, ready with banked fires, to admit of the escape of the whites. Passed several posts in Rom's district today—quite deserted, however, and the state's post-house empty, the mast without a flag.

February 23. Reached Lomami River, and the post of Isanghi, five hours' steaming from Romée. Left Romée in the afternoon. The post is twenty-five minutes' walk from the river-bank, and close to the large settlement of an important coastman, Kayamba, who now is devoted to the interests of the state, catching slaves for them, and stealing ivory from the natives of the interior. Does the philanthropic King of Belgium know about this? If not, he ought to.

February 25. Left Bazoko. Sand-banks on the Congo are constantly changing; each captain makes his own charts, but has to alter them repeatedly. On the shore-line there is a monotony of thick forests everywhere. The natives who are in revolt in the district of Bazoko are now close to the station. They killed twenty-two soldiers of the post within three hours, and during our stay speared a state soldier within five minutes' walk of the station. They say they have made « medicine,» and discovered by it that their efforts against the white man will be successful, but they must not begin the attack till after the appearance of new men in a day or so.

February 27. Reached Mbumba at nine o'clock this morning. Found that the chief of the station, a Norwegian officer, Sundt, was away on a war expedition in the *Ville de Ghent*. The persistent badgering of the natives for rubber and ivory has led to the revolt. All are agreed on this point.

Digitized by Google

February 28. At Upoto, where there are now one state station (white), one state post (blacks only), and the English Baptist mission (Mr. and Mrs. Forfeitt and two white colleagues). The latter have one or two houses of corrugated iron, and the dwelling of Mr. and Mrs. Forfeitt is nicely and tastefully furnished with books, papers, magazines, photographs, and an organ. But little trade is now to be done at Upoto; the South African Baptists have merely the rind of the orange, exhaustively sucked by the state long ago. Upoto is composed of several stretches of settlements, the huts being closely packed together, and about three thousand in number.

Two elephants to-day swam across the stream between two islands, a distance of two hundred yards; they were about one hundred and fifty yards ahead of the *Ville de Bruxelles*. Everybody fired, but apparently without doing any damage.

March 2. Passed the populous village of Ikulungu. Here I was recognized by a Bangala whom I had not seen for nine years; he was head-man of the first Bangalas taken down to Boma by Vanderkoven in 1886. Bangala is now a splendid station, all built of brick and tiles. There is much dissatisfaction everywhere on account of the non-supply of provisions and wine. By the state laws each white is entitled to a certain amount, but for the last three years there has not been enough for the lawful ration.

News is brought up, purporting to emanate from a letter written to Dhanis, that the Congo Free State will in the near future become a Belgian colony. If so, Belgium will not have a big catch. It is not a territory out of which a colony can be made. Naturally the officials hope for this change, as the Belgian government will give pensions after a certain number of years' service.

March 5. Equator, now known as Coquillanville, is removed from the old site of Equator founded by Stanley. At present it is near the mouth of the Ruki at Bandaka. The South African Baptist station is just above the old station, and the South African Baptist mission has moved half a mile down-stream. Formerly the natives were well treated, but now expeditions have been sent in every direction, forcing natives to make rubber and to bring it in to the stations. Up the Ikilemba, away to Lake Matumba, the state is perpetrating its fiendish policy in order to obtain profit. We are taking down one hundred slaves, mere children, all taken in unholy wars against the natives. While at the mission station, I saw a gang of prisoners taken along by the state soldiers. War has been waged all through the district of Equator, and thousands of people have been killed and homes destroyed. It was not necessary in the olden times when we white men had no force at all. This forced commerce is depopulating the country.

March 6. Left Equator at eleven o'clock this morning, after taking on a cargo of one hundred small slaves, principally boys seven or eight years old, with a few girls among the batch, all stolen from the natives. As Schonberg had arranged to go at eleven, I left papers with Murphy on his boat, he happening to come in while I was there. We went down together, and called on Branfaut, in charge of the South African Baptists just above the old station of Equator. Branfaut was at Bolobo in 1883, when I first came to Africa. I saw many natives who recognized me. I am struck with the slight difference time has made in the natives. They do not age rapidly; the women I remembered as being in their prime seemed the same; the young men are young men still.

VIEWS ON THE LINE OF THE CONGO RAILWAY.

The *commissaire* of the district is a violent-tempered fellow. While arranging to take on the hundred small slaves, a woman who had charge of the youngsters was rather slow in understanding his order, delivered in very poor Kibanji; he sprang at her, slapped her in the face, and as she ran away kicked her. They talk of philanthropy and civilization! Where it is I do not know.

March 8. Reached my old station, Lukolela, the present state post being eight hundred yards above. Mr. Sebau, a Swedish carpenter in charge to cut wood into planks, has built a very nice-looking place. There are few natives now on this side of the river; all have been driven to the other side by the impatient policy of the white man who succeeded Schoen here. Very few people came on the beach to-day; in old times crowds thronged the place. Of the *libérés* brought down the river, many die. They are badly cared for: no clothes to wear in the rainy season, sleep where there is no shelter, and no attention when sick. The one hundred youngsters on board are ill cared for by the state; most of them are quite naked, with no covering for the night. They make small fires, and huddle round these for warmth. Many are getting the germs of disease sown in their little bodies. Their offense is that their fathers and brothers fought for a little independence.

Most white officers out on the Congo are averse to the india-rubber politics of the state, but the laws command it. Therefore, at each post one finds the natives deserting their homes and escaping to the French side of the river when possible. Hundreds of people are killed in the wars, whereas if the state merely conducted a humane administration, and allowed traders gradually to develop the rubber industry, there would be no fighting. The Bakongo have gradually taken to labor, the number of porters increasing each year. The same prog-

Digitized by Google

ress would have been possible on the upper river. The decrease in the native population is very marked at Bangala, Equator, Lukolela, and Bolobo; my memory furnishes a very strong contrast, and it would be interesting to see a reliable census.

March 12. Reached Leopoldville. It is much changed: more buildings, and plenty of whites. Stayed at Kinsassa on the road; found a batch of letters, and news of everybody at home. Everywhere I hear the same news of the doings of the Congo Free State —rubber and murder, slavery in its worst form. It is said that half the libérés sent down die on the road.

March 16. News has now been received at Leopoldville that no more libérés are to be sent down here; a new camp is to be made at Bolobo. This is a satisfactory change. All the children libérés are handed over to the Jesuit mission at Kinoninza, southeast four hours from Leopoldville. A *père* told Mr. Rogers that seventy-three died during the month, and thirty-five only a month or two ago. The Jesuit mission has not yet been established two years, and they have already three hundred graves, nearly all of libérés. In Europe we understand from the word «libérés» slaves saved from their cruel masters. Not at all! Most of them result from wars made against the natives because of ivory or rubber. It is only the state officials who make war; seldom do the traders have any trouble, and the missionaries never.

The Congo Free State has gradually developed its administration until to-day it has post-offices, law-courts, its own coin, police, *force publique*, transport, and communications by land and water. All is in a satisfactory condition except the miserable system of the libérés I myself believe that the natives should be forced to serve the state as soldiers for a certain number of years, but a little consideration should be shown; if a man is married, for instance, his wife ought to accompany him. The wretched rubber business should be stopped; this would remove the great evil. It is the enforced commerce which breeds all the trouble.

Stanley Pool is a majestic place, and is well named, for it is a monster pool. At each end it is narrow, and widens out in the middle. It is studded with islands and sandbanks, and encircled by hills more or less timbered.

A native of Kinsassa is said once to have passed safely the rapids below Leopoldville. He was in a canoe, and endeavored to cross the river, but was swept into the rapids. By dexterous paddling he managed to keep his bark afloat through two miles of the wild-

DRAWN BY H. D. NICHOLS.

STATION-HOUSE OCCUPIED BY CAPTAIN ROM AT STANLEY FALLS—A GROUP OF STATION LABORERS IN THE FOREGROUND.

Digitized by Google

est waters; then she filled and swamped, and the native swam safely to a small island. Here he remained six days. To cross the rapids and relieve him was impossible. Every day he could be seen waving his arms frantically, and his cries for help could sometimes be heard above the roar of the waters. After six days he was reduced by hunger, and determined to risk his life. He gathered together some light logs, lashed these with vines into a rude sort of raft, then dropped down from the end of the island, and, paddling with a stick, was hurled about by the rapids, which, however, are not so strong as above; and although carried down a great distance, he managed at last, by working his craft into a back current, to get ashore. Battered, terrified, and almost dead with hunger, he reached a fishing-camp.

March 26. I left Leopoldville with eleven porters hired from Sims. The porters are better paid and better rationed than they used to be. I do not see any great progressive changes here, except that the Arab power is broken; but on the Congo itself there is nothing of a very startling character denoting progressive development, promising a solid, profitable future for the Congo Free State.

Toyo, the boy I engaged of Sims, is more different kinds of an ass than any one I have met for several moons. The other day, after cooking something in the frying-pan, he placed the sooty side on the drum of my banjo! I do not understand his language very well, but from gesture and disgusted look it ought to have been clear to him that I objected to that sort of untidiness. When I threw off the frying-pan, he took it up carefully, wiped the sooty part with a cloth I had given him to clean plates with, and then put it back on the banjo! He has made tea in my coffee-pot without removing the coffee-grounds. He walks into my room without taking off his hat or removing his pipe. He is ugly, slow, and has no more intelligence than a rock. I found him wearing a hat which I had given him to carry, and wiping his sweaty face on my towel. What service he could have rendered Sims's mission I do not know.

On the other side of Nkisi I passed five whites destined for the Mongala River as agents of the Société Commerciale Anversoise. They are all sub-officers in the Belgian army. It seems to me rather a heartless proceeding to send off inexperienced men to a deadly hole like the Mongala; but the state wants money, and ivory is money, and in the Mongala there is plenty of ivory. These sub-officers are poorly paid in the army, and the three hundred dollars a year, with percentage of purchases, presents to them a golden prospect.

There are markets along the trail at which plenty of food can be bought, but it is dear; the carriers do not suffer, as they now get a good ration. The state has built houses for whites and carriers at easy stages of two and a half or three hours; but generally between these points there is no shelter to be found, so if you are caught in a heavy rain you have to keep going till you reach the next stage. During the first part of my journey, in case of rain, I rigged up my tent hurriedly, and packed away in it all my principal loads; then I put up the tarpaulin, in the shape of a roof, to shelter my men and the remaining loads.

The state operations on the Congo demand a large transport, and any hitch on the road puts the up-river people in a serious position, and therefore they have to take violent measures to gain their ends. The natives are now better paid, and, besides, each caravan of over a dozen men going down to Matadi receives a pig besides the ration, which is two pieces of handkerchief for the way down. All carriers now want good, strong cloth; they wear much more than they used to. Each one now has a long cloth; one end is tied as a loin-cloth, and the long end thrown over the shoulder, or an extra cloth is carried for the shoulder.

April 5, 1895. I left Lukunga at eleven. I did not visit the state station there; in fact, I felt very seedy while at the mission station, and did not feel inclined to move about. Lukunga is the transport and forwarding station of the state's caravan service, and has undergone tremendous development; even the mission now needs ten thousand carriers a year to take up their stuff. The missions should be more particular to bring up only the things that are quite necessary. The iron frame and stand of a good printing-press were lying out in the rain at Lukunga; it never had been used, and now never can be, I should say. The type is stowed away in an old outhouse with a hole in it big enough for a man to go in on horseback. This material and the transport must have cost a lot of money. The big wooden house that was sent out to Lukunga was partly built, and then was found to be located on land belonging to the state, which claimed and obtained the heavy damages of two thousand dollars or more. A society that can stand such extravagance as that is both merciful and rich.

DRAWN BY C. M. RELYEA.

THE REV. AND MRS. LAWSON FORFEITT AT THE BAPTIST MISSION, UNDERHILL, MATADI. THE PHOTOGRAPH WAS TAKEN BY GLAVE WHILE THEIR GUEST. HE DIED IN THIS HOUSE.

With regard to this missionary business. The missionaries, who are very earnest, conscientious people as a rule, do not expect the natives to be Christians of a high, clean order. The native first becomes a Christian, according to their reasoning; then by education he gradually becomes honest, truthful, trustworthy, loyal, etc.; but when a man is dishonest, a liar, and a thief, I do not take very much stock in his acceptance of the Christian faith. About six hundred natives belong to the church at Lukunga.

I met Baron de Rezen, chief of the public forces at Lukunga and chief of the station. He agrees that rubber is the cause of all the trouble on the Congo, but excuses the state on the ground that it is necessary for it to have funds. He thinks the small posts placed among the natives without whites a mistake; the blacks, thus vested with a little authority, immediately take advantage of it and ill-treat the natives.

Between Nkisi and Lukunga the land seems to be divided into immense bowls, high ranges of hills forming the rim on each side. You have to climb to a great height to get over this rim; then below you find an undulating plateau, cut in every direction by valleys, ravines, and land-slips. All these sheltered damp places are thickly covered with timber, the wine-giving palm-tree being very prominent. Pink lines where the wine has been carried are traced all over the land, showing the numerous trails from village to village, and to the markets and the caravan roads. There is no village on the road, the settlements always being some distance away. Many villages can be seen as one ascends the high places, some of them in hollows, and some clinging to the side of a hill like a swallow's nest. Many of the plantations are made on exceedingly steep hillsides, or on the damp sides of ravines. The timber is cleared away, and manioc, maize, etc., are planted. The natives say they get much better crops by planting in such places. The land on the hilltops and flat places gets too parched. The rich timber growth in the ravines is in utter contrast to the barren-looking hills with sparse

Digitized by Google

growth of dwarfed timber. The natives are all very friendly Barongo.

April 8. After three and a half hours' fairly easy traveling from Sekololo, reached Linionzo post, where I found a party of Bakongo burying a dead carrier. As a rule, when a carrier dies he is left by the roadside; this burial either displays unusual consideration for the deceased, or is the carrying

DRAWN BY HARRY FENN.

VIEW OF MATADI ON THE CONGO.

The site of the Underhill mission, where Glave died, is indicated by the white roof on the far promontory to the left.

out of an order which at least ought to exist compelling carriers to bury their dead. The carriers here always carry on the head, and rest awhile by putting the load on the shoulders. Carrying on the head develops the neck and shoulders, and makes them as straight as arrows. These people are a hardy race, but the carrying business is a great strain on the system, as is also the constant drenching they get in wet seasons. Often they suffer from hunger, and there are never spare men with a caravan, so that in case of sickness the carrier still has to lug along his sixty-five pounds' weight, a hard enough task for a well man, but killing for an invalid. One sees some miserable wretches dragging along in the rear of a caravan. State officers often complain that missionaries employ too many carriers and make themselves too comfortable, while state officers in the far interior have to be denied even the necessaries of life from lack of transport. Twelve thousand loads are said to be in stores at Matadi. The majority of missionaries are in Africa for their whole lives, and therefore they naturally need a big transport to surround themselves with some of the comforts which would be theirs in Europe or America. Then, again, the state officers must know that the state does send up something like fifty thousand loads a year. Surely with such colossal opportunities they might arrange to supply their whites with butter and wine; the lack of these things constitutes the great grievance. Fewer guns and less powder, and more butter, would be better for both whites and blacks.

Carriers have to be coddled considerably to get them down to Matadi. All sorts of new cloth has to be introduced to attract their attention. Yesterday I saw a caravan of twenty-one natives, all of whom had received as pay a second-hand frock-coat, and in spite

Digitized by Google

of its being a hot, muggy day, were proudly wearing the garment. Some of them were carrying powder, others demijohns of wine in *matets* (rough baskets, elongated, and made of the leaf of the palm-tree), and still others had boxes. With their full-skirted frock-coats, and bare legs beneath, they presented a strange sight. For a time highly colored bed-quilts were the rage, and carriers flocked down in thousands to Matadi to receive this form of payment. Now the coats seem to be the fascination. But even with all the inducements held out, the state cannot carry up nearly enough loads, and only the railway can cope with this; then, if the Lower Congo becomes occupied by planters, the Bakongo may find new employment. Anyhow, they have now a taste for cloth; they can always get plenty of food from their own ground, but they must have cloth, which necessitates labor.

April 9. I visited Banza Manteka, the mission station of the American Baptist Missionary Union, in charge of a very determined, zealous, hard-working missionary, Mr. Richards, who has now had fourteen years of Africa, being one of the pioneers who pushed their way into the interior. For seven years he preached and tried to reach the natives with Christian teaching, but only toward the end of this time did he begin to see any result, when some of the courageous natives burned their idols, cast aside all emblems of heathen worship, and boldly declared their adoption of the Christian faith. Since then the number of members of the church has been rapidly growing, and now it has seven hundred members whom Mr. Richards can rely on as being earnest Christians who live according to the teaching of the missionaries. All those belonging to the church who have more than one wife may retain them, but in case of the death of one they may not replace her; and men having only one wife must not have more. *Mulafu*, the native drink, is prohibited. The church, made of corrugated iron, seats five hundred people, and was brought up river by the natives, who would accept no pay for their services.

To-day I saw the dead body of a carrier lying on the trail. There could have been no mistake about his being a sick man; he was nothing but skin and bones. These posts ought to give some care to the porters; the heartless disregard for life is abominable. Two days ago a native applied to me for medicine and food; he was ill and starving. The same day I met a poor liberated slave, emaciated, with nothing to eat. I gave him food, but could not understand his language, as he was a poor wretch stolen from a far-away home. Native life is considered of no value by the Belgians. No wonder the state is hated. Carrying is pushed to such an extent that it is killing the people. They are on the road the whole time, without rest to enable them to recuperate and get strong after each trip. Often the mission stations are applied to for succor; but, as a rule, when the carriers present themselves they are thoroughly overcome by the exertion of carrying a load while ill, and they generally die. Formerly the state sent out its soldiers to tie up the women when the people refused to come in as carriers. This has now been stopped. Soon the railway will be finished as far as Lufu; this will relieve the transport considerably, if the service from Lukunga to Lufu can be arranged as regards pay with the natives. The Belgians often ask what will the Bakongo people do when the railway is finished. What did they do before the white men came to rule them? Did they die of hunger, and lie unburied on the road?

Mr. Richards has thirty or forty schools and churches all over the country, earnestly attended. His own church has trained native teachers and preachers. Many villagers have themselves built schools, and pay the black teacher.

I met a number of white men going up country to-day, all Belgians, to take part in the ivory traffic and the redemption of free people! Now Belgium is asked to take over the state and make it into a colony. They will have a very bad bargain; if they do, they must change their methods, and not be merely a trading concern. We must not condemn the young Congo Free State too hastily or too harshly. They have opened up the country, established a certain administration, and beaten the Arabs in the treatment of the natives. Their commercial transactions need remedying, it is true.

April 10. Hard day's tramp to-day from Naremboli, one hour from Banza Manteka, to Masa Mankengé, three and a half hours beyond Congo du Lemba. One's carriers are most annoying. They insist on waiting two or three hours in the middle of the day, resting and eating; then, late in the afternoon, they take it into their heads to reach a certain far-away point. To-night, for instance, it was eight o'clock before I reached Masa Mankengé. I was on my feet eleven hours to-day, which is really too much. Traveling after dark is not a sensible proceeding at

Digitized by Google

all. I lost my hat, besides working myself up into a vile temper, first by being caught out late, then by having to stumble over a stony trail, across which long grass drooped, making traveling very difficult; besides, there were several muddy streams to cross.

The present site of Matadi belonged entirely to the Livingstone Island Mission, now the American Baptist Missionary Union; but the state took the land away from them, and poked them away in a corner on an elbow of rock, about the worst place in Matadi. The mission was politely asked by the state to give up the land, with the threat that if it was not done graciously, the state would requisition it. The mission authorities were informed by the state that they should receive all sorts of consideration from the state, especially on the upper river, but the promise has not been kept. For each load from Matadi to Leopoldville the stranger has to pay two francs to the state for the use of bridges, roads, etc. Half the bridges are washed away. There are huts and sheds for carriers; but you have to get permission to use the old grass huts, and the mission and trading-house carriers are often turned out of the sheds to stay in the rain with their loads. But a sick Belgian never hesitates about going to the nearest mission station, where he is well received and tenderly cared for.

April 30, May 1 and 2, visited the American mission, at Ngangela, of the International Missionary Alliance, New York. The object of the work is to evangelize a big portion of the country. They aim to support themselves as nearly as possible, and have been established six years. At present twenty missionaries, male and female, are here. About thirty have been out, and ten of them have died. The missionaries spend as little money as possible, and go in largely for cultivating the ground, with the idea of sustaining the people on the station. They are deeply religious, and have their houses smothered over with religious texts. They say lengthened grace at meal-time, and have a service every evening with a great deal of prayer. Ngangela, with a very nice station, is the headquarters of the mission.

As Africans are civilized the condition of their women-folk improves. In the native villages women do all the drudgery, and have only a miserable standing; but at the mission stations, when a man has only one wife, and is trained morally so that he is intelligent, kind, and honest, the woman receives much better treatment.

Awfully hot weather; the thermometer today indicates 103° in the shade; it is most weakening.

Mr. Harvey heard from Clarke, who is at Lake Matumba, that the state soldiers have been in the vicinity of his station recently, fighting and taking prisoners; and he himself has seen several men with bunches of hands signifying their individual kill. These, I presume, they must produce to prove their success! Among the hands were those of men and women, and also those of little children. The missionaries are so much at the mercy of the state that they do not report these barbaric happenings to the people at home. I have previously heard of hands, among them children's, being brought to the stations, but I was not so satisfied of the truth of the former information as of the reports received just now by Mr. Harvey from Clarke. Much of this sort of thing is going on at the Equator station. The methods employed are not necessary. Years ago, when I was on duty at the Equator without soldiers, I never had any difficulty in getting what men I needed, nor did any other station in the old, humane days. The stations and the boats then had no difficulty in finding men or labor, nor will the Belgians if they introduce more reasonable methods.

The other day there was an accident on the railway. A train laden with trucks and a first-class wagon was coming down Calabala Hill, homeward bound. Beyond this point there are some sharp, dangerous bends. Coming down these, the engineer tried to put on brakes, but they would not work, and the train flew along, threatening to topple into the ravine at one of the sharp bends. Weyns and Judge Gore and another white man threw themselves off the train, escaping with slight injury. The black engineer and fireman kept their posts, as did all the black passengers, twenty-five in number; but I do not think this suggests superior pluck—rather the want of it. A wagon became derailed, and slowly brought the train to a standstill by its dragging, the sharp flanges of the wheels chopping off the ends of the sleepers. A few days afterward a wagon was derailed close to the mission station at Matadi, and afterward three trucks without an engine came rushing down an incline, and sped away almost into the depot.

The railway has had great difficulties to deal with. They have made no bold cuttings where they could wriggle here and there and maintain their general direction. Trains run fairly steady; the route is through a pic-

Digitized by Google

turesque country. The engine-drivers are Senegalis, with generally a white man as inspector of the train. The Congo Railway, it is said, has already spent twenty million francs. They employ three thousand blacks —Hausas, Sierra Leones, Accra, Senegalis; the last are said to be the most trustworthy, capable men in the company.

It must be apparent to all clear-headed men that the sale of alcohol leads to the degradation and degeneration of the African races. The Congo Free State allows gin to be sold as far as Nkisi on the railway. Any amount of this fiery poison is sold for half a franc a bottle. The employees of the railway, under its maddening influence, become guilty of the gravest insubordination with regard to the exchange for natural produce. It is a short-sighted policy. Africans who are allowed to sell their produce for rum lose all energy and force, and produce only enough to give them the treasured rum. The African has no control over his vices.

A negro was listening to a white man speaking of the superiority of the whites. The native said the blacks were equally clever. «Can you make powder or guns?» asked the white man. «No; but what of that? If we knew how we could do it.» That is the great difference. On the other hand, natives often express indignation that they are so ignorant in comparison with whites.

CENTRAL AFRICA SILVER WAR MEDAL PRESENTED TO GLAVE BY THE BRITISH GOVERNMENT, ON ACCOUNT OF SERVICES RENDERED BY HIM IN THE WAR ON THE ARAB SLAVE RAIDERS ABOUT LAKE NYASSA, DESCRIBED BY GLAVE IN «THE CENTURY» FOR AUGUST, 1896. THE AWARD WAS MADE AFTER GLAVE'S DEATH.

RUSKIN.

PAINTER in words, on whose resplendent page,
Caught from the palette of the seven-hued bow,
The colors of our English Turner glow,—
Silver of silent stars, the storm's red rage,
The spray of mountain streams, rocks gray with age,
Gold of Athena, white of Alpine snow,
Cool green of forests, blue of lakes below,
And sunset-crimsoned skies,—O seer and sage,
Crowned with wild olive, fine of sense and sight,
In thy prophetic voice, through work, trade, strife,
The stones cry out: «By truth the nations live,
And by injustice die. Be thy weights right,
Thy measures true. These be the lamps that give
The way of beauty and the path of life.»

GLIMPSES OF GLADSTONE.

WITH SKETCHES FROM LIFE BY THE AUTHOR.

GLADSTONE SPEAKING.

UPON an ordinary night in the House of Commons, Mr. Gladstone generally arrived shortly before question time was over. With a somewhat apologetic air he would walk to his seat, which was of late years between Sir William Harcourt and Mr. John Morley; and, did there happen to be any political excitement in the air, his entrance was frequently signaled by a cheer from the Irish benches. Were he a little late he was wont to turn toward Sir William Harcourt or to Mr. John Morley, and make inquiry as to the course which affairs had taken. If nothing of importance had occurred, he would place an ink-bottle upon the table in front of him and begin to scribble.

But on occasion—as, for instance, upon an Irish night when the Chief Secretary was speaking, and as a matter of course was being interrupted by Mr. Sexton or Mr. Healy—Mr. Gladstone was all attention, and might be seen leaning forward, with his hand placed to his ear in order to catch every syllable that passed. Now and then an exclamation such as «Quite right,» or «Hear, hear!» would escape from him, and he would look over at the Chief Secretary with an interrogative air, as much as to say, «Now, then, how can you answer that?» and sometimes he would follow up the interruption by rising and addressing the Speaker on some point of order. In fact, whenever he was present, his was the central figure in the picture. His quick, intelligent eye took in everything at a glance, and the impulsive gestures with which he accompanied a speech invariably compelled the attention of the most lethargic listener, while, even when he was not speaking, but merely sitting in his place, no one could fail to perceive the keenness, the activity, and the indescribable magnetism of genius which lifted him head and shoulders above all about him.

I noticed that he always appeared to be very anxious and restless before rising to make a speech. His first movement upon such an occasion was to arrange his carefully prepared notes upon the box in front of him; then, taking from his pocket the historical pomatum-pot, which contained, I believe, a mixture of egg-flip and honey,—a recipe of Sir William Clarke's,—he would place it out of view on the edge of the table by the side of the box. Then he would sit, placing both hands upon his knees, with his face firmly set, and with his hawk-like eyes fixed upon the Speaker, waiting for the signal to spring to his feet. Once up, he seemed composed enough, playing with the notes in front of him, and arranging and rearranging them. Then, leaning forward and laying his hand upon the box, he would begin slowly, latterly with a husky voice. When the graceful introduction with which he prefaced his remarks was over, there would come an ominous tug at his wristbands, followed by an easing of his collar with one finger, a step back, a flash from those passionate eyes, and then—but let others describe his speeches.

As an artist, accustomed perhaps to use

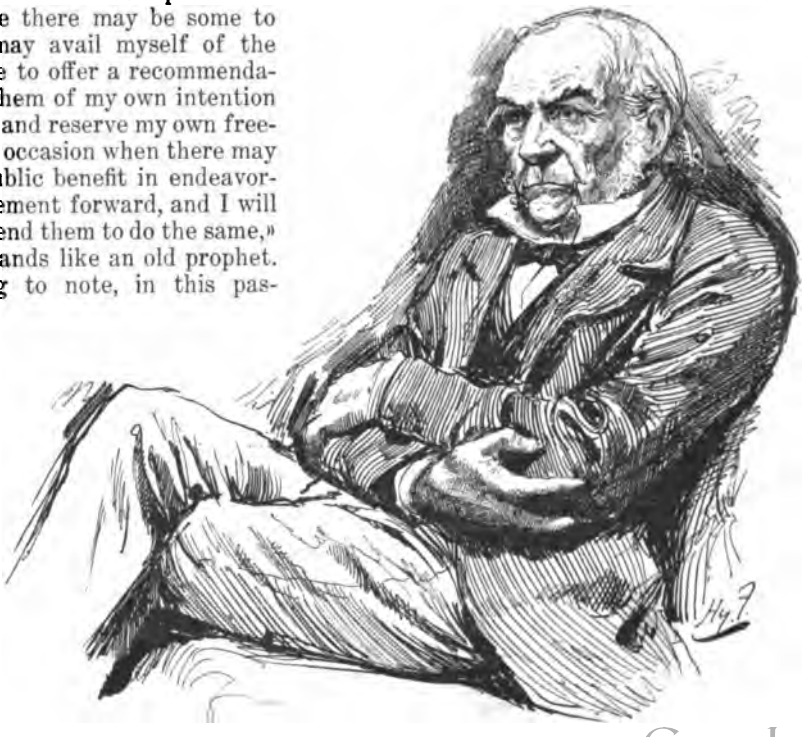
Digitized by Google

my eyes more than my ears, I content myself here with noting down certain personal traits—such, for instance, as that when the great orator paused to consider a difficult point he was wont to scratch the top of his head with the wrist of his left hand. When determined to drive an argument home to his listeners, he used to emphasize it by bringing down his ringed hand upon the box with a tremendous bang, of which energetic action evidence remains in the shape of many tell-tale dents in the boxes. I have examined these evidences, and it was interesting to find that the energy of the orator was much greater when he was out of office than when he was in power, the box upon the Opposition side being much more severely marked than its fellow in front of the Government bench, notwithstanding the terrific thumping to which that receptacle was subjected during the memorable oration of Thursday, April 8, 1886.

Another habit peculiar to Mr. Gladstone during debate was that of turning round and addressing members behind him. Upon one occasion, in 1889, he turned to his younger supporters and gave them this notable advice: «I stand here as a member of the House, where there are many who have taken their seats for the first time upon these benches, and where there may be some to whom possibly I may avail myself of the privilege of old age to offer a recommendation. I would tell them of my own intention to keep my counsel and reserve my own freedom until I see the occasion when there may be a prospect of public benefit in endeavoring to make a movement forward, and I will venture to recommend them to do the same,» —holding up his hands like an old prophet.

It is interesting to note, in this passage, Mr. Gladstone's advice to young members to keep their own counsel. He had practised what he preached from his earliest days in parliament. Keeping his own counsel and running as a dark horse have always been characteristic of him. In the Greville memoirs he is referred to as follows: «The great event which came off on Monday night was Gladstone's budget. He had kept his secret so well that nobody had the least idea what it was to be, only it oozed out that the income tax was not to be differentiated. He spoke for five hours, and by universal consent it was one of the grandest displays and most able financial statements that ever was heard in the House of Commons. A great scheme, boldly, skilfully, and honestly devised, disdaining popular clamor and pressure from without, and the execution of it absolute perfection. Even those who do not admire the budget or are injured by it admit the merit of the performance. It has raised Gladstone to a great political elevation, and, what is of far greater consequence than the measure itself, has given the country assurance of a man equal to great political necessities, and fit to lead parties and direct governments.»

The writer of this could never have dreamed of the way in which, many years afterward, Mr. Gladstone would cease to lead and direct his own government. What would the writer have said of the scene on the memorable afternoon when Mr. Gladstone introduced his Irish Bill? The rush made by noble peers for seats resembled the scramble at the pit door at Drury Lane on Boxing



GLADSTONE UNDER FIRE.

Digitized by Google

Night, and some of the younger members of the Upper House seemed to enjoy it. The Duke of Marlborough came with the rush, and Lord Fife was conspicuous in the mêlée. The demand for seats for strangers for that never-to-be-forgotten day was unparalleled, and those lucky enough to get them saw one of the most remarkable scenes that ever took place in the House of Commons. Some members, to secure their seats, slept in the House all night, and the aspect of the place in the early morning must have been indeed strange. I got down to the House about ten o'clock, and it then presented rather the appearance of the saloon of a steamer after a warm night in the Red Sea than that of the legislative chamber of Great Britain. There were members of Parliament in every state of attire—some with traveling-caps, and some with railway rugs, some resting, some restless, all weary. Some of these members, I need hardly say, belonged to the Irish contingent. Space will not allow of my entering into the details of this day, even did I not feel it quite beyond my power to convey anything like an adequate impression of a scene so memorable and so historical.

GLADSTONE UNDER WAY.

For the first time, I believe, chairs were brought in and placed down the center of the House, covering the floor, leaving a passage at each side for members to get to their seats on the benches. The members sat facing the Speaker, very much the same as on the top of an omnibus with garden seats upon it. There was not a vestige of room in any part of the House when Mr. Gladstone began his speech at half-past four o'clock. He had a rose in the buttonhole of his coat, with some leaves carefully placed about it. Getting up, as his custom was, slowly, he approached the table, and while his supporters stood and cheered him he arranged his notes on the table in front of him, and the mixture in bottles like pomatum-pots by the side of the box. It was the only occasion on which he had two pomatum-pots instead of one, which showed that there was a long task before him in the speech he was about to make. At the outset he assured the House that he meant there and then to settle the Irish question. There was to be no beating about the bush.

For some time the speech was listened to with the deepest interest and in silence, but when he referred to stripping the law in Ireland of its foreign garb, and investing it with a domestic character, he brought forth the first outburst of cheers from the Parnellites, who were not sitting on the seats, but half rising and half sitting, so intense was their interest and excitement in listening to every syllable falling from the great man upon whom their whole future depended. Then, when Mr. Gladstone went on to speak of all the Irish members sitting in a House of their own, there was loud laughter from all parts at the idea of the Ulster and Irish members sitting together like a happy family in their own country. He rose to oratory when he referred to the bill as Ireland's Magna Charta. It was a grand effort, and held the House en-

Digitized by Google

thralled, though the Ulster members, who felt that their rights and their future were being jeopardized, once or twice laughed in a jeering way at some statement which to them was incredible, and when Mr. Gladstone sat down, the cheers that came from the Irish benches lasted for many minutes, and a number of other members could not resist joining, because they felt that an oration such as this deserved the applause of those against it as well as of those in whose interests it was made.

Then there came a reaction. The buzz of conversation rose as the House rapidly emptied, and the members went into the lobbies, or found their way into the dining-room, to discuss the great speech with approval or dissatisfaction. I had that night the pleasure of dining with a number of members of the Liberal side of the House, and four or five out of about fourteen were the loudest in their protests against the speech. These four or five members, after a week or two, were induced—in most cases from self-interest—to swallow the speech, but there is no doubt, if I am a correct observer, that the effect of the speech was to lose votes, and not to gain them. No one who made up his mind to leave Mr. Gladstone over this question came back to him afterward; but many who had decided to leave him until the speech was heard made up their minds that the propositions in it were not feasible, and adhered to him, and it is a curious study of human nature to analyze the waverers during the week or two that followed this speech. It is well known to those behind the scenes that one great Liberal sat on the fence, and only tumbled on the side of Mr. Gladstone through pique at a remark made to him at a private dinner, twitting him for not taking a decided position. But I refer more to the smaller fry. Members whose instincts told them that they ought not to follow Mr. Gladstone in what he had done were moved by interest to take the opposite view directly afterward. However, I must not generalize or break away from the object of this article, which is merely to record a few impressions of Mr. Gladstone, and not to attempt to write as a politician.

How often before this had I seen Mr. Gladstone, arm in arm with his stanch supporter, Lord Hartington (now the Duke of Devonshire), walk down Parliament street to the House. Yet after the introduction of the Home Rule Bill I saw Lord Hartington assaulted by Gladstonian supporters when leaving the House after voting against Mr. Gladstone.

On the occasion of the scene that took place on the night of June 7, 1886, when he brought the question to a division, it was exactly twenty-five minutes past eleven when Mr. Gladstone rose in a crowded House, filled to its utmost capacity. Of course he received an ovation, but many felt that he would hardly be as effective as he had been on the

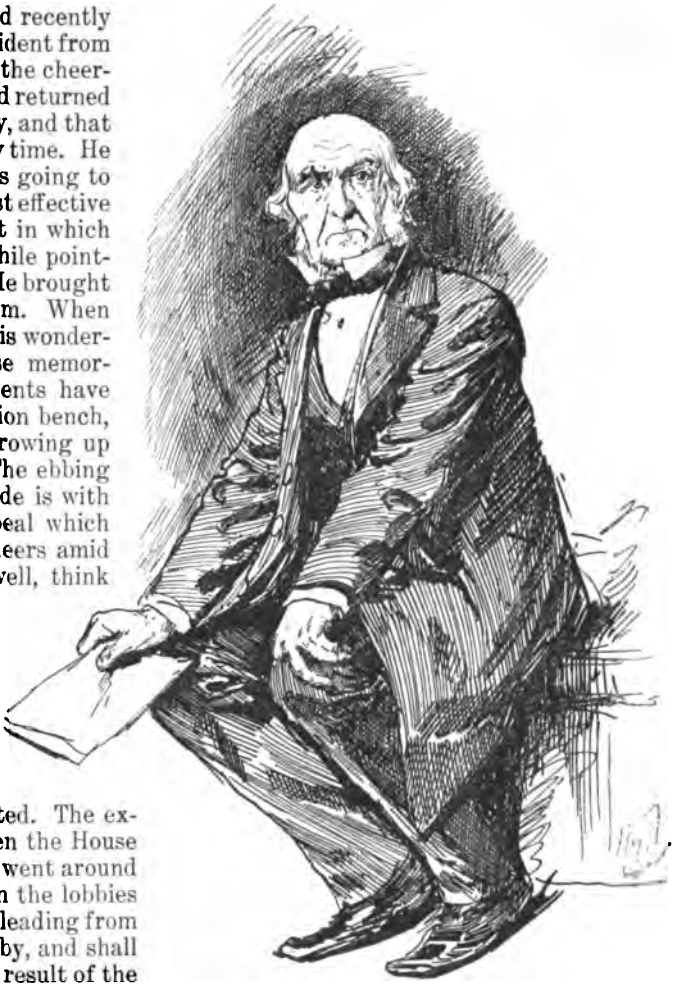
GLADSTONE AND LORD HARTINGTON GOING TO THE HOUSE.

Digitized by Google

former occasion, as his voice had recently been very husky. But it was evident from the first word he uttered, after the cheering had ceased, that his voice had returned with all its richness and intensity, and that his energy was as great as at any time. He also showed at once that he was going to make a fighting speech. The most effective of his lighter passages was that in which he criticized Mr. Chamberlain while pointing at him with his forefinger. He brought down the house with the sarcasm. When he rose to his highest point in his wonderful peroration, he uttered these memorable words (but how futile, events have shown), pointing to the Opposition bench, taking a step or two back, throwing up his face, his eyes sparkling: «The ebbing tide is with you; the flowing tide is with us.» He concluded with an appeal which brought him the tumultuous cheers amid which he sat down: «Think well, think wisely, think not for the moment, but for the years to come, before you reject our plan.»

The division was called at ten minutes past one on the morning of June 8, and perhaps there never was a division upon which so much depended and about which so much excitement existed. The excitement was at fever-heat when the House was emptied for the division. I went around to see the effect of the result in the lobbies below. I was in a little corridor leading from the inner lobby to the outer lobby, and shall never forget the scene when the result of the division became known. At first it was reported that the majority was only three (instead of thirty), and at this a cheer arose from every one present—one side because they had won, the other because the majority (they thought) was so small. Hats and sticks were thrown into the air, and all order was lost. Strangers, who are expected to observe the utmost decorum in this place, cheered again and again. Such excitement and utter disregard of the rules by strangers in the House was never before witnessed, and, I do not hesitate to say, will never be again.

Within the House the excitement was as great. It is a wonder that the different parties did not come to fisticuffs, for they seemed to lose all control over themselves in the excitement. The most conspicuous member at the moment was Mr. T. P. O'Connor, who jumped upon the seat, and called at the top of his voice for three cheers for the Grand Old Man.



GLADSTONE CATCHING THE SPEAKER'S EYE.

But as this article is merely to give the impressions of an artist, it is unnecessary for me to go further into scenes in which Mr. Gladstone took part at the close of his extraordinary parliamentary career. In fact, did I attempt an essay on Mr. Gladstone, I might be accused of exaggeration in the same proportion as my drawings of him are supposed to be caricatures.

I believe I am generally supposed to have invented Mr. Gladstone's collars; but as a matter of fact I merely discovered them. Many men wear collars quite as large as, and even larger than, his, but they are not so prominent in appearance, for the simple reason that when Mr. Gladstone sat down it was his custom to sit well forward. His body collapsed, so to speak, and his head sank into his coat. The inevitable result was that his collar rose, and owing to this circumstance,

Digitized by Google

I have frequently seen it looking quite as conspicuous as it is depicted in my caricatures.

When Mr. Gladstone, upon one occasion, met the artists of « Punch » at dinner, I was chagrined to find, when he walked into the dining-room, that he had discarded his usual large collar for one of the « masher » type. I felt that my reputation for accuracy was blighted, and sought consolation from the editor of a Gladstonian organ, who happened to be present.

« Yes,» he said; « he is evidently dressed up to meet the ‹ Punch › artists. He is the pink of fashion and neatness now; but last night, when I met him at dinner, his shirt was frayed at the edges, and his collar was pinned down behind, but the pin gave way during the evening, and the collar nearly came over his head.»

Upon great occasions in the House Mr. Gladstone's dress was very noticeable. He was then spruce, in a black frock-coat, light trousers, and wearing a flower in his buttonhole. This generally indicated that a great speech was imminent. Whenever there was any excuse for wearing them, Mr. Gladstone had a partiality for gray clothes, which were not too fashionably cut; and once I remember that he caused some sensation by appearing in the House wearing a wedding-favor. Something had evidently tickled his sense of humor upon the occasion, for he was « smiling all over » as he came in; and when he sat down by Sir William Harcourt, to whom he related the joke, his merriment seemed to increase. Afterward he repeated it to Mr. Chamberlain, and again to the Speaker, finally quitting the House to tell it anew outside.

GLADSTONE LISTENING.

In this short article I have not touched upon Mr. Gladstone outside of Parliament,

Digitized by Google

although few politicians have made more public appearances outside the House than he. Still, I have always been of the opinion that he was seen at his best in the House of Commons. When addressing public meetings out of doors he appeared to me to labor under a great disadvantage; not on account of the matter which formed the staple of his speeches, but merely because his manner did not appeal to the theatrical tastes of a popular audience. His style, in fact, was too refined for such assemblies, abounding as it did in graceful periods and elaborately constructed sentences. I am referring, of course, only to his public utterances since the year 1873, when I saw him for the first time. Sir William Harcourt always strikes me as far better suited for the rôle of a public speaker at these mass-meetings; not because his greater physique gives him a more commanding presence,—for a few others, less liberally endowed by nature in that respect (as Lord Randolph Churchill, for instance), have proved formidable rivals to him, and also Mr. John Bright and Mr. Chamberlain, who will both probably be remembered as having been more effective upon the platform than Mr. Gladstone,—but because he knew better how to appeal to popular sympathies, and had his finger, so to speak, more closely upon the pulse of the public, than his great leader in Parliament. Mr. Gladstone always eschewed clap-trap of any sort, and was as inexperienced in the use of what I may call the political blunderbuss, of which Sir William must be accounted a passed master, as in the daring recklessness of the late Lord Randolph Churchill, or in the personalities of Mr. Labouchere. It mattered little, however, after all; for so great was the public admiration for the illustrious leader of the Liberal party that merely to see him was to the majority of his audiences enough.

Penetrating as his voice was, it was absolutely impossible for any but those standing immediately about the platform to hear him upon such occasions as that of the famous Blackheath meeting, or those at Birmingham and elsewhere; but the masses nevertheless came in thousands, and were more than repaid for their trouble by catching even a distant glimpse of William Ewart Gladstone.

Harry Furniss.

THE KINDS THAT CURED.

WHEN the weather was warm, as on this June day, Cutler's Island folk enjoyed the interval between forenoon meeting and Sunday-school, and made large use of it. Few of the pews in the meeting-house were cushioned. Neither was the minister's rhetoric. As his mild monotone ended with the benediction, there was a general stir and stretch. Elderly women and lovers sought the burying-ground. The children wandered off to Checkerberry Knoll. The men grouped at the steps, and, above all others, exemplified that restraint which appertains to Sunday clothes. Secular conversation was tabooed, and though theirs was that Puritan habit of independence which does not fear to criticize the minister, they would not do it on his and the Lord's day.

If the sun shone and no wind blew from the east, it sometimes chanced that the severity of custom insensibly moderated. The meeting-house had a wide outlook; it fronted the Atlantic. When the warmth and the wideness had wrought, the people spoke of their successes, which were «mercies,» or preferably compared their states of health, finding therein occasion for sympathy or thanksgiving. Even the class-leader, Brother Mitchell, felt that illness was a theme appropriate to the Sabbath; discussed at the church door, in view of the graveyard, it brought the other world appreciably near. His lean and long-drawn face was capable of emotional changes at such seasons. It broadened almost into tenderness when Eli Martin appeared; and before he could reasonably expect the congratulations he coveted, the class-leader's welcome was ready.

«Well, brother—» His voice creaked and failed, like a machine out of use. He stared at Martin with the pathetic earnestness of the tongue-tied, and shook his hand vigorously up and down.

«Oh, pooty well, thank ye.» The newcomer nodded impartially around, straightening himself to stand inspection. «Et six flapjacks f'r breakfast, I did!» he proclaimed, chuckling. «Victuals taste good ag'in. Cal'late I 'm beginnin' to pick up flesh!»

The listeners nudged each other and exchanged that amused, superior smile which

Digitized by Google

sailors reserve for the interesting but unimportant landsman. Had they sympathized with Martin, the same smile would have preceded its expression—the freemasonry of the sea requires it; but there was more of forbearance than fellowship in the tone of old Cap'n Bunker, who spoke for all.

«You been laid up ag'in, Eli?» he demanded.

«Well, I ruther guess I hev!»

«Injun doctor cure ye this time?»

Martin flushed and looked wrathful. He opened his mouth to reply, thought better of his purpose, and shook his head, smiling somewhat painfully. His manner suggested ability to say much, if he would; yet he waited in evident apprehension for the next question.

«What ailed ye, Eli?»

«Dyspepsy, wa' n't it, brother?» the class-leader feelingly murmured.

«That wuz some of it—that wa' n't all, though,» Martin hastened to add. «I did n't rightly git over the grip, ye know. That left me narvous, weak stomach, mouth parched, all-over-trembly spells, tired feelin', blood poor, headache, no appetite, ringin' in m' ears, lame back, pains in my j'ints. I s'rmise I had 'bout 's many symptoms 's any man on the island.»

«Sho!» said the class-leader.

«Why did n't ye take Dr. Solomon's Pills?» Cap'n Bunker inquired. «They saved ye, I heerd, last time ye wuz dyin'.»

Somebody laughed aloud. The class-leader sighed reproachfully, and went within. Martin sent a wistful glance after him, and another toward the road, but pitched his voice to amiable explanation, and strove to duplicate his smile.

«Them 's good f'r liver complaint 'n' fever-sores,» he argued. «Great things f'r salt-rheum they be, too. But, my king! they did n't take holt no more 'n nothin'. Ferguson's Specific did n't, nuther; n'r Old Mother Clay's Extract o' Pinkweed; n'r Golden 'Intment. I tried 'em all. 'Lectric plasters eased up my back a little. I got one on now. I 'd feel kind o' jub'ous ef 't wa' n't helpin' me, f'r I d' know how in Tunket I sh'd go to work to git it off.»

«Y' ain't told us yit what did cure ye, Eli,» Cap'n Bunker intimated at the end of an ambiguous grin.

«Oh, 't ain't no secret. 'T wuz Potter's Sars'perilla.»

There was defiance in Martin's voice as well as certainty; but Cap'n Bunker only rubbed his beard, and studied the smaller man with an appearance of considerate friendliness. For the moment the two were almost alone. The bell had given warning that Sunday-school was about to begin, and while teachers and scholars entered the church, others, fearing a possible call to «take a class,» set eager faces toward the road. The cap'n was unregenerate, alien to such dread; but Martin, warned by a sense of his own danger, forgot his pride and his defiance, and stepped hastily from the platform.

«Guess I better be gittin' along home,» he muttered. «Like 's not my brown bread 's b'ilin' dry.»

He clutched at his hat as he spoke, and caught his breath with a gasp. Beyond the shadow of the church the air was furnace-like, and the broken clam-shells that paved the road beat back a lusterless glare of heat. Cap'n Bunker, slouching beside Martin, looked off at the restful sea-line; but Martin bent his head and groaned.

«I mistrust my eyesight 's failin' me,» he announced. «Kind o' a blind stagger I had then.»

«What you want, Eli, 's to git ye a woman.»

«Huh!»

«Bein' 's the old lady 's dead, 'n' ye hev to scuff along by y'rself, ye know,» the cap'n pursued in his most omniscient manner. «I don't count none on what little Reuben's wife does f'r ye; she *is* Reuben's wife, 'n' she ain't yourn. 'F ye had somebody right 'longside to soak y'r feet 'n' put poultices on ye, 't ought to save ye consid'able.»

A dull red burned in Martin's face. He stared straight ahead, clearing his throat with a sound of confusion. Just beyond, the clam-shells ended where the road climbed a naked ledge, and he gathered a handful of stones and inspected them narrowly, the intent scrutiny seeming to parallel the course of his thought. When he threw them away he was ready to speak.

«D' know 's anybody 'd hev me,» he said, with a nervous laugh. «Over 'n' above that, I d' know 's I sh'd be contented with most women. Mother sp'iled me for 'em, I cal'late. She knowed, ye see. Now Reuben's wife—I ha' n't nothin' ag'in' her, but does seem 't when she 's gi'n ye a doset o' salts, 'n' follered it up with Pinworm Elixir, she 's come to th' end o' her doctorin'; 'n' it stands to reason—»

«Certain!» the other interrupted. «You want a woman that 's had experience. Somebody like that sister 'f Aunt Mary Curit's. You seen her yit? Kind o' curi's 'bout her.»

he added reflectively. «They tell me she did n't hev no health till lately.»

«Don't say!»

«That 's what I hear. Near 's I c'n make out, she 'n' you wuz tarred with the same brush. You ought to talked to her to meetin'.» Martin did not respond, and the cap'n, disappointed, fell away from him a little, and glanced casually backward. When he turned again he looked happier. «Guess ye got y'r chance now,» he said. «Here 's Mis' Peters 'n Aunt Mary comin'.»

A shy and doubtful curiosity made Martin hold his ground. His eyes passed over the red face and straining figure of the older woman, and dwelt upon an individuality of the precise and rigid sort that tempers the atmosphere. As one not unmindful of social obligations, the stranger held a parasol; but she lowered it as she approached the men, and stood prepared to look the sun and the islanders equally in the eye.

«Ain't this awful!» Mrs. Curit exploded. «I never see sich weather f'r June, did you? 'N' yit, I can't git her to walk a mite slower 'n she would in Janooary! I tell her she 'd ought to be thankful she ain't so stout 's I be!»

«Well, yes; I s'pose she had,» Martin assented. The bovine compliment he might have tendered had been effaced by the stranger's placid but crushing dignity. He hardly realized that he had spoken when Mrs. Curit took up the burden of discourse.

«I cal'late you know how 't is,» she went on, with a laugh that was not wholly mirthful. «'S I wuz sayin' to Dr. Blossom, you 're 'bout the fattest man on the island; 'most fat enough to kill, 's they say. ‹Yes,› says he; ‹'n' paytent medicine 'll do the job some day,› he says. What you doctorin' with now, Eli?»

Martin colored, and drew himself up. «That 's nuther here n'r there,» he said stiffly. «All is, I got sense enough to tell salt water from cream tartar, 'f they *don't* come out of old Blossom's bag!»

«Oh, I ain't sayin' anything ag'in' paytent medicines,» Mrs. Curit was prompt to reply. «I tell people, 'f it had n't 'a' been f'r sars'perilla, Loizy would n't 'a' been here. Three doctors give her up—three doctors 'n' a hospital.»

«I sh'd s'pose you 'n' Eli c'd feel f'r each other, 'cordin' to what I 've heerd tell,» Cap'n Bunker observed. He signaled Martin to take up the utterance; but that reminder was superfluous; enraptured with the novel sense of comradeship, the invalid was anxious to speak.

«I took Potter's Sars'perilla, too!» he cried, out of his joyous enthusiasm.

The stranger looked at him, and smiled faintly. «I 've heard of it,» she said. «It was Mayo's Sars'perilla that cured me.»

II.

OUTING-SHIRTS, russet shoes, and cigarettes are known to Cutler's Island, and it has ceased to marvel at the bathing-suit; but when winter banishes these, the islanders bid comprehensive adieu to the refinements of civilization, and turn, perforce, to the native and the general. Cutler's lies open to the Atlantic, and between the island and «the main» drift-ice grinds and surges with the tide, or clings in a doubtful solidity that the wise man distrusts. For the most part, the passage is left untried, save by the mail-boat, which maintains a tenuous but persistent link with the greater world. Thanks to her initiative, other roads are opened, and it was because of her that, on a certain January afternoon, Aunt Mary Curit appeared at the home of Mr. and Mrs. Eli Martin.

«Got some news f'r ye, Loizy,» was the visitor's greeting. She sank into a rocking-chair, wheezing desperately, but atoning for her breathlessness by an ardent face. «I see the' wuz a postal-card for ye, 'n' when I read it I says, ‹I must take that right over!› says I; 'n' there 't is—that 'n' the ‹Seaport Beacon.› Guess ye 're glad I come, ain't ye?»

The other smiled and nodded, receiving the card between a floury thumb and finger. Her face changed ever so little at the reading. «So 'Mandy 's got a boy baby,» she said in a meditative way, after a moment. «Well, I s'pose I 'm a grandmother.» There was no bitterness in the tone, but neither was there fervor; and the readiness with which the speaker returned to her sifting and stirring seemed to the older woman to savor of the irreligious.

«I tell Uncle David 't I think jest as much o' my grandchildern 's I do o' my childern,» she suggested virtuously.

«Yours are all girls. I would n't find any fault with a boy baby, if he stayed so. I hate to think of wastin' a cunnin' little boy to make a man.»

«Sho! You 'll feel diff'rent, come April.» The visitor laughed in fat, comfortable fashion, but her utterance did not lack the note of sympathy. «Course I know men underfoot 's a terrible nuisance, but what ye goin' to do when the weather won't let 'em work? They hev to be somewheres.»

Digitized by Google

Mrs. Martin made no reply, though there was the emphasis of speech in her manner of closing the oven door. Her sister was content to be silent, to survey a room that more than satisfied the local ideal. A certain clean and precise permanence was the characteristic of the place. The chairs and tables seemed established, even inevitable. The minor furnishings appeared to cherish an aggressive consciousness of fixed utility. So much was true even of the bottle at the end of the mantel. As for that, indeed, it told so eloquent a tale of use as to appeal to a New England conscience for cordial recognition. «I s'pose you 'll tell 'Mandy to build up on sars'perilla, won't ye?» Mrs. Curit said.

«I 'm sick o' the name of sars'perilla!»

The sister nodded knowingly, but did not hazard reply. The hostess attempted no further conversation. When she had removed her baking-dishes, she took an unfinished stocking, and sat down by the window; and the two were quiet and busy with their own thoughts until at length the caller's eyes inspired her tongue.

«Cap'n Bunker!» she announced. «'N' I do believe he 's comin' here! Make him wipe his feet, Loizy,» she found opportunity to whisper; «he 's the carelessest man! How d' do, Cap'n Bunker? Quite a stranger! Aunt Nancy pooty well?»

The newcomer took time to settle himself by the stove before he condescended to the gnarled and weather-beaten smile that preceded speech. «Oh, middlin'!» he said indifferently; then, with a warmer impulse: «Stands it 'bout 's well 's any woman in the State of Maine, she does,» he added. «Like all o' Grandsir' Higgins's childern, she is—tougher 'n pine-knots b'iled down. You 're lookin' tiptop, Mis' Martin. I b'lieve I ain't seen ye afore sence the fust time I see ye—that air hot Sunday in June.

«I guess not.»

«What lots o' changes the' 's been in six months, ain't the'?» the other woman struck in. «Here 's Loizy come to visit a spell, 'n' got married ag'in, 'n' her 'Mandy with a baby, 'n' Abe Parker's folks moved to the main, 'n' our clam-house burnt, 'n'—»

«Huh!» Cap'n Bunker growled. «Where 's Eli?»

«Eli? He went down t' the store.»

«My woman wants him to come over 'n' put up a cupboard in the settin'-room.» The cap'n's voice showed him divided between amusement and contempt. «Ain't got enough, she ain't. Next thing, I cal'late, 'll be closets in the hen-coop to stow away her trash in.»

«I d' know how a woman 'd git along without closets,» said Mrs. Curit, in all certainty of conviction.

Cap'n Bunker viewed her stonily. «N'r I,» he agreed. «'F I 'd knowed as much about women folks when I built 's I do now, I sh'd 'a' built 'leven 'r twelve closets, 'n' hitched the house on 'most anywheres.»

The utterance had that accent of finality which signifies the hopelessness of speech; and though the woman might have wished to make explicit rejoinder, a pettish movement of her chair was all that she found possible. That, as it chanced, put her in the way of compensation. Something out of doors attracted her whole attention, and by the easy stages of interest, curiosity, and eagerness she had quite regained her usual self when Eli Martin bustled in.

«What is it, Eli?» she turned to ask. «I knowed suthin' 'd happened when I see ye a-comin'. You got that money Rufe Walker owed ye?»

«Who? Rufe? Ketch him payin'!» The master of the house wagged his head and chuckled as though a bad debt were a fountain of mirth. In the face of Cap'n Bunker's sour stare he tried to content his humor with a smile; but the effort failed, and he laughed more loudly. Between his jollity and the bottle on the mantel there seemed some occult connection; he regarded it a moment, holding the attitude of one who expects comprehension and sympathy, before he controlled himself to speak.

«S'pose ye 've all been readin' 'The Beacon,' ain't ye?» he suggested,

«I ain't. I 'd prosecute the man 't dropped one in my swill-barrel!»

«Why, Cap'n Bunker!» Mrs. Curit protested. «I 'm sure the' 's real nice pieces in 'The Beacon'—'n' all the deaths 'n' marriages. What is it, Eli?» she repeated. «They caught the feller 't passed that bad ten-cent piece off to Seaport?"

Martin's face had clouded when Cap'n Bunker spoke. It lightened again as he unfolded a newspaper and pointed to the top of a blurred and greasy column.

«Pooty fair likeness, I take it,» he commented, in the manner of one who would be modest; «pooty fair, 'f they hev made my whiskers a little too p'inted.»

It was an engraving of that common kind wherein the artist arrives at a certain intelligible unity by burlesquing the striking features and exaggerating all. So far from lacking resemblance, however, it seemed grotesquely to image the truer Martin—him

who might have lived his life in those idyllic isles where personality goes untrammeled of preachers, public opinion, or pantaloons. In this aspect it invited consideration; but that which chiefly engaged Cap'n Bunker, so that almost unconsciously he read it aloud, was the deliverance for which the portrait stood sponsor:

I Am Now a Cured Man!
Restored to Health and Happiness by Potter's!
Are the Days of Miracles Past?

The following testimonial came to us *unsolicited*. What would some of the venders of worthless nostrums give for such an indorsement from a leading citizen? *They never got one, and they never will.* It takes the best medicine known to do such cures—viz.: *Potter's Sarsaparilla!*

«Land sakes!» gasped Mrs. Curit.

«Why don't ye read the rest of it?» Martin hinted. He leaned back in his chair and beamed about him, convinced that his friends and the community had part in his glory, and blandly willing they should have. In such serene assurance of public benefit, he felt that he could afford to enter a disclaimer. «Course I did n't tell 'em I wuz a leadin' citizen,» he said. «I cal'late you 're 'bout the leadin'est on th' island—you 'n' Uncle Jack's Jim.»

«No, I ain't, nuther. I never took no sars'perilla.» Cap'n Bunker had grown suddenly genial under the mellowing influence of his host's good humor. Unaccustomed laughter shook him. He grinned as heartfully as Martin. He even squandered a smile on Mrs. Curit. «Thinkin' how cunnin' ye wuz about it, Eli,» he explained. «D' you know he wuz goin' to git his name up this way, Mis' Martin?»

«No.»

«No,» her husband repeated. «I did n't reelly go to set about it. Took me a long while, it did, to make up my mind 't wuz my duty. But when I see s' many people spendin' hard-earnt money f'r these 'ere wuthless nostrims, 't kind o' seemed to me 's though I 'd ought to p'int 'em out a medicine 't doos amount to suthin'.»

«Certain. I s'pose you 'n' Mis' Martin doctors with it altogether?»

The woman made no reply. Martin glanced sidewise at her averted face, deliberating his form of words. «She—she wuz kind o' sot on Mayo's,» he confessed. «That 's to say,» he added more briskly, with another look aslant, «she *wuz*.»

«Mayo's what?»

«Why, sars'perilla.»

«That wuz what cured *her*,» Mrs. Curit interpreted.

«Yes, I know. Folks git notions when they 're ailin'.» Martin's tone was kindly, but distinctly superior. «I s'pose Mayo's 's better 'n nothin'. 'N' yit, I 've heard said 't wa'n't nothin' but m'lasses 'n' water 'n' dandyline, with a little alkyhol put in so 't the mess would n't sour.»

«Kind o' rough on you, Mis' Martin!» The cap'n's was a sufficiently good-humored challenge, but the woman seemed to ignore it. She had opened a closet and employed herself within. At the unanswered comment conversation flagged. Cap'n Bunker stared at the floor and whistled through his teeth. Mrs. Curit wondered, open-mouthed, at Martin. He practised that expression of unaffected benignity which should accompany fame. Mrs. Martin went out of their thoughts. They hardly looked at her when she appeared with shawl and overshoes, and no one roused to deeper interest as she proceeded to put them on.

«Where goin', Loizy?» Martin asked indifferently.

«Down t' the store.» Her voice was passionless, but resolved, and her deliberate movements had the quality of determined and irresistible force. «I 'm goin' to get a bottle of Mayo's Sars'perilla,» she volunteered on her way to the door. «'F I should be sick, I 'd want somethin' in the house to take besides slops.»

III.

«'F IT cured Loizy's neuralagy, I d' know why it would n't be good f'r his azmy. D' you, Mis' Bunker?»

While the cap'n inhaled the fumes of his pastil, he was powerless to resent advice or criticism, or the pity, more akin to curiosity than love, which Mrs. Curit bestowed upon him. Under such circumstances the choking atmosphere of the Bunker kitchen was rather an incentive than an impediment to free speech.

«I ain't never had azmy,» the visitor chattered on; «but don't seem to me 't anybody c'n be much wuss off 'n Loizy was with ja'nders 'n' narvousness 'n' neuralagy 'n' rheumatiz. Hed to creep up-stairs, she did, 'n' everything a-sourin' on her stomach! I d' know what would 'a' become of her 'f she had n't run across Jake Patterson's wife. Mayo's Sars'perilla cured *her* of catarrh 'n' dyspepsy 'n' sunstroke; 'n' when Loizy heard o' that she sent for it, 'n' she had n't took more 'n fourteen bottles 'fore she wuz able to do her washin'.»

The pastil was burned out. As the last

Digitized by Google

thread of vapor fluttered from its ashes Cap'n Bunker passed his hand across his beaded forehead, and, sitting upright, drew an experimental breath. It was a qualified success, and he ventured an easier position and an attempt at speech. «Mayo's Sars'perilla show any sign o' curin' Eli?» he asked hoarsely.

«Eli acts ridic'lous!»

«Ain't him 'n' her got done wranglin' yit?»

The word was objectionable, and Mrs. Curit would not directly answer the question. «Loizy don't make no fuss with nobody,» she protested to Mrs. Bunker. «'T ain't her way. She 'n' her first husband got along splendid, f'r all ‹Thunderation John› wuz the name he went by. Never wuz a better man round the house. Course, he 'd ought to been. Loizy 's neat 's she c'n be, 'n' there ain't no better cook anywhere round. I d' know what more a man wants, d' you?»

Cap'n Bunker had begun to whistle, and his wife had started a long seam. Each occupation seemed absorbing; neither man nor woman spoke; but somewhat in their attitude may have appeared to Mrs. Curit to warrant her continuance.

«As f'r Eli,» she said, «well, there!» A despairing gesture rounded the sentence. «Eli 's spleeny, 'n' he 's notional—that 's what it is. The way his mother cosseted him wuz enough to spile any man. I did n't think he 'd ever spunk up to a woman, 'r find one good enough for him, did you? Wa' n't it funny to see that old bach runnin' a'ter Loizy, 'n' pesterin' her to marry him right off? I notice he did n't hev much to say 'bout Potter's Sars'perilla when he used to come round our house. Everything Loizy done wuz all right. 'N' jest 's soon 's they wuz settled, what does he do but fetch out his bottle, 'n' try to git her to take some, 'n' tell her 't wuz all imagination 't Mayo's cured her! She done a good deal more 'n I would to pacify him; she put her bottle away out o' sight. I don't believe it 's a woman's duty to make a graven image of her husband that way, d' you?»

Mrs. Curit evidently assumed that the silence of her auditors gave consent. There was neither expectation nor desire in the eyes she turned upon them, and no trace of discomfiture touched the persistent undertone which she hastened to renew.

«'Long 't the last of it Eli got to talkin' 'bout the scriptooral call of a wife to be guided by her husband. Loizy did n't contradict; 't wa'n't no use; but he did n't p'suade her it 'd tickle the Lord if she took Potter's Sars'perilla. I cal'late she fairly had to turn on him at last, a'ter his pictur' come out in the paper. Then she put her bottle on t' other end o' the mantelpiece, 'n' took her doset three times a day, right 'fore his face 'n' eyes. I think she done right, don't you? I told the minister so. Land knows, though, where it 's goin' to stop! Ye see, her sars'perilla folks heard how she got cured, 'n' they want to print her pictur', 'n' Eli's 'bout crazy over it. Says it 'd be a burnin' disgrace f'r man 'n' wife to be callin' each other story-tellers, same 's in the papers. I d' know 's Loizy *will*, 'n' I d' know *as* she will. All is, I wish 't they 'd both got cured by the same thing!»

Assured that she had been eminently neighborly, and that she had laid on her neighbors the obligation of speech, Mrs. Curit suddenly ceased, and looked from one to the other. The woman tightened her lips and sighed equivocally. Cap'n Bunker rose with exaggerated stiffness, and made his way to the window. «Wind 's haulin' round nothe-east,» he commented. «Reg'lar April weather, ain't it? What 's Uncle David lot on plantin' in that air heater piece?»

«P'tetters,» Mrs. Curit said crisply. She felt that an invited confidence had been scorned, thrown back upon herself; but for the moment her helplessness equaled her chagrin. «I s'pose you 'd ruther hev azmy 'n take Mayo's Sars'perilla,» she suggested, when at length she found herself able to speak. «'N' yit, I sh'd think azmy 'd be kind o' wearin'—on the folks in the house, anyway.»

«Oh, azmy ain't the wust thing in the world,» was Cap'n Bunker's smiling assurance. The smile was all for her, to show that he understood. «I c'd stan' it fust-rate if it 'd leave me a little more breath to cuss it with. 'N' other folks git used to it, same 's they do to childern 'n' fools. Here 's Eli a-comin',» he added, with a broader smile. «Looks kind o' peaked, Eli does. I s'rmise he must 'a' missed ye, 'n' come to hunt ye up.»

The first impulse of her wrath might have carried Mrs. Curit through the door, had it not been stayed by Martin. His somber face was so far from motiveless that while she stared at him her angry mutterings ceased, and she returned to her chair, intent to know his purpose. Martin shrank from her, and hesitated to close the door; but Cap'n Bunker's greeting was so full of invitation that he finally edged within, and huddled, a damp and distressful figure, in the most distant chair.

Digitized by Google

«What 's the news, Eli?» the cap'n demanded.

«That 's what I come to find out. You take the ‹Mornin' Eagle,› don't ye?»

«I see it. Ain't nothin' in it to-day but a harricane in the West Injees.»

«Nothin' 'bout anybody here on th' island, I take it?»

«N-no. Not 'nless it 's in the advertisements.»

Watching Martin, noting that he started and paled at the word, Mrs. Curit seized upon it. «Loizy's pictur'!» she exclaimed. «'S that in the paper?»

«What fer? I cal'late 'f 't wuz I 'd be likely to know.» He counterfeited surprise and certainty, but his rejoinder lacked the force that promptness would have lent it. «'Cordin' to law 'n' gospil, I must hev,» he went on hesitantly. «Women 'd ought to hev their husband's permission 'fore they go flourishin' round in public. What say, cap'n?»

«Onmanageable critters, women be,» was the serious answer. «Can't never tell where to hev 'em. I d' know 's I 'd advise any young feller to git married, 'f I hed to tell the truth about it. Would you? Hey?»

«I—I d' know.»

Martin's tone was tremulous with that indecision which to the man who talks is the supremest misery. In the absence of solicitude he was silent, staring dismally out of the window. Night was drawing in over fog and a mist of rain. The semi-palpable dusk already shrouded the craft at anchor in the creek, and was fast inclosing the nearer land. Even Martin's wayward senses felt the influence of the desolate and ghostly darkness. His face was grayer and blanker than ever when he suddenly rose and stepped toward the door.

«Lookin' kind o' mauger, Eli!» the cap'n called out. «Takin' y'r sars'perilla right along, be ye?»

«Mm-m.»

«Why don't ye let other folks take theirn?»

The question was involuntary and an escape. Even while she asked it, Mrs. Curit had the air of disowning temerity, and when once the words were uttered she was helpless. Eli looked at her unfathomably, and was dumb. He nodded to Cap'n Bunker. Then he shut the door, and they heard him splashing down the yard. Upon the other visitor the sound had an awakening effect. She leaned forward and gathered her shawl.

«Won't ye stay 'n' hev some supper?» the hostess asked.

«No, I thank ye. I—I guess I better be goin'. I d' know—»

She left the sentence incomplete. It was as though a duty had appealed to her with irresistible force, or a quick consciousness of incorrigible fatuity had made her voiceless and hurried her to hide. Mrs. Bunker went to the window and looked curiously after her. The cap'n fell to filling his pipe, and, that done, set it against the mantel and reached up for a match. Then a neglected opportunity seemed to occur to him. He opened the door, and spat significantly into the path.

IV.

THE «boy,» Seth Bunker, needed a «chance.» That was ostensibly the reason why Cap'n Bunker resigned command of the *Mountain Maid*, leaving his eldest to direct the freighting of stone and the building of wharves. The truth was that the cap'n was old and worn and in need of rest. He did not greatly desire it. He had never acquired that accomplishment of contented idling, which is best attained by the serious effort of a lifetime, and he might have fared ill had not action of a milder sort inevitably engaged him. It mattered little to the cap'n whether he built a superfluous pigsty or hacked at his apple-trees or baited a trawl for a belated fisherman; the one necessity was to be able to feel that he had deserved his dinner. When serious employment failed, he compromised with his conscience by doing everybody's errands, and he was upon the discharge of this self-delegated duty when he and Mrs. Curit encountered on a memorable day in June.

«You been t' the post-office!» she complained, with an accent that made the fact appear a cause for tears and shame. «You need n't 'a' took the trouble, seein' 's nobody asked ye,» she added ungraciously. «I s'pose th' ain't no mail f'r our folks, is the'?»

«Ain't none f'r you. I got a letter f'r Mis' Martin, 'n' a circ'lar f'r Eli. Oh, I 'm goin' right over.» She had offered to receive the envelops, but he made no answering movement. «Want to see Eli, ye know,» he explained, with a smooth, confiding smile. «Kind o' miss Eli, I do, when I don't see him to meetin'.»

«Why don't ye go to meetin'?»

«Who, me? Jest 's sure 's I git there, 'n' git set down, this cussed azmy ketches me, ker-whoop!»

He put on an expression of patient endurance, and coughed once or twice by way

«WHERE GOIN', LOIZY?»

Digitized by Google

of confirmation; but the woman vouchsafed no sympathy. Her action might have been intended to serve as comment. She turned and went on in his direction, silently at first, like one who debates a sudden resolution and plans its enforcement; and when at length she spoke, her thought proved elusive. «I d' know what you want to see Eli for,» she challenged.

«Oh, I kind o' like to know what 's goin' on, same 's you do.»

«I b'lieve you make fun of Eli,» the other rattled on regardlessly. «I do, 'Liphalet Bunker! When Eli grows wuss every day, 'n' him callin' her ‹Mis' Martin,› 'n' she callin' him ‹Mister Martin,› like a—like a dood! 'N' you standin' off 'n' laughin', ain't ye? All is, 'f you be, Eli 's my brother-in-law, sars'perilla 'r no sars'perilla, 'n' I—»

«Sh-h-h! Sho, Aunt Mary!» The cap'n's voice was grieved and pitiful. «Why, Eli 'n' me 's brothers,» he protested. «Don't we b'long to the Sons o' Temp'rance? 'T ain't me that 's sot him ag'in Mis' Martin; you know that, don't ye? I d' know 's I c'n help it, nuther. 'N' yit, I ain't so sure but I—»

He stopped and shook his head, as though he hesitated at a dangerous promise; but he had suggested hope, and Mrs. Curit would not be put off. There was atonement for her late suspicion in the eagerness with which she faced him. «What was you goin' to do?» she demanded.

«Well, I d' know, sca'cely. I run 'f a notion 't I 'd play some kind of a p'int on Eli, but I ain't figgered it out yit. Jest a-studyin' on it, I wuz, when you come up. Tell ye what 't is, Aunt Mary,»—he lowered his voice and fell into the attitude of conspiracy,—«I 'll do suthin' right off, 'f you say so. There 's Eli putterin' round the back door-steps, 'n' she ain't nowheres in sight, 'n' I can talk to him 's man 'n' man, ye see. Now you keep along over t' our house, 'n' visit a spell, 'n' if I don't make Eli toe the mark—»

The words of mystery weighed down the woman's lips. She and her companion had halted at the bars that inclosed Martin's field, and she resolved her soul into a stare. An element of distrust was in it; somewhat of the threatening qualified her parting gesture of consent. The cap'n perceived that her future deeds were problematical. He watched her well out of sight before he ventured to join his neighbor.

«How are ye, Eli?» was his salutation. «Mis' Martin to home? Got a letter f'r her, I hev. I 'll drop it int' this 'ere chair inside the kitchen winder, shall I? Here 's suthin' f'r you.»

«Don't say! I ain't had a letter in a dog's age.» Martin laid down his hammer to wipe his hands on his trousers, and stooped interestedly over the envelop that the cap'n held out. It was not sealed, and while he studied the superscription, a bulky circular, loudly typed, luridly illustrated, and printed on pink paper, fell from it. The cap'n previsied its nature before he bent to pick it up. He did not venture remark as he extended the paper, and Martin's action was equally wordless. He crumpled the circular into a ball, and threw it behind him.

«Azmy trouble ye much lately?» he asked in the same instant.

«Oh, nothin' to speak of, when the wind 's this way. Curi's! That 's what I come to talk to ye 'bout.» The cap'n sat down on the doorstep, sighing comfortably as he stretched out his legs. «Aunt Mary wuz a-comin', too,» he casually observed; «only I kind o' s'rmised my woman wanted to see her, 'n' so I sent her along.»

They exchanged that passionless but searching glance which, between married men, says so much and says it so safely. Then Martin seated himself and prepared to listen. Despondency had become his portion. He sighed frequently, and his head hung low; but natural curiosity was not extinct, and at its worst his heavy face gave indication that it might possibly lift and lighten.

«I wuz thinkin' you 'n' me could cook up suthin' f'r azmy, Eli,» the cap'n began. «Seems like throwin' money away to pay half a dollar f'r a box o' them pastils—all smoke 'n' stink. You 're pooty well posted on medicines; I did n't know but you might think o' suthin that 'd burn up 'n' fetch a man's breath same 's they do. How 'd dried mullen 'n' sulphur do? Would ye put in a pinch o' tebacker?»

There was a gleam of speculative interest in Martin's mild blue eye, but he silently waited for the cap'n to continue.

«'N' then the' 's gin'ral medicines—bitters 'n' sich—them that cures 'most anything. Ain't no great difference in 'em, is the'? Well, here 's our folks payin' 't the rate of two dollars a quart for 'em. 'F we 'd git 'em up suthin' jest 's good f'r two dollars a gallon, I cal'late we c'd keep that money to home. Say we b'iled down thoroughwort 'n' penny-r'yal 'n' gentian. Them 's all good, strong bitters. I d' know but they 'd do 's well 's sars'perilla to tone anybody up, don't you? You take 'bout a gill o' new rum, 'n'—»

Digitized by Google

«Mister—Mister Martin!»

Though the interruption heralded an unexpected speaker, the words and the tone seemed so incongruous that, almost on the instant, the cap'n forgot his surprise in his amusement. He screwed around on the doorstep, and looked up at Mrs. Martin, humorously ready to sympathize over the falling of a loaf of cake. But this, whatever it was, was a more serious matter. It had moved the woman from the stolid to the tremulous, had blended sorrow, determination, dread, and tenderness in her face, had heightened her irresistible dignity by touching it with humanity. The cap'n achieved a prompt and adequate inspiration. He faced to the front again, and rose.

«Well, I guess I better be goin', Eli,» he said indifferently. «'N' so, good day to ye. Guess we c'n git up suthin' that 'll knock all these 'ere sars'perillas higher 'n a kite, 's you say.»

There was no reply; he had expected none; and while he loitered up the path the woman spoke again, with that effect of continuance which arises when one is grasped and held by an idea.

«My letter,» she said. «It 's from 'Mandy. She 's weakly and ailin'. The baby 's fretful, 'n' it wears her out. 'Mandy ain't strong. I —I—she says she wants me to come 'n' give her a start on the summer's work—'f I can't do no more.»

Something seemed to be left unsaid. The man on the door-step was aware of the lapse. «I hear ye,» he suggested gently.

«I darned your cotton stockin's,» Mrs. Martin hurried on. «They 're in the top bureau drawer. 'N' your liver-pad—'f you sh'd want that, it 's up on the closet shelf. The' 's pies 'n' doughnuts in the butt'ry. Tomorrow night, you know, 's the night to wind up the clock. 'Mandy thinks I better stay,» she ended abruptly.

Cap'n Bunker laid a gentle hand on the bars, tiptoed through, and replaced them with infinite care. The rasping of the grasshoppers oppressed him. He scowled at a crow that flapped noisily over the field. But his precaution and his fear were needless. The man and woman at his back had quite forgotten him. They did not even moderate their voices, and in the sweet, still atmosphere the words carried far.

«I—I don't b'lieve ye better stay,» the man murmured presently. His accent showed a chastened temper and a submissive spirit, and the pauses between his sentences confirmed that interpretation. «Fact is, I ain't feelin' over 'n' above smart this summer, 'n' Potter's Sars'perilla ain't helpin' me none, nuther, 's fer 's I c'n see. I wuz—I wuz thinkin' o' throwin' my bottle away 'n'—'n' tryin' yourn.»

«I 'd ruther you would n't. I have n't any faith in it. I 'most wish 't I 'd never seen it.»

An interval of silence followed. Cap'n Bunker, for all that he appreciated its possibilities, found occasion to glance over his shoulder. The man and woman had not changed their positions. One sat, the other stood, and there was contact of neither hand nor eye; and yet it seemed that somewhat of rigidity had been smoothed from the woman's aspect, that a new vivacity possessed the man; and the cap'n averted his face again, and whistled very softly.

«I tell ye what,» the man said, all at once; «you 'n' me did n't hev no weddin' tower—did n't even go to Seaport 'n' git dinner in a' eatin'-house.»

«No, we did n't.»

«Well,»—his voice was determined, though strangely broken,—«what say if we both go up to Livermore, 'n' bring 'Mandy 'n' the baby back to stay all summer? That suit ye, Loizy?»

«I—I 'd like to have you to go and come back with—Eli.»

Cap'n Bunker had reached the turn in the road, and he made haste to round it. He was out of sight and hearing then. It seemed safe to grin.

Walter Leon Sawyer.

THE RIVER.

HOW far soe'er thy restless waters roll,
Thou hast attained the sea.
So, haply, now the current of the soul
Hath touched eternity.

For backward to the fountainhead there flows
A breath of tides to be—
Of life beyond, wherein the present knows
E'en now its destiny.

John B. Tabb.

A NEW NOTE IN AMERICAN SCULPTURE.

STATUETTES BY BESSIE POTTER.

THERE is a pleasurable sense of relief when, in the mass of conventional work at the annual exhibitions, the critic comes face to face with some evidence of thought and personal execution beyond the commonplace. And this feeling gives way to real satisfaction when the effort assumes a significant importance that warrants enthusiasm.

There were shown at the Society of American Artists in New York, in the spring of 1896, some statuettes of graceful young womanhood, essentially modern in conception, singularly naïve in treatment, refined, and withal intensely personal. The interested visitor who found pleasure in the work discovered in a modest corner the name of Bessie Potter, and the catalogue gave her address as Chicago.

New notes in exhibitions are not too frequent. Often the departure means affectation or presumption, if not downright insolence. Much spurious coin passes current in the republic of art. It is not difficult to make radical departures with paint and canvas, but to say something new in a plastic way means much more. Sculptural form is

PORTRAIT SKETCH OF ALICE.

PORTRAIT SKETCH OF MRS. R.

arbitrary. It cannot be ignored or disguised either by deft modeling or ingenious arrangement. It demands a rigorous adherence to prosaic facts of construction. Human anatomy permits no trifling or uncertainty, and in this the difficulty of the sculptor exceeds that of the painter.

Homely domesticity in strictly modern dress has presented little incentive to our serious workers, and has been relegated to the domain of the commercial Italian, that skilful imitator of fabrics and detail of the tombstone variety.

While the disclosure is by no means novel, Miss Potter makes us aware of the fact that in the daily prosaic life about us there are possibilities conventional, yet attractive, simple, but containing much of suggestion, waiting only the sympathetic touch to be responsive if the proper chord is struck.

In art matters completeness is rare, even impossible, of realization; however great the ability, long years are requisite to round out the talent, to mellow the judgment, to perfect the technic, and to bring the gifts to a consummation.

The interesting statuettes that come from Miss Potter's hands comprise groups of chil-

Digitized by Google

dren, dainty girlish figures in easy, flowing draperies, or pathetically natural visions of maternity. They possess to an eminent degree the charm of spontaneity, observation, and keen appreciation of the beautiful. It may be a line of tender delicacy that catches the eye, or a happy disposition of mass that

Chicago, the typical Western city, standing for all that is bustling, hustling, and rushing in the civilization of to-day, is surely the antithesis of that little town in Bœotia where, two thousand years ago, the esthetic Greeks wrought out their delicious idyllic creations of grace and beauty.

A YOUNG MOTHER.

lifts the work out of the commonplace; but there is generally an astonishingly clear perception, that grasps with certainty and quickness the picturesqueness of the situation. The methods are difficult of analysis, but they are present, and there is no mistaking them.

It is curious to note the affiliation of this young woman with the efforts of the Tanagra workers, whose quaint figurines, unearthed only twoscore years since, are to-day the wonder and delight of the art-loving world.

True, the freer garb of classic maidenhood presented easier and more inspiring problems to the ancient masters of clay and stone, and the open-air life of the people of that epoch produced a more robust type of femininity; but our Occidental civilization is not without its advantages in the matter of beauty of face and form, and the hideous fashionable dress of the present may by proper treatment be softened and mitigated, and its incongruities kept in intelligent subjugation.

But if the inspiration of the young woman

Digitized by Google

is evident, her work can in no way be called imitative. Of course it matters little what the art be, if it be good art. No one can claim absolute originality; every worker has a particular preference; the influence may be traced, even if it be not acknowledged. It is in interpretation that the individual may claim consideration. Fresh personality in the rendering of old themes gives them their charm. The story of mankind is as old as history; the telling varies with each generation, and the tale is ever new.

It may be said that the naturalness in Miss Potter's work at times defeats its purpose, if purpose it has other than absorption in her art. She lingers now and then with uncomfortable insistence over lines of too great severity. Her occasional long sweeps of rigid limbs or drapery have an aggressive assertiveness that dangerously approaches the ugly, and there are faults of balance that betray immaturity. It would be strange indeed if these were always absent, but they may be noted, nevertheless, in the general review.

Hitherto there has been little about the sculptor's profession that suggested its adaptability to feminine hands. The studio, in its cold, cheerless, uninspiring character, however necessary for the proper manipulation of clay or the cutting of stone, is nevertheless essentially masculine in its surroundings, uninviting to womanhood, and apparently without possibilities for the sex. To be sure, there are no good reasons why man should have preëmpted the field; but he has, and has had it nearly all his own way. Where woman has come in occasionally, there has been about her work nothing especially characteristic of her sex. Statues, portraits, or groups she has made along recognized lines, and she has followed man as closely as her ability permitted.

But in the case of Miss Potter the results are different. Her statuettes are purely and obviously the work of a woman. The feeling, the sentiment, and the delicacy are thoroughly feminine, but they are feminine from the psychological side entirely, for there are no traces of that weakness of artistic conception and that technical inefficiency which, it must be admitted, are frequent attributes of woman's plastic efforts.

Woman has an instinctive intuition for her sex. The thousand nothings peculiar to her are quite beyond the ken of man, no matter how closely he observes or how minutely he investigates. The last word in sculpture is yet to be said; and if, by virtue of natural perceptions, there are certain phases clearer to the eye of woman, all other things being equal, it is obvious that where she is to delineate her sisters she will have this much advantage over her hitherto supposedly stronger brother.

For detail in the general acceptation of the term Miss Potter has little use. It is the abstract, and not the concrete, that appeals to her and arouses her enthusiasm. Her leaning is to the picturesque rather than to the simply beautiful,—if the distinction may be made,—though in her search for the former she rarely misses the latter. But hers is the inclination toward modern realism, so arranged that she may find grace of form in simple masses; and her work, like certain bits of melody, conveys, above everything, a sense of delightful suggestiveness.

It is six years since Miss Potter began the study of art, two of which were spent at the Art Institute of Chicago, and two in Paris. Among modern sculptors in the latter city she found herself more closely drawn to Rodin than to any other master. The brevity of her experience in art makes the results all the more remarkable; and it is fair to presume that she is only at the beginning of a career which will be full of interest as her powers unfold and mature.

CAMPAIGNING WITH GRANT.

BY GENERAL HORACE PORTER.

CAPTURE OF PETERSBURG AND RICHMOND AND PURSUIT OF LEE.

MEETING OF GRANT AND SHERMAN AT CITY POINT.

SHERMAN, in his correspondence, had intimated a desire to have a personal conference with his chief before the general movement of all the armies took place; and it was learned on March 27 that he had arrived at Fort Monroe, and was on his way up the James. Grant telegraphed to several prominent officers to meet Sherman that evening at headquarters. Late in the afternoon the *Russia*, a captured steamer, arrived with Sherman aboard, and General Grant and two or three of us who were with him at the time started down to the wharf to greet the Western commander. Before we reached the foot of the steps, Sherman had jumped ashore and was hurrying forward with long strides to meet his chief. As they approached Grant cried out, «How d' you do, Sherman!» «How are you, Grant!» exclaimed Sherman; and in a moment they stood upon the steps, with their hands locked in a cordial grasp, uttering earnest words of familiar greeting. Their encounter was more like that of two school-boys coming together after a vacation than the meeting of the chief actors in a great war tragedy. Sherman walked up with the general-in-chief to headquarters, where Mrs. Grant extended to the illustrious visitor a cordial greeting. Sherman then seated himself with the others by the campfire, and gave a most graphic description of the stirring events of his march through Georgia. The story was the more charming from the fact that it was related without the manifestation of the slightest egotism. His field of operations had covered more than half of the entire theater of war; his orders always spoke with the true bluntness of the soldier; he had fought from valley depths to mountain heights, and marched from inland rivers to the sea. Never were listeners more enthusiastic; never was a speaker more eloquent. The story, told as he alone could tell it, was a grand epic, related with Homeric power. At times he became humorous, and in a nervous, offhand, rattling manner recounted a number of amusing incidents of the famous march. He said, among other things: «My old veterans got on pretty familiar terms with me on the march, and often used to keep up a running conversation with me as I rode along by their side. One day a man in the ranks had pulled off his shoes and stockings, and rolled up his trousers as far as they would go, to wade across a creek we had struck. I could n't help admiring his magnificently developed limbs, which might have served as models for a sculptor, and I called out to him: ‹A good stout pair of legs you 've got there, my man.› ‹Yes, general; they 're not bad underpinning,› he replied, looking down at them with evident pride. ‹I would n't mind exchanging mine for them, if you don't object,› I continued. He sized up my legs with his eye, and evidently considered them mere spindle-shanks compared with his, and then looked up at me and said: ‹General, if it 's all the same to you, I guess I 'd rather not swap.›»

Sherman then went on to talk about his famous «bummers,» saying: «They are not stragglers or mere self-constituted foragers, as many have been led to suppose, but they are organized for a very useful purpose from the adventurous spirits who are always found in the ranks. They serve as ‹feelers› who keep in advance and on the flanks of the main columns, spy out the land, and discover where the best supplies are to be found. They are indispensable in feeding troops when compelled, like my army, to live off the country, and in destroying the enemy's communications. The bummers are, in fact, a regular institution. I was amused at what one of Schofield's officers told me at Goldsboro. He said Schofield's army was maintaining a telegraph-line to keep up communication with the sea-coast, and that one of my men, who was a little more ‹previous› than the rest, and was far in advance of my army, was seen up a telegraph-pole hacking away at the wires with a hatchet. The officer yelled out to him: ‹What are you doing there? You 're destroying one of our own telegraph-lines.› The man cast an indignant look at his questioner, and said, as he continued his work

of destruction: ‹I 'm one o' Billy Sherman's bummers; and the last thing he said to us when we started out on this hunt was: «Be sure and cut all the telegraph-wires you come across, and don't go to foolin' away time askin' who they belong to.»›»

After the interview had continued nearly an hour, Grant said to Sherman: «I 'm sorry to break up this entertaining conversation, but the President is aboard the *River Queen;* and I know he will be anxious to see you. Suppose we go and pay him a visit before dinner.» «All right,» cried Sherman; and the generals started down the steps, and were soon after seated in the cabin of the steamer with the President.

AMUSING COLLOQUY BETWEEN MRS. GRANT AND SHERMAN.

In about an hour the two commanders came back and entered the general-in-chief's hut. I was there talking to Mrs. Grant at the time. She, with her usual thoughtfulness, had prepared some tea, and was awaiting the return of the generals. She at once inquired, in her womanly way, «Did you see Mrs. Lincoln?» «Oh,» replied her husband, «we went rather on a business errand, and I did not ask for Mrs. Lincoln.» «And I did n't even know she was aboard,» added Sherman. «Well, you are a pretty pair!» exclaimed Mrs. Grant. «I do not see how you could have been so neglectful.» «Well, Julia,» said her husband, «we are going to pay another visit in the morning, and we 'll take good care then to make amends for our conduct to-day.»

«And now, let us talk further about the immediate movements of my army,» said Sherman. «Perhaps you don't want me here listening to all your secrets,» remarked Mrs. Grant. «Do you think we can trust her, Grant?» exclaimed Sherman, casting a sly glance at Mrs. Grant. «I 'm not so sure about that, Sherman,» said the commander, entering into the spirit of fun which had now taken possession of the trio. «Public documents, in disseminating items of information, are accustomed to say, ‹Know all men by these presents.› I think it would be just as effective to say, ‹Know one woman,› for then all men would be certain to hear of it.» Sherman laughed heartily at this way of putting it, and said: «Now, Mrs. Grant, let me examine you, and I can soon tell whether you are likely to understand our plans well enough to betray them to the enemy.» «Very well,» she answered; «I 'm ready for all your questions.» Then Sherman turned his chair squarely toward her, folded his arms, assumed the tone and look of a first-class pedagogue, and, in a manner which became more and more amusing as the conversation went on, proceeded to ask all sorts of geographical questions about the Carolinas and Virginia. Mrs. Grant caught the true essence of the humor, and gave replies which were the perfection of drollery. When asked where a particular river in the South was, she would locate it a thousand miles away, and describe it as running up stream instead of down; and when questioned about a Southern mountain she would place it somewhere in the region of the north pole. Railroads and canals were also mixed up in interminable confusion. She had studied the maps in camp very carefully, and had an excellent knowledge of the geography of the theater of war, and this information stood her in good stead in carrying on the little comedy which was being enacted. In a short time Sherman turned to his chief, who had been greatly amused by the by-play, and exclaimed: «Well, Grant, I think we can trust her»; and then, speaking again to the general's wife, he said: «Never mind, Mrs. Grant; perhaps some day the women will vote and control affairs, and then they will take us men in hand and subject us to worse cross-examinations than that.» «Not if my plan of female suffrage is ever adopted,» remarked the chief. «Why, Ulyss, you never told me you had any plans regarding that subject,» said Mrs. Grant. «Oh, yes,» continued the general; «I would give each married woman two votes; then the wives would all be represented at the polls, without there being any divided families on the subject of politics.»

Dinner was now announced, and Sherman escorted Mrs. Grant to the mess-room, and occupied a seat beside her at the table.

MEETING OF SHERMAN AND SHERIDAN.

In the evening several officers came to pay their respects to Sherman. Sheridan had been telegraphed to come to headquarters, but he did not appear until nearly midnight, and after all the others had left. He had been delayed several hours by his train's running off the track on the military railroad. Sherman had been told by Grant about the plans he had discussed with Sheridan for the operations of the cavalry, and Sherman urged that it should join him after destroying the railroads on the way. Sheridan became a good deal nettled at this, and argued earnestly against it; but General Grant soon cut short the discussion by say-

ing that it had been definitely decided that Sheridan was to remain with our army, then in front of Petersburg. Sheridan's command was made separate from the Army of the Potomac, and was to be subject only to direct orders from the general-in-chief. The cavalry commander had cheerfully given up the command of the Middle Military Division to take the field at the head of the cavalry corps, and General Grant felt that he was entitled to every consideration which could be shown him.

THE FAMOUS CONFERENCE ABOARD THE «RIVER QUEEN.»

THE next morning (March 28) Admiral Porter came to headquarters, and in the course of his conversation said to Sherman: «When you were in the region of those swamps and overflowed rivers, coming through the Carolinas, did n't you wish you had my gunboats with you?» «Yes,» answered Sherman; «for those swamps were very much like that Western fellow's Fourth-of-July oration, of which a newspaper said, ‹It was only knee-deep, but spread out over all creation.› One day, on the march, while my men were wading a river which was surrounded for miles by swamps on each side, after they had been in the water for about an hour, with not much prospect of reaching the other side, one of them cried out to his chum: ‹Say, Tommy, I 'm blowed if I don't believe we 've struck this river lengthways!›»

After spending a quarter of an hour together, General Grant said that the President was expecting them aboard his boat, and the two generals and the admiral started for the *River Queen*. No one accompanied them. There now occurred in the upper saloon of that vessel the celebrated conference between these four magnates, the scene of which has been so faithfully transferred to canvas by the artist Healy. It was in no sense a council of war, but only an informal interchange of views between the four men who, more than any others, held the destiny of the nation in their hands. Upon the return of the generals and the admiral to headquarters, they entered the general-in-chief's hut, where Mrs. Grant and one or two of us were sitting. The chief said to his wife: «Well, Julia, as soon as we reached the boat this morning I was particular to inquire after Mrs. Lincoln, and to say that we desired to pay our respects to her. The President went to her state room, and soon returned, saying that she was not well, and asking us to excuse her.» General Grant afterward told us the particulars of the interview. It began by his explaining to the President the military situation and prospects, saying that the crisis of the war was now at hand, as he expected to move at once around the enemy's left and cut him off from the Carolinas, and that his only apprehension was that Lee might move out before him and evacuate Petersburg and Richmond, but that if he did there would be a hot pursuit. Sherman assured the President that in such a contingency his army, by acting on the defensive, could resist both Johnston and Lee till Grant could reach him, and that then the enemy would be caught in a vise and have his life promptly crushed out. Mr. Lincoln asked if it would not be possible to end the matter without a pitched battle, with the attendant losses and suffering; but was informed that that was a matter not within the control of our commanders, and must rest necessarily with the enemy. Lincoln spoke about the course which he thought had better be pursued after the war, and expressed an inclination to lean toward a generous policy. In speaking about the Confederate political leaders, he intimated, though he did not say so in express terms, that it would relieve the situation if they should escape to some foreign country. Sherman related many interesting incidents which occurred in his campaign. Grant talked less than any one present. The President twice expressed some apprehension about Sherman's being away from his army; but Sherman assured him that he had left matters safe in Schofield's hands, and that he himself would start back that day.

That afternoon Sherman took leave of those at headquarters, and returned to his command in the *Bat*, as that vessel was faster than the one which had brought him up the coast.

GRANT STARTS ON HIS LAST CAMPAIGN.

THE troops had been in motion the previous night, and the general had decided that headquarters should be moved on the morning of the 29th. The horses were to be put aboard the train which was to take the general and staff to the Petersburg front. About 8:30 Mr. Lincoln came ashore to say good-by. We had the satisfaction of hearing one good story from him before parting. General Grant was telling him about the numerous ingenious and impracticable suggestions that were made to him almost daily as to the best way of destroying the enemy, and said: «The

Digitized by Google

last plan proposed was to supply our men with bayonets just a foot longer than those of the enemy, and then charge them. When they met, our bayonets would go clear through the enemy, while theirs would not reach far enough to touch our men, and the war would be ended.»

Mr. Lincoln laughed, and remarked: «Well, there is a good deal of terror in cold steel. I had a chance to test it once myself. When I was a young man, I was walking along a back street in Louisville one night about twelve o'clock, when a very tough-looking citizen sprang out of an alleyway, reached up to the back of his neck, pulled out a bowie-knife that seemed to my stimulated imagination about three feet long, and planted himself square across my path. For two or three minutes he flourished his weapon in front of my face, appearing to try to see just how near he could come to cutting my nose off without quite doing it. He could see in the moonlight that I was taking a good deal of interest in the proceeding, and finally he yelled out, as he steadied the knife close to my throat: 'Stranger, kin you lend me five dollars on that?' I never reached in my pocket and got out money so fast in all my life. I handed him a bank-note, and said: 'There 's ten, neighbor; now put up your scythe.'»

The general soon after bade an affectionate good-by to Mrs. Grant, kissing her repeatedly as she stood at the front door of his quarters. She bore the parting bravely, although her pale face and sorrowful look told of the sadness that was in her heart. The party, accompanied by the President, then walked down to the railroad-station. Mr. Lincoln looked more serious than at any other time since he had visited headquarters. The lines in his face seemed deeper, and the rings under his eyes were of a darker hue. It was plain that the weight of responsibility was oppressing him. Could it have been a premonition that with the end of this last campaign would come the end of his life? Five minutes' walk brought the party to the train. There the President gave the general and each member of the staff a cordial shake of the hand, and then stood near the rear end of the car while we mounted the platform. As the train was about to start we all raised our hats respectfully. The salute was returned by the President, and he said in a voice broken by an emotion he could ill conceal: «Good-by, gentlemen. God bless you all! Remember, your success is my success.» The signal was given to start; the train moved off; Grant's last campaign had begun.

The general sat down near the end of the car, drew from his pocket the flint and slow-match that he always carried, struck a light, and was soon wreathed in the smoke of the inevitable cigar. I took a seat near him, with several other officers of the staff, and he at once began to talk over his plans. Referring to Mr. Lincoln, he said: «The President is one of the few visitors I have had who have not attempted to extract from me a knowledge of my movements, although he is the only one who has a right to know them. He intends to remain at City Point for the present, and he will be the most anxious man in the country to hear from us, his heart is so wrapped up in our success; but I think we can send him some good news in a day or two.» I never knew the general to be more sanguine of victory than in starting out on this campaign.

STORM-BOUND.

WHEN we reached the end of the railroad, we mounted our horses, started down the Vaughan road, and went into camp for the night in an old corn-field just south of that road, close to Gravelly Run. That night (March 29) the army was disposed in the following order from right to left: Weitzel in front of Richmond, with a portion of the Army of the James; Parke and Wright holding our works in front of Petersburg; Ord extending to the intersection of Hatcher's Run and the Vaughan road; Humphreys stretching beyond Dabney's Mill; Warren on the extreme left, reaching as far as the junction of the Vaughan road and the Boydton plank road; and Sheridan still farther west at Dinwiddie Court House. The weather had been fair for several days, and the roads were getting in as good condition for the movement of troops as could be expected, for in that part of the country in summer the dust was usually so thick that the army could not see where to move, and in winter the mud was so deep that it could not move anywhere. The weather had now become cloudy, and toward evening rain began to fall. It descended in torrents all night, and continued with but little interruption during the next day. The country was densely wooded, and the ground swampy, and by the evening of the 30th whole fields had become beds of quicksand, in which the troops waded in mud above their ankles, horses sank to their bellies, and wagons threatened to disappear altogether. The men began to feel that if any one in

Digitized by Google

after years should ask them whether they had been through Virginia, they could say, «Yes; in a number of places.» The roads soon became sheets of water, and it looked as if the saving of that army would require the services, not of a Grant, but of a Noah. Soldiers would call out to officers as they rode by: «I say, fetch along the pontoons.» «When are the gunboats coming up?» The buoyancy of the day before was giving place to gloom; men lost their tempers, and those who employed profanity on such occasions as a means of mental relaxation wanted to set up a mark and go to swearing at it. Some began to be apprehensive that the whole movement was premature. This led to an animated debate at headquarters. General Rawlins expressed the opinion around the camp-fire, on the morning of the 30th, that no forage could be hauled out to our cavalry; that Joe Johnston might come up in our rear if we remained long in our present position; that the success of turning Lee's right depended on our celerity; that now he had been given time to make his dispositions to thwart us; and that it might be better to fall back, and make a fresh start later on. General Grant replied by saying that if Johnston could move rapidly enough in such weather to reach us, he (Grant) would turn upon him with his whole command, crush him, and then go after Lee; and that as soon as the weather cleared up the roads would dry rapidly, and the men's spirits would recover all their former buoyancy. The general then entered his tent, and Rawlins followed him.

GRANT AND SHERIDAN CONFER.

JUST then we saw Sheridan turning in from the Vaughan road, with a staff-officer and an escort of about a dozen cavalrymen, and coming toward our headquarters camp. He was riding his white pacer named «Breckinridge,» a horse which had been captured from General Breckinridge in the Valley of Virginia. But instead of striking a pacing gait now, it was at every step driving its legs knee-deep into the quicksand with the regularity of a pile-driver. As soon as Sheridan dismounted he was asked with much eagerness about the situation on the extreme left. He took a decidedly cheerful view of matters, and entered upon an animated discussion of the coming movements. He said: «I can drive in the whole cavalry force of the enemy with ease, and if an infantry force is added to my command, I can strike out for Lee's right, and either crush it or force him to so weaken his intrenched lines that our troops in front of them can break through and march into Petersburg.» He warmed up with the subject as he proceeded, threw the whole energy of his nature into the discussion, and his cheery voice, beaming countenance, and impassioned language showed the earnestness of his convictions.

«How do you expect to supply your command with forage if this weather lasts?» he was asked by one of the group. «Forage!» said Sheridan. «I 'll get up all the forage I want. I 'll haul it out, if I have to set every man in the command to corduroying roads, and corduroy every mile of them from the railroad to Dinwiddie. I tell you, I 'm ready to strike out to-morrow and go to smashing things»; and, pacing up and down, he chafed like a hound in the leash. We told him that this was the kind of talk we liked to hear, and that while General Grant felt no apprehension, it would do his heart good to listen to such words as had just been spoken. Sheridan, however, objected to obtruding his views unbidden upon the general-in-chief. Then we resorted to a stratagem. One of us went into the general's tent, and told him Sheridan had just come in from the left and had been telling us some matters of much interest, and suggested that he be invited in and asked to state them. This was assented to, and Sheridan was told that the general wanted to hear what he had to say. Sheridan then went in, and found Grant and Rawlins still discussing the situation. Several persons soon after came into the tent, and Sheridan, saying he was cold and wet, stepped out to the camp-fire. The general-in-chief remarked that he wanted to have some words with Sheridan in private before parting, and followed him out. Ingalls said his tent was vacant, and Grant and Sheridan entered it and had a talk there, in which a definite understanding was reached as to Sheridan's immediate movements. In about twenty minutes they came out, and Sheridan mounted his horse, waved us a good-by with his hand, and rode off to Dinwiddie.

GRANT ON WARREN'S FRONT.

THE next morning (March 31) Sheridan reported that the enemy had been hard at work intrenching at Five Forks and to a point about a mile west of that place. Lee had been as prompt as Grant to recognize Five Forks, the junction of five roads, as a strategic point of great importance, and to protect his right had sent there a large force of infantry and nearly all his cavalry. The rain

continued during the night of March 30, and on the morning of the 31st the weather was cloudy and dismal.

General Grant had thought that Warren would be attacked that morning, and had warned him to be on the alert. Warren advanced his corps to develop with what force the enemy held the White Oak road, and to try and drive him from it; but before he had gone far he was met by a vigorous assault. When news came of the attack, General Grant directed me to go to the spot and look to the situation of affairs there. I found that Warren's troops were falling back, but he was reinforced by Humphreys, and by noon the enemy was checked. As soon as Grant was advised of the situation he directed Meade to take the offensive vigorously, and the enemy was soon driven back. General Grant had now ridden out to the front, and hearing that he was at Mrs. Butler's house near the Boydton plank road, I joined him there. It was then a little after one o'clock. He had in the meantime ordered the headquarters camp to be moved to Dabney's Mill, about two miles from Meade's camp.

Warren's corps was now ordered to move forward again for the purpose of deterring the enemy from detaching infantry from that portion of the line to send against Sheridan. The advance was made later in the afternoon, and with decided success.

CARRYING INSTRUCTIONS TO SHERIDAN.

WHEN this movement had been decided upon, General Grant directed me to go to Sheridan and explain what was taking place on Warren's and Humphreys's front, and have a full understanding with him as to future operations in his vicinity. I rode rapidly down the Boydton plank road, and soon came to Gravelly Run. The bridge was destroyed, but my horse was able to ford the stream notwithstanding the high water caused by the recent rains. Hearing heavy firing in the direction of the Five Forks road, I hurried on in that direction by way of the Brooks road, and soon saw a portion of our cavalry moving eastward, pressed by a superior force of the enemy, while another portion was compelled to fall back southward toward Dinwiddie. I turned the corner of the Brooks cross-road and the Five Forks road just as the rear of the latter body of cavalry was passing it, and found one of Sheridan's bands with his rear-guard playing «Nellie Bly» as cheerfully as if furnishing music for a country picnic. Sheridan always made an effective use of his bands. They were usually mounted on gray horses, and instead of being relegated to the usual duty of carrying off the wounded and assisting the surgeons, they were brought out to the front and made to play the liveliest airs in their repertory, which produced excellent results in buoying up the spirits of the men. After having several of their instruments pierced by bullets, however, and the drums crushed by shells, as often happened, it must be admitted that the music, viewed purely in the light of an artistic performance, was open to adverse criticism.

I found Sheridan a little north of Dinwiddie Court House, and gave him an account of matters on the left of the Army of the Potomac. He said he had had one of the liveliest days in his experience, fighting infantry and cavalry with only cavalry, but that he would hold his position at Dinwiddie at all hazards. He did not stop there, but declared his belief that with the corps of infantry which he expected to be put under his command, he could take the initiative the next morning, and cut off the whole of the force which Lee had detached. He said: «This force is in more danger than I am. If I am cut off from the Army of the Potomac, it is cut off from Lee's army, and not a man in it ought ever be allowed to get back to Lee. We at last have drawn the enemy's infantry out of its fortifications, and this is our chance to attack it.» He begged me to go to General Grant at once, and urge him to send him Wright's corps, because it had been under his command in the Valley of Virginia, and was familiar with his way of fighting. I told him, as had been stated to him before, that Wright's corps was next to our extreme right, and that the only corps which could reach him by daylight was Warren's. I returned soon after to headquarters at Dabney's Mill, a distance of about eight miles, reaching there at 7 P. M., and gave the general a full description of Sheridan's operations. He took in the situation in an instant, and at once telegraphed the substance of my report to Meade, and preparations soon began looking to the sending of Warren's corps and Mackenzie's small division of cavalry to report to Sheridan. It was expected that the infantry would reach its destination in ample time to take the offensive about day break; but one delay after another was met with, and Grant, Meade, and Sheridan spent a painfully anxious night in hurrying forward the movement. Ayres's division of Warren's corps had to rebuild the bridge over Gravelly Run, which took till 2 A. M. Warren, with

Digitized by Google

his other two divisions, did not get started from their position on the White Oak road till 5 A. M., and the hope of crushing the enemy was hourly growing less. This proved to be one of the busiest nights of the whole campaign. Generals were writing despatches and telegraphing from dark to daylight. Staff-officers were rushing from one headquarters to another, wading through swamps, penetrating forests, and galloping over corduroy roads, carrying instructions, getting information, and making extraordinary efforts to hurry up the movement of the troops.

THE MOVEMENT AGAINST FIVE FORKS.

EARLY the next morning (April 1) General Grant said to me: «I wish you would spend the day with Sheridan's command, and send me a bulletin every half-hour or so, advising me fully as to the progress made. You know my views, and I want you to give them to Sheridan fully. Tell him the contemplated movement is left entirely in his hands, and he must be responsible for its execution. I have every confidence in his judgment and ability. I hope that there may now be an opportunity of fighting the enemy's infantry outside of their fortifications.»

I set out with half a dozen mounted orderlies to act as couriers in transmitting field bulletins, and met Sheridan about 10 A. M. on the Five Forks road not far from J. Boisseau's house. Ayres had his division on this road, having arrived about daylight; and Griffin had reached J. Boisseau's between 7 and 8 A. M. I had a full conference with Sheridan, in which he told me that the force in front of him had fallen back early in the morning; that he had pursued with his cavalry, had had several brushes with the enemy, and was driving him steadily back; that he had had his patience sorely tried by the delays which had occurred in getting the infantry to him, but that he was going to make every effort to strike a heavy blow with all the infantry and cavalry as soon as he could get them into position, provided the enemy should make a stand behind his intrenchments at Five Forks, which seemed likely. While we were talking, General Warren, who had accompanied Crawford's division, rode up and reported in person to Sheridan. It was then eleven o'clock.

A few minutes before noon Colonel Babcock came over from headquarters, and said to Sheridan: «General Grant directs me to say to you that if, in your judgment, the Fifth Corps would do better under one of its division commanders, you are authorized to relieve General Warren and order him to report to him [General Grant] at headquarters.» General Sheridan replied in effect that he hoped such a step as that might not become necessary, and then went on to speak of his plan of battle. We all rode on farther to the front, and soon met General Devin of the cavalry, who was considerably elated by his successes of the morning, and loudly demanded to be permitted to make a general attack on the enemy. Sheridan told him he did n't believe he had ammunition enough. Said Devin: «I guess I 've got enough to give 'em one surge more.» Colonel Babcock now left us to return to headquarters. About one o'clock it was reported by the cavalry that the enemy was retiring to his intrenched position at Five Forks, which was just north of the White Oak road and parallel to it, his earthworks running from a point about three quarters of a mile east of Five Forks to a point a mile west, with an angle, or «crochet,» about one hundred yards long, thrown back at right angles to his left to protect that flank. Orders were at once given to Warren's corps to move up the Gravelly Run Church road to the open ground near the church, and form in order of battle, with Ayres on the left, Crawford on his right, and Griffin in rear as a reserve. The corps was to wheel to the left and make its attack upon the angle, and then, moving westward, sweep down in rear of the enemy's intrenched line. The cavalry, principally dismounted, was to deploy in front of the enemy's line and engage his attention, and as soon as it heard the firing of our infantry to make a vigorous assault upon his works.

The Fifth Corps had borne the brunt of the fighting ever since the army had moved out on March 29; and the gallant men who composed it, and who had performed a conspicuous part in nearly every battle in which the Army of the Potomac had been engaged, seemed eager once more to cross bayonets with their old antagonists. But the movement was slow, the required formation seemed to drag, and Sheridan, chafing with impatience and consumed with anxiety, became as restive as a racer struggling to make the start. He made every possible appeal for promptness, dismounted from his horse, paced up and down, struck the clenched fist of one hand against the palm of the other, and fretted like a caged tiger. He exclaimed at one time: «This battle must be fought and won before the sun goes down. All the conditions may be changed in the morning. We

Digitized by Google

have but a few hours of daylight left us. My cavalry are rapidly exhausting their ammunition, and if the attack is delayed much longer they may have none left.» And then another batch of staff-officers was sent out to gallop through the mud and hurry up the columns.

THE BATTLE OF FIVE FORKS.

AT four o'clock the formation was completed, the order for the assault was given, and the struggle for Pickett's intrenched line began. The Confederate infantry brigades were posted from left to right as follows: Terry, Corse, Steuart, Ransom, and Wallace. General Fitzhugh Lee, commanding the cavalry, had placed W. H. F. Lee's two brigades on the right of the line, Munford's division on the left, and Rosser's in rear of Hatcher's Run, to guard the trains. I rode to the front, in company with Sheridan and Warren, with the head of Ayres's division, which was on the left. Ayres threw out a skirmish-line and advanced across an open field which sloped down gradually toward the dense woods just north of the White Oak road. He soon met with a fire from the edge of these woods, a number of men fell, and the skirmish-line halted and seemed to waver. Sheridan now began to exhibit those traits which always made him a tower of strength in the presence of an enemy. He put spurs to his horse, and dashed along in front of the line of battle from left to right, shouting words of encouragement, and having something cheery to say to every regiment. «Come on, men,» he cried; «go at 'em with a will! Move on at a clean jump, or you 'll not catch one of 'em. They 're all getting ready to run now, and if you don't get on to them in five minutes they 'll every one get away from you! Now go for them!» Just then a man on the skirmish-line was struck in the neck; the blood spurted as if the jugular vein had been cut. «I 'm killed!» he cried, and dropped to the ground. «You're not hurt a bit!» cried Sheridan. «Pick up your gun, man, and move right on to the front.» Such was the electric effect of his words that the poor fellow snatched up his musket, and rushed forward a dozen paces before he fell, never to rise again. The line of battle of weather-beaten veterans was now moving right along down the slope toward the woods with a steady swing that boded no good for Pickett's command, earthworks or no earthworks. Sheridan was mounted on his favorite black horse, «Rienzi,» which had carried him from Winchester to Cedar Creek, and which Buchanan Read has made famous for all time by his poem of «Sheridan's Ride.» The roads were muddy, the fields swampy, the undergrowth dense, and Rienzi, as he plunged and curveted, kept dashing the foam from his mouth and the mud from his heels. Had the Winchester pike been in a similar condition, it is altogether likely that he would not have made his famous twenty miles without breaking his own neck as well as Sheridan's. This historic horse derived his name from the fact that he was presented to Sheridan by the Second Michigan Cavalry in the little town of Rienzi, Mississippi, in 1862. After the famous ride he was sometimes called «Winchester.» He was of Blackhawk blood. He bore Sheridan in nearly all his subsequent battles. When the animal died in 1878, in his twentieth year, his body was stuffed, and now stands in the museum on Governor's Island. The surviving veterans often decorate him with flowers on Memorial Day.

Mackenzie had been ordered up the Crump road, with directions to turn east on the White Oak road, and whip everything he met on that route. He encountered a small cavalry command, and whipped it, according to orders, and then came galloping back to join in the general scrimmage.

Soon Ayres's men met with a heavy fire on their left flank, and had to change direction by facing more toward the west. As the troops entered the woods, and moved forward over the boggy ground, and struggled through the dense undergrowth, they were staggered by a heavy fire from the angle, and fell back in some confusion. Sheridan now rushed into the midst of the broken lines, and cried out: «Where is my battle-flag?» As the sergeant who carried it rode up, Sheridan seized the crimson-and-white standard, waved it above his head, cheered on the men, and made heroic efforts to close up the ranks. Bullets were now humming like a swarm of bees about our heads, and shells were crashing through the ranks. A musket-ball pierced the battle-flag; another killed the sergeant who had carried it; another wounded an aide, Captain McGonnigle, in the side; others struck two or three of the staff-officers' horses. All this time Sheridan was dashing from one point of the line to another, waving his flag, shaking his fist, encouraging, entreating, threatening, praying, swearing, the true personification of chivalry, the very incarnation of battle. He would have been a sorry soldier who could have helped following such a leader. Ayres and his officers were equally exposing themselves at all points in rallying the men;

Digitized by Google

and soon the line was steadied, for such troops could suffer but a momentary check. Ayers, with drawn saber, rushed forward once more with his veterans, who now behaved as if they had fallen back only to get a «good ready,» and with fixed bayonets and a rousing cheer dashed over the earthworks, sweeping everything before them, and killing or capturing every man in their immediate front whose legs had not saved him.

Sheridan spurred Rienzi up to the angle, and with a bound the animal carried his rider over the earthworks, and landed among a line of prisoners who had thrown down their arms and were crouching close under the breastworks. Some of them called out, «Whah do you want us all to go to?» Then Sheridan's rage turned to humor, and he had a running talk with the «Johnnies» as they filed past. «Go right over there,» he said to them, pointing to the rear. «Get right along, now. Oh, drop your guns; you 'll never need them any more. You 'll all be safe over there. Are there any more of you? We want every one of you fellows.» Nearly 1500 were captured at the angle.

An orderly here came up to Sheridan, saluted, and said, «Colonel Forsyth of your staff is killed, sir.» «It 's no such thing!» cried Sheridan. «I don't believe a word of it. You 'll find Forsyth 's all right.» Ten minutes later Forsyth rode up. He had been mistaken for the gallant General Winthrop, who had fallen in the assault. Sheridan did not even seem surprised when he saw Forsyth, and merely said, «There; I told you so.» This incident is mentioned as illustrative of a peculiar trait of Sheridan's character, which never allowed him to be disturbed by camp rumors, however disastrous.

The dismounted cavalry had assaulted as soon as they heard the infantry fire open. The natty cavalrymen, with their tight-fitting jackets and short carbines, swarmed through the pine thickets and dense undergrowth, looking as if they had been especially built for crawling through knot-holes.

The cavalry commanded by the gallant Merritt made a final dash, went over the earthworks with a hurrah, captured a battery of artillery, and scattered everything in front of them. Here Custer, Devin, Fitzhugh, and the other cavalry leaders were in their element, and vied with one another in deeds of valor. Crawford's division had moved off in a northerly direction, marching away from Ayres, and leaving a gap between the two divisions. Sheridan became exceedingly annoyed at this circumstance, complained that Warren was not giving sufficient personal supervision to the infantry, and sent nearly all his staff-officers to the Fifth Corps to see that the mistakes made were corrected. After the capture of the angle I started off toward the right to see how matters were going there. I went in the direction of Crawford's division, on our right. Warren, whose personal gallantry was always conspicuous, had had his horse shot while with these troops. I passed around the left of the enemy's works, then rode due west to a point beyond the Ford road. Here I rejoined Sheridan a little before dark. He was laboring with all the energy of his nature to complete the destruction of the enemy's forces, and to make preparations to protect his own detached command from a possible attack by Lee's army in the morning. He said to me that he had just relieved Warren, and placed Griffin in command of the Fifth Corps. I had been sending frequent bulletins to the general-in-chief, during the day and now despatched a courier announcing the change of corps commanders, and giving the general result of the round-up.

Sheridan had that day fought one of the most interesting tactical battles of the war, admirable in conception, brilliant in execution, strikingly dramatic in its incidents, and productive of extremely important results.

I said to him: «It seems to me that you have exposed yourself to-day in a manner hardly justifiable on the part of a commander of such an important movement.» His reply gave what seems to be the true key to his uniform success on the field: «I have never in my life taken a command into battle, and had the slightest desire to come out alive unless I won.»

CARRYING THE NEWS OF FIVE FORKS TO GRANT.

ABOUT half-past seven o'clock I started for general headquarters. The roads in many places were corduroyed with captured muskets; ammunition-trains and ambulances were still struggling forward; teamsters, prisoners, stragglers, and wounded were choking the roadway; the «coffee-boilers» had kindled their fires in the woods; cheers were resounding on all sides, and everybody was riotous over the victory. A horseman had to pick his way through this jubilant condition of things as best he could, as he did not have a clear right of way by any means. As I galloped past a group of men

Digitized by Google

on the Boydton plank, my orderly called out to them the news of the victory. The only response he got was from one of them, who raised his open hand to his face, put his thumb to his nose, and yelled: «No, you don't—April fool!» I then realized that it was the first of April. I had ridden so rapidly that I reached headquarters at Dabney's Mill before the arrival of the last courier I had despatched. General Grant was sitting, with most of the staff about him, before a blazing camp-fire. He wore his blue cavalry overcoat, and the ever-present cigar was in his mouth. I began shouting the good news as soon as I got in sight, and in a moment all but the imperturbable general-in-chief were on their feet giving vent to boisterous demonstrations of joy. For some minutes there was a bewildering state of excitement, and officers fell to grasping hands, shouting, and hugging each other like school-boys. The news meant the beginning of the end, the reaching of the «last ditch.» It pointed to peace and home. Dignity was thrown to the winds, and every man at that moment was in a fitting mood to dig his elbows into the ribs of the Archbishop of Canterbury, or to challenge the Chief Justice of the Supreme Court to a game of leap-frog. The proprieties of army etiquette were so far forgotten in the enthusiasm of the occasion that, as soon as I had thrown myself from my horse, I found myself rushing up to the general-in-chief and clapping him on the back with my hand, to his no little astonishment, and to the evident amusement of those about him.[1] The general, as might have been expected, asked his usual question: «How many prisoners have been taken?» I was happy to report that the prisoners this time were estimated at over five thousand, and this was the only part of my recital that seemed to call forth a responsive expression from his impassive features. After having listened attentively to the description of Sheridan's day's work, the general, with scarcely a word of comment, walked into his tent, and by the light of a flickering candle took up his «manifold writer,» and after finishing several despatches handed them to an orderly to be sent over the field wires, came out and joined our group at the camp-fire, and said as coolly as if remarking upon the state of the weather: «I have ordered a general assault along the lines.» This was about nine o'clock in the evening.

In his conversation his sense of humor now began to assert itself. During the day I had sent him a bulletin saying: «I have noticed among the prisoners and dead many old men whose heads are quite bald.» This was mentioned as an evidence that the enemy in recruiting was «robbing the grave.» Ingalls was sitting with us. His hair had become so thin that he used to part it low behind and comb the stray locks forward, trying to make the rear-guard do picket duty at the front. The general delighted in teasing him on this subject, and looking toward him, he now said to me: «When I got your message to-day about the bald-headed men, I showed it to Ingalls, and told him he had better take care and not fall into the hands of the enemy, for that is just the way they would be commenting on his head in their reports.»

GRANT PREPARES TO ASSAULT THE PETERSBURG LINES.

GRANT was anxious to have the different commands move against the enemy's lines at once to prevent Lee from withdrawing troops and sending them against Sheridan. Meade was all activity, and so alive to the situation, and so anxious to carry out the orders of the general-in-chief, that he sent word that he was going to have the troops make a dash at the works without waiting to form assaulting columns. At 9:30 P. M. General Grant sent a message that he did not mean to have the corps attack without assaulting columns, but to let the batteries open at once, and to feel out with skirmishers, and if the enemy was found to be leaving, to let the troops attack in their own way. The corps commanders reported that it would be impracticable to make a successful assault until morning, but sent back replies full of enthusiasm, and having in them a ring of the true soldierly metal. Ord said he would go into the enemy's works «as a hot knife goes into butter.» Wright sent word that when he started in he would «make the fur fly,» and said: «If the corps does half as well as I expect, we will have broken through the rebel lines in fifteen minutes from the word 'go.'» Grant was highly pleased with the spirit evinced in these messages, and said: «I like the way

[1] Badeau, in his «Military History of Ulysses S. Grant,» says in referring to this scene: «The bearer of the good news was Colonel Horace Porter, one of the most abstemious men in the army; but he came up with so much enthusiasm, clapping the general-in-chief on the back, and otherwise demonstrating his joy, that the officer who shared his tent rebuked him at night for indulging too freely in drink at this critical juncture. But Porter had tasted neither wine nor spirits that day. He was only drunk with victory.»—EDITOR.

Wright talks; it argues success. I heartily approve.»

The hour for the general assault was fixed at four o'clock the next morning. Miles was ordered to march with his division at midnight to reinforce Sheridan and enable him to make a stand against Lee in case he should move westward in the night. A little after midnight the general tucked himself into his camp-bed, and was soon sleeping as peacefully as if the next day was to be devoted to a picnic instead of a decisive battle. Every one at headquarters had caught as many cat-naps as he could, so as to be able to keep both eyes open the next day, in the hope of getting a sight of Petersburg, and possibly of Richmond. And now four o'clock came, but no assault. It was found that to remove abatis, climb over chevaux-de-frise, jump rifle-pits, and scale parapets, a little daylight would be of material assistance.

CAPTURING THE WORKS AT PETERSBURG.

AT 4:45 there was a streak of gray in the heavens, which soon revealed another streak of gray formed by Confederate uniforms in the works opposite, and the charge was ordered. The thunder of hundreds of guns shook the ground like an earthquake, and soon the troops were engaged all along the lines. At headquarters, where he could be easily communicated with, and from which he could give general directions, the general awaited for a while the result of the assault.

At a quarter past five a message came from Wright that he had carried the enemy's line in his front and was pushing in. Next came news from Parke that he had captured the outer works, with 12 pieces of artillery and 800 prisoners. At 6:40 the general wrote a telegram with his own hand to Mr. Lincoln at City Point, as follows: «Both Wright and Parke have got through the enemy's line. The battle now rages furiously. Sheridan, with his cavalry, the Fifth Corps, and Miles's division of the Second Corps, which was sent to him since 1 this morning, is now sweeping down from the west. All now looks highly favorable. Ord is engaged, but I have not yet heard the result in his front.» A cheering despatch was also sent to Sheridan, winding up with the words: «I think nothing is now wanting but the approach of your force from the west to finish up the job on this side.»

Soon Ord was heard from as having broken through the intrenchments. Humphreys, too, had been doing gallant work. At half-past seven the line in his front was captured, and half an hour later Hays's division of his corps had carried an important earthwork, with three guns and most of the garrison. At 8:30 A.M. a despatch was brought in from Ord saying that some of his troops had just captured the enemy's works south of Hatcher's Run.

The general and staff now rode out to the front, as it was necessary to give immediate direction to the actual movements of the troops, and prevent confusion from the overlapping and intermingling of the several corps as they pushed forward. He urged his horse over the works which Wright's corps had captured, and suddenly came upon a body of 3000 prisoners marching to our rear. His whole attention was for some time riveted upon them, and we knew that he was enjoying his usual satisfaction in seeing so large a capture. Some of the guards told the prisoners who the general was, and they manifested great curiosity to get a good look at him. Next he came up with a division of Wright's corps, flushed with success, and rushing forward with a dash that was inspiriting beyond description. When they caught sight of the leader whom they had patiently followed from the Rapidan to Petersburg, their cheers broke forth with a will, and their enthusiasm knew no limit. The general galloped along toward the right, and soon met Meade, with whom he had been in constant communication, and who had been urging on the Army of the Potomac with all vigor. Congratulations were rapidly exchanged, and both went to pushing forward the good work. Grant, after taking in the situation, directed both Meade and Ord to face their commands more toward the east, and close up toward the inner lines which covered Petersburg. Lee had been pushed so vigorously that he seemed for a time to be making but little effort to recover any of his lost ground; but now he made a determined fight against Parke's corps, which was threatening his inner line on his extreme left, and the bridge across the Appomattox. Repeated assaults were made, but Parke resisted them all successfully, and could not be stirred from his position. Lee had ordered Longstreet's command from the north side of the James, and with these troops reinforced his extreme right.

GRANT WRITES DESPATCHES UNDER FIRE.

GENERAL GRANT dismounted near a farmhouse which stood on a knoll, from which he could get a good view of the field of opera-

Digitized by Google

tions. He seated himself on the ground at the foot of a tree, and was soon busy receiving despatches and writing orders to officers conducting the advance. The position was under fire, and as soon as the group of staff-officers was seen, the enemy's guns began paying their respects to the party. This lasted for about a quarter of an hour, and as the fire became hotter and hotter, several of the officers, apprehensive for the general's safety, urged him to move to some less conspicuous position; but he kept on writing and talking, without the least interruption from the shots falling about him, and apparently not noticing what a target the place was becoming, or paying any heed to the gentle reminders to «move on.» After he had finished his despatches he got up, took a view of the situation, and as he started toward the other side of the farm-house said with a quizzical look at the group about him: «Well, they do seem to have the range on us.» The staff was now sent to the various points of the advancing lines, and all was activity in pressing forward the good work.

CAPTURE OF FORTS GREGG AND WHITWORTH.

By noon nearly all the outer line of works was in our possession, except two strong redoubts, which occupied commanding positions, named respectively Fort Gregg and Fort Whitworth. The general decided that these should be stormed, and about one o'clock three of Ord's brigades swept down upon Fort Gregg. The garrison of 300 men, commanded by Lieutenant-Colonel J. H. Duncan, with two rifled cannon, made a desperate defense, and a gallant contest took place. For half an hour after our men had gained the parapet a bloody hand-to-hand struggle continued, but nothing could stand against the onslaught of Ord's troops, flushed with their morning's victory. By half-past two 57 of the brave garrison lay dead, and the rest had surrendered. Fort Whitworth was abandoned, but the guns of Fort Gregg were opened upon the garrison as they marched out, and the commander, Colonel Joseph M. Jayne, and 60 men surrendered.

About this time Miles struck a force of the enemy at Sutherland's Station, on Lee's extreme right, and captured two pieces of artillery and nearly 1000 prisoners. At 4:40 the general, who had been keeping Mr. Lincoln fully advised of the history that was so rapidly being made that day, sent him a telegram inviting him to come out the next day and pay him a visit. A prompt reply was received from the President, saying: «Allow me to tender you, and all with you, the nation's grateful thanks for the additional and magnificent success. At your kind suggestion, I think I will meet you to-morrow.»

Prominent officers now urged the general to make an assault on the inner lines, and capture Petersburg that afternoon; but he was firm in his resolve not to sacrifice the lives necessary to accomplish such a result. He said the city would undoubtedly be evacuated during the night, and he would dispose the troops for a parallel march westward, and try to head off the escaping army. And thus ended this eventful Sunday.

GRANT ENTERS PETERSBURG.

The general was up at daylight the next morning, and the first report brought in was that Parke had gone through the lines at 4 A. M., capturing a few skirmishers, and that the city had surrendered at 4:28 to Colonel Ralph Ely. A second communication surrendering the place was sent in to Wright. General Grant's prediction had been fully verified. The evacuation had begun about ten the night before, and was completed on the morning of the 3d. Between 5 and 6 A. M. the general had a conference with Meade, and orders were given to push westward with all haste. About 9 A. M. the general rode into Petersburg. Many of the citizens; panic-stricken, had escaped with the army. Most of the whites who remained stayed indoors; a few groups of negroes gave cheers, but the scene generally was one of complete desertion. Grant rode along quietly until he came to a comfortable-looking brick house with a yard in front, No. 21 Market street, the residence of Mr. Thomas Wallace, and here he and the staff dismounted and took seats on the piazza. A number of the citizens now gathered on the sidewalk, and stood gazing with eager curiosity upon the features of the commander of the Yankee armies. Soon an officer came with a despatch from Sheridan, who had been reinforced and ordered to strike out along the Danville Railroad, saying he was already nine miles beyond Namozine Creek, and pressing the enemy's trains. The general was anxious to move westward at once with the leading infantry columns, but he prolonged his stay until the President came up.

LINCOLN AT PETERSBURG.

Mr. Lincoln soon after arrived, accompanied by Robert, who had ridden back to the rail-

Digitized by Google

road station to meet him, and by his little son, «Tad,» and Admiral Porter. He dismounted in the street, and came in through the front gate with long and rapid strides, his face beaming with delight. He seized General Grant's hand as the general stepped forward to greet him, and stood shaking it for some time, and pouring out his thanks and congratulations with all the fervor of a heart which seemed overflowing with its fullness of joy. I doubt whether Mr. Lincoln ever experienced a happier moment in his life. The scene was singularly affecting, and one never to be forgotten. He said: «Do you know, general, I had a sort of sneaking idea all along that you intended to do something like this; but I thought some time ago that you would so manœuver as to have Sherman come up and be near enough to coöperate with you.» «Yes,» replied the general; «I thought at one time that Sherman's army might advance far enough to be in supporting distance of the Eastern armies when the spring campaign against Lee opened; but I had a feeling that it would be better to let Lee's old antagonists give his army the final blow, and finish up the job. If the Western troops were even to put in an appearance against Lee's army, it might give some of our politicians a chance to stir up sectional feeling in claiming everything for the troops from their own section of country. The Western armies have been very successful in their campaigns, and it is due to the Eastern armies to let them vanquish their old enemy single-handed.» «I see, I see,» said Mr. Lincoln; «but I never thought of it in that light. In fact, my anxiety has been so great that I did n't care where the help came from, so that the work was perfectly done.» «Oh,» General Grant continued, «I do not suppose it would have given rise to much of the bickering I mentioned, and perhaps the idea would not have occurred to any one else. I feel sure there would have been no such feeling among the soldiers, but there might have been among our politicians. Of course I would not have risked the result of the campaign on account of any mere sentiment of this kind. I have always felt confident that our troops here were amply able to handle Lee.»

Mr. Lincoln then began to talk about the civil complications that would follow the destruction of the Confederate armies in the field, and showed plainly the anxiety he felt regarding the great problems in statecraft which would soon be thrust upon him. He intimated very plainly, in a conversation that lasted nearly half an hour, that thoughts of leniency to the conquered were uppermost in his heart.

Meanwhile his son Tad, for whom he always showed a deep affection, was becoming a little uneasy, and gave certain appealing looks, to which General Sharpe, who seemed to understand the mute expressions of small boys, responded by producing some sandwiches, which he offered to him, saying: «Here, young man, I guess you must be hungry.» Tad seized them as a drowning man would seize a life-preserver, and cried out: «Yes, I am; that 's what 's the matter with me.» This greatly amused the President and the general-in-chief, who had a hearty laugh at Tad's expense.

A gentleman whom we supposed was the proprietor of the house asked the general to go into the parlor; but he declined politely, saying, «Thank you, but I am smoking.»

The general hoped that before he parted with Mr. Lincoln he would hear that Richmond was in our possession; but after waiting about an hour and a half, he said he must ride on to the front and join Ord's column, and took leave of the President, who shook his hand cordially, and with great warmth of feeling wished him God-speed and every success.

The general and staff had ridden as far as Sutherland's Station—about nine miles—when a despatch from Weitzel overtook him, which had come by a roundabout way. It read: «We took Richmond at 8:15 this morning. I captured many guns. The enemy left in great haste. The city is on fire in two places. Am making every effort to put it out. The people received us with enthusiastic expressions of joy.» Although the news was expected, there were loud shouts of rejoicing from the group who heard it read. The general, as usual, did not manifest the slightest sign of emotion, and merely remarked: «I am sorry I did not get this information before we left the President. However, I suppose he has heard it by this time»; and then added: «Let the news be circulated among the troops as rapidly as possible.»

IN HOT PURSUIT OF LEE.

GRANT and Meade both went into camp at Sutherland's Station that evening (April 3). The Army of the Potomac caught but a few hours' sleep, and at three the next morning was again on the march. The pursuit had now become swift, unflagging, relentless. Sheridan, «the inevitable,» as the enemy had learned to call him, was in advance, thunder-

ing on with his cavalry, followed by Griffin and the rest of the Army of the Potomac; while Ord was swinging along toward Burkeville to head off Lee from Danville, to which point it was naturally supposed he was pushing in order to unite with Joe Johnston's army. April 4 was another active day; the troops were made to realize that this campaign was to be won by legs; that the great walking-match had begun, and success depended upon which army could make the best distance record. Grant rode this day with Ord's troops. Meade was ill and had to take at times to an ambulance; but his loyal spirit never flagged, and all his orders breathed the true spirit of a soldier. That night General Grant camped at Wilson's Station on the South Side Railroad, twenty-seven miles west of Petersburg. A railroad engineer who had been brought in as a prisoner reported that Davis and his cabinet had passed through Burkeville, on their way south, early on the morning of the day before. The next morning the general sent a despatch to Sherman in North Carolina, giving him an account of the situation, containing instructions as to his future movements, and winding up with the famous words: «Rebel armies are now the only strategic points to strike at.». On the 5th he marched again with Ord's column, and at noon reached Nottoway Court House, about ten miles east of Burkeville, where he halted with Ord for a couple of hours. A young staff-officer here rode up to Ord in a state of considerable excitement, and said: «Is this a way-station?» The grim old soldier, who was always fond of a quiet joke, replied with great deliberation: «This is Nott-a-way Station.» The staff collected about General Grant on the front porch of the old town tavern, and while examining maps and discussing the movements a ringing despatch came in from Sheridan saying he had captured six guns and some wagons, and had intercepted Lee's advance toward Burkeville; that Lee was in person at Amelia Court House, etc. This news was given to the passing troops, and lusty cheers went up from every throat. They had marched about fifteen miles already that day, and now struck out as if they were good for fifteen more, and vowed that they were going to beat the record of the cavalry.

GRANT MAKES A NIGHT RIDE TO REACH SHERIDAN.

WE continued to move along the wagon-road which runs parallel to the South Side Railroad till nearly dark, and had by that time reached a point about half-way between Nottoway and Burkeville. The road was skirted by a dense woods on the north side—the side toward the enemy. A commotion suddenly arose among the headquarters escort, and on looking round, I saw some of our men dashing up to a horseman in full Confederate uniform, who had emerged like an apparition from the woods, and were in the act of seizing him as a prisoner. I recognized him at once as the scout who had brought the important despatch sent by Sheridan from Columbia to City Point. I said to him, «How do you do, Campbell?» and told our men he was all right, and was one of our people. He said he had had a hard ride from Sheridan's camp, and had brought a despatch for General Grant. By this time the general had also recognized him, and had ridden up to him and halted in the road to see what he had brought. Campbell took from his mouth a small pellet of tin-foil, opened it, and pulled out a sheet of tissue-paper, on which was written the famous despatch, so widely published at the time, in which Sheridan described the situation at Jetersville, and added, «I wish you were here yourself.»

The general said he would go at once to Sheridan, and dismounted from his black pony «Jeff Davis,» which he had been riding, and called for his horse «Cincinnati.» He stood in the road for a few minutes, and wrote a despatch to Ord, using the pony's back for a desk, and then, mounting the fresh horse, told Campbell to lead the way. It was found that we would have to skirt pretty closely to the enemy's lines, and it was thought that it would be prudent to take some cavalry with us; but there was none near at hand, and the general said he would risk it with our mounted escort of fourteen men. Calling upon me and three other officers to accompany him, he started off. I had in the meanwhile questioned the scout about the trip, and found that we would have to follow some cross-roads through a wooded country and travel nearly twenty miles. It was now dark, but there was enough moonlight to enable us to see the way without difficulty. After riding for nearly two hours, the enemy's campfires were seen in the distance, and it was noticed that the fence-rails were thrown down in a number of places, indicating that cavalry had been moving across this part of the country, though we were certain our cavalry had not been there. Knowing that scouts are seldom trustworthy, and are often in the employ of both sides, and feeling that

the general's safety was now entirely in the power of a comparatively unknown man, I, for one, began to grow suspicious. Just then Campbell fell back several paces and suddenly turned his horse into a piece of woods which we were skirting, and seemed to be acting in a manner that indicated either confusion or treachery. I cocked my pistol, and rode close behind him, thinking his feelings would stand that much in the way of precaution anyhow, and determined that if he was caught giving any suspicious signals I would at once arrest him. The scout, however, was thoroughly loyal, and one of Sheridan's most trusted men; no thought of treachery had crossed his mind; he was only looking for a short cut through the woods. About half-past ten o'clock we struck Sheridan's pickets. They could hardly be made to understand that the general-in-chief was wandering about at that hour with so small an escort, and so near to the enemy's lines. The cavalry were sleeping on their arms, and as our little party picked its way through their ranks, and the troopers woke up and recognized the general in the moonlight, their remarks were highly characteristic of the men. One said: «Why, there 's the old man. Boys, this means business»; and another: «Great Scott! the old chief 's out here himself. The rebs are going to get bu'sted to-morrow, certain»; and a third: «Uncle Sam 's joined the cavalry sure enough. You can bet there 'll be lively times here in the morning.» Sheridan was awaiting us, feeling sure that the general would come after getting his despatch. A good supper of beef, cold chicken, and coffee was soon prepared, and it was quickly demonstrated that the night ride had not impaired any one's appetite.

When the general-in-chief had learned fully the situation in Sheridan's front, he first sent a message to Ord to watch the roads running south from Burkeville and Farmville, and then went over to Meade's camp near by. Meade was lying down, and still suffering from illness. His views differed somewhat from General Grant's regarding the movements of the Army of the Potomac for the next day, and the latter changed the dispositions that were being made, so as to have the army unite with Sheridan's troops in swinging round more toward the south and heading off Lee in that direction.

GRANT HURRIES ON TO FARMVILLE.

THE next day (April 6) proved a decided field day in the pursuit. It was found in the morning that Lee had retreated during the night from Amelia Court House; and from the direction he had taken and information received that he had ordered rations to meet him at Farmville, it was seen that he had abandoned all hope of reaching Burkeville, and was probably heading for Lynchburg. Ord was to try to burn the High Bridge over the Appomattox, and push on to Farmville. Sheridan's cavalry were to work around Lee's left flank, and the Army of the Potomac was to make another forced march, and strike the enemy wherever it could reach him. I spent a portion of the day with Humphreys's corps, which attacked the enemy near Deatonsville and gave his rear-guard no rest. I joined General Grant later, and rode with him to Burkeville, getting there some time after dark.

Ord had pushed out to Rice's Station, and Sheridan and Wright had gone in against the enemy and fought the battle of Sailor's Creek, capturing six general officers and about 7000 men, and «smashing things» generally. General Grant broke camp and started from Burkeville early the next morning (the 7th), and moved rapidly in the direction of Farmville. The columns were crowding the roads, and the men, aroused to still greater efforts by the inspiriting news of the day before, were sweeping steadily along, despite the rain that fell, like trained pedestrians on a walking-track. As the general rode among them he was greeted with shouts and hurrahs on all sides, and a string of sly remarks, which showed how familiar swords and bayonets become when victory furnishes the topic of their talk, such as, «Cavalry 's gi'n out, general. Infantry 's going to crush the rest of the mud»; and «We 've marched nigh twenty miles on this stretch, and we 're good for twenty more if the general says so»; and «We 're not straddlin' any hosses, but we 'll get there all the same.» The general raised his hat in acknowledgment of the cheers, and gave a pleasant nod to each of the men who addressed him.

GRANT AT FARMVILLE.

A LITTLE before noon on April 7, 1865, General Grant, with his staff, rode into the little village of Farmville, on the south side of the Appomattox River, a town that will be memorable in history as the place where he opened the correspondence with Lee which, two days later, led to the surrender of the Army of Northern Virginia. He drew up in front of the village hotel, a comfortable brick building, dismounted, and established head-

quarters on its broad piazza. News came in that Crook was fighting large odds with his cavalry on the north side of the river, and I was directed to go to his front and see what was necessary to be done to assist him. I found that he was being driven back, the enemy (Munford's and Rosser's cavalry divisions, under Fitzhugh Lee) having made a bold stand north of the river. Humphreys was also on the north side, isolated from the rest of our infantry, confronted by a large portion of Lee's army, and having some heavy fighting. On my return to general headquarters that evening, Wright's corps was ordered to cross the river and move rapidly to the support of our troops there. Notwithstanding their long march that day, the men sprang to their feet with a spirit that made every one marvel at their pluck, and came swinging through the main street of the village with a step that seemed as elastic as on the first day of their toilsome tramp. It was now dark, but they spied the general-in-chief watching them with evident pride from the piazza of the hotel as they marched past. Then was witnessed one of the most inspiring scenes of the campaign. Bonfires were lighted on the sides of the street; the men seized straw and pine-knots, and improvised torches; cheers arose from their throats, already hoarse with shouts of victory; bands played, banners waved, and muskets were swung in the air. A regiment now broke forth with the song of «John Brown's body,» and soon a whole division was shouting the swelling chorus of that popular air, which had risen to the dignity of a national anthem. The night march had become a grand review, with Grant as the reviewing officer.

GRANT OPENS A CORRESPONDENCE WITH LEE.

ORD and Gibbon had visited the general at the hotel, and he had spoken with them, as well as with Wright, about sending some communication to Lee that might pave the way to the stopping of further bloodshed. Dr. Smith, formerly of the regular army, a native of Virginia, and a relative of General Ewell, now one of our prisoners, had told General Grant the night before that Ewell had said in conversation that their cause was lost when they crossed the James River, and he considered that it was the duty of the authorities to negotiate for peace then, while they still had a right to claim concessions, adding that now they were not in condition to claim anything. He said that for every man killed after this somebody would be responsible, and it would be little better than murder. He could not tell what General Lee would do, but he hoped that he would at once surrender his army. This statement, together with the news that had been received from Sheridan, saying that he had heard that General Lee's trains of provisions, which had come by rail, were at Appomattox, and that he expected to capture them before Lee could reach them, induced the general to write the following communication:

HEADQUARTERS, ARMIES OF THE U. S.,
5 P. M., April 7th, 1865.

GENERAL R. E. LEE, Commanding C. S. A.:

The results of the last week must convince you of the hopelessness of further resistance on the part of the Army of Northern Virginia in this struggle. I feel that it is so, and regard it as my duty to shift from myself the responsibility of any further effusion of blood by asking of you the surrender of that portion of the Confederate States army known as the Army of Northern Virginia.

U. S. GRANT, Lieutenant-General.

This he intrusted to General Seth Williams, adjutant-general, with directions to take it to Humphreys's front, as his corps was close up to the enemy's rear-guard, and see that it reached Lee. Williams's orderly was shot, and he himself came near losing his life in getting this communication through the lines. General Grant decided to remain all night at Farmville and await the reply from Lee, and he was shown to a room in the hotel in which he was told that Lee had slept the night before, although this statement could not be verified. Lee wrote the following reply within an hour after he received General Grant's letter, but it was brought in by a rather circuitous route, and did not reach its destination till after midnight:

April 7th, 1865.

GENERAL: I have received your note of this date. Though not entertaining the opinion you express of the hopelessness of further resistance on the part of the Army of Northern Virginia, I reciprocate your desire to avoid useless effusion of blood, and therefore, before considering your proposition, ask the terms you will offer on condition of its surrender.

R. E. LEE, General.

LIEUTENANT-GENERAL U. S. GRANT,
Commanding Armies of the U. S.

The next morning, before leaving Farmville, the following reply was given to General Seth Williams, who again went to Humphreys's front to have it transmitted to Lee:

Digitized by Google

April 8th, 1865.

GENERAL R. E. LEE, Commanding C. S. A.:

Your note of last evening, in reply to mine of the same date, asking the conditions on which I will accept the surrender of the Army of Northern Virginia, is just received. In reply would say that, peace being my great desire, there is but one condition I would insist upon—namely, that the men and officers surrendered shall be disqualified for taking up arms against the Government of the United States until properly exchanged. I will meet you, or will designate officers to meet any officers you may name for the same purpose, at any point agreeable to you, for the purpose of arranging definitely the terms upon which the surrender of the Army of Northern Virginia will be received.

U. S. GRANT, Lieutenant-General.

The last sentence shows great delicacy of feeling on the part of General Grant, who wished to spare General Lee the mortification of personally conducting the surrender. The consideration displayed has a parallel in the terms accorded by Washington to Cornwallis at Yorktown. Cornwallis took advantage of the privilege, and sent O'Hara to represent him; but Lee rose superior to the British general, and in a manly way came and conducted the surrender in person.

There turned up at this time a rather hungry-looking gentleman in gray, wearing the uniform of a colonel, who proclaimed himself the proprietor of the hotel. He gave us to understand that his regiment had crumbled to pieces; that he was about the only portion of it that had succeeded in holding together, and he thought he might as well «stop off» at home and look after his property. It is safe to say that his hotel had never before had so many guests in it, nor at such reduced rates. His story was significant as indicating the disintegrating process which was going on in the ranks of the enemy.

THE RIDE TO CURDSVILLE.

GENERAL GRANT had been marching most of the way with the columns which were pushing along south of Lee's line of retreat; but, expecting that a reply to his last letter, would soon be received, and wishing to keep within easy communication with Lee, he decided to march this day with the portion of the Army of the Potomac that was pressing Lee's rear-guard. After issuing some further instructions to Ord and Sheridan, he started from Farmville, crossed to the north side of the Appomattox, conferred in person with Meade, and rode with his columns. Encouraging reports came in all day, and that night headquarters were established at Curdsville in a large white farm-house a few hundred yards from Meade's camp. The general and several of the staff had cut loose from the headquarters trains the night he started to meet Sheridan at Jetersville, and had neither baggage nor camp equipage. The general did not even have his sword with him. This was the most advanced effort yet made in moving in «light marching order,» and we billeted ourselves at night in farm-houses, or bivouacked on porches, and picked up meals at any camp that seemed to have something to spare in the way of rations. That night we sampled the fare of Meade's hospitable mess, and once more lay down with full stomachs.

GRANT SUFFERS AN ATTACK OF ILLNESS.

GENERAL GRANT had been suffering all the afternoon from a severe headache, the result of fatigue, anxiety, scant fare, and loss of sleep, and by night he grew much worse. He was induced to bathe his feet in hot water and mustard, and apply mustard-plasters to his wrists and the back of his neck; but these remedies afforded little relief. The dwelling we occupied was a double house. The general threw himself upon a sofa in the sitting-room on the left side of the hall, while the staff-officers bunked on the floor of the room opposite, to catch what sleep they could. About midnight we were aroused by Colonel Charles A. Whittier of Humphreys's staff, who brought the expected letter from Lee. Rawlins took it, and stepped across the hall to the door of General Grant's room. He hesitated to knock, not wishing to awake the commander if he were asleep, and opened the door softly and listened a moment to ascertain whether he could judge by any sound how the chief was resting. Soon the general's voice was heard saying: «Come in; I am awake. I am suffering too much to get any sleep.» I had in the meantime brought a lighted candle, and now stepped into the room with it. The general, who had taken off only his coat and boots, sat up on the sofa and read the communication.

MORE CORRESPONDENCE WITH LEE.

THE letter was as follows:

April 8th, 1865.

GENERAL: I received at a late hour your note of to-day. In mine of yesterday I did not intend to propose the surrender of the Army of Northern Virginia, but to ask the terms of your proposition. To be frank, I do not think the emergency has arisen to call for the surrender of this army; but

as the restoration of peace should be the sole object of all, I desired to know whether your proposals would lead to that end. I cannot, therefore, meet you with a view to surrender the Army of Northern Virginia; but as far as your proposal may affect the Confederate States forces under my command, and tend to the restoration of peace, I shall be pleased to meet you at 10 A. M. to-morrow on the old stage road to Richmond, between the picket-lines of the two armies.

R. E. LEE, General.

LIEUTENANT-GENERAL U. S. GRANT.

The general shook his head, expressive of his disappointment, and remarked, «It looks as if Lee still means to fight; I will reply in the morning»; and after making a few more comments, lay down again upon the sofa. Rawlins and I expressed the hope that the general might still be able to get some sleep, and then retired from the room. About four o'clock on the morning of April 9 I rose and crossed the hall to ascertain how the general was feeling. I found his room empty, and upon going out of the front door, saw him pacing up and down in the yard, holding both hands to his head. Upon inquiring how he felt, he replied that he had had very little sleep, and was still suffering the most excruciating pain. I said: «Well, there is one consolation in all this, general: I never knew you to be ill that you did not receive some good news before the day passed. I have become a little superstitious regarding these coincidences, and I should not be surprised if some good fortune were to overtake you before night.» He smiled, and replied: «The best thing that could happen to me to-day would be to get rid of the pain I am suffering.» We were soon joined by some others of the staff, and the general was induced to walk over to Meade's headquarters with us and get some coffee, in the hope that it would do him good. He seemed to feel a little better then, and after writing the following letter to Lee, and despatching it, he prepared to move forward.

April 9th, 1865.

GENERAL: Your note of yesterday is received. As I have no authority to treat on the subject of peace, the meeting proposed for 10 A. M. to-day could lead to no good. I will state, however, general, that I am equally anxious for peace with yourself, and the whole North entertains the same feeling. The terms upon which peace can be had are well understood. By the South laying down their arms they will hasten that most desirable event, save thousands of human lives, and hundreds of millions of property not yet destroyed. Sincerely hoping that all our difficulties may be settled without the loss of another life, I subscribe myself, etc.,

U. S. GRANT, Lieutenant-General.

GENERAL R. E. LEE.

General Grant kept steadily in mind the fact that he was simply a soldier, and could deal only with hostile armies. He could not negotiate a treaty of peace without transcending his authority.

(To be concluded in the next number.)

Horace Porter.

THE VIOLET GATE.

I KNOW a little winding way
Adown whose path is set
A tiny gate that opens to
The breath of violet.

No other blossom weaves the spell
Or holds the hidden key;
These fragrant lips alone possess
The magic witchery.

Give but the scent of violets
Beneath a dream-set sky,
And down the little winding way
Walk Memory and I.

Clarence Urmy.

BROWNING'S SUMMERS IN BRITTANY.

WITH PICTURES BY GEORGE WHARTON EDWARDS.

AT A ROADSIDE FOUNTAIN.

TO wander from place to place in a country in which Robert Browning spent many summers, almost following his steps; to seek those spots which furnished themes for some of his best-known poems; to see the bits of landscape mirrored by his verses; to find the home of a hero he has praised or of a legend he has framed; to note the people and the customs observed by him, the types that impressed him; in short, to bring together a few scenes and events among a peculiar people still living apart from the clamor of the present century, in a province of France the inhabitants of which have never been truly French—this is the simple object of these pages.

Mrs. Browning died on June 29, 1861. On July 19 Mr. Browning wrote to his friend Leighton: «I shall go to some quiet place in France to get right again. . . . I don't mean

Digitized by Google

to live with anybody, even my own family, but to occupy myself thoroughly,» etc.[1] On August 17 we find him at St. Enogat, near Dinard.

To one who knows Brittany it is not surprising that, of all the provinces of France, this should have been Mr. Browning's choice. Brittany at that time was almost unexplored by foreigners. It had no association with that life now closed for him. The simplicity of Breton life and its solitude were attractive to one wounded in spirit, seeking to «get right again,» and desiring only occupation. No one can read the poems of Robert Browning without being made aware of the peculiar charm an obscure tradition, an old tale, or a family record grown musty in its hiding-place, had for him, and of the good use he made of such material. Brittany teems with such matter; we shall see what use he made of it.

A PORNIC MAIDEN.

For nearly every town in Brittany has its legend, as each commune possesses its own style of *coiffe*. Every woman of this province may be designated, as to her locality, through the particular head-dress she wears.

And nature here seems in accord with the spirit of its legends. She is mysterious, marvelous. A magical influence seems to pervade everything. The forests are solemn. It seems easy to believe them enchanted.

[1] The extracts from letters are quoted from Mrs. Orr's «Life and Letters of Robert Browning.»

It is a country of quartz and granite, covered with wild heather, eternal oaks, savage ravines, and black mountains, and sown with landscapes that would have enchanted Vergil—a country historic and marvelous.

This, then, is the country that Browning sought in his trouble, and here for half a dozen summers he lived and dreamed and wrote. He knew the legends of the country, appreciated the best qualities of the Bretons, who little knew what manner of man lived among them «takin' notes.»

Near Dinard, which is to-day the most fashionable summering-place of France, is St. Enogat, of which Browning wrote (August 17, 1861): «The place is singularly unspoiled, fresh and picturesque, and lovely to heart's content.» One thinks of the poet, with an ache in his heart, taking lonely walks on the cliffs that border the sea; but St. Enogat did not make him «right again,» and he never returned.

The summer of 1862 found him in the south, at Biarritz, where there was less loneliness and more distraction. But he writes: «This town is crammed with gay people, of whom I see nothing but their outsides. For myself, I have got on by having a great read at Euripides, the one book I brought with me.» Mrs. Orr tells us that here he worked at «The Ring and the Book» («the Roman story, you know,» he wrote in the same letter), the poem having been thought out years before at Casa Guidi.

Although Biarritz was distracting, Browning turned his face Brittany-ward the following summer, and it is from «Ste. Marie, near Pornic,» in lower Brittany, that he wrote on August 17, 1863. One wonders how he chanced upon Pornic, that «un-Murrayed fishing-hamlet.» Few foreigners even now know the place, save through his poem «Gold Hair,» which embodies the legend of Pornic. Few towns of Brittany have had their legends so honorably framed:

> . . . The beautiful girl, too white,
> Who lived at Pornic down by the sea,
> Just where the sea and the Loire unite!
> And a boasted name in Brittany
> She bore, which I will not write.

And then the legend continues, which has it that this proud maid of Pornic, with a great reputation for sanctity, was in reality a miser, and therefore lost her paradise. For, years after her pompous burial, when the floor of the church was being repaired, it was found that the coffin had fallen to pieces, and that coins were hidden away in the golden hair which had been the girl's pride, and which she had begged might remain undisturbed after her death.

The verses describing the Pornic maid and her burial are those of a veritable impressionist, done in white and gold:

> . . . Dead lay she;
> Her parents sobbed their worst on that;
> All friends joined in, nor observed degree:
> For indeed her hair was to wonder at,
> As it spread—not flowing free,
>
> But curled around her brow, like a crown,
> And coiled beside her cheeks, like a cap,
> And calmed about her neck—ay! down
> To her breast, pressed flat, without a gap
> I' the gold, it reached her gown.

It was on a September morning, just thirty years after Browning's first summer at Ste. Marie (which is in reality only a hamlet at the extreme end of the town), that we wandered through the streets of Pornic in search of the spot where once stood the little parish church of St. Gilles. Alas! the well-to-do folk of Nantes have discovered the utility of Pornic as a summering-place, and have trampled out with their villas and promenades all that was quaint and lovely. We sigh for the vanished simplicity of the old Pornic whence Browning wrote: «I live upon milk and fruit, bathe daily, do a good morning's work, read a little with Pen and somewhat more by myself, go to bed early and get up early—rather liking it all.»

The coast, so desolate in 1863, now swarms with the gay Nantese; and old St. Gilles, where in the space by the altar was buried the girl of the «Gold Hair,» has disappeared.

> All kissed that face, like a silver wedge
> 'Mid the yellow wreath, nor disturbed its hair:
> E'en the priest allowed death's privilege,
> As he planted the crucifix with care
> On her breast, 'twixt edge and edge.
>
> And thus was she buried, inviolate
> Of body and soul, in the very space
> By the altar; keeping saintly state
> In Pornic church, for her pride of race,
> Pure life and piteous fate.

The Pornic legend is redolent of the peculiar Breton flavor. The unsuspected sin of avarice bears its sinister fruit, springing from the gold hair coiled, «ay! down to her breast.»

The same savor exists in another Breton legend, one of the best-known in the province—the legend of Notre Dame de Folgoët. It

Digitized by Google

is diametrically opposed to that of Pornic in thesis and dénouement, and has the quality of illustrating original virtue. As a usual thing, the Breton looks at things through a lens of somber coloring. The legend of Notre Dame de Folgoët is so characteristic and so famous that we give it as it is told and sung in the Celtic language in lower Brittany to-day. It has been translated into the French by M. Villemarqué.

In the year 1315 there lived in Brittany a poor innocent named Salaün. After the death of his parents, who had always been very poor, this poor child sought the solitude of the forest, in which there was a fountain. He was thinly clad, barefoot, and had only the earth for a bed. He begged his bread from day to day, speaking only two words—«Ave Maria.» In the coldest weather he plunged every morning into the fountain, always singing his little song to the Virgin. When he was cold he swung himself in the branches of the trees, singing as he swung, «Ave Maria.» From all these strange ways of behavior, people called him Salaün the Fool. Thus he lived forty years, offending no one. Finally he fell ill, and died. It was told that the Virgin herself nursed and comforted him. Dying, he repeated always the sweet name of Mary. He was found dead near the fountain, and was buried by his neighbors. And there sprang from his grave a beautiful, fragrant white lily, with the two words, «Ave Maria,» traced in golden letters on the petals. The curiosity of the ecclesiastics caused them to search for the root of this wonderful lily, and it was found that it grew from the mouth of the poor Salaün.

The dukes of Brittany built a beautiful church on the border of Salaün's fountain, and it became famous because of the many miracles wrought by its waters. The source of the fountain is under the chief altar, but the pool is close by the terminal wall of the church.

Traveling from Landerneau to Lesneven, we found the famous church standing among a few forlorn hovels. The beauty of the screen separating the choir from the nave is of itself worth a visit. It and the five altars are of the granite of Kersanton—black, and almost as hard as iron, but carved beautifully by the Lamballye Frères, claimed by some to belong to the Order of Masons, and of whom, in the middle ages, Michel Colomb was master. In Brittany we see his masterpieces in the cathedrals of Nantes and St. Pol-de-Léon.

In the fifteenth century Queen Anne of France, last duchess of Brittany, made pilgrimages to Notre Dame de Folgoët. To-day the peasants flock to the famous church to celebrate their religious fêtes. Kneeling before the sacred fountain in their holiday

WOMEN PRAYING AT THE FOUNTAIN OF SALAÜN, FOLGOËT.

Digitized by Google

gowns and coiffes, they made a charming picture on that summer day when two of us made our pilgrimage to the fountain of poor Salaün, the Fool of the Forest.

Pornic is associated with Mr. Browning through yet another poem. It was here, at one of the fairs that still make glad the Breton heart, that the poet saw the gipsy who served as model for his «Fifine,» the idea of the poem being, to quote Mr. Browning's words, «to show morally how a Don Juan might justify himself, partly by truth, somewhat by sophistry.»

In this poem we have Pornic in the twilight, «the streak of Île Noirmoutier» lying off against the horizon, the spire of old St. Gilles standing high against the night sky, and the queer little burying-ground with the absurd, pathetic bead wreaths and emblems —all familiar pictures, and, like everything Browning paints, true to the life.

THE CALVARY AT FOLGOËT.

In the twentieth verse we have a glimpse of the strongest superstition in the Breton heart—the belief that the Virgin protects the mariner from danger. The saint,

> Cold-pinnacled aloft o' the spire, prays calm the seas
> From Pornic church, and oft at midnight (peasants say)
> Goes walking out to save from shipwreck: well she may!
> For think how many a year has she been conversant
> With nought but winds and rains.

This Ste. Marie being the hope of the Breton sailor, one finds all along that cruel coast statues of the Virgin, or chapels bearing her name, standing on bold promontories or cliffs at dangerous points. At Paimpol, where live the quaint fisherfolk of Pierre Loti's «Pêcheur d'Islande,» «our Lady» is the object of especial homage, and plays a prominent part in all the processions at pardons and other fête-days. Every fishing-boat carries a little faience statue of her, which counts for much more in the Breton mind than any marine insurance. Notwithstanding this, the graves in the Paimpol burying-ground are those of women and children; only here and there a man is buried. And we recalled the little church which Pierre Loti has made us know, as we chanced upon it one summer Sunday night; within, dotting the space darkened by the twilight, the white coiffes of widows and orphans, showing like pale stars in a dark firmament—lonely women and children, praying, while from the open door we looked upon the burying-ground with the same blue-beaded ornaments that Browning describes in «Fifine at the Fair.»

Digitized by Google

In the memorable ramble of the poem the

pair chance upon the Druid monument. Unless one has happened upon one of these monstrous, weird piles at night, it is difficult to believe how solemn is the impression given.

How does it strike you, this construction gaunt and gray—
Sole object, these piled stones, that gleam unground-away
By twilight's hungry jaw, which champs fine all beside
I' the solitary waste we grope through? Oh, no guide
Need we to grope our way and reach the monstrous door
Of granite! Take my word, the deeper you explore
That caverned passage, filled with fancies to the brim,
The less will you approve the adventure! Such a grim
Bar-sinister soon blocks abrupt your path, and ends
All with a cold dread shape,—shape whereon Learning spends
Labour, and leaves the text obscurer for the gloss,
While Ignorance reads right—recoiling from that Cross!
Whence came the mass and mass, strange quality of stone
Unquarried anywhere i' the region round? Unknown!
Just as unknown, how such enormity could be
Conveyed by land, or else transported over sea,
And laid in order, so, precisely each on each.

And of the solitary, stately menhir

. . . Folk, too, . . .
Surmised the old gray stone upright there, through such tracts
Of solitariness and silence, kept the facts
Entrusted it, could deal out doctrine, did it please:
No fresh and frothy draught, but liquor on the lees,
Strong, savage, and sincere.

Separated from the Breton atmosphere which surrounds it, outside and beyond the Pornic stretch of land and sea which frames it, there are, of course, unforgettable lines, sentences which give the key-note of the poem, as:

Life means—learning to abhor
The false, and love the true, truth treasured snatch by snatch.

Or:

Into the truth of things—
Out of their falseness rise, and reach thou, and remain!

During three summers, 1863, '64, and '65, Browning visited Ste. Marie. The letter of September, 1865, given by Mrs. Orr, refers to the Pornic legend. «I suppose my poem which you say brings me and Pornic together in your mind is the one about the poor girl. If so, ‹fancy!› (as I hear you say). They have pulled down the church since I arrived last month. There are only the shell-like, roofless walls left for a few weeks more. It was very old, built on a natural base of rock, small enough, to be sure; so they built a smart new one behind it, and down goes this—just as if they could not have pitched down their brick and stucco further away, and left the old place for the fishermen. . . . Certain old Norman ornaments, capitals, pillars, and the like, which we left erect in the doorway, are at this moment in a heap of rubbish by the roadside. The people here are good, stupid, and dirty, without a sense of picturesqueness in their clod-polls.»[1]

How often it happens to one traveling through Brittany to come upon lovely little churches or chapels in most unexpected places,—sometimes on the edge, sometimes in the depths, of a forest, or on a cliff overlooking the sea,—built in the middle ages, when faith and zeal found expression in this manner! These have now fallen into disuse, though not yet into decay. Only the poverty of the people has prevented a «smart new one» from taking the place of the beautiful old church.

On our way to Folgoët we chanced upon one of these beautiful chapels, standing a hundred feet from the road, in a grove of tall trees. After long searching we found the custodian of the rusty key,—itself a relic of the middle ages,—who opened the door for us. How beautiful it all was! What simplicity, and what perfect proportions! The well-meaning Breton explained apologetically: «Of course it 's very old, but we hope to be able to build a new one in its place in a few years. They tore their old church down over in Plougastel, and built a new one two years ago; but we are poor in this parish.» «Oh, no; you are not poor; you are rich,» I answered. «You have this beautiful old church. God keep you from following the fashion of Plougastel!» Of course the good soul looked sympathetically at us, as at people gone out of their senses.

It was at Ste. Marie that the poem «James

[1] Mr. Sharp, in his «Life of Robert Browning,» page 173, tells us that the poem «Gold Hair» was written in Normandy in 1858. Mr. Browning was in Pornic in the summers of 1863–4–5. In Mr. Sharp's «Chronological List of Works,» he puts the publication of «Gold Hair» and «James Lee»—both poems having Pornic for setting—in 1864.

Lee's Wife» took form. Browning writes to a friend: «This is a wild little place in Brittany, close by the sea—a hamlet of a dozen houses—perfectly lovely. You may walk on the edge of the low rocks for miles. . . . I feel out of the very earth sometimes, as I sit at the window, with the little church or field, a few houses, and the sea. On a week-day there is nobody in the village. Plenty of hay-stacks, cows, and fowls; all our butter, eggs, and milk are produced on the farm here. Such a soft sea, and such a mournful wind!» Mrs. Orr tells us that the «window» of the letter is the «doorway» of the poem.

On this autumn morning we sought the spots which Browning has framed in «James Lee.» We walked «along the beach»; we lingered «on the cliff,» and clambered «among the rocks.» Can one forget the lines:

Oh, good gigantic smile o' the brown old earth,
This autumn morning! How he sets his bones
To bask i' the sun, and thrusts out knees and feet
For the ripple to run over in its mirth;
Listening the while, where on the heap of stones
The white breast of the sea-lark twitters sweet.[1]

Each separate spot on this bit of Pornic shore gave the key-note and title to these rare groups of verses that go to make the whole of the poem.

WOMEN PRAYING AT THE DRUID MONUMENTS.

The water 's in stripes like a snake,
To the leeward,—
On the weather-side, black, spotted white with the wind.
«Good fortune departs, and disaster 's behind,»—
Hark, the wind with its wants and its infinite wail!

[1] Reminding one of the lines in «Pauline»:

And tongues of bank go shelving in the waters,
Where the pale-throated snake reclines his head,
And old gray stones lie making eddies there.

Digitized by Google

This is the «mournful wind» of the letter. And the field and the fig-tree of the third stanza:

Our fig-tree, that leaned for the saltness, has furled
Her five fingers,
Each leaf like a hand opened wide to the world
Where there lingers
No glint of the gold, Summer sent for her sake.

The «mayor's house,» which Browning occupied, has disappeared, or perhaps is absorbed in a modern French villa, its «clean and bare» walls doubtless given over to the inevitable stucco.

The year 1866 brought the poet to another little nook in lower Brittany—Le Croisic. His father had died in June, and his sister came to live with him. They had tried Dinard. The letter written from Le Croisic says: «We all found Dinard unsuitable, and after staying a few days at St. Malo, resolved to try this place, and well for us, since we find it serves our purpose capitally. . . . We are in the most delicious and peculiar old house I ever occupied, the oldest in the town; plenty of great rooms, nearly as much space as in the Villa Alberti. The little town and surrounding country are wild and primitive, even a trifle beyond Pornic perhaps. Close by is Batz —a village where the men dress in white from head to foot, with baggy breeches and great black flap hats. Opposite is Guérande, the old capital of Brittany. You have read about it in Balzac's ‹Béatrix.› And other interesting places are near. The sea is all round our peninsula, and, on the whole, I expect we shall like it very much.»

Browning has made Croisic unforgettable, not because he lived there, for the simple folk do not dream what poet dwelt among them those summers, but chiefly because «Hervé Riel the Croisickese» has been so beautifully framed in the poem. We found the «delicious and peculiar» house where the poet lived. We walked along the shore among the fisherfolk, and met his Hervé Riel more than once. We see him to-day, looking to be of the same valiant stuff as when he «up stood, out stepped, in struck» to save the French fleet on that 31st of May, 1692, at «St. Malo on the Rance.» The type still abounds on this rocky shore of Croisic.

Not a symptom of surprise
In the frank blue Breton eyes,

exactly describes the Hervé Riel we met. Nor is the «Belle Aurore» lacking. We saw —we believe we saw—Hervé Riel, and his Belle Aurore, and a flock of little Hervé Riels and Belle Aurores, on this September morning of 1893. It is only in this one little spot of Brittany that one finds «blue Breton eyes» (Browning makes no mistakes). A Breton historian tells us that only in Batz, Guérande, and Croisic are found the Saxon element— «Saxons that were left behind and forgotten in Brittany» after an invasion. They are tall, and have blond hair and blue eyes. The costumes of these Batz people are the gayest and most elaborate in Brittany—«the men dressed in white from head to foot,» of whom Browning writes, being those who work in the salt-fields, the one industry besides agriculture. As for the others, the women wear white dresses with red or blue sleeves, black or violet petticoats bordered with velvet, fine red stockings, coiffes attached under the chin, with barbs floating over the shoulders, and lace collars or fichus daintily fluted. The costume of the men is not less picturesque: three or four waistcoats of different lengths and of all colors, large plaited trousers, the hat broad-brimmed and raised proudly in front, but falling over the eyes when they are in mourning. This was the ancient costume of the people of Batz; to-day it is somewhat simplified, but still very picturesque.

The rocky coast of Croisic is a fit training-school for such sailors as this typical Hervé Riel; and after knowing the Croisickese sailors, one is not surprised at the gallant deed of Browning's hero. The affectionate qualities of these people are shown in Hervé Riel's reply when asked to name his reward; he begs a whole day's holiday, that he may visit his wife, whom he calls «the Belle Aurore.» In other respects the poet has given us in Hervé Riel the true flavor of this strangely interesting Breton, the Croisickese, brave, handsome, and gentle. Mr. Browning, while at St. Malo, found the name Duguay-Trouin everywhere. A street and a quay bear his name, his statue stands in a public square, and his portrait is in the museum. It would seem that he has honors sufficient without the bit of glory that really belonged to the «simple coasting pilot» of Croisic. While in Croisic, Browning came to believe that the real hero who saved the French fleet in 1692 was no other than Hervé Riel of Croisic. He searched the records of the admiralty, established the fact, and determined to honor a deserving name, thus honoring likewise the modest little town. The poem was written, but lay in a drawer until 1871, when, desiring to contribute to

Digitized by Google

the Paris Relief Fund, for the aid of the people after the siege, Mr. Browning sold it to the «Cornhill Magazine» for one hundred pounds, and this was his contribution.

The late M. Guizot, in his course of lectures on the poems of Robert Browning at the College of France in 1892–93, said, in connection with this poem: «Mr. Browning said to me that it was not without a purpose that he selected this poem, which was a tribute to the bravery and modesty of a French sailor, thus bringing it to serve other brave Frenchmen who also had shown real heroism.» Browning himself says of «Hervé Riel»: «I venture to call my verses good for once.»

Mr. Browning, with his sister, returned to Croisic in the summer of 1867. In his «Two Poets of Croisic» he takes occasion to honor two well-nigh forgotten men of that out-of-the-way town. The first ten verses of the poem sing of the log fire—the blazing ship-wood sending forth the many-colored flames:

A PEASANT DINNER.

Crowd closer, let us! Ha, the secret nursed
Inside yon hollow, crusted roundabout
With copper where the clamp was,—how the burst
Vindicates flame the stealthy feeder! Spout
Thy splendidest—a minute and no more?
So soon again all sobered as before?

. . . . . .

Our log is old ship-timber, broken bulk.
There 's sea-brine spirits up the brimstone flame.

Why resist the temptation to put alongside these Croisic lines those other that bear the title «By the Fireside,» in «James Lee's Wife»?

Is all our fire of shipwreck wood,
Oak and pine?
Oh, for the ills half-understood,
The dim, dead woe
Long ago
Befallen this bitter coast of France!
Well, poor sailors took their chance;
I take mine.

A ruddy shaft our fire must shoot
O'er the sea;
Do sailors eye the casement—mute
Drenched and stark,
From their bark—
And envy, gnash their teeth for hate
O' the warm, safe house and happy freight—
Thee and me?

But it is with Croisic that we have now to do, where the poet sits before the ship-wood blaze. He recalls his boyhood, when, watching the sparks and flames of a log fire, he was wont to conjure heroes therefrom.

By that old nurse-taught game which gave the sprites
Each one his title and career.

He sings now of the wild, weather-beaten Croisic:

Launched by our ship-wood, float we, once adrift,
In fancy to that land-strip waters wash,
We both know well! Where uncouth tribes made shift

A MAN OF BATZ AND A WOMAN OF GUIMILLIAN.

Long since to just keep life in, billows dash
Nigh over folk who shudder at each lift
Of the old tyrant tempest's whirlwind-lash,
Though they have built the serviceable town
Tempests but tease now, billows drench, not drown.

Croisic, the spit of sandy rock which juts
Spitefully northward, bears nor tree nor shrub
To tempt the ocean, show what Guérande shuts
Behind her, past wild Batz whose Saxons grub
The ground for crystals grown where ocean gluts
Their promontory's breadth with salt: all stub
Of rock and stretch of sand, the land's last strife
To rescue a poor remnant for dear life.

Could any words more truly picture this cruel coast, jutting «spitefully northward»? And «what Guérande shuts behind» is a veritable bit of Italian softness—balmy air, tender sky, fruitful, verdant, with perfume of violet and spreading green of fig-trees; and, between Guérande and Croisic, Batz, with its salt-marshes.[1]

[1] One of the Breton poet Brizeux's best-known poems —«Les Goélands»—describes a custom of Croisic. The young women come down to the shore to bid adieu to their lovers who are sailing away to the Spanish coast.

Le matin, à la mer haute
Les jeunes gens du Croisic
Vont s'embarquer sur leur bricks:
Mes sœurs, chantons sur la côte
Goélands, Goélands,
Ramenez-vous nos amants!

The ships sail away. The sea-gulls follow the ships. The maidens, weeping and dancing in circles on the shore, sing:

Goélands, aux ports d'Espagne
Guidez nos chers matelots,
Et parlez leurs sur les flots
Des filles de la Bretagne.
Goélands, Goélands,
Ramenez-vous nos amants!

The faithful sea-gulls have followed the ships. The maidens, alas! stretch their arms in vain toward the sea.

DOUARNINEZ FISHERMAN AND SHIP-BOY.

In the fourteenth verse the poet writes:

And still so much remains of that gray cult,
That even now, of nights, do women steal
To the sole Menhir standing, and insult
The antagonistic church-spire by appeal
To power discrowned in vain, since each adult
Believes the gruesome thing she clasps may heal
Whatever plague no priestly help can cure:
Kiss but the cold stone, the event is sure!

Not until the twenty-second verse do we actually arrive at the «two poets.»

. . . Poets, if you please!
What, even there, endowed with knack of rhyme,
Did two among the aborigines
Of that rough region pass the ungracious time
Suiting, to rumble-tumble of the sea's,
The songs forbidden a serener clime?
Or had they universal audience—that 's
To say, the folk of Croisic, ay, and Batz?

Then follows the story of the fair—René Gentilhomme:

Appropriate appellation! noble birth
And knightly blazon, the device wherefrom
Was ‹Better do than say›! In Croisic's dearth
Why prison his career while Christendom
Lay open to reward acknowledged worth?
He therefore left it at the proper age,
And got to be the Prince of Condé's page.

. . . . . .

Not until the sixty-seventh stanza does the poet take up the legend of the two poets of Croisic, and in the sixty-ninth stanza he says:

Paul Desforges Maillard, Croisickese by birth.

. . . . . .

. . . Cease to scan
The ways of Providence! See Croisic's dearth—
Not Paris in its plentitude—suffice
To furnish France with her best poet twice!

Digitized by Google

The chief success of the second poet seems to lie in the fact that he «brought Voltaire upon his knees.» Moreover, he furnished Piron with the subject of his comedy «Métromanie»:

> . . . There you 'll find
> He 's Francaleu . . .
> As for Voltaire, he 's Damis.

To a lover of Brittany the poem is congenial. To a poet or critic the gem is the epilogue beginning:

> Such a starved bank of moss
> Till that May-morn,
> Blue ran the flash across:
> Violets were born!

Another important place mentioned is Quimper, the chief city of that department of the province called Finistère.

Near Quimper is the forest of Broceliande, still murmuring of past mysteries. In this forest stood the palace of marble and gold in which the fairy Vivian imprisoned Lancelot of the Lake; and the Bretons will tell you that under a rock in Broceliande the enchanter Merlin is still sleeping. In this forest is that «Endless Valley» where the souls of perfidious lovers forever wander. After Quimper we find Mr. Browning on that bit of Brittany coast where once the «Roi d'Ys» held his court. He writes from Audierne: «At Quimper we heard, for a second time, that Audierne would suit exactly, and to it we came, happily, for ‹suit› it certainly does. Look on the map for the most westerly point of Brittany and of the mainland of Europe; there is niched Audierne, a delightful, quite unspoiled little fishing-town, with the open ocean in front, and beautiful woods, hills, dales, meadows, and lanes behind and beyond, sprinkled here and there with villages, each with its fine old church. Sarianne and I have just returned from a walk, in the course of which we visited a town—Pont Croix—with a beautiful cathedral-like building amid a cluster of clean, bright Breton houses; and a little farther on is another church, Notre Dame de Comfort, with only a hovel or two round it, worth the journey from England to see.»

Not far from Audierne, where the Bay of Douarninez is, formerly stood the city of Is. Here King Gradlon had established his court. St. Gwenolé, a disciple of St. Corentin, who had the knack of promenading on water dry-shod, was much beloved by Gradlon, who, it appears, had a special talent for discovering saints and a great admiration for miracles. He gave to Gwenolé the celebrated monastery of Landévének, in Finistère, the ruins of which are still to be seen. Gwenolé was a frequent visitor at the palace at Is, and considered it no breach of hospitality to preach against the iniquities practised in that city, even denouncing the daughter of Gradlon, most iniquitous of all. The peasants of Huëlgoat, in Finistère, still point out a gulf into which this wicked princess Dahut threw her superfluous lovers.

Finally God, so the legend goes, decided to punish the crimes of the people of Is, and Dahut became his instrument. The sluice-gates of the city could be unlocked only with the golden key which the king always wore hung about his neck. Dahut, having promised this key to her lover, who had planned to destroy the city, stole it from her father's neck as he was sleeping. Shortly after the sea rushed in and overwhelmed the city. At the moment of danger St. Gwenolé ran to the king, and warned him of the peril, urging him to flee. Gradlon mounted his horse, taking his daughter with him; but he was overtaken by the waves. At that crisis a terrible voice commanded him to

THE ENDLESS VALLEY—FOREST OF BROCELIANDE.

Digitized by Google

separate himself from his daughter, who was behind him in the saddle. The king recognized in this the voice of God, and abandoned his daughter to the waves. The sea, satisfied with its prey, receded; but the city of Is was swallowed up, with all its inhabitants, and the next day only the Bay of Douarninez was to be seen.

It is in this bay, near the Pointe du Raz, that the Breton sailor still believes he sees

TRÉPASSES—THE BAY OF LOST SOULS. (DRUID MONUMENT TO THE LEFT.)

under the green waves the ruined streets and monuments of this Breton Sodom. He even shows the print of the foot of King Gradlon's horse on a rock near by!

This bit of Brittany coast teems with weird and gruesome legends. Not far from the Pointe du Raz is the Baie des Trépasses. The legend of this bay dates from the Druids. The flavor is one that appeals to the Breton taste and fancy, and has been carefully preserved.

According to the Celtic legend, the Druids after death embarked from this coast to be transported to the Île de Sein, a wild island off Pointe du Raz, there to be buried. So savage is the sea at this point that many corpses were shipwrecked. These souls, weeping in great anguish, walk up and down the shore of this bay; often the skeletons of these wrecked creatures knock at the doors of the fishermen's cabins, to beg for burial. To-day the priests of this coast go out in boats to say the mass for the dead in presence of the people, who kneel praying on the shore.

Normandy was the scene of Browning's «Red Cotton Night-cap Country.» The summers of 1870, '72, '73, and still others, were passed in this province. Normandy—thrifty, industrious, adaptive, successful, glib, forgetful of her folk-lore, keeping pace with the century—is thoroughly French. Brittany—land of beautiful churches, of poetic traditions, sanctuary of the legend, cradle of the Druids—still celebrates the brave deeds of her heroes and of her saints. She still sings the old songs to her little ones. Her young men and maidens still dance the gavotte at the pardons. She has not yet lost her faith in her fairies. To her simple peasants the animals still talk on Christmas nights, and on the eve of St. Toussaint the dead walk in solemn procession through the fields. The table stands, has always stood, and always will stand, by the one window, and the benches are on each side. The beggar is always welcomed, and at weddings the custom still holds for the bride to dance with the beggar, for the sake of the good luck that is sure to result.

A. M. Mosher.

AN ADVENTURE WITH A DOG AND A GLACIER.

BY THE AUTHOR OF «THE MOUNTAINS OF CALIFORNIA,» ETC.

IN the summer of 1880 I set out from Fort Wrangel in a canoe, with the Rev. S. H. Young, my former companion, and a crew of Indians, to continue the exploration of the icy region of southeastern Alaska, begun in the fall of 1879. After the necessary provisions, blankets, etc., had been collected and stowed away, and the Indians were in their places ready to dip their paddles, while a crowd of their friends were looking down from the wharf to bid them good-by and good luck, Mr. Young, for whom we were waiting, at length came aboard, followed by a little black dog that immediately made himself at home by curling up in a hollow among the baggage. I like dogs, but this one seemed so small, dull, and worthless that I objected to his going, and asked the missionary why he was taking him. «Such a helpless wisp of hair will only be in the way,» I said; «you had better pass him up to one of the Indian boys on the wharf, to be taken home to play with the children. This trip is not likely to be a good one for toy dogs. He will be rained on and snowed on for weeks, and will require care like a baby.» But the missionary assured me that he would be no trouble at all; that he was a perfect wonder of a dog—could endure cold and hunger like a polar bear, could swim like a seal, and was wondrous wise, etc., making out a list of virtues likely to make him the most interesting of the company.

Nobody could hope to unravel the lines of his ancestry. He was short-legged, bunchy-bodied, and almost featureless—something like a muskrat. Though smooth, his hair was long and silky, so that when the wind was at his back it ruffled, making him look shaggy. At first sight his only noticeable feature was his showy tail, which was about as shady and airy as a squirrel's, and was carried curling forward nearly to his ears. On closer inspection you might see his thin, sensitive ears and his keen dark eyes with cunning tan spots. Mr. Young told me that when the dog was about the size of a wood-rat he was presented to his wife by an Irish prospector at Sitka, and that when he arrived at Fort Wrangel he was adopted by the Stickeen Indians as a sort of new good-luck totem, and named «Stickeen» for the tribe, with whom he became a favorite. On our trip he soon proved himself a queer character—odd, concealed, independent, keeping invincibly quiet, and doing many inexplicable things that piqued my curiosity. Sailing week after week through the long, intricate channels and inlets among the innumerable islands and mountains of the coast, he spent the dull days in sluggish ease, motionless, and apparently as unobserving as a hibernating marmot. But I discovered that somehow he always knew what was going forward. When the Indians were about to shoot at ducks or seals, or when anything interesting was to be seen along the shore, he would rest his chin on the edge of the canoe and calmly look out. When he heard us talking about making a landing, he roused himself to see what sort of place we were coming to, and made ready to jump overboard and swim ashore as soon as the canoe neared the beach. Then, with a vigorous shake to get rid of the brine in his hair, he went into the woods to hunt small game. But though always the first out of the canoe, he was always the last to get into it. When we were ready to start he could never be found, and refused to come to our call. We soon found out, however, that though we could not see him at such times, he saw us, and from the cover of the briers and huckleberry-bushes in the fringe of the woods was watching the canoe with wary eye. For as soon as we were fairly off, he came trotting down the beach, plunged into the surf, and swam after us, knowing well that we would cease rowing and take him in. When the contrary little vagabond came alongside, he was lifted by the neck, held at arm's length a moment to drip, and dropped aboard. We tried to cure him of this trick by compelling him to swim farther before stopping for him; but this did no good: the longer the swim, the better he seemed to like it.

Though capable of most spacious idleness,

Digitized by Google

he was always ready for excursions or adventures of any sort. When the Indians went into the woods for a deer, Stickeen was sure to be at their heels, provided I had not yet left camp. For though I never carried a gun, he always followed me, forsaking the hunting Indians, and even his master, to share my wanderings. The days that were too stormy for sailing I spent in the woods, or on the mountains or glaciers, wherever I chanced to be; and Stickeen always insisted on following me, gliding through the dripping huckleberry-bushes and prickly *Panax* and *Rubus* tangles like a fox, scarce stirring their close-set branches, wading and wallowing through snow, swimming ice-cold streams, jumping logs and rocks and the crusty hummocks and crevasses of glaciers with the patience and endurance of a determined mountaineer, never tiring or getting discouraged. Once he followed me over a glacier the surface of which was so rough that it cut his feet until every step was marked with blood; but he trotted on with Indian fortitude until I noticed his pain and, taking pity on him, made him a set of moccasins out of a handkerchief. But he never asked help or made any complaint, as if, like a philosopher, he had learned that without hard work and suffering there could be no pleasure worth having.

Yet nobody knew what Stickeen was good for. He seemed to meet danger and hardships without reason, insisted on having his own way, never obeyed an order, and the hunters could never set him on anything against his will, or make him fetch anything that was shot. I tried hard to make his acquaintance, guessing there must be something in him; but he was as cold as a glacier, and about as invulnerable to fun, though his master assured me that he played at home, and in some measure conformed to the usages of civilization. His equanimity was so immovable it seemed due to unfeeling ignorance. Let the weather blow and roar, he was as tranquil as a stone; and no matter what advances you made, scarce a glance or a tail-wag would you get for your pains. No superannuated mastiff or bulldog grown old in office surpassed this soft midget in stoic dignity. He sometimes reminded me of those plump, squat, unshakable cacti of the Arizona deserts that give no sign of feeling. A true child of the wilderness, holding the even tenor of his hidden life with the silence and serenity of nature, he never displayed a trace of the elfish vivacity and fun of the terriers and collies that we all know, nor of their touching affection and devotion. Like children, most small dogs beg to be loved and allowed to love, but Stickeen seemed a very Diogenes, asking only to be let alone. He seemed neither old nor young. His strength lay in his eyes. They looked as old as the hills, and as young and as wild. I never tired looking into them. It was like looking into a landscape; but they were small and rather deep-set, and had no explaining puckers around them to give out particulars. I was accustomed to look into the faces of plants and animals, and I watched the little sphinx more and more keenly as an interesting study. But there is no estimating the wit and wisdom concealed and latent in our lower fellow-mortals until made manifest by profound experiences; for it is by suffering that dogs as well as saints are developed and made perfect.

After we had explored the glaciers of the Sumdum and Tahkoo inlets, we sailed through Stephen's Passage into Lynn Canal, and thence through Icy Strait into Cross Sound, looking for unexplored inlets leading toward the ice-fountains of the Fairweather Range. While the tide was in our favor in Cross Sound we were accompanied by a fleet of icebergs drifting out to the ocean from Glacier Bay. Slowly we crawled around Vancouver's Point, Wimbleton, our frail canoe tossed like a feather on the massive swells coming in past Cape Spenser. For miles the Sound is bounded by precipitous cliffs which looked terribly stern in gloomy weather. Had our canoe been crushed or upset, we could have gained no landing here; for the cliffs, as high as those of Yosemite, sink perfectly sheer into deep water. Eagerly we scanned the immense wall on the north side for the first sign of an opening, all of us anxious except Stickeen, who dozed in peace or gazed dreamily at the tremendous precipices when he heard us talking about them. At length we discovered the entrance of what is now called Taylor Bay, and about five o'clock reached the head of it, and encamped near the front of a large glacier which extends as an abrupt barrier all the way across from wall to wall of the inlet, a distance of three or four miles.

On first observation the glacier presented some unusual features, and that night I planned a grand excursion for the morrow. I awoke early, called not only by the glacier, but also by a storm. Rain, mixed with trailing films of scud and the ragged, drawn-out nether surfaces of gray clouds, filled the inlet, and was sweeping forward in a thick,

Digitized by Google

passionate, horizontal flood, as if it were all passing over the country instead of falling on it. Everything was streaming with life and motion—woods, rocks, waters, and the sky. The main perennial streams were booming, and hundreds of new ones, born of the rain, were descending in gray and white cascades on each side of the inlet, fairly streaking their rocky slopes, and roaring like the sea. I had intended making a cup of coffee before starting, but when I heard the storm I made haste to join it; for in storms nature has always something extra fine to show us, and if we have wit to keep in right relations with them the danger is no more than in home-keeping, and we can go with them rejoicing, sharing their enthusiasm, and chanting with the old Norsemen, «The blast of the tempest aids our oars; the hurricane is our servant, and drives us whither we wish to go.» So I took my ice-ax, buttoned my coat, put a piece of bread in my pocket, and set out. Mr. Young and the Indians were asleep, and so, I hoped, was Stickeen; but I had not gone a dozen rods before he left his warm bed in the tent, and came boring through the blast after me. That a man should welcome storms for their exhilarating music and motion, and go forth to see God making landscapes, is reasonable enough; but what fascination could there be in dismal weather for this poor, feeble wisp of a dog, so pathetically small? Anyhow, on he came, breakfastless, through the choking blast. I stopped, turned my back to the wind, and gave him a good, dissuasive talk. «Now don't,» I said, shouting to make myself heard in the storm—«now don't, Stickeen. What has got into your queer noddle now? You must be daft. This wild day has nothing for you. Go back to camp and keep warm. There is no game abroad—nothing but weather. Not a foot or wing is stirring. Wait and get a good breakfast with your master, and be sensible for once. I can't feed you or carry you, and this storm will kill you.» But nature, it seems, was at the bottom of the affair; and she gains her ends with dogs as well as with men, making us do as she likes, driving us on her ways, however rough. So after ordering him back again and again to ease my conscience, I saw that he was not to be shaken off; as well might the earth try to shake off the moon. I had once led his master into trouble, when he fell on one of the topmost jags of a mountain, and dislocated his arms. Now the turn of his humble companion was coming. The dog just stood there in the wind, drenched and blinking, saying doggedly, «Where thou goest I will go.» So I told him to come on, if he must, and gave him a piece of the bread I had put in my pocket for breakfast. Then we pushed on in company, and thus began the most memorable of all my wild days.

The level flood, driving straight in our faces, thrashed and washed us wildly until we got into the shelter of the trees and ice-cliffs on the east side of the glacier, where we rested and listened and looked on in comfort. The exploration of the glacier was my main object, but the wind was too high to allow excursions over its open surface, where one might be dangerously shoved while balancing for a jump on the brink of a crevasse. In the meantime the storm was a fine study. Here the end of the glacier, descending over an abrupt swell of resisting rock about five hundred feet high, leans forward and falls in majestic ice-cascades. And as the storm came down the glacier from the north, Stickeen and I were beneath the main current of the blast, while favorably located to see and hear it. A broad torrent, draining the side of the glacier, now swollen by scores of new streams from the mountains, was rolling boulders along its rocky channel between the glacier and the woods with thudding, bumping, muffled sounds, rushing toward the bay with tremendous energy, as if in haste to get out of the mountains, the waters above and beneath calling to each other, and all to the ocean, their home. Looking southward from our shelter, we had this great torrent on our left, with mossy woods on the mountain slope above it, the glacier on our right, the wild, cascading portion of it forming a multitude of towers, spires, and flat-topped battlements seen through the trees, and smooth gray gloom ahead. I tried to draw the marvelous scene in my note-book, but the rain fell on my page in spite of all that I could do to shelter it, and the sketch seemed miserably defective.

When the wind began to abate I traced the east side of the glacier. All the trees standing on the edge of the woods were barked and bruised, showing high ice-mark in a very telling way, while tens of thousands of those that had stood for centuries on the bank of the glacier farther out lay crushed and being crushed. In many places I could see, down fifty feet or so beneath, the margin of the glacier mill, where trunks from one to two feet in diameter were being ground to pulp against outstanding rock-ribs and bosses of the bank. About three miles above the front of the glacier, I climbed to the surface

of it by means of ax-steps, made easy for Stickeen; and as far as the eye could reach, the level, or nearly level, glacier stretched away indefinitely beneath the gray sky, a seemingly boundless prairie of ice. The rain continued, which I did not mind; but a tendency to fogginess in the drooping clouds made me hesitate about venturing far from land. No trace of the west shore was visible, and in case the misty clouds should settle, or the wind again become violent, I feared getting caught in a tangle of crevasses. Lingering undecided, watching the weather, I sauntered about on the crystal sea. For a mile or two out I found the ice remarkably safe. The marginal crevasses were mostly narrow, while the few wider ones were easily avoided by passing around them, and the clouds began to open here and there. Thus encouraged, I at last pushed out for the other side; for nature can make us do anything she likes, luring us along appointed ways for the fulfilment of her plans. At first we made rapid progress, and the sky was not very threatening, while I took bearings occasionally with a pocket-compass, to enable me to retrace my way more surely in case the storm should become blinding; but the structure-lines of the ice were my main guide. Toward the west side we came to a closely crevassed section, in which we had to make long, narrow tacks and doublings, tracing the edges of tremendous longitudinal crevasses, many of which were from twenty to thirty feet wide, and perhaps a thousand feet deep, beautiful and awful. In working a way through them I was severely cautious, but Stickeen came on as unhesitatingly as the flying clouds. Any crevasse that I could jump he would leap without so much as halting to examine it. The weather was bright and dark, with quick flashes of summer and winter close together. When the clouds opened and the sun shone, the glacier was seen from shore to shore, with a bright array of encompassing mountains partly revealed, wearing the clouds as garments, black in the middle, burning on the edges, and the whole icy prairie seemed to burst into a bloom of iris colors from myriads of crystals. Then suddenly all the glorious show would be again smothered in gloom. But Stickeen seemed to care for none of these things, bright or dark, nor for the beautiful wells filled to the brim with water so pure that it was nearly invisible, the rumbling, grinding moulins, or the quick-flashing, glinting, swirling streams in frictionless channels of living ice. Nothing seemed novel to him. He showed neither caution nor curiosity. His courage was so unwavering that it seemed due to dullness of perception, as if he were only blindly bold; and I warned him that he might slip or fall short. His bunchy body seemed all one skipping muscle, and his peg legs appeared to be jointed only at the top.

We gained the west shore in about three hours, the width of the glacier here being about seven miles. Then I pushed northward, in order to see as far back as possible into the fountains of the Fairweather Mountains, in case the clouds should rise. The walking was easy along the margin of the forest, which, of course, like that on the other side, had been invaded and crushed by the swollen glacier. In an hour we rounded a massive headland and came suddenly on another outlet of the glacier, which, in the form of a wild ice-cascade, was pouring over the rim of the main basin toward the ocean with the volume of a thousand Niagaras. The surface was broken into a multitude of sharp blades and pinnacles leaning forward, something like the updashing waves of a flood of water descending a rugged channel. But these ice-waves were many times higher than those of river cataracts, and to all appearance motionless. It was a dazzling white torrent two miles wide, flowing between high banks black with trees. Tracing its left bank three or four miles, I found that it discharged into a fresh-water lake, filling it with icebergs.

I would gladly have followed the outlet, but the day was waning, and we had to make haste on the return trip to get off the ice before dark. When we were about two miles from the west shore the clouds dropped misty fringes, and snow soon began to fly. Then I began to feel anxiety as to finding a way in the storm through the intricate network of crevasses which we had entered. Stickeen showed no fear. He was still the same silent, sufficient, uncomplaining Indian philosopher. When the storm-darkness fell he kept close behind me. The snow warned us to make haste, but at the same time hid our way. At rare intervals the clouds thinned, and mountains, looming in the gloom, frowned and quickly vanished. I pushed on as best I could, jumping innumerable crevasses, and for every hundred rods or so of direct advance traveling a mile in doubling up and down in the turmoil of chasms and dislocated masses of ice. After an hour or two of this work we came to a series of longitudinal crevasses of appalling width, like immense furrows. These I traced with firm nerve, excited and strengthened by the danger, mak-

Digitized by Google

ing wide jumps, poising cautiously on the dizzy edges after cutting hollows for my feet before making the spring, to avoid slipping or any uncertainty on the farther sides, where only one trial is granted—exercise at once frightful and inspiring. Stickeen flirted across every gap I jumped, seemingly without effort. Many a mile we thus traveled, mostly up and down, making but little real headway in crossing, most of the time running instead of walking, as the danger of spending the night on the glacier became threatening. No doubt we could have weathered the storm for one night, and I faced the chance of being compelled to do so; but we were hungry and wet, and the north wind was thick with snow and bitterly cold, and of course that night would have seemed a long one. Stickeen gave me no concern. He was still the wonderful, inscrutable philosopher, ready for anything. I could not see far enough to judge in which direction the best route lay, and had simply to grope my way in the snow-choked air and ice. Again and again I was put to my mettle, but Stickeen followed easily, his nerves growing more unflinching as the dangers thickened; so it always is with mountaineers.

At length our way was barred by a very wide and straight crevasse, which I traced rapidly northward a mile or so without finding a crossing or hope of one, then southward down the glacier about as far, to where it united with another crevasse. In all this distance of perhaps two miles there was only one place where I could possibly jump it; but the width of this jump was nearly the utmost I dared attempt, while the danger of slipping on the farther side was so great that I was loath to try it. Furthermore, the side I was on was about a foot higher than the other, and even with this advantage it seemed dangerously wide. One is liable to underestimate the width of crevasses where the magnitudes in general are great. I therefore measured this one again and again, until satisfied that I could jump it if necessary, but that in case I should be compelled to jump back to the higher side, I might fail. Now a cautious mountaineer seldom takes a step on unknown ground which seems at all dangerous, that he cannot retrace in case he should be stopped by unseen obstacles ahead. This is the rule of mountaineers who live long; and though in haste, I compelled myself to sit down and deliberate before I broke it. Retracing my devious path in imagination, as if it were drawn on a chart, I saw that I was recrossing the glacier a mile or two farther up-stream, and was entangled in a section I had not before seen. Should I risk this dangerous jump, or try to regain the woods on the west shore, make a fire, and have only hunger to endure while waiting for a new day? I had already crossed so broad a tangle of dangerous ice that I saw it would be difficult to get back to the woods through the storm; while the ice just beyond the present barrier seemed more promising, and the east shore was now perhaps about as near as the west. I was therefore eager to go on; but this wide jump was a tremendous obstacle. At length, because of the dangers already behind me, I determined to venture against those that might be ahead, jumped, and landed well, but with so little to spare that I more than ever dreaded being compelled to take that jump back from the lower side. Stickeen followed, making nothing of it. But within a distance of a few hundred yards we were stopped again by the widest crevasse yet encountered. Of course I made haste to explore it, hoping all might yet be well. About three fourths of a mile up-stream it united with the one we had just crossed, as I feared it would. Then, tracing it down, I found it joined the other great crevasse at the lower end, maintaining a width of forty to fifty feet. We were on an island about two miles long and from one hundred to three hundred yards wide, with two barely possible ways of escape—one by the way we came, the other by an almost inaccessible sliver-bridge that crossed the larger crevasse from near the middle of the island. After tracing the brink, I ran back to the sliver-bridge and cautiously studied it. Crevasses caused by strains from variations of the rate of motion of different parts of the glacier and by convexities in the channel are mere cracks when they first open,—so narrow as hardly to admit the blade of a pocket-knife,—and widen gradually, according to the extent of the strain. Now some of these cracks are interrupted like the cracks in wood, and, in opening, the strip of ice between overlapping ends is dragged out; and if the flow of the glacier there is such that no strain is made on the sliver, it maintains a continuous connection between the sides, just as the two sides of a slivered crack in wood that is being split are connected. Some crevasses remain open for years, and by the melting of their sides continue to increase in width long after the opening strain has ceased, while the sliver-bridges, level on top at first, and perfectly safe, are at length melted to thin, knife-edged blades, the upper portion

being most exposed to the weather; and since the exposure is greatest in the middle, they at length curve downward like the cables of suspension-bridges. This one was evidently very old, for it had been wasted until it was the worst bridge I ever saw. The width of the crevasse was here about fifty feet, and the sliver, crossing diagonally, was about seventy feet long, was depressed twenty-five or thirty feet in the middle, and the up-curving ends were attached to the sides eight or ten feet below the surface of the glacier. Getting down the nearly vertical wall to the end of it and up the other side were the main difficulties, and they seemed all but insurmountable. Of the many perils encountered in my years of wandering in mountain altitudes, none seemed so plain and stern and merciless as this. And it was presented when we were wet to the skin and hungry, the sky was dark with snow, and the night near, and we had to fear the snow in our eyes and the disturbing action of the wind in any movement we might make. But we were forced to face it. It was a tremendous necessity.

Beginning not immediately above the sunken end of the bridge, but a little to one side, I cut nice hollows on the brink for my knees to rest in; then, leaning over, with my short-handled ax cut a step sixteen or eighteen inches below, which, on account of the sheerness of the wall, was shallow. That step, however, was well made; its floor sloped slightly inward, and formed a good hold for my heels. Then, slipping cautiously upon it, and crouching as low as possible, with my left side twisted toward the wall, I steadied myself with my left hand in a slight notch, while with the right I cut other steps and notches in succession, guarding against glinting of the ax, for life or death was in every stroke, and in the niceness of finish of every foothold. After the end of the bridge was reached, it was a delicate thing to poise on a little platform which I had chipped on its up-curving end, and, bending over the slippery surface, get astride of it. Crossing was easy, cutting off the sharp edge with careful strokes, and hitching forward a few inches at a time, keeping my balance with my knees pressed against its sides. The tremendous abyss on each side I studiously ignored. The surface of that blue sliver was then all the world. But the most trying part of the adventure was, after working my way across inch by inch, to rise from the safe position astride that slippery strip of ice, and to cut a ladder in the face of the wall—chipping, climbing, holding on with feet and fingers in mere notches. At such times one's whole body is eye, and common skill and fortitude are replaced by power beyond our call or knowledge. Never before had I been so long under deadly strain. How I got up the cliff at the end of the bridge I never could tell. The thing seemed to have been done by somebody else. I never have had contempt of death, though in the course of my explorations I oftentimes felt that to meet one's fate on a mountain, in a grand cañon, or in the heart of a crystal glacier would be blessed as compared with death from disease, a mean accident in a street, or from a sniff of sewer-gas. But the sweetest, cleanest death, set thus calmly and glaringly clear before us, is hard enough to face, even though we feel gratefully sure that we have already had happiness enough for a dozen lives.

But poor Stickeen, the wee, silky, sleekit beastie—think of him! When I had decided to try the bridge, and while I was on my knees cutting away the rounded brow, he came behind me, pushed his head past my shoulder, looked down and across, scanned the sliver and its approaches with his queer eyes, then looked me in the face with a startled air of surprise and concern, and began to mutter and whine, saying as plainly as if speaking with words, «Surely you are not going to try that awful place?» This was the first time I had seen him gaze deliberately into a crevasse or into my face with a speaking look. That he should have recognized and appreciated the danger at the first glance showed wonderful sagacity. Never before had the quick, daring midget seemed to know that ice was slippery, or that there was such a thing as danger anywhere. His looks and the tones of his voice when he began to complain and speak his fears were so human that I unconsciously talked to him as I would to a boy, and in trying to calm his fears perhaps in some measure moderated my own. «Hush your fears, my boy,» I said; «we will get across safe, though it is not going to be easy. No right way is easy in this rough world. We must risk our lives to save them. At the worst we can only slip; and then how grand a grave we shall have! And by and by our nice bones will do good in the terminal moraine.» But my sermon was far from reassuring him; he began to cry, and after taking another piercing look at the tremendous gulf, ran away in desperate excitement, seeking some other crossing. By the time he got back, baffled, of course, I had made a step or two. I dared not look back, but he made

Digitized by Google

himself heard; and when he saw that I was certainly crossing, he cried aloud in despair. The danger was enough to daunt anybody, but it seems wonderful that he should have been able to weigh and appreciate it so justly. No mountaineer could have seen it more quickly or judged it more wisely, discriminating between real and apparent peril.

After I had gained the other side he howled louder than ever, and after running back and forth in vain search for a way of escape, he would return to the brink of the crevasse above the bridge, moaning and groaning as if in the bitterness of death. Could this be the silent, philosophic Stickeen? I shouted encouragement, telling him the bridge was not so bad as it looked, that I had left it flat for his feet, and he could walk it easily. But he was afraid to try it. Strange that so small an animal should be capable of such big, wise fears! I called again and again in a reassuring tone to come on and fear nothing; that he could come if he would only try. Then he would hush for a moment, look again at the bridge, and shout his unshakable conviction that he could never, never come that way; then lie back in despair, as if howling: «Oh-o-o, what a place! No-o-o; I can never go-o-o down there!» His natural composure and courage had vanished utterly in a tumultuous storm of fear. Had the danger been less, his distress would have seemed ridiculous. But in this gulf—a huge, yawning sepulcher big enough to hold everybody in the territory—lay the shadow of death, and his heartrending cries might well have called Heaven to his help. Perhaps they did. So hidden before, he was transparent now, and one could see the workings of his mind like the movements of a clock out of its case. His voice and gestures were perfectly human, and his hopes and fears unmistakable, while he seemed to understand every word of mine. I was troubled at the thought of leaving him. It seemed impossible to get him to venture. To compel him to try by fear of being left, I started off as if leaving him to his fate, and disappeared back of a hummock; but this did no good, for he only lay down and cried. So after hiding a few minutes, I went back to the brink of the crevasse, and in a severe tone of voice shouted across to him that now I must certainly leave him—I could wait no longer; and that if he would not come, all I could promise was that I would return to seek him next day. I warned him that if he went back to the woods the wolves would kill him, and finished by urging him once more by words and gestures to come on. He knew very well what I meant, and at last, with the courage of despair, hushed and breathless, he lay down on the brink in the hollow I had made for my knees, pressed his body against the ice to get the advantage of the friction, gazed into the first step, put his little feet together, and slid them slowly down into it, bunching all four in it, and almost standing on his head. Then, without lifting them, as well as I could see through the snow, he slowly worked them over the edge of the step, and down into the next and the next in succession in the same way, and gained the bridge. Then lifting his feet with the regularity and slowness of the vibrations of a seconds' pendulum, as if counting and measuring one, two, three, holding himself in dainty poise, and giving separate attention to each little step, he gained the foot of the cliff, at the top of which I was kneeling to give him a lift should he get within reach. Here he halted in dead silence, and it was here I feared he might fail, for dogs are poor climbers. I had no cord. If I had had one, I would have dropped a noose over his head and hauled him up. But while I was thinking whether an available cord might be made out of clothing, he was looking keenly into the series of notched steps and finger-holds of the ice-ladder I had made, as if counting them and fixing the position of each one in his mind. Then suddenly up he came, with a nervy, springy rush, hooking his paws into the notches and steps so quickly that I could not see how it was done, and whizzed past my head, safe at last!

And now came a scene! «Well done, well done, little boy! Brave boy!» I cried, trying to catch and caress him; but he would not be caught. Never before or since have I seen anything like so passionate a revulsion from the depths of despair to uncontrollable, exultant, triumphant joy. He flashed and darted hither and thither as if fairly demented, screaming and shouting, swirling round and round in giddy loops and circles like a leaf in a whirlwind, lying down and rolling over and over, sidewise and heels over head, pouring forth a tumultuous flood of hysterical cries and sobs and gasping mutterings. And when I ran up to him to shake him, fearing he might die of joy, he flashed off two or three hundred yards, his feet in a mist of motion; then, turning suddenly, he came back in wild rushes, and launched himself at my face, almost knocking me down, all the time screeching and screaming and shouting as if saying, «Saved! saved! saved!» Then away again, dropping

Digitized by Google

suddenly at times with his feet in the air, trembling, and fairly sobbing. Such passionate emotion was enough to kill him. Moses's stately song of triumph after escaping the Egyptians and the Red Sea was nothing to it. Who could have guessed the capacity of the dull, enduring little fellow for all that most stirs this mortal frame? Nobody could have helped crying with him.

But there is nothing like work for toning down either excessive fear or joy. So I ran ahead, calling him, in as gruff a voice as I could command, to come on and stop his nonsense, for we had far to go, and it would soon be dark. Neither of us feared another trial like this. Heaven would surely count one enough for a lifetime. The ice ahead was gashed by thousands of crevasses, but they were common ones. The joy of deliverance burned in us like fire, and we ran without fatigue, every muscle, with immense rebound, glorying in its strength. Stickeen flew across everything in his way, and not till dark did he settle into his normal fox-like, gliding trot. At last the mountains crowned with spruce came in sight, looming faintly in the gloaming, and we soon felt the solid rock beneath our feet, and were safe. Then came weariness. We stumbled down along the lateral moraine in the dark, over rocks and tree-trunks, through the bushes and devil-club thickets and mossy logs and boulders of the woods where we had sheltered ourselves in the morning. Then out on the level mud-slope of the terminal moraine. Danger had vanished, and so had our strength. We reached camp about ten o'clock, and found a big fire and a big supper. A party of Hoona Indians had visited Mr. Young, bringing a gift of porpoise-meat and wild strawberries, and hunter Joe had brought in a wild goat. But we lay down, too tired to eat much, and soon fell into a troubled sleep. The man who said, «The harder the toil the sweeter the rest,» never was profoundly tired. Stickeen kept springing up and muttering in his sleep, no doubt dreaming that he was still on the brink of the crevasse; and so did I—that night and many others, long afterward, when I was nervous and overtired.

Thereafter Stickeen was a changed dog. During the rest of the trip, instead of holding aloof, he would come to me at night, when all was quiet about the camp-fire, and rest his head on my knee, with a look of devotion, as if I were his god. And often, as he caught my eye, he seemed to be trying to say, «Was n't that an awful time we had together on the glacier?»

NONE of his old friends know what finally became of him. When my work for the season was done I departed for California, and never saw the dear little fellow again. Mr. Young wrote me that in the summer of 1883 he was stolen by a tourist at Fort Wrangel, and taken away on a steamer. His fate is wrapped in mystery. If alive he is very old. Most likely he has left this world—crossed the last crevasse—and gone to another. But he will not be forgotten. Come what may, to me Stickeen is immortal.

John Muir.

WHAT STOPPED THE SHIP.

IGHT bells has gone, Mr. Sims!» shouted the apprentice, shaking the mate violently.

«Eight bells!» he answered, leaping from his bunk, and frantically getting into sea-boots. «Why the devil did n't you call me before, Devine?»

«I called you four times, sir,» said the boy, in a hurt tone; «and the last time I made sure you 'd get up, because you asked about the weather, sir.»

«Well, you ought to know by this time that it 's your business to see me get out,» said the mate, with emphasis. «Is the watch aft?»

«Yes, sir.»

«D—n!» said the mate, and he rushed bareheaded on deck to muster his men.

The port watch lounged, a sleepy group, about the main fife-rail—the men for the wheel and lookout in oilskins, the remainder not fully dressed.

«Johnson, Hawkins, Tregethen, McCarthy,» began the mate.

«Here, sir. All here,» spoke up one of the men.

«Relieve the wheel, then,» ordered the officer. «Be up there in a minute, Mr. Markham,» he called to the poop, and then dived into his room again for additions to his toilet.

Digitized by Google

«It 's mighty funny those boys can't call me decently,» he said to the second mate, as he reached the top of the poop-ladder five minutes later.

«Ay, it is, sir,» answered the second, dryly. «The course is west by south, if she 'll lay it. It 's been calm since four bells.»

With this the second went below, and the mate strode aft to look at the compass. The ship was then heading almost due north, for there was not a breath of wind, and she had no steerageway. A dense fog enshrouded the vessel, veiling both sea and sky, and causing a steady drip, drip from everything aloft. Although it was June, the air was raw and bitterly cold, and the mate sent one of the boys for his mitts before he had been on deck half an hour.

«Confound the Banks, anyway!» he growled, as he stamped up and down. «It 's the cussedest place in the Atlantic. Keep that fog-horn going for'ard there!» he yelled.

A faint «Ay, ay, sir!» and a long, dismal blast came back in answer.

«I 'm going in steam next time, if I have to ship in the bunkers,» he continued savagely. «I think that I 've had my whack out of these wave-punching, wind-jamming, western-ocean hookers.»

Then the mate of the *Alice B. Stites* sat down heavily on the skylight, and cut himself up a pipeful of tobacco. Lighting up, he leaned back, and gazed aloft at the swaying masts and flapping canvas with the eye of an officer who looks for work even in the middle watch. Nothing unshipshape caught his eye, however, and the watch were left in peace. But the position was too much for Mr. Sims. Without his being in the least aware of it, his jaw relaxed, and he slept. The apprentice who was «keeping the time,» seeing the state of his superior, chuckled softly to himself, and curled up for a snooze in the cabin alleyway; the helmsman, having nothing to occupy his attention, leaned over the wheel and dozed; and to his everlasting shame be it said that even the man on the lookout braced himself against the stanchions of the forecastle-head and nodded. As for the rest of the watch, they lay, as is usual in fine weather, at full length upon the deck, under the lee of the house, oilskinned and sea-booted, and ready for instant service, to be sure, yet sound asleep.

Now, although there is no lawful excuse for any deck officer, wheel or lookout man guilty of sleeping on duty, it must be said, in all fairness to these men, that for the three days previous they had had virtually no rest, the vessel having passed through a gale of exceeding violence.

Thus, for the first time in her sea life, the *Alice B. Stites* lay becalmed and befogged, and without a soul aboard of her awake.

Suddenly the mate opened his eyes with a start, and sat bolt upright.

«What 's that?» he exclaimed. He felt that something unusual had happened, but could not tell what. Jumping to his feet, he ran aft, and found the steersman jamming the wheel hard down.

«What 's the matter, Hawkins?» he inquired sharply.

«Oh, nothink, sir; only there 's a bit of a breeze coming up on the starboard quarter, and I 'm a-tryin' to bring 'er 'ead round to the course. She don't come very lively, though—hain't got way on yet.»

The mate looked in the binnacle. She was heading north by west. The yards were squared and the sails were full, with the starboard leeches lifting.

«Keep your wheel down; she 'll come round in a minute,» he said, stepping to one side and feeling the direction of the wind.

«Did n't you notice anything peculiar a few moments ago, Hawkins?» asked the mate, nervously.

«No, sir; nothink hout of the hordinary, sir,» replied the man.

As a matter of fact, Hawkins had been awakened at the same time and with the same presentiment as the mate, but of course would not acknowledge having been asleep at his post.

«Just sing out when she makes a start,» said the mate, walking forward.

«All right, sir,» answered Hawkins.

At the break of the poop the mate roused the watch with the cry of «Stand by your starboard main-braces!» and the men came tumbling up the poop-ladders, and tailed on to the ropes, ready for the word to «Haul away!» In the meantime the puzzled officer interviewed the lookout; but he too had neither seen nor heard anything unusual, he said.

«I must have been dreaming,» muttered the officer, as he hurried aft again. «How 's her head now, Hawkins?» he asked, as he cast the port-braces off their cleats.

«She don't move a quarter of a p'int, sir!» answered the man at the wheel.

«Shake the compass; it must have stuck,» said the mate, impatiently.

«It don't make no difference, sir,» was the reply.

The mate bounced to the binnacle, and

Digitized by Google

tapped it briskly; but the card always swung back to the same point.

«Why, what in thunder ails her?» he ejaculated. Then, in an excited way, he added: «I believe her rudder 's off. Here, one of you fellows! jump out to the end of the boom there, and bring in those signal halyards. Lively, now, my lad! There 's something wrong here.»

In a minute or so the line was swung inboard to the officer, who quickly made it fast to one of the binnacle lamps, and lowered it over the stern. Half a dozen anxious faces peered across the taffrail as the light descended; but the alarm was unfounded—the rudder hung securely in the eye-bolts, and, in accordance with the wheel, was hard-a-starboard. The lamp was about to be hauled up again when McCarthy cried: «Begad, she 's not movin' at all! Small wondher she 'll not shteer!»

All eyes were now directed at the still water which slowly rose and fell about the stern-post. The bubbles on the surface were motionless, and there was not the slightest sign of a wake.

«By Judas! this is the rummiest go I ever saw,» said the mate, scratching his head, and looking perplexedly aloft. «A three-knot breeze blowing, and the sails full, and the old cow as dead as mutton!» He went forward and examined the anchors. Both of them were lashed in the accustomed places upon the forecastle-head. Then he stared thoughtfully over the bow for several minutes. «According to the chart,» he said, «we are hundreds of miles off shore, and in forty fathoms of water! Surely she can't have run aground. I 'll soon settle that, though.»

Returning aft, he sent one of the hands for the deep-sea lead, armed it carefully, and dropped it over the quarter. It ran out in a way that soon convinced him that the vessel had not grounded, and showed the regulation depth with a sandy bottom.

«*I* give it up!» exclaimed the mate, shaking his wet hands. «Boy, call the captain.»

In the course of a few minutes the master pattered up the companionway in slippers and pajamas. Without stepping on deck, he inquired, «What is it, Mr. Sims?»

«If you please, sir,» answered the mate, feeling rather foolish, «the ship has stopped.»

«Stopped, Mr. Sims—stopped!» said the captain, testily. «What do you mean? She had stopped when I went below at four bells. There was no wind.»

«Yes, sir; but there 's considerable of a breeze now, and the canvas is drawing, but she won't go.»

The captain took another step upward, and tried to look into the mate's face. «Are you sober, Mr. Sims?» he inquired quietly.

«Captain Allison,» replied the mate, «if you will consider for a moment, you will see the foolishness of asking such a question aboard *this* ship. Now perhaps you will investigate the matter for yourself, sir»; and the mate walked forward in a huff.

«Then he 's mad,» said the skipper to himself, as he descended into the cabin for more clothes. «Anyway, I 'll not allow my officers to talk to me like that. I 'll—put him in irons, d—n him!—put him in irons!»

In the meantime the strange news had rapidly made a circuit of the ship. All hands had turned out, and in the ghostly gray of the early dawn the ship presented an odd spectacle. Groups of sailors, idlers, and passengers stood shivering about the deck, earnestly discussing the problem.

At the galley door, laying down the law to a Dutchman, two ordinary seamen, and an apprentice, stood the white-haired darky cook. «I tell yo' what it is, boys,» he said, looking over his spectacles, and flourishing a great iron spoon, «dis yere t'ing am a wisitation ob de Lawd. De Lawd done git plumb tired sendin' fair winds and fine weather to sich a mis'able lot ob sinners as he fin' abo'd dis packet, so he just han' her ober to de debbil, an' de debbil got her in his clutches now. Dat 's suah!»

Among the forecastlemen the superstitious croak of the sea-lawyer held sway. According to Olsen, «Dere was a Yonah aboard.» Another had it that «Dot vas vat comed of foolin' mit Moder Garey's shickens.» A third remarked that «Friday was an onloocky day to sail, aanyway.»

The passengers, of course, blamed the captain. «He had no right to run the ship into such dangerous places. Why did he do this and do that?» and «How was it that he did not know what was the matter? Why—why—they never heard of such a state of affairs.»

As for the captain and the officers, they were taxing their brains to the utmost to find a solution to the mystery. By this time the master of the *Alice B. Stites* had found that his chief mate was neither drunk nor insane, whereupon he had promptly apologized, and was now busy giving orders.

«First of all, we 'll heave the lead again, if you please, Mr. Sims,» he said. This was done from the main rigging, with the same result as before. Next, a hand was sent to

Digitized by Google

each masthead to see if by chance anything could be discovered from that height. The fog, however, was as thick aloft as it was on deck, and they reported nothing.

«Well, now, Mr. Sims, let us lower one of the boats, and take a pull round the ship,» said the captain. Immediately the chocks were knocked out from under the dinghy on the skids, and she was swung out in the davits and let down alongside. The captain and the mate, with two hands, dropped into her, and, slowly paddling, made the circumference of the vessel. In vain they looked skyward and seaward. Certainly no visible outside forces detained her.

«It may be that some undercurrent or magnetic attraction holds her,» suggested the captain.

«In that case,» said the mate, «we might get all hands in the boats and pull her a few miles. If such influences exist, they cannot extend over any great area, or the fact would have been discovered long ago.»

«Capital idea, Mr. Sims. Capital idea! Do it at once!» replied the captain.

The necessary orders were rapidly given, and in half an hour's time six boats strung away from the bow on a stout Manila line, awaiting the order to pull.

«Give way!» cried the skipper from the forecastle-head.

Thirty-four oars dipped simultaneously at the words, the line tautened, and the captain leaned over to watch the cutwater. But—great heavens!—there was no response. No ripple curled up before the stem, no wave spread V-shaped from the bows.

«Pull, you beggars, pull!» yelled the captain, stamping his foot with rage. And they pulled. They lay back on their oars and churned the calm water into foam; they tightened the Manila until it was like a bar: but all to no purpose. True to her sex, the *Alice B.* had put her forefoot down to stay, and she stayed.

Aft in the saloon the four women passengers were in a fearful state. Uncomforted by the companionship of the men, who were all on deck, the poor creatures had imagined the worst, and made up their minds that the ship was sinking. The party consisted of two old maids, Miss Bates and Miss Morse, a Mrs. Pope, and her daughter Minnie. All were frantically engaged in collecting their valuables, and loading themselves down with the quaintest conglomeration of articles.

«Come, Minnie, come!» screamed Mrs. Pope, rushing to the foot of the companion-way. «Never mind anything else. Those selfish men will leave us behind if we don't hurry!»

The good lady, who ran slightly to fat, was simply attired in a much-befrilled night-dress, an odd pair of boots, and a large flower-garden bonnet smashed down over one eye. A blanket and several dresses were flung over her arms, while in her hands she grasped a hot-water bottle and a pair of stays.

«Oh, wait for us! Do wait for us!» wailed Miss Bates, struggling quite manfully with an immense Saratoga trunk.

«Not if you are going to try to bring that thing,» answered Mrs. Pope, sensibly. «Minnie! Where are you?»

«Coming, mother dear!» cried a voice from an adjoining state-room.

A moment later a rosy-cheeked girl in a blue mackintosh and a tam-o'-shanter hurried out; and the old maids being induced to leave their bulky property, the four scrambled up the steps to the poop.

At this time everybody was either in the boats or upon the forecastle-head, except the second officer, who had been ordered to remain by the wheel. Seeing no one, and supposing that they had been abandoned, the lady passengers set up a prolonged cry of distress, until, catching sight of Mr. Markham, they literally fell upon his neck and wept.

The embarrassed young man endeavored to calm them, pointing to the crowd and assuring them that there was not the slightest danger.

«But where is my husband?» sobbed Mrs. Pope.

«Is n't that him standing on the bow, ma'am?» said the second mate.

«Oh, yes, the dear man! so it is. Po-ope!» she called.

The gentleman evidently did not hear.

«Mr. Po-o-pe!»—very much louder.

Still no reply.

«Pope, you brute!» This time it was a shriek, and it reached Mr. Pope's ears, for he turned on the instant and came hurriedly aft. The two descended into the saloon, talking rapidly; and the old maids soon followed, for they were still worrying about that trunk. Only Miss Minnie remained on deck, and she, now that her fears were gone, showed a desire to see what was going on, and a curiosity to hear the cause of the trouble. Moreover, the second mate was a particularly good-looking young fellow; and despite the fact that the captain had monopolized Miss Minnie all the passage,—as captains invariably do, and which, not being a captain myself, I con-

sider an outrage,—the two were on very good terms.

«I 'm afraid you 'll find it rather cold up here if you stand still, Miss Pope,» said the second mate. «If you don't mind, we 'll take a turn up and down the poop.»

So while the hands were tugging away at the oars forward, the young folks stepped briskly along the planks together, and talked until the boats were recalled and all hands went to breakfast.

And what a breakfast it was! Unwashed, unkempt, and with wondrous incongruity of clothing, surely never had such a disreputable-looking lot sat down in the saloon before. The usually chatty skipper, lost in thought, sat at the head of the table, with his food untasted. The passengers, after asking questions without number, finally relapsed into silence, each trying to think out the answer to that bewildering riddle, What was the matter with the *Alice B. Stites?* Sand-bars, coral islands, the Atlantic cable, barnacles, whales, sunken wrecks, octopi, a plot, seaweed, ay, and even overhanging trees, were suggested, only to be disproved in the light of already established facts.

Speculation, too, as to the possible outcome of it all caused uneasiness. What was to be the end of it? they asked themselves uneasily. How long was this helpless state of things to last? If, with a steady little breeze blowing and all her canvas set, the vessel could not make headway, when would she be able to move? Might it not last for a week, a month, or until their provisions were exhausted and they starved to death? Indeed, the matter began to assume a very serious aspect for those who gave it sufficient thought. Moreover, the question had its uncanny side. The realms of reality having been exhausted in search of an explanation, what more human than that their minds should turn toward the supernatural? And here was endless play for the heated imagination.

The meal ended. A feeling of unrest took all on deck again. The fog was as thick as ever, though the light breeze had veered to the westward, and the yards had to be braced up to keep the sails full. The cold, damp atmosphere, the strange stillness of the vessel, emphasized by the constant lap, lap of the water against the weather side—these, with a certain dread which hourly increased in intensity, cast a gloom over the entire ship's company. Impatiently they paced to and fro, now gazing wonderingly aloft, now peering apprehensively over the side. They spoke with lowered voices, and such was the demoralizing effect upon the crew that they left the ropes uncoiled upon the deck, and walked the quarter-deck and poop like men with «tickets.» [1]

At ten o'clock the captain, after consulting his chart and nautical almanac in the hope that they might throw some light upon the subject, declared most unreasonably that the whole thing was an impossibility, and once more called away the dinghy, so that he and his chief officer might make a large circle around the stationary ship. Before leaving he took the precaution to place a small compass in the boat, and ordered the forward bell to be rung every minute.

Pulling out abeam until they could hardly be seen by those aboard the boat, they took a wide sweep round the stern, and crept along the weather side, sometimes in full view, again, in the denser patches of mist, invisible. Crossing the vessel's bow, the watchers lost sight of the boat. As she failed to appear again, it was thought that the occupants had sighted something in that direction, and a buzz of excitement ran through the anxious crowd as they awaited her return.

Ten minutes went by without a sight or a sound of the dinghy. No actual fear was felt by the hands, for they knew the captain had provided himself with a compass; yet there was a shade of anxiety in the second mate's face as he tried to pierce the fog-bank ahead. In the intervals of ringing the bell he listened intently. Suddenly out of the distance there came a sharp, cracking sound, followed by an immense splash. It was as though some monster had crushed the boat in its jaws and then plunged into the ocean.

«My God!» cried the second mate, hoarsely, «she 's gone!»

Breathlessly they listened again, and as they waited a great green wave like a roll of velvet came swiftly over the smooth surface of the sea. The vessel did not rise to it an inch, and it washed clear over her, drenching those who stood on the bow, and sweeping aft to the break of the poop.

At four o'clock that morning the detention of the *Alice B. Stites* was merely a puzzle; at eight it had grown into an alarming circumstance: but now it had developed into a downright horror. Pale-faced and terror-stricken, both passengers and crew huddled closely together for mutual protection, momentarily expecting some further evil to overtake the ill-fated ship.

[1] Officers.

Digitized by Google

An hour of awful suspense dragged by without change, save that the wind hauled a trifle to the northward, and the wet sails, no longer drawing, flapped dismally.

«Men!» said the second mate, rousing himself, «we stand here like a pack of frightened women while perhaps our shipmates need assistance. I want six of you in the boat. Who will volunteer?»

One by one the four apprentices stepped out and signified their willingness.

«I said *men*,» said the officer, significantly, to the sullen, silent group before him. But not a hand stirred.

«Not a man among you, eh?» he asked, with fierce sarcasm. «Then stay, you cursed cowards, and be —— to you! Come, boys,» he said to the apprentices, «haul up one of the boats!»

A score of voices were raised in protest, the passengers, gathering about the young man, declaring that it was his duty, as the only navigator aboard, to remain and protect them, the men pointing out the folly of risking more lives.

«Gentlemen,» he said simply to the passengers, «my first duty is to those who we know are in danger»; and pushing them aside, he sprang to the bulwark.

He reached it, and was about to descend the rope when his eye was arrested by something forward, and at the same moment a cry of astonishment burst from his lips.

The noonday sun was fast burning away the hated fog, and as it thinned there appeared, towering hundreds of feet above the masts of the vessel, turreted, pinnacled, and of most fantastic shape, the dazzling face of an ice-mountain. Though in reality the mighty mass of ice lay fully a quarter of a mile away, such was its height that the vessel seemed in instant danger of collision.

For the space of a minute Mr. Markham poised himself on the rail and stared with shaded eyes at the scintillating apparition. Then leaping to the deck, he picked up the lead-line, and hurried to the forecastle-head. Making a cast, he got three fathoms of water.

«It 's as I thought,» he said. «She 's run her bow on a sunk part of the iceberg.» Sounding along the rail toward the stern, he found the same depth of water until he came abreast of the galley, and here the lead plunged down to forty fathoms.

«A very natural solution, after all,» he remarked, with a laugh.

And now the wind, constantly hauling farther ahead, brought with it the sound of voices. «Ahoy! Aho-o-oy!» came faintly over the water; and as the atmosphere became clearer, the occupants of the missing dinghy were discovered upon the lower part of the berg. A dozen willing men jumped for the boat at the second mate's call, and within an hour the ship's company was complete again.

It appeared that the captain, feeling instinctively that some object lay to the northward of them, had steered the boat in that direction, and found the iceberg. Unfortunately, just as they were about to return a huge piece of the glacier split away, and came down so close to their boat that it capsized. The men, after a vain attempt to right her, becoming numb with the cold, swam toward the ice, and succeeded in reaching it in safety.

No sooner did Captain Allison put his foot on deck than he ordered the yards squared. There came the rapid flinging of ropes upon the deck, the clicking of patent blocks, the sailors' sing-song as they merrily hand-over-handed the braces, and in less than five minutes every kite aloft was flat aback.

«Belay all!» roared the captain. And the next moment a slight grating was felt under the keel, and the vessel slid stern foremost into clear water.

«Now, Mr. Sims,» said the captain, as he went below to change his clothes, «you may brace her up, set the staysails, and put her on her course,»—all of which was promptly attended to; and the *Alice B. Stites*, heeling slightly to the freshening breeze, gradually gathered headway, and went on her way rejoicing.

UP THE MATTERHORN IN A BOAT.

BY THE AUTHOR OF «A DAY IN TOPHET,» «A JUDICIAL ERROR,» ETC.

WITH PICTURES BY GEORGE WRIGHT.

PART III.

WELL, we dug him out. He was quite motionless at first; in fact, I rather thought he was dead: but Hill said no; only unconscious from shock—no bones broken, no outward injury that he could see.

«Nothing but his feelings hurt,» said our authority on ballooning and excavations. His suit was plaid, his boots were of the most approved pattern, his calves fairly bawled from their pens. He looked as if he had just jumped off a bike or out of golfing-links, and there was a string attached to a buttonhole that cried monocle to the icicles.

«English to his toes,» said Hill, regarding him speculatively. «If you don't believe it, just wait until he opens his mouth.»

«I should like to see him open his eyes first,» said I, for our visitor was young and fair, and I did not like to see him lying in our gully like a log.

«Oh, he 's all right,» said Hill, slangily. His spirits seemed to revive wonderfully with this arrival. «Give him time, man. It 's all most men need to pay their debts in this world.»

I helped him along with a drop of brandy, and presently he opened his eyes and looked at us. Then he sat up, brushing the snow from his clothes with feeble finger-tips.

«Aw—thanks, awfully,» he said in a far-away voice. He seemed dazed yet, and fumbled in his pockets and brought out a little flat wallet. From it he presently extracted with a shaking thumb and finger a round bit of glass, which he proceeded to thread like a needle, tying a knot in the end of the black cord that had been dangling from his lapel. As nearly as we could tell, the only loss he had sustained beyond the temporary loss of consciousness was that of his eye-glass. As soon as he had that threaded and fixed up he screwed it into his eye and took a look at us.

«By Jove!» he said. He next noticed Jabez, who was sniffing about him in the most friendly fashion, wagging his stump of a tail, and he patted his head and said:

«Hello, old chap! A bit of mongrel, eh?»

His attention next wandered to the *Cloud Queen*, and he became transfixed. He gaped at it for a moment, then riveted his eyes upon the boat, and after examining it minutely exclaimed:

«How very extraordinary!»

He then rose, staggered over to the boat, knocked on it with his knuckles to assure himself that it was real, all the time exclaiming, «How very extraordinary!» and finally gave it a feeble shake, being himself in a very feeble and shaky condition as yet.

«Talk about ballooning!» said Hill. «This beats it all out of sight. Just look at that chap; he thinks he is in eternity. The last lucid thought he had was that he was on the edge of the end of all things earthly, and he 's trying to adjust his ideas to dogs and boats in the next world. He has always been taught that the former had no souls, and that it would be too hot for the latter.»

But pretty soon he came back, recovering his manners and his sensation of still being himself at the same time.

«A ROUND BIT OF GLASS.»

Digitized by Google

«I say,» said he, hauling off his knitted cap, and holding out his hand, «it was awfully good of you to be down here, don't you know. Whatever would have become of me without your opportune assistance I—aw—I—really I—aw—can't at all imagine.»

«That 's right,» said Hill, shaking hands with him cordially. «We did not really arrange to be here on account of your coming, but if we had n't been I guess your name would have been Dennis all right.»

The young fellow straightened up, dived into his pocket, fished out the wallet again, and drew forth a card.

«My name is Clambor,» he said stiffly —«Lord Clambor.»

«IT WAS AWFULLY GOOD OF YOU.»

«Delighted to see you, my lord,» said Hill, taking the card. «My friend Holdem of Chicago, Lord Clambor.»

The young lord regarded me through his glass, and then held out his hand. Society at the bottom of a crack in the Alps could n't help being democratic.

«Feel any appetite?» Hill inquired.

«Well, rather!» responded our visitor, with an unmistakable emphasis.

«Suppose we sit down to lunch, then,» said Hill, acting as master of ceremonies, and as cordial as if, with only three days' rations left, the addition of a new boarder did not reduce his own chances for life very materially. While we sat at lunch, the newcomer doing hearty service, Hill explained our plight, and the young lord gave an account of himself.

«You see,» said he, «it all happened like this. I was tied in between two guides, but I slipped and fell, and the rope broke. Deuced awkward, don't you know—nothing to hang on to.»

«Could n't you throw a rope over the atmosphere?» inquired Hill, innocently.

Lord Clambor stared at him.

«I suppose,» said he, «I should have tried Mont Blanc first.»

«What did you try first?» asked Hill.

«Well, I 've had a little practice, don't you know; but I doubt if any practice is enough. I 've been up Fujiyama, and part way up Kunchinjinga. But everything else is child's play to the Matterhorn.»

«The Matterhorn!» exclaimed Hill.

«The Matterhorn!» cried I.

«Yes,» said Lord Clambor, placidly spreading some raspberry jam on a piece of bread; «they say the shoulder on the Matterhorn is about as nasty a bit of work as you want. Mont Blanc is the thing to do first, you know.»

Hill leaned against the side of the boat with his mouth open, and I suppose I did something equally intelligent. Presently, as my companion seemed quite speechless, I inquired:

«Would you mind telling us what you fell off?»

«I really can't give you the exact spot,» the young lord answered pleasantly. «It takes it out of a fellow so, don't you know. I was quite knocked up by it.»

«Knocked up or knocked down,» said Hill, recovering himself, «is all one. What was the name of the pile of ground you tumbled from?»

«Oh, you mean the mountain? The Matterhorn, of course. I started from Zermatt this morning.»

«Comets and calculations!» shouted my friend, staring hard at the new arrival, who adjusted his eye-glass to bear a strain, and inspected him inquiringly in return; «where are we at?»

The arrangement of this conundrum was manifestly far beyond the Englishman's powers of imagination, and as for Hill, he was dumfounded. He jumped up and paced nervously back and forth in front of the boat, winking very fast, and gnawing the ends of his fingers, as he did sometimes in

moments of great perplexity. Pretty soon he stopped in front of me, and propounded:

«Holdem, what was the last thing you saw up above?»

«Mont Blanc,» replied I, stoically. I meant to stick to my mountain when it was no harder to do than that. Hill resumed his striding, winking faster than ever. His fingers were in positive peril, but he was not yet satisfied. Again he wheeled around, propounding:

«Jabez, what did you see?»

Jabez cocked one ear up, and looked at his questioner unwinkingly for a moment. Then he twisted around and gave his attention to an old flea-bite far down on his spine, where it was hard to get at. I never saw contempt for human conclusions shown more promptly or with greater comprehensiveness.

«That settles it!» said Hill. «That dog has got more sense than we have. It 's just as I said: he knows better than to trust to his eyes alone. He would have to hear Mont Blanc and smell Mont Blanc before he said ‹Mont Blanc.›»

Lord Clambor looked at us as though he thought we had all gone crazy.

«For Heaven's sake, let us smoke, or do something,» Hill went on, sitting down. «A good dense smoke might clear the atmosphere about us. You see,» he said frankly to the Englishman, «we thought we had fallen into Mont Blanc.»

«Fancy!»

«We thought we saw it as we came down. We had been up eight miles.»

«Oh, I say!»

«It's a fact, though. I 've got the instruments to prove it. That 's where we frosted our noses.»

For a moment Lord Clambor's countenance almost showed an expression, but he checked it in time to save the monocle.

«How very extraordinary! Why, I thought it was port.»

«No,» said Hill; «it is frost-bite. Now, my lord, you have had some experience in mountain-climbing,—in going up and down mountains,—and you were kind enough to fetch your ice-ax along. Just cast your mountaineering eye over our surroundings, and tell me what you think of the chances of climbing out of this place.»

Lord Clambor looked up at the ribbon of sky overhead, bright with the noon sun, and pretty nearly as thin as the edge of a goblet. He walked up and down the gorge some little distance, far enough to command a view of the end, and then he asked:

«Have you explored the whole length?»

«Yes.»

«Is it all as bad as this?»

«Or worse.»

Lord Clambor sat down, looking very thoughtful.

«My idea is,» said Hill, «that it might be done at a hazard and with great peril by cutting out steps as we climb; but the trouble is that a man's strength could not hold out to get anywhere near the top. He would have to cut a little, and return, and let another take his place. We should have to take turns, and it would be long and tiresome work; but if it is to be done at all, it must be undertaken at once; we have no time to lose.»

«Quite so,» agreed our new companion.

«The worst of it is that our provisions are getting low, and we will need to go on short rations. I should say that a man needed full-fed strength for that sort of work—although no man knows what he can endure until he is tried. I 've had some experience in climbing clouds, but very little climbing mountains.»

«Quite so.»

«As I explained, there is not enough electrical power left in the storage-battery to get us up with the balloon. I hate like sixty to leave it here.» He looked over at the *Cloud Queen* with a sigh. «That 's the best balloon that ever floated.»

«It must have cost a pretty penny,» said Lord Clambor.

«‹THE MATTERHORN!› CRIED I.»

Digitized by Google

«It did—a number of them, and several good-looking American dollars, too. In fact, like the American heiress, it 's made of dollars. I can see them now.»

A glimmer of real interest passed over the face behind the monocle, and the glass itself was never trained upon any object with greater care. Its wearer sighted over at that balloon as painstakingly as any Chinese gunner in the late war ever squinted through one of the bamboo sights he had adjusted to a Krupp gun.

«If this fracture we are in happened to be in Alaska,» Hill resumed, «I suppose that side of it would presently chip off and become an iceberg. But it is n't in Alaska; and as the only opening in life just now seems to be unsuited to our talents, we may as well begin making our own tracks out. I 've heard of people making tracks before.»

«Hill,» I remonstrated, «I believe the situation has gone to your head. You seem to me to be a little flighty.»

«Well, maybe it has; I should say the situation was strong enough; and as to being flighty, I 'd like to be flighty enough to get out of this with the *Cloud Queen*, I can tell you!»

I was seriously alarmed over his mental condition, and Lord Clambor looked as if he was, too. We arranged that we should begin cutting at once, and that I, as the least experienced in the work, should undertake to hew out the lowest flight, thereby getting some practice for the more difficult labor of cutting and climbing higher up. Moreover, it was necessary for us to improve every moment of daylight, for the nights were cruelly long. We selected what seemed to be the most advantageous point in the ice-gorge, and I began my work. Heavens! what a task it was! I cannot undertake to say how often I dropped my ax in the course of the first twenty feet. It was necessary to cut diagonally, but we decided to keep the angle as sharp as possible, thereby reducing the distance to be gone over. And how hard it was to cut each niche in the right place and at the right angle! Often a great piece of ice would chip away—a deep sliver that left no place for another niche, but compelled an entire change of direction. These accidents made us mindful of the fact that a piece of imperfect ice large enough to include the three little footholds to which the man who was cutting had to cling with fingers and toes might also be detached by a blow. It was slow work and sober work, and when I came down from my first attempt, with muscles trembling from exertion, and looked up at the little flight of shallow steps—so long they had seemed to me, made at the cost of such wearisome effort—and saw that they covered only a fraction of the great wall stretching pitilessly away to that little thread of blue at the top, I sat down utterly discouraged.

«It never can be done!» I said with conviction.

«That 's what every one said about the Matterhorn,» responded Hill, cheerily; «but by and by along came some men who did it, and we are going to do this.»

I think I was the only one in the party who really gave up. The Englishman held on to hope with the regulation Johnny-never-let-go grip with which a Britisher holds on to everything. As for Hill, his spirit was so marvelous I really did entertain doubts as to his sanity. His whimsicalities grew in proportion as our situation became more serious. The second night after we began our cutting I was awakened by the sound of tapping and tinkling, tinkling and tapping, down the gorge; and, opening my eyes, I saw that Hill had rigged a candle to his cap after the fashion of a miner, and was working high up on the wall, like a firefly on the bark of a tree. The icy gorge caught and repeated this feeble little light, every projection sparkling and glittering with innumerable repetitions of it, until the whole narrow crevasse was turned into a shishamahal—a hall of mirrors—fit to place in a king's palace. It was a pretty sight, but not one to take pleasure in, for I knew that Hill was in danger. The worst of it was that he was whistling away merrily some light, tripping air with a lilt and a swing to it like a Hungarian dance. We were in absolute darkness in the boat below, and I had no means of knowing whether Lord Clambor was awake, but presently he moved and spoke:

«By Jove! That 's what I call jolly plucky.»

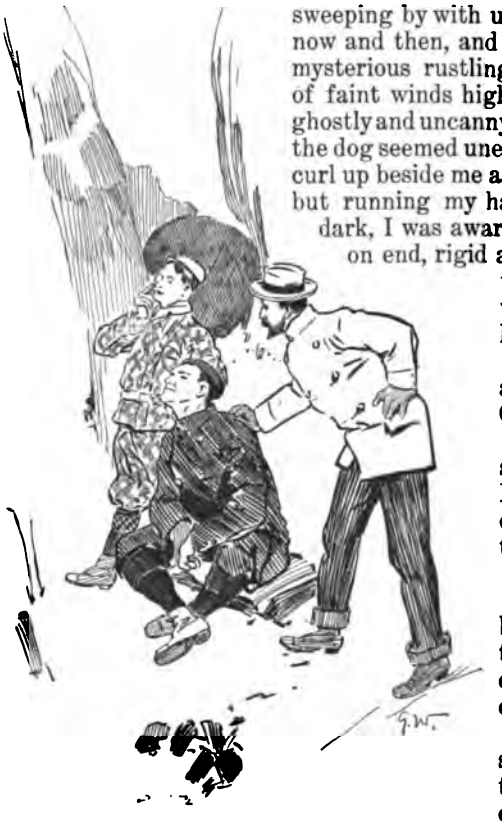
«It 's what I call a piece of idiotic daring,» I retorted. I was touchy; and my nerves were getting strung higher and higher. «It 's all very well going up, but how in the name of Sam Patch is he going to get back? That 's what I should like to know.»

And as if in answer to my question, the light above suddenly went out. There was a splintering, grinding sound that detonated through the gorge like a cannon, and then a crash. After that all was silent. My heart fairly stopped beating, and Lord Clambor and I rolled out of the boat and stumbled down the gorge together, forgetting in our haste and fright that we could do very little to-

Digitized by Google

ward discovering the body of our friend in the darkness. Jabez ran ahead, filling the place with echoes from his barks.

I shall never forget the horror of the next few minutes. The darkness of the grave I shall some day fill will be no more dense and impenetrable than the Stygian glooms through which we plowed along with outstretched hands, running against each other, bruising ourselves on the walls we could not see, and at last stumbling upon a new obstruction in the gorge. Jabez never for a moment ceased to bark, and the whole place seemed full of hollow echoes, a sort of weird thrumming of muffled sound from some gigantic string. Lord Clambor struck a match, and by the aid of two or three we groped about until we found the ax, which had fallen on one side of a mass of glittering ice, two or three tons at least, some of it pounded and powdered into snow as if the sides of the crevasse had been a huge mortar and the law of gravitation the pestle hammering it down. It was useless to try to look for poor Hill. It would have exhausted every match we had, and all our candles. We might have to eat the latter yet before we were out of that dreadful place; besides, no human shape could have survived such a fall. That alone would have stricken life out, but to be pinned under that great heel of ice like a spider under a boot—well, he was in his grave. For the matter of that, we were probably in ours, too. There was nothing to say as we slowly groped our way back and clambered into the boat again. The chill of the place got hold of me with nervous horror, and I shivered as if with ague. The very blood in my veins seemed turned to ice—the awful imprisoning ice about us, above us, and beneath us.



«IT NEVER CAN BE DONE!»

«Take some brandy, old chap,» said Lord Clambor, kindly, «and don't give out. We're jolly bad off, but we 've got to keep up.»

I thanked him in a whisper, and complied. It was good advice, and the chill presently passed; but I lay there unable to sleep, tormented by my thoughts and by strange sounds that I had never heard before. It seemed as if the echoes of our footsteps, of the stumbling rush we had made down the gorge, the uproar of Jabez's barking, and our own few horrified exclamations, had twisted themselves together, and were also groping and rolling between the walls to escape, struggling to reach that top so far away. These sounds seemed living, incarnate, sweeping by with unmistakable evidence now and then, and again dying away in mysterious rustlings and breathings as of faint winds high up. The effect was ghostly and uncanny in the extreme. Even the dog seemed uneasy. He did not again curl up beside me as he had done before, but running my hand over him in the dark, I was aware that he was sitting on end, rigid and intent, all his faculties also centered upon the one sense of hearing.

«I say, do you hear anything?» once Lord Clambor asked.

Hear anything! I should think I did; but I temporized. Instead of answering his question, I asked another.

«Do you?»

«Well, rather! I 've been hearing something ever since we came back and were quiet.»

«So have I,» I answered then; «but I think it is the echo of all the crash and noise, caught high up and still reverberating.» But there were ripples and crawlings over my cuticle that gave the lie to this, and chills were racing round my spinal column as mice or squirrels race in a treadwheel. And just as my hair was creeping under my cap like the sturdy in a sheep's brain, Jabez burst into a dozen barks, and leaped from the boat. If there are any further sensations of fright and nervous apprehension of ghostly visitants from another world to be experienced, I trust I may be spared the experiencing. Lord

Digitized by Google

Clambor confided to me afterward that he was not in such a funk falling off the Matterhorn. Just as we were on the point of expiring on account of a supposed ghost, a match was scratched outside the boat, and illuminated—Hill! Hill, with a large and lifelike smile—it could n't be other than large, being lifelike. Jabez was defying gravity about him, and gamboling in the snow like an early spring lamb. Never tell me that dogs do not know what they are about. No man was ever welcomed back from the jaws of death by his best friend the way Hill was applauded out of the crack of doom by Jabez—an acquaintance of a week!

Yes, there was Hill; and in order to be absolutely natural he threw a switch, or touched a button, one—I never could tell by the looks just what he did. Now I had fumbled among those buttons, when we got back from the supposed grave of Hill, thinking that a light would be cheerful in our darkness, literal and spiritual; but I might as well have fumbled among my own buttons, so far as any results were concerned. A pile of dead ashes in an alley would have illuminated as well as I did; but the minute Hill put his finger on it, presto, change! the dry wand of my effort burst into the bud of his performance, or the full bloom, rather, for the light-gun was firing off fireworks as if in celebration of his return. I am not quite clear in my mind what happened then. I know that I rolled over the side of the boat into the midst of a leaping and cavorting Jabez, and fell upon his neck (Hill's, not the dog's), and that Lord Clambor, as guiltless of an eye-glass as he was at his birth, seized him by the hand and worked it as if he had a contract to pump the ocean dry, and Hill's arm was the handle.

«Why, I called to you,» said Hill, «but between you two and Jabez you were making such a hullabaloo you did n't hear. And when I saw you scratching matches, and taking on over what you thought was my grave, I concluded I had better climb down from my perch before I yelled ‹Morning!› like a cock-sparrow. I decided, too, that if I dropped I 'd drop easy, for I considered it would be taking a mean advantage of friendship to die twice on your hands. Why, what 's the matter with you two fellows? You both look as if you had seen a ghost. Now I want to tell you right here that we are going to get out of this. Just reckon up the situation if you don't believe it. Here are two men who have tumbled eight miles out of the clouds and landed right side up with care. How 's that? Why, out of a million men who die a million deaths you could n't pick out two who had such provocation, or who would have been so justified by posterity in their departure. I speak of ourselves first, my lord, because we were the pioneers down here. Date has to come before title—in a crevasse, at least.»

Lord Clambor actually laughed. I shall always believe it was because he had been too much excited to put on his eye-glass.

«And here,» continued Hill, waving his hand as if Clambor were the spectacle and the Alps were the spectators,— «here is a man who has come a cropper off the Matterhorn, and failed to break his neck, failed to come up to expectation and comply with the rules of the game. Does it look as if he was born to be hanged—as if a rope had any chance against a mountain? Now I submit to you, gentlemen; *does* it look as if we were born to be drowned? Well, I rather guess not! It looks to me more as if we were being saved to become presidents and prime ministers, eh? But all this argument is n't worth the forty winks we must get before daylight. Turn in, everybody. Lights out!»

IV.

It was the earliest, dimmest kind of dawn in our crevasse next morning when I was awakened by the sound of a terrific report. My first thought was that the balloon had exploded in some unaccountable way; but on opening my eyes I perceived that there was a singular red glow on the ice-walls ahead of us, apparently about a hundred feet down the gorge. Hill was gone, and so was Jabez.

«What is that?» asked Clambor, in alarm, as we started up together.

«Heaven knows,» I replied. «I suppose Hill is somehow or in some way at the bottom of it.» I shouted his name, but he did not answer; and as we were both seriously alarmed by this silence and the preceding explosion, to say nothing of the unearthly illumination before us, we started with one accord, as we had done the night before, and hurried in the direction of the light. I could hear Jabez barking, and presently he ran to meet us, only to turn and rush clamoring back in the greatest excitement.

«He acts as if something was wrong,» remarked Lord Clambor. It seemed to me as if this statement was uncalled for, because, according to my understanding of the existing circumstances, everything was wrong, to begin with; but I had neither time nor inclination for argument. Almost immediately we beheld Hill staggering toward us, sil-

Digitized by Google

houetted darkly against the red glow behind him. The next moment he fell forward upon his knees, and from there lurched over slowly, easing himself down with one hand, like a man whose senses are leaving him gradually. Rushing to him, we found him lying with eyes wide open, in a dazed or semiconscious condition, and with several small, trifling cuts upon his face and hands. Jabez was whining beside him and looking unhappy. But what chiefly riveted my attention was the beatific expression on the fallen man's countenance. It was nothing short of seraphic.

«Hill, Hill!» I cried, «are you hurt?»

He looked at me dreamily for a moment, and then ejaculated:

«By the great horned spoon!»

Lord Clambor and I exchanged glances as we tried to raise him up. I thought he was raving, but as soon as we touched him he remonstrated peevishly:

«Let me alone! Let me be, can't you? I'll get up when I 'm ready.»

«But what is the matter?» I persisted. «What is that light? How did you get hurt, or, if you are not hurt, what are you lying here for?»

«I 'm not hurt,» he retorted in reply to my quadruple question. «I 'm just lying here giving my heart a chance to beat, that 's all.» As he said it he raised himself rather uncertainly, rubbing his head with one hand as he did so—an habitual movement with him when confronted by some brain-splitting problem. Then he went on: «Listen to it! You fellows go down the gorge, and tell me what you think of that.»

We were aware of an unusual sound in the crevasse, a noise like the sustained expulsion of breath from a pair of mighty lungs; and, finding that Hill was not in need of assistance, we hurried to the spot. It was the same place where we had believed our friend had fallen the night before, and we now discovered that in our previous excitement and the surrounding darkness we had overlooked a great sliver of rock that had been split from the foot of the wall by the mass of descending ice, revealing a little cavern behind it. In the farthermost corner of this a great flame flared,—a torch as big as a man's arm,—burning fiercely, with that hissing roar peculiar to gas under pressure. I heard Hill's uncertain steps behind us, and turned to him. The little cavern was red and lurid, and reflected its glow upon our faces and the opposite cliff, where the ice was as rosy as a snow-mountain at sunrise. We might have been three fiends holding consultation in the Inferno.

«By Jove!» said Clambor. «How very extraordinary!»

«What in the world is that?» I asked.

«That,» said Hill, looking dreamily at the flame, «that is gas—natural gas, right here in the Alps. Think of it!»

«But how did you happen to discover it?»

«I did n't,» said he, grinning. «It discovered me, and the first thing it did when it found me was to kick me out with business-like precision. By George! it pretty nearly jolted the life out of me, too.» He stretched his arms and legs stiffly, rubbing them here and there, and wincing and grimacing as he did so. But presently he straightened up, forgetting all about his aches and pains in the excitement of a thought.

«Say! Talk about fortunes! If the confounded thing was anywhere else, just think of the stock company we could form! You see, when I awoke this morning early, I concluded to explore that part of the crevasse I had tried to knock over last night, and the first thing I ran across was this cavern. I thought maybe it might have chipped off the door to some other crevasse, through which we might perhaps crawl out, so I walked in and struck a match to look around. That was all there was to it: everything else just happened itself.» Considering what *had* happened, this was deliciously droll; and he went on, with a twinkle in his eye: «Now I want you fellows to turn in and make snowballs—big ones, fit to build a fort of. You 've not forgotten how to roll them up, have you, Holdem?»

«I should say not! But what on earth do you want of snowballs?»

«Well, I intend to put that light out the first act—not until it has melted a few barrels of water off that opposite wall, though. Then I shall build a flue of ice and snow, cemented with water, say three quarters of the way up to the balloon, using the sides and floor of the cavern for two sides of the chimney, and arching the third side of the triangle between them. We will bank the mouth of the chimney with stone to protect the snow and ice from melting too quickly, make a hole through the plugging of the fissure mouth, join it with the flue by cementing it over in a hurry, and light up our gas again just where we want it. Why, an hour of that heat—maybe half an hour—reasonably near to the balloon will thaw it. I tell you, I feel good. Of course there is this objection to the scheme: if the heat required

Digitized by Google

to float the *Cloud Queen* is also enough to float that avalanche overhead, we shall have to tie to the ice-ax again for a life-preserver. But I believe luck is with us, and I propose to go right on making preparations to depart by first balloon. It 's the easiest way out, and, judged from my experience last night, it may be the only way. Now I want these snow-plugs made as big as barrels. It 's going to be a ticklish job to put out that light, but I guess we can do it.»

We ate our frugal breakfast first, with the thought that there was just enough left in the larder for one more scanty meal to act as an aid to digestion. So far as any prospects of a future dinner were concerned, we might have been the family of any brotherhood-bound striking workman. The only satisfaction we had was that the world outside, like a walking delegate, was dining well.

During all that day we made snowballs, rolling them up and down the gorge, assisted by Jabez, who thought this exercise was devised for his entertainment. Big as our great torch appeared to be, examination showed that the fissure through which the gas came was a small, jagged, triangular rent in the rock, not above eighteen inches from the floor of the cavern. We experienced far less trouble extinguishing the flame than we had anticipated, and, barring some singed eyebrows and whiskers, Hill's plan of operations succeeded admirably. But it was long, slow work building a flue of the length required, and cementing every little irregularity that might perhaps allow the gas to escape, particularly as after a few hours it became necessary for Clambor and me to explore the gorge from end to end for snow. Hill acted as mason, and we were «hod-carriers,» according to him.

It was in the course of these explorations that I came upon a curious piece of rock that had been at some preceding age grooved out by falling water, so that one side was shaped not unlike the half of a sewer-pipe divided longitudinally. It was perhaps three feet long, and from one to two thick, very irregular in outline, of course, but I at once saw that it would be a valuable adjunct for finishing the mouth of the flue, where the flame would create an intense heat. With Clambor's aid I carried it to Hill.

«Magnificent!» cried that worthy. «Just the thing I have been longing for and wondering how I was going to do without. Now look at it—just look at it, and dare to be pessimistic! Why, I call it flying in the face of Providence—no less—to grumble at anything so far. Have n't we been provided with everything heart could wish?—except, perhaps, a ladder out, and that has not been offered because we are not going to require it. But some people are never satisfied; must have a chromo with their box of soap, or they won't wash.»

«WE MADE SNOWBALLS.»

We helped to place our find at a suitable distance from the balloon, and by banking it high with rocks about the mouth we soon had a surprisingly good vent, in which the gas could burn for some time before it melted away the granite opening of our prostrate chimney.

Late in the afternoon we divided our last crumbs. I shared mine with Jabez, and we were both hungry after our banquet. At this

time the flue was over half-made, and we continued to work on it by candle-light all that night, being reasonably sure that the fissure was sealed well enough to prevent the gas from escaping in any considerable quantities. Next morning Hill melted some snow, and invited us to «come to hot water,» requesting his guests to bring their own «spirits,» and recommending that we make believe, as children do, that we were merely dyspeptic, and restricted to this diet for the sake of health instead of necessity. It was a pretty thin breakfast after twenty-four hours of steady toil, but our host reassured us by promising the best dinner to be had in Switzerland, served at twelve sharp.

«No fashionable hour for us,» said he, briskly. «A good feed to-day, and welcome to fashion to-morrow.»

It was while we were going through the empty form of this meal that Lord Clambor called our attention to Jabez.

«Look at that beggar,» he said. «I never saw any one thrive on short rations the way he does. He is actually putting on flesh.»

«In other words, this climate and dietary seem to agree with him,» said Hill, «which only goes to sustain my theory that the mind has more to do with health and happiness than the body. Jabez has not argued himself into hopelessness, as you have, Holdem. He is going on the principle that 'sufficient unto the day is the evil thereof.'»

But a sudden suspicion had crossed my mind. I knew Jabez well, and now that my attention was called to him, I perceived that he was filled with something besides hopefulness. There were attendant symptoms other than those visible to the eye in his increased circumference. In the first place, he did not tease. That meant, with Jabez, «I am not hungry.» I knew that he had been very hungry only a little while before, and I marveled in consequence. Then, too, Jabez carried a red napkin in his mouth that he invariably used after meals. This napkin was now doing good service, and when, after licking his chops to his satisfaction, he rolled over on his back and writhed about as he was wont to do from sheer excess of contentment at really possessing his dinner beyond the possibility of its being taken away from him, I sprang up.

«What in the name of heaven has that dog found to eat?»

We started as one man in the direction whence he had come last, and he, scenting discovery, ran ahead, looking back apprehensively now and then, as any provident-minded dog does when he fears his buried bone is about to be scented out by another dog. We were all so eager that we forgot our anxiety concerning the glacier overhead, and at last we ran Jabez to earth in the little cavern where our big gas-light had been burning. One side of this cave was of ice, and the heat had melted it away for three or four feet, as it had the cliff on the opposite side. Here Jabez sat on guard, wagging his tail, and at the same time showing his teeth, as one who would say:

«Now you see it. Take a good look at it, but let it alone.»

The shout we sent up might have started a dozen avalanches, for here was breakfast —aye, and dinner, too, and any number of meals, provided we were unfortunate enough to need them there. Nobody knows how long the ice had been accumulating, but when the heat had worn it away the sharp nose of the dog had discovered what we should have failed to find—the carcass of a pack-mule, swept off the pass of Mont Cervin, perhaps, and preserved, as if by Providence, in this great refrigerator for the needs of three little human things crawling about the spot long afterward. The circumstance of this discovery added to Hill's fund of cheerfulness.

«There,» said he; «does that look as if luck had deserted us? Better people than we have been reduced to rations of mule-meat before now. Of course, if this animal had been really thoughtful, he would have brought some greengroceries along in his pack, in which event we might have enjoyed our own garden here, so to speak. But we won't quarrel with our bread and butter—even if it is nothing but plain, ungarnished mule. You see, we are bound to get out of this predicament.»

«By Jove!» said Lord Clambor, with enthusiasm, «I believe you are right.»

«I know I am,» said Hill, modestly, casting a speculative eye aloft. «We have nothing to fear now, except our enemy up there. If he will kindly hold off, and not take advantage of our defenseless position—»

But he was interrupted by a rumble and a roar, a crash as if heaven and earth were smiting together, and we all sprang to our feet and looked into one another's white faces.

«What 's that?» I asked when the tumult had subsided.

Hill had seated himself almost immediately, and now said in a careless, offhand way, as if such a trifling circumstance hardly merited an explanation:

Digitized by Google

«That? Oh, that 's probably just another Englishman dropping in.»

Clambor was getting in a measure accustomed to Hill's pleasantries, but the voice with which he got off his regulation retort, «Oh, I say!» was decidedly feeble.

«Sounds to me as if he had brought his whole island along,» pursued Hill, cheerfully.

But the humor of the situation had rather a pallid color. I knew and Hill knew—we all knew—that if the accumulated snow on the mighty roof over our little house was sliding off the eaves in one place, there was no reason why it should not slide in another at any moment. Damocles's sword was a puny instrument of destruction compared with the one hanging suspended over our heads.

There are a few things — raindrops, microbes, gray hairs, and troubles—that never come singly. And sometimes one piece of good luck pairs off with another, and there you have the beginning of a jolly family party in time. We finished our breakfast of mule-steak,—Hill said we could call it beef if it would make it taste any better,—feeling our spirits reviving with every mouthful, and our confidence in the future returning in jumps. Sixty minutes later we had the connection made between the fissure and the flue, and had the gas lighted again, this time without accident of any sort. In an incredibly short time it became apparent that the balloon was reviving, too. Poor old *Cloud Queen!* She was getting the chill out of her bones and straightening up again, preparing once more to soar into her own domain. To say that we rejoiced is a feeble way of expressing it. As for Hill, he fairly wept. He ran over at the first motion of the great dull body, and lovingly took hold of a chain here and a chain there, as if they had been the hands of a friend he had thought dead miraculously restored to him; and he talked encouragingly to it, as though his words were understood and were helpful. Then he rushed back to the boat.

«Come, now,» he cried, seizing it vigorously, «with a will! We have no time to spare.»

We took hold of it as men do when manning a life-boat, and we pushed it over the intervening space as the crew shove the craft in which they may perhaps be about to lose their lives—or save lives—into the surf.

«GET IN, GET IN!»

«We can't wait, or hold her back with stay-lines until the ascending power regains its full force,» said Hill; «it would n't be safe. Besides, going up slowly will be our salvation. It 's the only way of getting the *Cloud Queen* out without damage that might ruin her.»

We were attaching the chains to the boat as he talked, and we could see that they were gradually straightening out.

«Get in, get in; wait for nothing!» cried Hill.

Lord Clambor jumped first, and Jabez and I followed. Hill ran back for the ice-ax. As he returned I saw him start, and throw his hand up to his head. When he reached the side of the boat there was a little cut on his temple from which the blood trickled slowly.

«Nothing but an icicle,» he remarked cheerfully, «and a small one, fortunately.»

But we all knew the significance of that falling bit of ice. As the man stood there, with his hand on the taffrail, and his head thrown back to look at the balloon above us, I thought that never before had any human being lived in whom the spirit predominated so absolutely over the flesh. His face expressed only a keen and comprehensive interest in the workings of the mechanism he had invented, and he was watching the pro-

Digitized by Google

cess of ascension with the same careful professional attention that he would have given it if he were preparing to ascend from any dooryard in France. It was the finest piece of absolute self-control in the face of imminent danger that I ever saw. We knew that, so far as our chances went, we might just as well be sitting over a mine of gunpowder to which the fuse was laid and lighted, cheerfully hoping that the spark would expire before it reached the powder. Clambor looked at our chief intently and steadily, but his face will never be more bloodless than it was then.

«Ah,» said Hill, pleasantly, «she floats at last.» He gave the boat a slight push, and I perceived that we had indeed cleared the bottom of the gorge.

«For heaven's sake, get in!» I stammered. I felt that he would be quite capable, in that debonair, careless fashion of his, of letting us go without him if he found at the last moment that the balloon would not carry us all. Some suspicion of this crossed Clambor's mind, too. The color came back to his face with a rush, and he sprang up like the gentleman that he was.

«I say,» he cried, «none of that! If any one stays, I do.»

«No, you don't,» said I, feeling miserably mean to have him speak first. «Both your lives are worth something, and you have other folks to think of. I 've nobody but Jabez, and if anybody remains, we do—don't we, Jabez?»

Now I know that dog understood what I said, and what my words meant, just as well as if he had been human. He looked up at me seriously, shutting his lolling mouth the better to hear, and after a moment's affectionate scrutiny he clambered up on my knee and licked my face. But Hill helped us over an awkward pause.

«No heroics booked for this trip—thank you both, just the same. We can't spare anybody; our party is too small. But Jabez is the last man that goes. Why, Jabez is our mascot, eh, old boy?» He gave him a friendly pat, but the dog looked sober and leaned hard against me, running his tongue out and back rapidly, as if he was searching about in his mouth for the right word, but could n't quite get hold of it. He snuffled, too, and that was always a mark of deep feeling with Jabez. Altogether, I knew he had expressed himself something like this:

«That 's all right, thank you. I appreciate your attention, and I entertain the highest opinion of you as a gentleman and a fakir. I 'm glad to stay, too; but it would have been just as master said. I stand by master in everything. He 's the only man I know who is always absolutely right on all subjects.»

To our great relief, Hill's additional weight did not appear very materially to affect the upward tendency of the balloon, but, horns of the Alps! how it crawled! When I thought of the way we had shot up through space the day we left Chamonix, and compared it with the way we crabbed along now, it was maddening, even though I knew that in this slow progress lay our safety *if* the avalanche held off. But what a big word those two letters made just then!

As we rose, and I looked back upon our prison, with its trampled snow and ice, through which ran the mark left by the boat like the trail of a great snake, while on the other side glowed and streamed our banner of flame with its fringe of ascending smoke, I perceived that under our north wall there was a little jagged, wet trench, like that under a dripping house-eave in a thaw. Only this line curved and wound in and out with a sinuous, menacing, serpentine fashion like something alive, and moving according to its own erratic notions instead of tamely following the straight line of a carpenter's wall. This sight did not add to any feeling of security that we might have had, and in the silence of the next few minutes there was a sound equally disquieting ascending to us—the sound of a sputtering hiss now and then, as drops of water from above splashed into the flame below. Water was also falling from the top of the balloon and trickling down the chains and valve-rope, and there was ever that monotonous drip, drip, drip on the floor of the cavern, seeming to our excited imaginations to be steadily increasing in volume. Patter, patter, patter came the sound, like hundreds of fleet steps following us—steps of sprites and gnomes who dwell in habitations unknown to man, and resent his advent into their domains. Drip, drip, patter, patter—it was a veritable quickstep. All the trolls of the eternal hills were after us to drag us back. It seemed to me, as I lifted my horrified eyes away from the slowly increasing depth beneath to the strip of widening sky above, where the edges of the crevasse stretched like wide lips in a horrid, fiendish grin at our presumption, that we were literally in the mouth of the mountain. The question was, would the great jaws close upon us and crush us? And as we rose higher and higher and approached the top, I could see the glacier hanging curled over

Digitized by Google

the grinning lip like a cruel, lolling tongue waiting to lick us into the maw of eternity.

Now it would be bad enough to be roasted, or smothered, or crushed, or frozen. Any of these words set by reality as a period to life smacks of the tragic. But to be roasted, *and* smothered, *and* crushed, *and* frozen makes a combination death that rises into the realms of a disaster altogether too complex to be appreciated by any plain, unaspiring person. Few care for a death constructed on the composite order. At any rate, I never should select anything so ornate as that for my own demise; my tastes were always simple. But that was just what our prospects seemed to be for a few minutes, as we soared lazily out of that awful gulf. How green its walls were!—green or blue, as you choose to call it,—like grotesque cliffs of petrified sea-water, of deep-sea water, frozen and split asunder by some caprice of nature, filling an idle day with the ruin of an earthquake or the orchestra of a cyclone.

"WE WERE JERKED OUT OF THE VORTEX."

The top of the balloon had evidently reached the level of the crevasse. We saw its huge shadow darkening the front of the suspended cataract above us. Leaning over the edge of the boat and looking up with suspended breath, we saw this shadow suddenly careen violently to one side. The next moment the *Cloud Queen* was flung against the inanimate pile of carved and statuesque snow, chiseled thus by the savage tools of those wandering mountain sculptors and climbers, the untrammeled winds. We had been on the point of deliverance, we had caught breath to cheer; but now each man grasped the sides of the boat and waited in silence. The good craft we were in was raking upward with violent jerks and plunges, as if the *Cloud Queen* was struggling with some mighty enemy to preserve her own life and the lives of her human cargo. Pieces of broken crust flaked off the snowy wall within reach of our hands and fell crumbling upon us. And then we saw the great white river begin to move; slowly, sluggishly, with the creak of rending ice and the groaning grunt of some huge animal goaded and lashed into reluctant motion. And we—out of the vortex into which that frozen torrent began to pour ever faster and faster, we were jerked, like puppets on a string, up into the sunshine, into the sweet air, out of that well filled with noisome gases, but into a wind that bore us along like a feebly resisting feather over that roaring Niagara into which it seemed we must inevitably be plunged. The *Cloud Queen* had risen out of the grave, only to be smitten by the mighty palm of a hurricane, and driven like a frightened bird against the ragged walls of the Matterhorn, or engulfed in the icy torrent below. A ghostly spume of snow rose from it as the resistless force of gravitation hurried it on, and the opposing winds plowed into it with savage thrusts and plunges of gusty strength. The great airship dipped and rose, rose and dipped, until at times we shut our eyes, feeling that the next instant would see us wrenched out of the air and tossed into the awful chaos of that entombing stream. With its thunder in our ears, and the fear of it in our hearts, we passed what seemed an eternity of time, expecting each moment to be blotted out of existence as completely as if we had never been.

(To be concluded in the next number.)

Marion Manville Pope.

TOPICS OF THE TIME

«The Century's» Prizes for College Graduates.

WITH the aim of encouraging literary activity among college graduates, THE CENTURY MAGAZINE offers to give, during four successive years, three prizes of $250, open to persons who receive the degree of Bachelor of Arts in any college or university in the United States during the commencement seasons of 1897, 1898, 1899, and 1900.

1*st*. *For the best metrical writing of not fewer than fifty lines.*

2*d*. *For the best essay in the field of biography, history, or literary criticism, of not fewer than four thousand or more than eight thousand words.*

3*d*. *For the best story of not fewer than four thousand or more than eight thousand words.*

On or before June 1st of the year succeeding graduation, competitors must submit type-written manuscript to the Editor of THE CENTURY MAGAZINE, marked, outside and inside, «For the College Competition,» signed by a pen-name, and accompanied by the name and address of the author in a separate sealed envelop, which will not be opened until the decision has been made. It is to be understood that the article submitted has not been previously published.

The Editor, at his discretion, may withhold the award in any class in case no manuscript is thought worthy of the prize.

THE CENTURY MAGAZINE reserves the right to print the prize manuscripts without further payments, the copyright to revert to the authors three months after the date of publication.[1]

THE above offer has been formulated after consultation with some of the leading educators of the United States. In some respects the proposition differs from the usual prize offer. It is meant to cover a wide range of belles-lettres, and to stimulate interest in purely literary production on the part of college graduates. It may be said that «short-story» writing needs no extraordinary stimulus in this country. The «output» is already large, and much of it is of excellent quality. Perhaps in this case the demand has had the usual effect upon the supply. It has, we believe, always been the habit to decry «magazine poetry,» even when a large part of it was written by those who are regarded as our «great poets.» But then and now the poetry of the better American magazines has probably been of finer quality than indiscriminate criticism concedes. The department of our literature perhaps most in need of stimulus is that of the essay. There would seem to be fewer well-equipped and accomplished critics and essayists than our literature needs.

[1] The above was announced in the public press Saturday, July 24, 1897.

THE CENTURY'S offer naturally brings up consideration of the often-noticed fact that so few of our literary men, since the earlier days, have been college graduates. The writer some years ago made up a list of about forty of the then living prominent American authors. A very small proportion of these were found to be college graduates. The proportion of that class of writers appears to be gradually increasing; but if a list were made of a dozen or fifteen of the men and women now at the head of American literature, the public would be surprised to find that there were so many more A. M.'s, L. H. D.'s, and LL. D.'s than B. A.'s among them.

Doubtless the greater attention given of late in some of the colleges and universities to the study of literature pure and simple, especially to English literature, is partly due to a knowledge of their own disproportionate representation in our modern authorship.

The direct efficacy of institutions, of academies, in the creation of artists in general will always be a matter of dispute, as well as the question of the benefit of the academy to the individual genius. Would Shakspere and Keats have done better if they had had the advantages of university training? Would Milton have been greater without these advantages? Is Winslow Homer a greater painter because he never studied in Paris, or is he great in spite of having missed the discipline of the Beaux Arts? Doubtless John Keats would have been glad to have had John Milton's «opportunities,» but would he then have enriched the literature of the world with more exquisite odes than those «On a Grecian Urn» and «To a Nightingale»? Questions like these are, and will always remain, very pretty subjects for debate.

Debatable also is the question of the value of prizes in stimulating literary activity of a high order. One of our advisers remarks that such prizes have not worked well among undergraduates in a certain university, as the young men have preferred to put their work on the regular subjects of instruction. But such a result of the prize method among undergraduates does not imply a similar result among graduates, as the conditions are, of course, entirely different. Others of our educational advisers are very hopeful concerning the experiment. At any rate, the experiment appears to be well worth trying, and we trust that substantial good will come of it.

Good Men and Bad City Government.

IT is a generally acknowledged fact that in the government of cities America has made its most conspicuous governmental failures. An incident of such failures, and partly accounting for them, is the frequent refusal of the men most active in all good works to participate in what is termed «local politics,»—even in «reform»

Digitized by Google

politics,—for the reason that such participation would interfere with their usefulness in connection with those religious and philanthropic organizations with which they are identified. The situation is very clearly set forth in an extremely interesting book published not long ago by a young citizen of New York, well known as one of the originators of the City Club, whose study of political conditions has not been the less thorough and fruitful because disinterested and public-spirited. Mr. Edmond Kelly says, in his chapter on «The Church and the State,»[1] that the necessity of holding off from politics on the part of the churches and the lay institutions which are kindred thereto has had a subtle reaction upon all who attend church; «so that abstention from politics has grown to be a sort of virtue, and, indeed, a matter of pride.» Again, church and charitable institutions are brought into contact with municipal office-holders, but generally in the relation of men who have favors to ask. These institutions are often land-owners. «Every owner of land is brought continually into contact with the city authorities in regard to such questions as assessments, improvements, sewers, police protection, and the like.» In cities «where a *per capita* allowance is paid to religious institutions for those whom they support, this relation is intimate, and apt to become collusive. Charitable societies are continually called upon to confer with the heads of public charities, of prisons, of public schools. The necessity for this intercourse occasions a mutual disposition to be on good terms with one another; especially is this the case with those who are in the relation of suppliants for favor. There arises, therefore, amongst church-goers and charitable people a notion that, however evil the city authorities may be, they are to be appeased, not fought, and, in the language of a contributor to the ‹Charities Review,› that more can be got out of them by coöperation than by resistance.»

Mr. Kelly goes on to say—and he evidently is speaking from close experience—that when a movement is started to reform unendurable abuses, and when appeals are made for assistance, the reformer is amazed at the answers often received.

> Clergymen very justly say that they cannot divide their congregations by introducing amongst them the sword of politics. The same answer is made by such bodies as the Young Men's Christian Association, by the managers of workmen's and boys' clubs—in fact, by every religious institution that has a pulpit or educational influence. But this is not all. The habit of tolerating municipal abuses and of conciliating municipal bosses has created a temperament which is perhaps a still more redoubtable enemy to good government than the enforced neutrality of religious bodies; for it is temperament that determines conduct, and it is from the conduct of her citizens that a city benefits or suffers. Now if the temperament of the best of her citizens is one of submission to municipal misgovernment and of aloofness from all matters political, then the salt has lost its saltness, and we may well ask, Wherewith shall it be salted?

Some good men beg off because they are devoting all their energies to the correction of some social evil in the community, and they do not wish to diminish their influence by political complications. «And so we are like a well-intentioned but insubordinate crew on an unseaworthy ship. Each one of us has attached himself to a particular leak, and will not hear of giving heed to any other matter, however much greater may be its importance to the safety of the ship.» While one is sponging away a few drops near at hand, tons of water are pouring into a gaping hole.

Especially in our cities, the elections, except under exceptional conditions, carry out the will, not of the people, but of a few corrupt political leaders, and it is only rarely, fitfully, and under extraordinary circumstances that the real popular will is expressed. It is also clear that this is due to the fact that the citizen has abdicated in favor of political machines; that in so doing he has been guilty of a political crime; and that if he performed his clear political duty,—that is to say, if he took the necessary steps to see that the proper candidates were nominated, and gave as much time to secure such nominations at periods of small excitement as he does at periods of great excitement,—it would be perfectly possible—nay, easy—for him to have his way year in and year out. In other words, the citizen only attends to his political duties when driven to it by impulse and temper; he never performs them for the same reason that he does his domestic duties—because they *are* duties, and he feels under a moral obligation to do so. It is believed that if the citizen knew what vital interests depended upon the yearly elections; if he were alive to the uselessness of devoting his time to charitable and philanthropic societies so long as the administration of our public charities, of our public schools, and of our public prisons was in the hands of ignorant and self-seeking politicians; if he appreciated that it was idle to spend his money on private charities so long as the money of the city was being squandered in manufacturing the very paupers and criminals which it was his aim to succor; if, in a word, he understood that his well-intentioned efforts have only for effect to trim the luxuriance of vice, and by trimming to promote its growth, it is believed that the energy, wealth, and disinterestedness that now dissipate themselves in infructuous if not in absolutely injurious effect would, by concentration in better-directed channels, purge the State of politicians, relieve the laboring classes of the incubus of pauperism, and largely diminish the effect of crime.

The author's contention is that virtually every great problem which now faces humanity is a political one. «The problem of pauperism and socialism, of education and crime, can only be handled by the State.» He holds that in a broad sense political duties have a religious character, and that although the church may not be an instrument through which the work can be effected, «it is through religion only that the work of regeneration can effectually be accomplished.» By religion the author is far from meaning ecclesiasticism; he defines the religious spirit philosophically as «the desire and resolution to fight animal instinct in so far as it clashes against spiritual instincts essential to social life.»

Mr. Kelly's practical suggestion is that what the churches, as such, cannot do, good men in the church can do. He thinks that «the spirit of enthusiasm which has heretofore been employed in organizing private charities should now be employed in organizing effort to achieve more fruitful results through the more powerful operation of public office.» He is aware of the necessity of avoiding any sectarian bias, but he thinks that the clergymen could do a great deal of a practical character in such movements, which should be thoroughly non-partizan.

Mr. Kelly's timely work unites general philosophical discussion with statements and suggestions of immediate and pressing application. Some of his readers may

[1] «Evolution and Effort and their Relation to Religion and Politics.» D. Appleton and Company.

Digitized by Google

not follow with approval either all his philosophical leadings or all the details of his practical program; but probably most of those who read his argument will acknowledge to a new and vivid sense of the evils which need to be corrected in American municipal government, and will agree with the author that a great amount of ethical effort is being diverted from its proper channel in the refusal of so many men of virtue to make their influence felt for good government. Under the system of universal suffrage such diversion is little less than a crime against the state.

There are so-called «good men,» leading church members, active in American municipal politics, who merely illustrate how much harm can be done by the possessors of a dual conscience—one for the Lord's day, and one for election day; and there are «political parsons» who are a public nuisance. But there are a great many churchmen who are «good» even in the trying field of public duty, and there are clergymen whose good sense makes their participation in civic affairs never other than proper and useful. But good citizenship needs to be reinforced more largely with these elements, for the fight is on for good city government in all parts of the country.

OPEN LETTERS

Glave's Last Letter and his Death.

NOTE BY THE EDITOR.

THE conclusion, in the present number, of the material from the diary of the African explorer Glave adds interest to the private letters which follow, and which form an interesting postscript to this important series. It will be remembered that Mr. Glave died just at the conclusion of his expedition, May 12, 1895, at Matadi, near the mouth of the Congo.

Shortly after his arrival at Matadi, he wrote a letter to the President of The Century Co., dated April 25, 1895, in part as follows:

«. . . The administration of the Belgians is decidedly progressive. Five large, comfortable boats have replaced the tiny A. I. A. *Royale* and *En Avant* on the upper river; a reliable postal service has been established to the very limits of the state territories; the Arab slavers have been crushed beyond ever again being a menace to the state's authority; and the Congo Railway, already running over a well-laid track for sixty miles, promises completion in three years' time, provided sufficient funds are found. This line will of course supersede the miserable depopulating system of manual transport by the native porters (the Bakongo), and will, when finished between Matadi and Stanley Pool, bring the heart of Africa within easy reach of the markets of the world by steam communication. The state intends also to carry a telegraph line from the coast to Tanganyika, and operations are already begun.

«Coffee of a superior quality has been found to grow out here in nearly every district, with most promising results; and, to my mind, coffee and rubber will constitute the main articles of profitable export. Ivory is getting constantly scarcer, and in a few years' time trade in elephant-tusks will have yielded up its important position in the list of African products. All the Belgians on the Congo are elated at the prospect of the Congo Free State being taken over by Belgium and made into a 'colony'; but this country cannot become a colony in the true sense of the word. Its unhealthy climate forbids this. Not only have dangerous fevers to be fought, but the climate reduces one's vigor and strength, and one's blood becomes watery and poor. It appears to me that even if colonists decide to face these dangerous conditions, the next generation will bear the brunt of the experiment. I have frequently seen children who have been born out on the Congo, and they are always bloodless-looking little creatures, and at the first opportunity they are sent home for safety. The fact of being born out here does not exempt them from fevers. Recently I saw a little girl ten months old who had already had several fevers.

«With regard to African sicknesses, experience and experiment are constantly furnishing knowledge concerning the remedies and treatment to be employed. Bilious, hematuric, or black-water fever is the principal menace to life, and often proves suddenly fatal; in spite of the ablest doctoring, a patient sometimes dies after two days' illness. On the other hand, certain constitutions resist these fevers in a remarkable way. Dr. Sims, of the American Union Missionary Society, who has been eight years at Leopoldville without going to a temperate climate, remains in good health in spite of having had, besides small fevers, twelve hematuric or black-water attacks! . . .

«The occupation of the territories of the Congo Free State by the Belgians is an enormous expense, and the administration is making most frantic efforts to obtain a revenue of a size sufficient to enable it to pay its way. In the fighting consequent upon this policy, owing to the inability or disinclination of natives to bring in rubber, slaves are taken—men, women, and children, called in state documents *libérés!* These slaves, or prisoners, are most of them sent down-stream, first to Leopoldville. There the children are handed over to a Jesuit mission to be schooled and to receive military training from a state officer established at the mission for that purpose. In two years this Catholic mission has buried three hundred of these poor, unfortunate little children, victims of the inhuman policy of the Congo Free State! In one month seventy-three new graves were made! On the *Ville de*

Digitized by Google

Bruxelles, the big state boat upon which I descended the Congo, we took on board at the equator one hundred and two little homeless, motherless, fatherless children, varying from four years to seven or eight, among them a few little girls. Many of them had frightful ulcers which showed no sign of having been attended to, although there was a state doctor at the equator station. Some few had a tiny strip of cloth, two or three inches wide, tucked in a string around the waist to hide their nakedness, but half of them were perfectly naked. As they were huddled together on the lower deck of the boat on the damp, chill mornings, shivering with cold, death was marking many more for hasty baptism and a grave at the Jesuit mission near Leopoldville. By the time we reached Kinsassa, Stanley Pool, there was a great deal of sickness among the children, principally fevers and coughs; many were hopelessly ill. If the Arabs had been the masters, it would be styled iniquitous trafficking in human flesh and blood; but being under the administration of the Congo Free State, it is merely a part of their *philanthropic* system of *liberating* the natives! The whole world seems to think that the Congo Free State is a civilizing influence, and that philanthropy and love of justice are prompting every effort of the administration. . . . It is his [the King of Belgium's] duty to learn the true state of things in the dominion of which he is sovereign. . . . I feel myself considerably run down by my residence in Africa; my physical strength does not diminish, but I am anemic, liverish, and mentally sluggish. . . .

«At this moment there are no startling movements on the Congo, and were it not for the forced commerce peace would reign everywhere. In the Stanley Falls regions Commandant Lothaire has a big expedition composed of twelve whites, three hundred regular soldiers, and a host of irregulars. He has gone northeast from the falls to Lake Albert Nyanza, with the idea of establishing the state's authority in these regions, and intends placing small garrisons along his route to establish communication through the land. One of the objects of this expedition—one might safely say the main one—is the collection of ivory, said to be in vast quantities in the native villages. Captain Franqui is on the Upper Onellé; and according to what news leaks out from the official bureau, the state has had serious fighting, and Franqui is in urgent need of assistance. . . .»

On April 11 the Rev. Lawson Forfeitt, of the Baptist mission at Underhill, near Matadi, addressed Mr. Glave, who was on his way down the river, in the following kindly spirit: «Your message arrived yesterday with a letter for Mr. Casement, who was here last month. . . . Thinking it possible you might be sick on the road, and in need of help, I opened your letter. I trust you will pardon the liberty. . . . My wife and I hope you will give us the pleasure of your company while you are in the neighborhood.»

On May 20, 1895, Mr. Forfeitt described the visit and death of Mr. Glave in the following letter to the President of the Century Co.

«The sad news of the death of Mr. E. J. Glave will have reached you ere this letter arrives. Mr. W. Clayton Pickersgill, C. B., British consul, landed here from the coast an hour after Mr. Glave died; and as he left two days later for Europe, he kindly undertook to write you and the relatives in England while on the voyage. Just before the end came, Mr. Glave requested me to take charge of all his effects, and deal with them as per inclosed memorandum. In going through his correspondence I found letters from you, the tone of which showed me that you regarded Mr. Glave not simply from the point of view of professional association, but that you entertained for him feelings of real personal friendship and esteem.

«I feel, therefore, that you will wish to know something more than the *fact* of the death, and that any further details I can give will be received with sorrowful satisfaction by you and Mr. Glave's many friends in America.

«I believe Mr. Glave wrote to you by the mail which left here on April 27, so that you would hear of his safe arrival at this point, the port of departure for Europe, he having successfully accomplished the great feat of crossing the continent.

«I had not met Mr. Glave before, but of course his name as that of an old African was well known to me. I need not say that my wife and I looked forward to his arrival with much pleasure, and we greatly enjoyed his company during the two or three weeks he stayed here as our guest. We are happy to believe he also enjoyed the time spent here, for in a letter to my brother at Upoto, Upper Congo, one thousand miles from here, he wrote on May 10, only two days before his death, as follows:

«‹I do not at all regret the delays, for the missions down here have extended to me the greatest kindness. To your brother and Mrs. Forfeitt I am deeply indebted for their untiring consideration and whole-souled hospitality. I have spent about two weeks with them, and felt from the first moment thoroughly at home. It is indeed a great privilege to enjoy such sterling friendship.›

«I trust you will not misunderstand my motive in venturing to quote Mr. Glave's kind words. My sole object is to enable you as far as possible to gather how he spent the last two or three weeks of his life, in agreeable association and fellowship with his own countrymen, and not away alone in the bush. This fact, I think, will give some comfort to his friends at home.

«While here Mr. Glave made excursions of two or three days each on the Congo Railway (in course of construction), and to Yellala Falls, the last of the cataracts. He took several photographs of the latter to include in THE CENTURY articles.

«On the 3d of May Mr. Glave had a small fever here, which was soon overcome; and for the most part, until the fatal attack of the 11th and 12th, he was in good health and spirits, and looking forward with great delight to meeting his friends in Europe and America once more. He had already taken a cabin on the steamship *Coomassie*, and all his luggage was on board. Indeed, he spent one night on the steamer, as an attack of fever came on suddenly when he was there on the 9th. I visited him early next morning, and found him dressed and apparently all right again. Finding the steamer's sailing was delayed two or three days, Mr. Glave preferred to return to Underhill in our boat with me, so as to be away from the noise and bustle on the vessel.

«That day, Friday, the 10th inst., was spent quietly

Digitized by Google

at this station. When he went to bed, we advised him to take breakfast before rising next morning. I went to his room in the morning, and placed my hand on his forehead to see if he had any return of the fever. Noticing this, he said, ‹Oh, I have no fever.› I thought he had, so fetched a thermometer, which registered his temperature at 102.2°. Of course we kept him in bed and applied the usual remedies and treatment. The temperature rose steadily, and continued high all day, but he was cheerful and took nourishment well, and also quinine, etc.

«I decided to sit up that night. At 11:30 P. M. our patient slept, and did not wake till 3:30 A. M. His temperature had come down well. I gave him ‹Brand's Essence,› and he went to sleep again until 6 A. M., by which hour the temperature was almost normal. Symptoms continued very favorable until after midday on Sunday, the 12th. At 2 P. M. the temperature went up a little, but it was not until four o'clock that it exceeded the previous day's record. We did all we possibly could to induce perspiration, but with little result. At five o'clock we felt the case to be very serious; and Mr. Glave himself evidently felt the same, for he turned to me and said: ‹If I die, Mr. Forfeitt, I want you to send all my papers and photographs to The Century Co., and all my other things to my brother, George Glave, 14 Paternoster Square, London, who is to sell all for the benefit of my mother.›

«Soon after this he became for the first time delirious and violent. We tried a cold bath to reduce the temperature; but all was unavailing, and at 6:15 P. M., after a short time of quiet, though still unconscious, our friend died.

«I cannot tell you how great a shock it has been to me and my wife, and to my colleague, Mr. Pinnock, who had shared the nursing. Our own sorrow is great, and we desire to assure you, and all the relatives and friends, of our heartfelt sympathy; and we earnestly pray that God may graciously comfort all who have been so sorely bereaved by this sad event. I have seen many fevers out here, and not a few fatal cases, but never one exactly like this in its course and sudden termination.

«On Monday morning, at nine o'clock, we buried Mr. Glave's remains in the graveyard of this mission, the funeral being attended by all our European neighbors who could possibly be present. I inclose several letters from some who could not attend, thinking you may like to see them.»

Edward James Glave would have been thirty-three years old on the following September 13. In THE CENTURY for October, 1895, was printed an account of «Glave's Career,» including his explorations in Africa and Alaska.

Editor of The Century.

Public-School Lectures in New York.

A SUGGESTION TO OTHER CITIES.

THE courses of free lectures for the people given under the auspices of the Board of Education in New York have met with such success that perhaps a few words concerning the system and its results may be of value to other cities. In 1888 the State legislature passed an act authorizing the Board of Education of New York City to provide for a course of free lectures for workingmen and workingwomen, to be given in the school-houses of the city. Fifteen thousand dollars were appropriated to carry out the plan. The Board of Education placed the matter in the hands of the Committee on Evening Schools, and during the first lecture season, which lasted from January to April, 1889, 186 lectures were given in six school-houses in the most densely populated centers of the city, the total attendance being 22,149, or an average of 119 persons at each lecture. During the next season 329 lectures were given between October and April, at seven centers, the total attendance being 26,632, or an average of 81 at each lecture. Comparing this number with that of the previous year, the committee began to doubt either the popularity of this form of instruction or the wisdom of the management. It was resolved to place the care of the free lectures under one responsible head, and Dr. Henry M. Leipziger, well known as an educator, was chosen to direct the work. His reforms in the free-lecture system were: first, the issuing of ten thousand pocket bulletins from each center, containing the list of lecturers and a brief statement explanatory of each lecture; second, large placards in the windows of neighboring stores and in shops and factories, giving the lecturers' names and subjects. Changes were made in the corps of lecturers, and liberal use of the stereopticon was decided upon. Technical scientific lectures were made plain by experiments. The attendance at the 185 lectures given the next season was 78,295, an average of 423 at each lecture. Some of the practical subjects treated that season were «Every-day Accidents, and How to Meet Them,» «How to Breathe,» «How to Take Care of the Eyes and Ears,» «Light and Color,» «Practical Electricity,» «How Worlds are Made,» «The Cañons of the Colorado,» «Abraham Lincoln,» «Money, and How to Make It,» «Survey of Architecture,» etc. While these lectures were not given in courses, a correlation was maintained between many of the subjects, so that a current of interest was supported throughout. The most instructive lectures were the ones most keenly enjoyed, and the attendance was so large at many of the school-houses that it was difficult to accommodate the people. A bill was passed by the next legislature empowering the Board of Education to rent halls if necessary; and Cooper Union Hall, the American Museum of Natural History, and the Hebrew Institute were brought into use. One of the problems confronting the managers was how to secure the services of able lecturers for the small sum of ten dollars; but it was soon discovered that many men of excellent talent were willing to lend a helping hand even for so small a fee.

The attendance during the fourth season was 122,243. The next year the lectures were made more varied, and 130,830 people heard 310 lectures. The sixth season, 170,368 people attended 383 lectures; and the seventh season there were 224,118 people present at 502 lectures. In 1895–96 this number was increased to 392,733 and 1040 lectures, of which 795 were illustrated with stereopticon views, and 73 by experiments. They were held at thirty different centers, and the attendance on the last night was 9289. During the past season, closing April 1, 1897, 426,357 persons heard 1066 lectures.

A strong evidence of the popular favor is the universal good order and eager attention characteristic of the

Digitized by Google

audiences in every part of the city. Besides the local superintendent of the lecture center, policemen, private detectives, and others are always on duty, though their services are seldom required. Having delivered lectures during the last season at twenty of the centers, including every grade of audience, from the Battery to Bedford Park, on both sides of the city, the attendance ranging in number from 250 to 2200, I can bear personal testimony to the delightful sympathy, the whole-souled responsiveness, and the perfect decorum of the people. The work has grown until it has become the largest free-lecture course in the world—a people's university, without a building of its own or a faculty, but inspired and carried out by the masses it is helping to educate and humanize.

New York is peculiarly fortunate in having so much available lecture talent at hand; but similar results can be obtained, with patience and persistence, by the school boards of many others of the larger towns and cities, especially in university towns where lecturers are plentiful. Ministers, lawyers, doctors, teachers, and other well-informed people could be called upon, and lectures on citizenship, literature, travel, business, natural history, laws of health, and questions of the day could be intelligently treated in hundreds of cities. This truly noble and far-reaching system of culture might be employed to the physical, intellectual, and moral elevation of many other communities of the American commonwealth. Doubtless Dr. Leipziger, under whose skilful management the system has been developed in New York, would send helpful material to any who cared to address him at his office in the Board of Education building, 146 Grand street, New York.

NEW YORK. *S. T. Willis.*

«The Century's» American Artists Series.

IRVING RAMSAY WILES.

IRVING RAMSAY WILES is best known for his excellent compositions in black and white, many of which have appeared in THE CENTURY; but as a painter he is equally worthy. The quality of the work, both in oil and water-colors, which he shows from time to time at the exhibitions is so much above the average as to cause his painter friends to wish that the demands of the publishers upon his time were less exigeant.

The leading characteristics of Mr. Wiles's painting and designing are refinement and good taste, a color-sense in the main attractive, good drawing, and a «touchy» handling that is not too loose. These qualities eminently fit him for portrait-painting, in which he has been successful, and in which those interested in his career hope to see him obtain a wider field.

Mr. Wiles, who is only thirty-six, has had a uniformly progressive career. Born in Utica, New York, he first studied with his father, L. M. Wiles, himself a good painter; later, at the Art Students' League, under Carroll Beckwith and William M. Chase. In 1882 he went abroad, and entered L'Académie Julien, where he had the advantage of the criticism of Le Febvre and that wonderful teacher, the late G. R. C. Boulanger. Mr. Wiles was also the pupil of Carolus Duran.

Upon his return to America in 1884, he at once came to the front as an illustrator. In 1886 he received the third Hallgarten prize, National Academy of Design, for the painting «The Corner-table»; 1889, the T. B. Clarke prize, National Academy of Design, for the picture we print as a frontispiece, «The Sonata»; 1897, the W. G. Evans prize, Water Color Society; 1889, honorable mention, Paris Exposition; 1893, medal, World's Columbian Exhibition; 1897, medal for portraiture, Tennessee Centennial.

Mr. Wiles is an associate of the National Academy of Design, a member of the Society of American Artists, the Water Color Club, and the Society of Painters in Pastel.

His principal portraits are of Dr. Edward Eggleston, Mr. Richard H. Halsted, General Martindale, and Mrs. Hugh J. Grant.

W. Lewis Fraser.

IN LIGHTER VEIN

Irish Love Song.

YOU darling, you white one, you sigh of fresh air,
With stars for your bright eyes, and wind for your hair,
And snow on your bosom,—'t is inside it too,—
You 'll kill me wid grievin', faith, that 's what you 'll do!

There 's sun in your kisses, there 's frost in your frown,
An' there 's light in your smile to light valley and town;
Yet I, in the dark, must go pokin' around;
'T would be well for my peace I was undher the ground!

Did Nature grow stingy, imposin' a dearth,
Faith, you as one blossom would save a bleak earth;
And were I the wild wind, I 'd roamin' forego
To hang tendherly over the spot where you 'd grow.

Oh, Molly avourneen, I 'm wastin' apace;
And the last thing on earth that needs spoilin' 's my face.
Faith, the dogs in the village run howlin' wid fright
At the sight of me walkin' abroad in the night.

But I 'll own you, my dewdrop, my flush of young dawn;
Though the chase be a long one, I 'll thrain wid the fawn;
And I 'll have you and hold you, your heart to my heart,
Till no wiles of this world can put us apart.

Oh, I 'll cherish and tend you and feast you on love,
Till the angels, in envy, look down from above;
And the grave earth itself 'll be one glowing smile
That 'll start 'neath your footsteps and spread mile by mile!

Thomas D. Bolger.

«The Man who Does his Work.»

THIS life is a strain and a struggle;
We are born to a world of care;
And of all the scurries and woes and worries
I 've had a bit more than my share.

It 's idle to say that it 's even,
And there 's no such thing as chance:
Though one has trouble, another has double;
One scrapes for the other to dance.

And some, they whine and they whimper,—
That 's the kind that will never be missed;
For honest labor there 's always a neighbor
To lend him a helping fist.

This much I have learned for my comfort:
It 's never worth while to shirk;
Blow east, blow west, the world wags best
For the man who does his work.

G.

A Reply to Cœlebs.[1]

THOUGH deeply moved by your appeal,
I hesitate to speak,
And yet I do so; for I feel
I am the one you seek.
I lay my maiden shyness by,
I stoop to raise the glove,
Such kindred souls as you and I
May frankly treat of love.

My mirror and my bank-account
In sweet accordance show
My charms to equal in amount
The list you dwell on so;
I always have a cheerful smile,
An ample balance, too;
I am an orphan; and my style,
I think, would dazzle you.

But, Cœlebs, on the other hand,
My standard, too, is high;
I too have sought, I too demand,
Perfection in reply.
There are conditions (just a few)
Which, I should like to state,
Must be embodied for me, too,
Ere I accept a mate.

I only ask for manly grace,
Proficiency in sport,
An easy manner, high-bred face,
A wit that foils retort,
A powerful mind, keen business sense,
A place in wide affairs—
In short, a man of prominence,
Whose wife his honors shares.

Your verse has kindled answering fire,
You seek perfection, too.
If you prove all that I desire,
I 'll prove the same to you.
But if you do not, Cœlebs, then
I really cannot see
Why less than such a man of men
Expects a wife like me.

Hope D. Firde.

The Poster Girl.

(AFTER "THE BLESSED DAMOZEL.")

THE blessed Poster-girl leaned out
From a pinky-purple heaven.
One eye was red and one was green;
Her bang was cut uneven;
She had three fingers on her hand,
And the hairs on her head were seven.

Her robe, ungirt from clasp to hem,
No sunflowers did adorn;
But a heavy Turkish portière
Was very neatly worn;
And the hat that lay along her back
Was yellow like canned corn.

It was a kind of wobbly wave
That she was standing on,
And high aloft she flung a scarf
That must have weighed a ton;
And she was rather tall—at least
She reached up to the sun.

She curved and writhed, and then she said,
Less green of speech than blue:
«Perhaps I *am* absurd—perhaps
I *don't* appeal to you;
But my artistic worth depends
Upon the point of view.»

I saw her smile, although her eyes
Were only smudgy smears;
And then she swished her swirling arms,
And wagged her gorgeous ears.
She sobbed a blue-and-green-checked sob,
And wept some purple tears.

Carolyn Wells.

«Po' Linger!»

WUNST 'pun a time dar wuz a po' ole man name' Linger, en he tuk mighty bad off. He wuz a-layin' in he baid when, 'way up in de air, here come Mr. Turkey-buzzard a-circlin' round, circlin' round. Den he drap a leetle lower en lower, 'twell he 'gin ter go flip-flop, flip-flop; den he res' 'pun de fence, en dis am whut he sing: «Po' Linger!» Den Linger say: «Wait er leetle longer.» Mr. Turkey-buzzard riz f'om de fence, en here come anoder circlin', circlin' round; den dey bofe flip-flop down to res' on dat fence. Den he sing: «Po' Linger!» En f'om de house de answer come fort': «Neber min'.» Den he hunch hisse'f todes t' oder, en sot. Den free er fo' more buzzards come, en dey did likewise, e' singin' 'fo' dey settled: «Po' Linger!» En he 'spon' back, mighty low now: «Neber min'.» Dey sets and dey wait; den de las' ter come hop down, en whin he git to de house he peep frough de chink, en sing out wunst mo': «Po'—Linger!» Nobody ain' sayin' nutten; ag'in he sing: «Po'—Linger!» Dey 's all now crowdin' roun' de do', some yit peepin' frough de-chinks.

Dey luks roun', en tu'n dey haids f'om side ter side; but nobody ain' a-sayin' nutten. Den dey bu'sts open de do', en all hops en sings:

«Mighty good pickin's et de barbycue! mighty good pickin's et de barbycue!»

Arter a while dey all riz up in de air higher en higher, en keep a-gwine 'twell dey 's clean outen sight. In de house dere 's layin' 'pun de flo' a leetle pile er dry bones.

THE ROLL OF HONOR OF THE NEW YORK POLICE.

BY THEODORE ROOSEVELT.

WITH PICTURES BY JAY HAMBIDGE.

IT may be true that, inasmuch as a price must always be paid for everything, we pay for peace the price of a certain softening of national and civic fiber which, if carried too far, would be very serious indeed. Nevertheless, in our present highly complicated civilization there are a number of occupations which, even when carried on during a time of profound peace, call for the development in a very high degree of the prime virtues of the soldier—energy, daring, hardihood, discipline, power of command, power of obedience, and marked bodily prowess.

Some of these occupations are the ordinary vocations of great classes of people in civilized life. A notable case in point is the profession of railroad-men. Engineers, firemen, brakemen, and train-hands generally, follow an occupation which makes more of a demand upon heart, hand, and head than any trade or business, not directly connected in some way with war, which was ever carried on before the present century. The men of the fishing-fleet, the men who follow other hazardous occupations at sea, are the only ones whose business in life implies the acceptance of risk and responsibility, and the exercise of courage and judgment, in the way which is true of almost all work connected with the business of transportation as now conducted.

But besides the employments of private business, there are in every large city two departments where men enter the service knowing that part of their duty is to show willingness to face danger, and even death, in the course of their regular work. These are the police and the fire departments.

In the two years following May, 1895, I was President of the New York Police Board, and so, of course, was brought into close contact with the police, and grew to know well their daily life and the emergencies which they have continually to meet. As soon as our Board of Police was put into office, we introduced a number of radical changes in the management of the force, and one of these changes was the effort systematically to acknowledge gallantry. We did not have to work a revolution in the force as to courage in the way we had to work a revolution as to honesty. The police force had always been brave and efficient in dealing with rioters and the like; but by degrees, under the rule of Tammany, it had become very corrupt. Our great work, therefore, was the stamping out of dishonesty; and so far as the ridiculous bi-partizan law under which the department was administered would permit, this work was thoroughly done. But we were anxious that while stamping out what was evil in the force, we should keep and improve

Copyright, 1897, by THE CENTURY CO. All rights reserved.

Digitized by Google

what was good. While warring on dishonesty, we made every effort to increase the efficiency of the force. After all, it is unfortunately true, as has been shown by sad experience, that at times a police organization which is free from the taint of corruption may yet show itself weak in some great crisis, or unable to deal with the more dangerous kinds of criminals. This we were determined to prevent.

Our efforts were crowned with entire success. The improvement in the efficiency of the force went hand in hand with the improvement as to honesty. The men in uniform and the men in plain clothes—the detectives—did better work than ever before. The aggregate of crimes where punishment followed the commission of the crime increased, while the aggregate of crimes where the criminal escaped unpunished decreased. Every discredited politician, every sensational newspaper, and every timid fool who could be scared by clamor, was against us. All three classes strove by every means in their power to show that in making the force honest we had impaired its efficiency; indeed, by their utterances they actually tended to bring about the very condition of things against which they professed to protest. But we went steadily along the path we had marked out. The fight was hard, and there was plenty of cause for worry and anxiety; but a resolute determination neither to falter nor to swerve can accomplish a good deal even under the most unfavorable conditions. The result in this case was that in February, 1897, the judge who charged the grand jury was able to congratulate them on the phenomenal decrease of crime, especially of the violent sort, in New York. This decrease was steady during the two years. The police, after the reform policy had been thoroughly tried, proved more successful than ever before in protecting life and property, and in putting down crime and vice.

The part played by the actual personal prowess of the members of the police force, and its recognition by the board, in producing this state of affairs was appreciable, though there were many other factors that combined to bring about the improvement. The immense improvement of discipline by punishing all offenders without mercy, no matter how great their political or personal influence; the resolute warfare against every kind of criminal who had hitherto been able to purchase protection; the prompt recognition of ability, even where it was entirely unconnected with personal prowess—all these were elements which had enormous weight in producing the change. Mere courage and daring, and the rewarding of courage and daring, could not supply the lack of discipline, of ability, of honesty; but they are of vital consequence, nevertheless. No police force is worth anything if its members are not intelligent and honest; but neither is it worth anything unless its members are brave, hardy, and well disciplined.

We showed recognition of daring and personal prowess in two ways: first, by awarding a medal or a certificate in remembrance of the deed; and, second, by giving it weight in making any promotion, especially to the lower grades. In the higher grades—in all promotions above that of sergeant, for instance—resolute and daring courage cannot normally be considered as a factor of determining weight in making promotions; rather is it a quality the lack of which unfits a man for promotion: for in the higher places we must assume the existence of such a quality in any fit candidate, and must make the promotion with a view to the man's energy, executive capacity, and power of command. In the lower grades, however, marked gallantry should always be taken into account in deciding among different candidates for any given place, and, wherever possible, should be made the determining consideration.

During our two years' service we found it necessary to single out men for special mention, because of some feat of heroism, over a hundred times. The heroism usually took one of four forms: saving somebody from drowning, saving somebody from a burning building, stopping a runaway team, or arresting some law-breaker under exceptional circumstances. Of course we occasionally awarded honorable mention for some other reason, such as coolness which averted a panic, or unusual nerve and skill in some arrest of the ordinary kind; but these instances were rare. The above-mentioned four kinds of gallantry are naturally those in which policemen are most apt to distinguish themselves. Their business is to prevent disorder and to arrest criminals, and now and then a desperate criminal or a violent mob will show fight. Their duties keep them in the streets, so that they necessarily observe every runaway, and try to stop it. They are of course present at every fire, and almost invariably before the firemen get there, so that they frequently have a chance to display gallantry in the rescue of life and property before the men of hose and ladder make their appearance. Finally, the river-front of the city is very ex-

Digitized by Google

STOPPING A RUNAWAY.

tensive, and the policemen stationed along it have unusual opportunities to see and rescue people who are drowning.

Perhaps the best way to convey an idea of why we awarded medals is to give a list of the men thus rewarded for two months. In October, 1895, we, on the 1st of the month, awarded a medal to a patrolman for peculiar gallantry in stopping a runaway horse under circumstances which made the act one of great danger to himself, and which doubtless resulted in saving the lives of those in the vehicle. The patrolman thus rewarded was also later made a roundsman, and put in charge of the bicycle squad, our attention having been first called to him by this act. On the same day we gave honorable mention, but without a certificate or medal, to three other officers: one had also stopped a runaway horse; another had rescued a man from drowning; and the third had arrested an insane man armed with a revolver, under circumstances which went to show that the officer's coolness and

presence of mind saved both himself and the onlookers from death or injury at the hands of the armed maniac. On the 8th of the month we gave a medal to an officer who had rescued a boy from drowning by plunging into the water between the wharf and the steamer from which the boy fell, at the imminent risk of being crushed to death between the two, a fate from which he and the rescued boy were saved purely by his pluck and his skill as a swimmer. Honorable mention was made of two other officers—one for rescuing a boy from drowning, and one for stopping a runaway horse. On the 15th yet another officer received honorable mention for saving a man from drowning; and on the 22d a sergeant and two patrolmen were commended for the coolness and skill they displayed in stopping a prize-fight and arresting both the participants and the spectators, though they were an uncommonly tough crowd, and showed immediate fight.

In February, 1897, we rewarded five men: two for stopping runaways; one for arresting a murderer, an ex-convict, who was armed and showed fight; and two for saving women from burning buildings.

Among the first promotions we made were two which illustrated the attitude of the board toward cases of this kind, and which also incidentally illustrated exactly what we mean by «taking the force out of politics» —that is, by administering it on principles of decency, and appointing and promoting men on their merits, without regard to their political backing. The first case was that of an old fellow, a veteran of the Civil War, who was at the time a roundsman. I happened to notice one day that he had saved a woman from drowning, and had him summoned so that I might look into the matter. The old fellow brought up his record before me, and showed not a little nervousness and agitation; for it appeared that he had grown gray in the service, had performed feat after feat of heroism, but had no political backing of any account. He was a Grand Army man, but not one of the «political» type, and so had not received any attention from the former police boards; and now, at last, he thought there was a chance for him. He had been twenty-two years on the force, and during that time had saved some twenty-five persons from death by drowning, varying the performance once or twice by saving persons from burning buildings. Twice Congress had passed laws especially to empower the then Secretary of the Treasury, John Sherman, to give him a medal for distinguished gallantry in saving life. The Life-Saving Society had also given him its medal, and so had the Police Department. On examining into his record carefully, we found that it was wholly free from complaints for any infraction of duty, and that he was sober and trustworthy. We felt that he was entitled to his promotion, and he got it. We did not know his politics, nor did we care about them. It is very unlikely that the woman whom he last saved, as he swam out toward her, felt any special interest as to whether he had voted for Cleveland or Harrison; nor did we. He had risked his life freely again and again in the performance of his duty; he had conducted himself so as to be a credit to the department and a credit to the city; and we felt that he was entitled to his reward. It is worth while mentioning that he kept on saving life after he was promoted to a sergeantcy. On October 21, 1896, he again saved a man from drowning. It was at night, nobody else was in the neighborhood, and the slip from which he jumped was in absolute darkness, and he was about ten minutes in the water, which was very cold. The captain of the precinct, in reporting the case, said: «The sergeant was off the bulkhead and into the water after his man quicker than it takes to say ‹Jack Robinson.›» There was no way in which the board could reward him for this, except by telling him that he was an honor to the department; for he had been given all the medals, and bars to the medals, that he could be given. It was the twenty-ninth person whose life he had saved during his twenty-three years' service in the department, and he was fifty-five years old when he saved him.

Can any intelligent and honest man say that we were wrong in rewarding this man? Yet it was because of our constantly acting in this manner, resolutely warring on dishonesty, and on that peculiar form of baseness which masquerades as «practical» politics, and steadily refusing to pay heed to any consideration except the good of the service and the city, and the merits of the men themselves, that we drew down upon our heads the bitter animosity, the malignant hostility, of the bread-and-butter spoils politicians. Through their tools in the legislature they repealed the civil-service law. They attempted to legislate us out of office, and desisted only because at last decent citizens were roused to take action in our favor. They denounced us with a ferocity that became fairly incoherent. They joined

Digitized by Google

with the baser portion of the sensational press in every species of foul, indecent falsehood and slander as to what we were doing. When all this failed they tried intrigue. But they could not make one of my colleagues, Major Avery D. Andrews, swerve a hand's-breadth; and though they finally caused a split in the board, it was, fortunately, not until most of our work was done. They did all this on the plea that we were impractical, hostile to the «organization,» and not good politicians, because, forsooth, we applied in public life the principles of common sense, honor, and morality which any decent man would uphold in private life.

Early in our term we promoted a patrolman to the grade of roundsman for activity in catching a burglar under rather peculiar circumstances. I happened to note his getting a burglar one week. Apparently he had fallen into the habit, for he got another the next week. In the latter case the burglar escaped from the house soon after midnight, and ran away toward Park Avenue, with the policeman in hot chase. The New York Central Railroad runs under Park Avenue, and there is a succession of openings in the top of the tunnel. Finding that the policeman was gaining on him, the burglar took a desperate chance, and leaped down one of these openings, at the risk of breaking his neck. Now the burglar was running for his liberty, and it was the part of wisdom for him to imperil life or limb; but the policeman was merely doing his duty, and nobody could have blamed him for not taking the jump. However, he jumped; and in this particular case the hand of the Lord was heavy upon the unrighteous. The burglar had the breath knocked out of him, and the «cop» did n't. When his victim could walk the officer trotted him around to the station-house, and a week afterward he himself was promoted, it appearing, upon careful investigation, that he was sober, trustworthy, and strictly attentive to his duty.

Here again it seems to me that we followed the eminently common-sense plan of promoting a man who had earned his promotion by faithful and distinguished service, and by proved superior capacity. We cared no more for the policeman's views on the tariff or the currency than we did for those of the burglar. Our interest, and the interest of citizens generally, was to have the officer catch that burglar and otherwise do his duty. If he did his duty we were for him; if he did not we were against him; in neither event did we care whether the officer had or had not the backing of the congressional delegation of the city or the Central Committee of the county. Of course, as before, this exposed us to wild outcries from the local political bosses and heelers, and much sneering at «civil-service reform»; but all the outcries and sneers meant was that we were doing our duty as decent men and as public officials, with some slight appreciation of what was implied by the words honor and uprightness. Political organizations are eminently necessary and useful; but when they are seized by professional spoils politicians of low morality, who run the «machine» in their own interests, who clamor against honesty, and defy decency, and rail against that device for obtaining clean government which is known as civil-service reform—then it is time for all citizens who believe in good citizenship to rise in revolt.

Two or three cases may be given as examples where the men's names were put on the roll of honor, but where it was not possible or advisable to promote them. First I will take a couple of instances of gallantry at fires which occurred in January, 1897.

In one case an officer, while going home to get his breakfast, saw a number of people gathered round a fire-box on a street corner, and trying ineffectively to send off an alarm. The officer at once stopped, sent off the alarm, and ran round to where the fire was supposed to be. It was in a tenement-house, and the inmates, with the curious apathy they sometimes show, had declined to take any interest in the fire. The officer dashed up-stairs, and literally drove them all out of their rooms. Once out, they saw that the hallway was filled with smoke, and came down quickly enough of their own accord. But while the officer was hunting through the rooms to see whether any children had been left behind, the flames suddenly burst out, running through the halls and up the staircases. Shielding his eyes, he dashed down one flight of stairs through the flames, leaped the balusters, and rolled down the next flight into the street. He was badly scorched, and the skin was hanging from his hands, so that he had to be sent to the hospital. If it had not been for his prompt action there would have been a very serious loss of life in the building.

The other case, where the officer did fireman's work at about the same time, resulted in a rather more definite saving of life. Two policemen saw flames and smoke coming out of a four-story brick building. After sending in an alarm, one of them hastily established

A RESCUE AT A FIRE.

the fire-line to keep the crowd away from the building, and got everything in readiness for the coming of the firemen, while the other larming the people within. Almost all n got out; but one woman, having run window of the second story, disap- back into the room, and did not . There was no flame in the halls, but they were thick with smoke, as were the rooms. The officer ran up-stairs, holding his breath. When he got on the landing he heard the woman moaning inside, and groped his way in on all fours. She was lying unconscious on the floor, and by this time he himself was almost smothered; but he managed to carry her down-stairs before he fell.

Digitized by Google

She speedily came to. The firemen arrived two or three minutes later, and got the fire under control.

In November, 1896, an officer who had previously saved a man from death by drowning added to his record by saving five persons from burning. He was at the time asleep, when he was aroused by a fire in a house a few doors away. Running over the roofs of the adjoining houses until he reached the burning building, he found that on the fourth floor the flames had cut off all exit from an apartment in which there were four women, two of them over fifty, and one of the others with a six-months-old baby. The officer ran down into the adjoining house, broke open the door of the apartment on the same floor,—the fourth,—and crept out on the coping, less than three inches wide, that ran from one house to the other. Being a large and very powerful and active man, he managed to keep hold of the casing of the window with one hand, and with the other to reach to the window of the apartment where the women and child were. The firemen appeared, and stretched a net underneath. The crowd that was looking on suddenly became motionless and silent. Then, one by one, he drew the women out of their window, and holding them tight against the wall, passed them into the other window. The exertion in such an attitude was great, and he strained himself badly; but he possessed a practical mind, and as soon as the women were saved he began a prompt investigation of the cause of the fire, and arrested two men whose carelessness, as was afterward proved, caused it.

A number of cases occurred in which the officers were obliged to use their revolvers in dealing with criminals who used theirs. We promoted one patrolman—a man with an already excellent record—for gallantry shown in a fray which resulted in the death of his antagonist. He was after a gang of toughs who had just waylaid, robbed, and beaten a man. They scattered, and he pursued the ringleader. Running hard, he gained on his man, whereupon the latter suddenly turned, and fired full in his face. The officer already had his revolver drawn, and the two shots rang out almost together. The policeman was within a fraction of death, for the bullet from his opponent's pistol went through his helmet, and just broke the skin of his head. His own aim was truer, and the man he was after fell dead, shot through the heart.

In May, 1896, a number of burglaries occurred far up-town, in the neighborhood of 156th street and Union Avenue. Two officers were sent out each night to patrol the streets in plain clothes. About two o'clock on the morning of May 8, they caught a glimpse of two men loitering about a large corner house, and determined to make them explain their actions. In order to cut off their escape, one officer went down one street, and one the other. The first officer, whose name was Ryan, found the two men at the gateway of the side entrance of the house, and hailed to know what they were doing. Without answering, they turned and ran toward Prospect Avenue, with Ryan in close pursuit. After running about one hundred feet, one of them turned, and fired three shots at Ryan, but failed to hit him. The two then separated, and the man who had done the shooting escaped. The other man, whose name proved to be O'Connor, again took to his heels, with Ryan still after him; they turned the corner, and met the other officer, whose name was Reid, running as hard as he could toward the shooting. When O'Connor saw himself cut off by Reid, he fired at his new foe, the bullet cutting Reid's overcoat on the left shoulder. Reid promptly fired in return, his bullet going into O'Connor's neck, and causing him to turn a complete somersault. The two officers then cared for their prisoner until the ambulance arrived, when he was taken to the hospital, and pronounced mortally wounded. His companion was afterward caught, and they turned out to be the very burglars for whom Reid and Ryan had been on the lookout.

In December, 1896, one of our officers was shot. A row occurred in a restaurant, which ended in two young toughs drawing their revolvers and literally running amuck, shooting two or three men. A policeman, attracted by the noise, ran up, and seized one of them, whereupon the other shot him in the mouth, wounding him badly. Nevertheless, the officer kept his prisoner, and carried him to the station-house. The tough who had done the shooting ran out, and was seized by another officer. He fired at him, the bullet passing through the officer's overcoat, but he was promptly knocked down, disarmed, and brought to the station-house. In this case neither policeman used his revolver, and each brought in his man, although the latter was armed and resisted arrest, one of the officers taking in his prisoner after having been himself severely wounded. A lamentable feature of the case was that this same officer was a man who, though capable of great gallantry, was also given to shirk his work, and we were finally obliged to dismiss

him from the force, after passing over two or three glaring misdeeds in view of his record for gallantry.

We promoted another man on account of finding out accidentally that he had performed a very notable feat, which he had forborne even to mention, so that his name never came on the roll of honor. Late at night, while patrolling in a lonely part of his post, he came upon three young toughs who had turned highwaymen and were robbing a peddler. He ran in at once with his night-stick, whereupon the toughs showed fight, and one of them struck at him with a bludgeon, breaking his left hand. The officer, however, made such good use of his night-stick that he knocked down two of his assailants, whereupon the third ran away, and he brought both of his prisoners to the station-house. Then he went round to the hospital, had his broken hand set in plaster, and actually reported for duty at the next tour, without losing one hour. He was a quiet fellow, with a record free from complaints, and we made him roundsman.

The mounted squad have, of course, many opportunities to distinguish themselves in stopping runaways. In May, 1895, a mounted policeman succeeded in stopping a runaway at Kingsbridge under rather noteworthy circumstances. Two men were driving in a buggy, when the horse stumbled, and in recovering himself broke the head-stall, so that the bridle fell off. The horse was a spirited trotter, and at once ran away at full speed. Heyer saw the occurrence, and followed at a run. When he got alongside the runaway he seized him by the forelock, guided him dexterously over the bridge, preventing him from running into the numerous wagons that were on the road, and finally forced him up a hill and into a wagon-shed. Three months later this same officer saved a man from drowning.

THE SHOOTING OF BURGLAR O'CONNOR.

The members of the bicycle squad, which was established soon after we took office, soon grew to show not only extraordinary proficiency on the wheel, but extraordinary daring. They frequently stopped runaways, wheeling alongside of them, grasping the horses while going at full speed; and, what was even more remarkable, they managed not only to overtake, but to jump into the vehicle and capture, on two or three different occasions, men who were guilty of reckless driving, and who fought violently in resisting arrest. They were picked men, being young and active, and any feat of daring which could be accomplished on the wheel they were certain to accomplish.

OVERBOARD.

Three of the best riders of the bicycle squad, whose names and records happen to occur to me, were men of the three ethnic strains most strongly represented in the New York police force, being respectively of native American, German, and Irish—or, more accurately, in this particular case of mixed Scotch and Irish—parentage.

The German was a man of enormous power, and he was able to stop each of the many runaways he tackled without losing his wheel. Choosing his time, he would get alongside the horse, and seize the bit in his left hand, keeping his right on the cross-bar of the wheel. By degrees he then got the animal under control. He never failed to stop it, and never lost his wheel. He also never failed to overtake any «scorcher,» although many of these were professional riders who deliberately violated the law to

Digitized by Google

see if they could not get away from him; for the wheelmen soon get to know the officers whose beats they cross.

The Yankee, though a tall, powerful man and a very good rider, scarcely came up to the German in either respect; he possessed exceptional ability, however, as well as exceptional nerve and coolness, and he won his promotion first. He stopped about as many runaways; but where the horse was really panic-stricken he usually had to turn his wheel loose, getting a firm grip on the horse's reins, and then kicking his wheel so that it would fall out of the way of injury from the wagon. On one occasion he had a fight with a drunken and reckless driver who was urging to top speed a very spirited horse. He first got hold of the horse, whereupon the driver lashed both him and the beast, and the animal, already mad with terror, could not be stopped. The officer had of course kicked away his wheel at the beginning, and after being dragged along for some distance he let go the beast, and made a grab at the wagon. The driver hit him with his whip, but he managed to get in, and after a vigorous tussle overcame his man, and disposed of him by getting him down and sitting on him. This left his hands free for the reins. By degrees he got the horse under control, and drove the wagon round to the station-house, still sitting on his victim. «I jounced up and down on him to keep him quiet when he turned ugly,» he remarked to me parenthetically. Having disposed of the wagon, he took the man round to the court, and on the way the latter suddenly sprang on him, and tried to throttle him. Convinced at last that patience had ceased to be a virtue, he quieted his assailant with a smash on the head that took all the fight out of him until he was brought before the judge and fined. Like the other «bicycle cops,» this officer made a number of arrests of criminals, such as thieves, highwaymen, and the like, in addition to his natural prey—scorchers, runaways, and reckless drivers.

The third member of the trio, a tall, sinewy man with flaming red hair, which rather added to the terror he inspired in evil-doers, was usually stationed in a rather tough part of the city, where there was a tendency to crimes of violence, and incidentally an occasional desire to harass wheelmen. The officer was as good off his wheel as on it, and he speedily established perfect order on his beat, being always willing to «take chances» in getting his man. He was no respecter of persons, and when it became his duty to arrest a wealthy man for persistently refusing to have his carriage-lamps lighted after nightfall, he brought him in with the same indifference that he displayed in arresting a street-corner tough who had thrown a brick at a wheelman.

Soon after it came into office the board undertook to train the men in the use of the pistol. A school of pistol practice was established, and the marksmanship of the officers was wonderfully improved in a very short while. The man who was put in charge of the school was a roundsman whom we promoted to sergeant. He was one of the champion revolver shots of the country, and prided himself on being able to hit just where he aimed. Twice he was forced to fire at criminals who resisted arrest, and in each case he hit his man in the arm or leg, simply stopping him or crippling him, without danger to his life. This same roundsman one Sunday met a volunteer military company returning from a spree, which had included both shooting at a target and heavy drinking. They were very noisy and disorderly, and the roundsman promptly arrested the captain. The company attempted to rescue him, but he held them at bay, brought in his prisoner in triumph, and then sallied out with reinforcements, and brought in all the others.

These are only a few cases out of the many on the roll of honor. Wherever we could, we recognized any signal feat of courage which resulted in the saving of life, or which was incidental to the performance of police duty. Besides awarding a medal, we also strove to give more tangible proof of our appreciation where this was possible, either by passing over, so far as we could, an infraction of discipline, or by actual promotion where the man was worthy. In considering promotions to the higher grades, it was not possible to take much account of physical courage or hardihood, although, of course, its lack would have been a conclusive bar to advancement; for in the higher grades good judgment, power of command, and ability to take and bear responsibility, are needed beyond all other qualities. But in promotion to the lower grades, where there is much less demand upon the higher mental qualities, proof of signal physical courage can often be made a determining factor in a promotion.

Of course other qualities must go with courage, and it may often happen that the best man for a position will earn his promotion in spite of the fact that no opportunity is thrown in his way to show his hardihood or physical prowess. An alert, active, hard-

working fellow, evidently possessed of intelligence and resolution, and fit to bear responsibility, cannot be held back merely because there has never been a chance for him to distinguish himself at a fire or against a dangerous criminal. Nor can we promote a man given to drink or to gross misconduct, no matter how much of a hero he may be. Very frequently careful and patient investigation has shown that some man who had distinguished himself by a brilliant exhibition of personal gallantry on some given occasion was nevertheless unfit for promotion, whether because of lack of steadiness and sobriety, or for some other good reason. I remember one very gallant man whom I would have liked to promote, but who could not keep clear of drink. We overlooked this so far as we could while he was patrolman, because of his occasional per-

Digitized by Google

formance of deeds of marked excellence; but it rendered him unfit for promotion. I remember another man whom we promoted, but were forced afterward to reduce. He displayed great courage and address on several different occasions in arresting criminals and saving human life; but he was not truthful, and he proved a poor disciplinarian, protecting his favorites and wreaking vengeance upon those whom he did not like.

In making promotions, therefore, we could not consider courage and personal prowess as conclusive. But we did treat them as factors of the greatest weight. Where a man was sober, steady, and orderly as well as daring and energetic, there was no difficulty whatever in giving him his promotion; and if we found a man to be deficient, even in a very slight degree, in courage, no amount of faithful performance of his ordinary duties could atone for the deficiency. The difficulty came in the mixed cases. A man who was sober, industrious, and intelligent, but who had never had a chance to display heroism, could not be permanently kept back; and yet in promoting him there was a risk lest he might prove to be deficient in the quality of rising to a serious crisis. On the other hand, if the man had repeatedly shown striking qualities of daring and resource, and yet had been guilty of marked shortcomings, it was a case to be carefully weighed. If, on the whole, the shortcomings were so serious that we could not trust the man, then his promotion had to be denied; but unless they were very serious, we usually gave such a man a chance to show what he was made of.

Generally the result justified our judgment. The responsibility sobered the man, the recognition of his merits made him proud, and he felt bound to justify himself by proving that he was fit to hold the position he had reached. The man with strong virtues and strong failings is always preferable to the bloodless creature with neither. Of course the best men of all are those who have the virtues without the shortcomings—who are resolute, strong, and clear-eyed, without being wild or disorderly. But there is small use indeed in the man whose virtue is merely one of the incidents of a condition of low vitality. A policeman is worth little unless he is honest, temperate, orderly, and cleanly without and within; but he is worth even less if he does not possess the positive, virile good qualities of hardihood, energy, resolution, and personal daring.

I doubt if the average citizen, especially the average stay-at-home citizen, realizes how often the man of the night-stick is called upon to display qualities which in a soldier would be called heroic. His feats in saving life or in arresting dangerous criminals, alone and at night, attract no special attention when mentioned in the newspapers; but they often imply just as much courage as those of the man who captures an enemy's flag in battle, or plants his own flag on a hostile parapet. The men of the New York police force represent all the different creeds and different race origins that go to the make-up of our stock; but they all become good Americans who pay no heed to differences of creed and race, for otherwise they would be useless. The police occupy positions of great importance. They not merely preserve order, the first essential of both liberty and civilization, but to a large portion of our population they stand as the embodiment as well as the representative of the law of the land. To the average dweller in a tenement-house district, especially if born abroad, the policeman is in his own person all that there is of government: he is judge, executive and legislature, constitution and town meeting. His power and influence are great. For any vice or shortcoming he should be sternly punished, but for gallantry and good conduct he should receive prompt and generous recognition.

OLD ENGLISH MASTERS.

SIR JOSHUA REYNOLDS (1723–1792).

WITH ENGRAVINGS ON WOOD BY TIMOTHY COLE, FROM THE ORIGINAL PICTURES.

THERE was nothing remarkable about the childhood of Sir Joshua Reynolds. He was born at Plympton, July 16, 1723, and probably received a better education at the hands of his clerical father than most boys of his time. There was some talk at first of his studying medicine, but matters shaped themselves otherwise. The youth wished to be a painter, and at eighteen he was sent up to London to study painting under Hudson, with whom he remained for two years, learning something about the way the old masters drew, and painting some portraits on his own account. Then he suddenly left London, returning to Devonshire, where he passed some time, to no profit, as he afterward seemed to think. Later he, with two sisters, took a house at Plymouth, and in 1746 he was again in London, painting portraits for a living, and trying to get on in the world. An opportunity for travel came to him. He went to the Mediterranean with Captain Keppel, voyaging to Gibraltar and Algiers. In 1749 he found himself in Rome, where for two years he gave himself up to a study of the Italians, chiefly Michelangelo and Raphael. After that he spent several months at Florence, Parma, and Venice, finally returning by Paris to London, where he at once set up a studio in St. Martin's Lane and began portrait-painting as a profession.

At first his style was not applauded by the painters, and Ellis told him he did not paint in the least like Sir Godfrey Kneller. His method was somewhat novel, but he saw to it that the innovation should not be too startling for public approval. He met with encouragement almost from the start. The Duke of Devonshire and his friend Keppel gave him commissions; others followed, and the painter was able to move to Great Newport street and to raise his prices. Something of a courtier, and always a gentleman, Reynolds had little trouble in making his way with the great people of the day, noble and otherwise. Johnson, Burke, Goldsmith, Garrick, Wilkes, became his dining companions at «The Club» and elsewhere; and their table-talk was for many years the town talk. In this brilliant circle Reynolds himself cut no inconsiderable figure, for at thirty he had achieved a fame that never left him. The larger his acquaintance, the greater seemed his success as a portrait-painter. He had so many orders that assistants had to be called in. Again he moved to more spacious quarters in Leicester Square, and again he raised his prices. He was growing rich, and advertised the fact by setting up a coach. In 1768 came the founding of the Royal Academy. Reynolds was made its first president, and the king knighted him. Five years later Oxford gave him the degree of D. C. L., and he was appointed painter to the king. Honors were falling fast upon him, but his head was not turned by them, and for all that he was the first portrait-painter of his time, he never relaxed his industry. At his apogee he was painting a hundred and fifty portraits a year. In 1781, and again in 1783, he made short trips in Belgium and Holland, studying and making notes of the pictures there; but as soon as he returned to London he took up the brush again like a young aspirant, trying with each new picture to rise above himself. At sixty-six, in the full flush of his power, his labors were suddenly stopped. While painting, one day, the sight of his left eye grew blurred. He put down the brush, and never took it up again. In a few weeks he was blind in one eye and the other was affected. Some quarrel or misunderstanding arose in the Royal Academy, and Sir Joshua resigned its presidency, then resumed it again at the king's request, but finally gave it up in 1790, after twenty-one years of rule. He never married, his family were dead or scattered, and with his occupation gone the painter failed rapidly. He died February 23, 1792; and, after a funeral which all London attended, he was buried beside Sir Christopher Wren in St. Paul's Cathedral. He left behind him a great reputation, a vast number of pictures (chiefly portraits), his «Academy Discourses» (so good in style that at one time Johnson was supposed to have written them), and sixty thousand pounds in money.

The manner in which Sir Joshua ordered

his personal life is indicative of the spirit that influenced his art. There was nothing erratic, venturesome, or impulsive about either. It is difficult to believe that the man at any time, either in life or in art, possessed such things as fire, passion, romance. He was too calm for either love or hatred, too conservative for brilliancy, too philosophical for enthusiasm. In art he placed less reliance upon inspiration than upon intelligent knowledge, believed the gospel of genius to be work, and thought originality a new way of saying old truths. Such ideas as these form the chief counts in his discourses to the students of the Royal Academy. «Excellence is granted to no man but as the reward of labor.» And again: «Have no dependence on your own genius; if you have great talents, industry will improve them; if you have but moderate abilities, industry will supply their deficiency.» His three stages of an art education were, first, learning the grammar of art; secondly, laying in a stock of ideas from the old masters; thirdly, independent action, but in moderation. And Sir Joshua usually practised what he preached. He hugged conservatism, held fast to the traditions, and tried to keep his genius in abeyance to rule and method. That he had genius cannot be denied; but in his own mind he confounded it with energy, and thought himself successful through work. He had slaved over execution, he had studied the art of the past, and with much labor had made other people's excellences his own. Naturally he thought work and education accounted for his success. Undoubtedly they were a great aid to him. The stock of ideas from the old masters helped him; his borrowings from others and his powers of assimilation helped him; but many painters have possessed these qualities and yet never attained high rank. Success as the result of such accomplishments would explain genius out of existence.

Sir Joshua's «borrowings» have been much talked about; but it should be borne in mind that the education of a painter in eighteenth-century England was largely a matter of borrowings. All the students of the time copied Raphael, Correggio, and Guido, and such a thing as a thorough academic training under a skilled master was not to be obtained. Indeed, it is not pushing the facts too hard to say that there was not a perfect craftsman in the school. Deficiency in training was made up for by taking hints from the old masters and by practising observation. Reynolds had greater chances than the others, and he improved them. «I know no man who has passed through life with more observation than Sir Joshua Reynolds,» said Johnson. What he observed as a pupil under Hudson we have slight means of knowing. Hudson was hard and dry in method, but, like all the painters of the time, he reverenced Van Dyck. And the Van Dyck doctrine of «painting noble men nobler still» Reynolds accepted in measure. He told his academy students that it was the duty of the portrait-painter «to aim at discovering the perfections only of those whom he is to represent»—a maxim he himself did not always follow, though doubtless he believed in it. And of course he believed in the Italians, for they were the fashion of the day. In Rome, like many another painter, he was at first disappointed in Raphael, but afterward grew very fond of his work, and in consequence declared that taste in art was not natural, but acquired; not on the surface, but underneath. Michelangelo impressed him instantly and lastingly. He talked about him all his life, held him up as a model to his students, but he himself did not follow him, except in the oft-cited case of the «Mrs. Siddons as the Tragic Muse.» He had nothing of Michelangelo's line, form, or spirit, nothing of Raphael's style or composition. He talked less about Correggio and the Venetians, yet here he helped himself more freely. In Venice he studied Titian's light-and-shade, and copied it in parts as he had copied Raphael's figures at Rome. Paolo Veronese also had an influence on his color, though Sir Joshua talked little about him. Nor did he discourse much on Guido and Guercino, yet one feels that his nymphs and Venuses were drawn from those sources—affectation and all. Besides these painters, he had the contemporary admiration for the Carracci: the eclecticism of Bologna was in both his theory and his art, and he even recommended Lodovico Carracci as a model in painting.

But notwithstanding Sir Joshua's admiration for the Bolognese, he was a very good judge of painting. He had not studied the art of Europe without profit. He knew very well how a thing should be done, but he did not always know how to do it. «Not having the advantage of an early academical education, I never had the facility of drawing the naked figure which an artist ought to have.» No, he had not. His drawing of the figure was tentative, hesitating, uncertain, hardly ever complete or wholly satisfactory. Hands he sometimes drew easily, and faces he understood better than anything else—not al-

ways drawing them truly, but painting them very cleverly with the brush, and giving the fleshy texture with much force. If one compares the «Lord Heathfield,» the «Dr. Johnson,» or any other portrait by Reynolds, with the so-called «Gevartius» portrait attributed to Van Dyck in the National Gallery, the difference between the tentative and the absolute will be immediately apparent. The drawing of the mouth, nose, eyes, cheeks, and forehead in the «Gevartius» is positive, done easily, surely, unostentatiously; that of the «Heathfield» is rambling, questioning, groping. Doubtless much of Sir Joshua's unevenness was due to frequent emendation,—his wish to better each part,—but that in itself is proof of uncertainty. His success with composition was not greater than with drawing. He could pose a portrait-figure happily enough, but his so-called historical pictures were deficient in invention and imagination. He could not see nymphs and Venuses and classic groups except as some old master had seen them before him; and because he saw portrait-subjects, and did not see figure-subjects, is one reason why he succeeded with the former and virtually failed with the latter. At times, however, he was very clever in composing a family group, as the «Lady Cockburn and Children» will exemplify. The manner in which he has woven and intertwined the lines of the figures with the drapery, knit the whole group together in form and color, and made a complete ensemble, is worthy of all praise.

Color he experimented with all his life. He believed that the secret of it was known to the Venetians, but lost. «There is not a man on earth who has the least notion of coloring; we all have it equally to seek for and find out, as at present it is totally lost to the art.» Sir Joshua sought for it with all pigments, mediums, and methods, and with some unfortunate results. In his experimental canvases painted during his early and middle periods he at times used fugitive blues, lakes, carmines, orpiments, mixing them with oil, wax, varnish—almost anything that would produce a desired effect. But the effect was often transient; the colors fled the canvas, and as a result many of his otherwise fine portraits are to-day pallid and cold. In fact, Sir Joshua's fading color was something of a town jest, and the girding Walpole suggested that his pictures should be paid for in annuities, to last as long as the pictures lasted. The painter felt badly enough about his fleeing colors, and he so mended his manner that many of his later canvases gave no cause for criticism on that score. Some of them are to-day in excellent preservation. Moreover, they are fuller and richer than his earlier works. In color, as in light, he finally returned to Rubens. The «Lady Cockburn and Children» shows how ornate he could be and still keep within the bounds of good taste. It is a magnificent harmony, as brilliant as a flower-garden, and yet serene, calm, well-ordered throughout. Sir Joshua was not quite just in saying no man living had any notion of color. He himself had a shrewd knowledge of it. His dictum about the use of warm and cold colors argues nothing whatever. He produced fine pieces of color on more than one occasion, not by virtue of any law or rediscovered secret, but because he had the color-instinct. Were he as much of a draftsman as a colorist, no one would be able to find many holes in his armor.

It might be thought that from his art principles Sir Joshua would have evolved a style, a manner somewhat like Raphael, the Carracci, or even the eclectic Mengs; but he never did. He talked much of things established, but took good care not to have them too firmly established with him. Every picture he painted was, in measure, different from its predecessor. Painstaking, industrious, persevering in the acquisition of knowledge, it is not remarkable that he finally became a painter of unusual culture. He never was quite spontaneous, never quite original in the sense of inventing a method wholly his own; but he was intelligent, perceptive, and for his time and people a painter with accomplishments. But again it must not be concluded that Sir Joshua's art hinged primarily on his technical ability. Granted his varied knowledge, the fact still remains that his craftsmanship was imperfect. If examined closely, many of his works will be found wanting. Take, for instance, the portrait of «Lady Elizabeth Foster.» It is not drawn, modeled, or painted. The features want articulation, the figure lacks solidity and substance, the color is chilly, the whole picture, even regarded as a sketch, lacks force. Yet, in spite of such sins of omission and commission, the portrait is most engaging, full of charm, full of loveliness. What is it about the work—about all of Sir Joshua's portraiture—that appeals to us so strongly?

It has been said that a portrait-painter puts no more in a head than there is in his own, which is equivalent to saying that every artist paints his own point of view. This was

LORD HEATHFIELD.

Digitized by Google

true of Sir Joshua. With all his eclecticism and his absorptions from hither and yon, he never forsook his own individual way of seeing things. If there was any struggle between the portrait-model before him and the established Italian method of doing a portrait, it generally resulted in his trusting his own eyes. In the canvas the painter outbalanced academic rule, and to this day every one of his portraits bears the individual stamp and seal of Sir Joshua Reynolds. Now Sir Joshua's view was peculiarly attractive. He was conversant with the best side of social England in the eighteenth century, and was, moreover, a man of good breeding, refinement, and sensitive perceptions. Naturally he was in sympathy with everything well-bred and refined in his sitter. He saw that phase of character acutely, and selected it as best suited for his purpose. If there was anything manly about a man, feminine about a woman, or childlike about a child, he noticed it at once. And these were the qualities upon which he concentrated his strength. He appealed frankly and boldly to the taste for dignity, charm, winsomeness, loveliness, in the personal presence, and the appeal was not in vain—is not in vain to-day. The eternal womanly he saw in every woman—saw it in Kitty Fisher and Nelly O'Brien as well as in the Duchess of Devonshire and Lady Powis. Besides this, he saw in some haughtiness, loftiness, distinction; in others mildness, maternal feeling, sadness; in others again, gaiety, coquetry, gracefulness. How shrewd he was in his observation of the look, the pose, the smile that make women captivating! How sensitive he was to the young girl's modest glance, the coquette's sly roguery, the lady's frank demeanor! The witchery of women, the fascination of the sex, the nameless something that leads on to love, he knew by heart, though no wife taught him. And he knew with just what happy incident to portray them, though no old master gave him the hint. What, for instance, could be more winning than the «Viscountess Crosbie» coming out from behind a tree, a smile upon her face, and her hand outstretched in greeting! One's first exclamation is: «You charming creature! What a pity you are dead!» The graceful step and expectant look of «Georgiana, Duchess of Devonshire,» as she comes down the terrace steps, the woman still in the duchess; the loveliness of «Mrs. Bradyll» and the «Ladies Waldegrave»; the coy impishness of «Mrs. Abington»; the questioning glance of «Perdita Robinson»; the demureness of «Kitty Fisher»—how very attractive they all are! And how interested we become in the subject! You cannot be so enthusiastic over the women of Velasquez, Rubens, or Holbein. Even the Venetian women of Titian, perfect types of beauty as they are, provoke only a mild curiosity as to their personality. We rather overlook the painted in the painter. But Sir Joshua's people attract us, and the subject—the much-despised subject of modern art—has weight in this English portraiture. The painter intended that it should have weight—intended that people should know and feel the charm of the sitter. It is matter of history that he had the most noble and beautiful women of England for sitters. They look it. An air of distinction and refinement hangs about them as easily as a cloak. Women of less beauty and less nobility sat to him, but their pictures were never his great successes. He preferred the handsome woman, and it was a part of his selective sense that led him to paint her so often. He did not and could not entirely sympathize with the plain or the homely. Sir Joshua was fortunate, then, in having attractive subjects for his art. He was fortunate again in having an attractive point of view. With such winning cards, it is easy to see that he had two points out of three in the game of portraiture. Had he been as successful in the third point, technic, as in the other two, he would have ranked as a portrait-painter with Van Dyck.

His children, when done directly from life, were almost as successful as his women. There is some mannerism about the majority of them,—a reminiscence of the way Correggio painted children,—but they are no less childlike and graceful. The fancy for round eyes, a wide smile, and a sharp-pointed chin with a consequent mouselike expression of face prevails. We see it in the charming piece of the «Lady Gertrude Fitzpatrick» standing on a hilltop, in the «Muscipula,» the «Robinetta,» the «Strawberry Girl,» the «Cupid as a Link-boy.» Presumably Sir Joshua employed this peculiar type to give the shy, frightened, or nervous character of children, and if so he certainly succeeded; but he is more pleasing when he gives the unconscious, self-absorbed character, as in the richly hued «Little Fortune-teller,» the «Dead Bird,» the «Master Bunbury,» the «Age of Innocence,» or the little «Miss Bowles» with the dog. He was very successful, too, with portrait-groups of women with children, two of which Mr. Cole has en-

Digitized by Google

graved. The children in the group with Lady Cockburn[1] are arranged, composed—posed, in fact; but how well this is done, and how firm is his grasp of the salient truths of childhood! Then, again, what could be more natural, unconscious, vivacious, than the Duchess of Devonshire,—the «Beautiful Duchess,» as she was called,—playing at «hot cockles» with her infant daughter! Both pictures were painted in the painter's mature period, when he had arrived at the height of his power, and both are excellent. They seize upon the incidental, the momentary, which was discoursed against by Sir Joshua in favor of the general and the permanent; but he himself proved more than once that his rules for the «grand style» were subject to many exceptions. He certainly never produced richer, fuller, nobler, more complete works of art than these two portrait-pieces.

His success with portraits of men was perhaps not so great. Occasionally he did a scholar or a general with great truth and power, but he seemed to have more sympathy with women and children. Every Englishman considers the «Lord Heathfield» a masterpiece, and in its original state it was undoubtedly a strong portrait. Unfortunately, one of its owners saw fit to cut it down to match another Reynolds on an opposite panel in his house, thus destroying the placing of the figure on the canvas; and after that it was repainted somewhat. It is still a noble canvas, in spite of bad treatment, and shows to-day something of the sturdy manhood of the English officer. The «Johnson» is heavy in touch and drawing, but portrays with much effect the unwieldy frame and the massive features of the irrepressible doctor. Sir Joshua's portraits of himself, of Gibbon, of Goldsmith, are also good pieces of characterization, beside which the flamboyant «Marquis of Rockingham,» the too heroic «Keppel,» the over-dramatic «Lord Ligonier» will not stand for a moment. Whenever Sir Joshua tried to practise his «old master» theory of generalization he left something to be desired. He had not enough imagination to see the abstract like a Titian or a Paolo Veronese; he needed the concrete before his eyes. When the model was on the platform he did not fail to see truly, and even at times powerfully; but whenever he wandered off to do the heroic or the grand he ran to the superficial. This is peculiarly true of his efforts in historical painting. The figure-piece was his lifelong aspiration, but never his success. The «Death of Dido,» the «Cleopatra,» the «Ugolino»—all the figure-pieces he ever did—would not save a name from the dust of oblivion. He painted half a dozen landscapes, but he never pretended to be a landscape-painter. He used trees, hills, and skies well enough as a background, just as he occasionally painted animals after Van Dyck; but they were mere accessory objects. We may dismiss them all, for Sir Joshua was a portrait-painter pure and simple. The limitation is not to his discredit. He could not have chosen a loftier field to work in. In the whole realm of painting there is nothing so difficult to produce as a thoroughly satisfactory portrait. And Sir Joshua produced more than one of them.

Taking him for all and all, Reynolds must be ranked at the head of the English school. He had not Hogarth's originality, nor Gainsborough's delicacy, nor Romney's spirit, nor Lawrence's skill; but in point of view, taste, intelligence, and breadth of accomplishment, he excelled any one of them. Not alone did peer and the duchess rank him as a great painter: his brothers of the craft acknowledged his position, and all through the works of his contemporaries and followers we shall find traces of his influence. He was virtually the founder of the school of English portrait-painters, and, in fact, the one man who put English art upon its feet and gave it importance.

John C. Van Dyke.

THE ART OF CHARLES KEENE.

WITH EXAMPLES OF HIS WORK, FROM THE ORIGINAL DRAWINGS.

THE MANAGER'S CALL. («PUNCH» AND DISRAELI.)

I THINK that too much cannot now be said about Charles Keene, too much of his work cannot be exhibited, whether in print or elsewhere, as some slight amends for the general indifference which was his portion during life. I need not point out how small a fraction of the popularity of the «Punch» artists fell to him. To the many, «Punch» meant Leech or Dicky Doyle or Du Maurier; only the few looked to it for Keene. The little that has been written about him proves the little that was thought of him. His drawings, as a rule, were received in silence or with a silly guffaw. It is curious to note the attitude of a critic like Mr. Ruskin, who could be so generous in his recognition of lesser men. Mr. George Somes Layard, in his life of the artist, said (and I am unable to disprove his assertion): «Mr. Ruskin did not find that Keene was worthy even to be mentioned when he took upon himself to discuss the ‹Punch› artists.» In the lecture on Leech and Tenniel, Keene's name never appears, though there are continuous references to Du Maurier, and he and Leech and Tenniel, and even Lady Butler, Mrs. Allingham, Miss Kate Greenaway, and Miss Alexander, are exalted here or elsewhere. However, Mr. Ruskin could not quite ignore Keene. When, in «Ariadne Florentina» (Vol. VII), he sneers at the illustrators of cheap «Ladies' Pocket-books,» as he has just been praising Du Maurier and the others, it is clear that it can only be Keene who has so incensed him. And Keene again must be the object of Ruskin's wrath in that conveniently forgotten passage in the «Art of England» in which he says: «Cheap popular art cannot draw for you beauty, sense, and honesty; but every species of distorted vice—the idiot, the blackguard, the coxcomb, the paltry fool, the disgraced woman—is pictured for your honourable pleasure on every page. These are thoroughly representative of the entire art industry of the modern press, with clumsy caricature struggling to render its dullness tolerable by insisting on defect—if perchance a penny or two more may be coined out of the cockney reader's itch for loathsomeness.» This delectable sentiment is inspired by illustrated books and magazines and papers of the year 1867 in particular, and in general by all English illustrated books and papers of about the same date. As Charles Keene was among the most distinguished contributors to these publications, it is safe to assume that he came in for a sufficient share of Mr. Ruskin's anathema. But it is neither wise nor fair to judge Mr. Ruskin by any

Digitized by Google

one of his criticisms. He has an amusing way of contradicting himself, as by this time we all know. Certainly, with charming unconsciousness of the denunciation he had uttered or was going to utter,—I am not sure in what order these lectures were given,—he did not hesitate to confess in «Aratra Pentelici» that it chanced, «as I was preparing this lecture, one of our most able and popular prints gave me a woodcut of the 'self-made man,' specified as such, *so vigorously drawn, and with so few touches, that Phidias or Turner himself could scarcely have done it better*»; and the woodcut—really a wood-engraving—which thus charms him, and is worthy to be ranked with Phidias and to be compared to a Greek coin, is the work of Charles Keene, printed in «Punch.» The man whom Mr. Ruskin, so far as I know, cannot condescend to mention by name, is thus set up by him to complete the trinity of his greatest gods! These are inconsistencies of criticism, it might be thought, better forgotten; but they help one to understand why Keene was so little known to the public, while draftsmen of very much less merit were glorified. Is it any wonder that English art and English criticism are a laughing-stock to the world, when such pronouncements can be seriously delivered from a professorial chair, and even more seriously printed with the official sanction of the University of Oxford?

A STUDY FOR «PUNCH.»

But if Keene, as the most accomplished draftsman in England, was never rightly recognized, there seems to be a prevailing impression that this was a matter of indifference to him. I am not able to analyze the mental attitude of an artist, to «reconstruct his psychology,» by scientific study of his work. But still, for all that has been written and said about Keene's indifference, for all the proof that his own letters may be declared to give, I cannot help thinking his supposed independence of appreciation something of a pose, concealing beneath it a feeling more akin to despair, which grew upon him with years of continued neglect. In writing of him, it has been pleasanter to speak, as one may now speak freely, of his delightful personality—of his quaint traits, of his love for music, of his more or less eccentric habits; of his dogs, his bagpipes, his clays; of the fact that he hardly ever rode in a hansom cab, and often cooked his own dinner in his studio. Why not forget the discreditable truth that when alive he was all but unknown; that to most people the initials «C. K.» meant nothing, the drawing

Digitized by Google

—unless of his tipsy men and Sandies—less, and the legend below everything, especially when quite pointless and unintelligible, as supplied to him by the professional purveyors of jokes? And after all, you are reminded, in England artists at least always knew his value, while he was for long received and respected on the Continent. If this be true, then certainly English artists had a curious fashion of expressing their pleasure and belief in his work. It was all very well, after his death, for Lord Leighton to utter platitudes about him; all very well to revive the legend that he had actually once been invited to an Academy dinner. But if there is any history to be written about the Royal Academy of Arts during the last thirty years, it will be to record that James McNeill Whistler, Dante Gabriel Rossetti, and Charles Keene were not of it—a scandal no whitewashing by lord mayors, presidents, and prime ministers can remove.

PROBABLY A STUDY FOR «PUNCH.»

Nor, indeed, was Keene appreciated, as the report is, on the Continent. At the time of his death he had barely been heard of in France, despite the gold medal awarded him at the exhibition of 1889; for at that time M. Jacques Blanche could only hope that «prochainement il sera découvert à Paris . . . par quelqu'un de nos hardis lanceurs de nouveautés et déclaré homme de génie.» This was written after the Universal Exhibition. And it was also a few years after his death that Bracquemond (who, with Blanche, had got to know him, not from the pages of «Punch,» but from casual visits to London), wrote, «Keene est peu connu en France,» though the eminent etcher thinks he is worthy to rank with Daumier, with Gavarni. Even Béraldi, whose monumental «Graveurs du XIX^e^ Siècle» gives him a position of authority in France, says: «Keene est de ceux que la critique met du temps à découvrir. Son nom n'est pas crié sur les toits.» Those are the verdicts of three of his French admirers, and the only other article about him I have been able to find in a French journal was contributed by an Englishman. I do not believe that the German public showed itself more sympathetic. The friendliness of Menzel is accepted as a sign of Keene's popularity in Germany. But the Menzel episode, as I heard the story from Keene's own lips, points to anything but a triumph in the studios of Berlin. As a tribute of his admiration of the German, Keene sent several of his drawings to Menzel. In return, and after an unflatteringly long interval, Menzel presented photographs and proofs of his own work—and eventually, I believe, some originals—to Keene. However, Keene was too generous to go into these details in any of his letters; it was only in terms of sincere eulogy that he could write or speak of the great illustrator.

There is the less excuse for the public's unanimity in ignoring him since the one phase of his art hitherto given to the public is his illustrations, essentially the most popular. The current impression is that if you look through the back numbers of «Punch,» and an occasional old magazine or book, you have learned all there is to be learned about Charles Keene as an artist. But this is by no means the case. His work may be divided properly—though the division has never been made—into two classes: that done, in one medium or another, for his own

study and delight; and that intended for publication. You may imagine, if you have not seen examples of the former class, that the engravings in «Punch» represent him fully and satisfactorily. Unfortunately, for the artist, they do not: for me, however, fortunately, as it is the reason I now have the pleasure of showing that there existed an entirely different artist, drawing in a style absolutely apart from that foisted upon him by the wood-engraver.

I shall begin by speaking of the unpublished work. These are chiefly costume poses which he drew at the Langham Sketching Club, and a series of studies done mostly in pen and ink, with a firm yet exquisitely delicate touch, portraits, or drawings of landscape and architecture, done for pure delight in the subject, though many afterward appear as backgrounds in his published designs. Much credit has been given to Keene and some of his contemporaries because they actually took the trouble to go to nature for the backgrounds of their illustrations. Frankly, I cannot see that they deserve great glory for doing only what every true artist does. It was no surprise to me to find a large number of landscapes among Keene's unpublished drawings. One has only to look at the moors and meadows and hills that stretch away beyond his gillies and rustics and sportsmen to be sure they were never faked. But I was amazed at the beauty and perfection of execution he put into these sketches. Some, drawn with a pen in old sketch-books, often on a nasty blue paper, are delicate and exquisite to a degree that makes me fear they must ever remain single works of art, so entirely are they beyond the possibility of any method of reproduction. However, there was another means of expression, capable of even greater delicacy and refinement, with the multiplication of a design as its chief end, of which Keene was master —etching. His few plates are as varied in subject as his drawings. Landscapes, Langham models, portraits—all these he drew with his needle. But from most of his plates so few proofs have been printed that his etchings have virtually escaped even the dealer and the collector.

The unpublished drawings may be arranged under several different heads. Those which, in a way, can most appropriately be considered first are the life studies—studies from the nude. They are owned chiefly by the South Kensington Museum, where they are bound up in a small portfolio.

They are all frankly for practice, for study. A small proportion are in color. Many of the designs are excellent. The Langham studies of men in armor and costume are admirable, even if they cannot be compared to Menzel's. There are little heads so full of character and so good technically that they alone should give him high rank as a painter in water-colors—a medium in which his work was never known, though that of men far his inferior was lauded to the skies. I know of only two or three works in oil by him; but I have seen a few in distemper.

He did a few charcoal-drawings. As I look at them, I read in every line and tone the influence of Menzel, which he would have been eager and proud to acknowledge. And I realize also that they are not surpassed by Menzel's drawings in the same medium; that they are no less varied in subject and execution.

Artists who could appreciate Keene knew that he had produced a series of etched plates; but they probably might not have been able to tell you how many of these there were. M. Béraldi catalogues twenty, but there are really nearer forty. Keene himself was so delightfully vague that he seemed to think there were only about a dozen—too few to be catalogued seriously. «I am amused at the idea of putting me down as a ‹Graveur du XIX^e^ Siècle,›» he wrote to Mrs. Edwin Edwards, in a letter quoted by Mr. Layard; «I have only scratched a few studies of sketches, not more than a dozen, all told, I should think—the merest experiments. Titles they have not. To save my life, I could n't tell the dates. And as to writing my life! ‹Story! God bless you, sir, I've none to tell.› A quotation to that effect. The most stirring incidents in my life are a visit to the dentist (date forgotten), and certain experiences of the last few days. Try to choke the French biographer off.»

The etchings may be grouped under four heads: studies at the Langham and from models, portraits, landscapes, and one humorous subject. As with his drawings, it is impossible to trace any progress, any development. They are the work of an accomplished artist with whom etching was but another responsive medium. If three or four are not successful, it is because they were meant to be elaborated, to be carried much further, and without the intended elaboration they are simply uninteresting. Among the Langham studies, a model with a 'cello is the most distinguished. Though in subject it might suggest Meissonier, in handling

CULTURE FOR THE WORKING-CLASSES.

PHILANTHROPIC EMPLOYER (who has paid his workpeople's expenses to a neighboring Fine Art Exhibition). Well, Johnson, what did you think of it? Pick up an idea or two?

FOREMAN: Well, you see, sir, it were a this way. When us got there, we was a-considering what was best to be done, so we app'inted a depertation o' three on us, to see what it were like, an' when they come out an' said it were only picturs an' such, we thought it a pity to spend our shillin's on 'em. So we went to the Tea Gardens, and wery pleasant it were too. Thank you kindly, sir.

there is a suppleness and a painter-like quality of line that the more celebrated artist never approached in his life. And it is astonishing that a man who etched so little had such a command of the richness and depth of color to be obtained from a copper-plate. This, and the woman in the costume of Elizabeth, seated, at her side a lute, in a corner the head of an artist leaning over his drawing, are both signed, so I suppose Keene considered them finished and was pleased with them. It is curious to note that on some of the plates he recorded the number of bitings and the time which each took.

But of all his etchings, none can surpass the portraits. The finest, I think, is one of Edwin Edwards, seated in a garden chair, under a tree, reading a book. The way the man sprawls at his ease, as Keene had probably seen him sprawl hundreds of times, is wonderfully expressed with the finest and most eloquent lines. There is a second portrait of Mr. Edwards, this time painting, and a charming study of Mrs. Edwards. No less charming is the portrait of another lady,—on a lounge in front of a richly figured wall-paper. In this even the old-fashioned bell-pull, even the picture on the wall, as in Mr. Whistler's portrait of his mother, become important in the wonderful scheme of decoration; and the color is richer, more effective, more deliberately introduced as an essential quality, than was the rule in his plates. It is unsigned. There are several other etchings—none lovelier than the female figure seated with a book, and dressed in the great voluminous skirts of the sixties, held out by the swaying crinoline which Mr. Morris would have had us believe is not beautiful, which Whistler and Millais and Boyd Houghton have shown us was far more graceful than the shapeless draggleries of a later, esthetic generation. Their drawings and Keene's etchings will endure; the opinion of Morris, when confronted with them, must prove but empty words. It is something to be thankful for that, in his drawing of women, Keene did not become a tiresome, mannered conventionalist like Du Maurier.

When the Keene Exhibition was held at the Fine Arts Society, a few years since, besides the more familiar « Punch » designs on the walls there were portfolios containing a few pen-and-ink drawings of figures—mostly single figures—and of landscapes, done with a touch so delicate and so refined that no wood-engraver, unless he were a master like

HOUSE NEXT TO CHARLES KEENE'S IN HAMMERSMITH.

Timothy Cole, could have engraved them on the wood block; at any rate, no Englishman ever did. An admirable example is the seated figure with a veil, published here. Others are drawings of landscape and architecture, like the suburban villa—next, I believe, to his mother's place in Hammersmith. Almost all the landscapes are as English in subject as his illustrations. Those I have seen were mostly in sketch-books, made with a small steel pen and usually with pure black or slightly browned ink, which he carried in an exciseman's bottle hung from his waistcoat button. Mr. Stacy Marks says that he drew straight away in ink, «without any preliminary pencilling as a means of obtaining certainty and sureness of hand.» He was very particular in selecting the sketch-books, which were of old Whatman or thin white papers, or of that pale blue used by our fathers for correspondence. In his very early work for the wood-engraver you can see that Keene was influenced more or less by Leech, whose drawings could be engraved, I imagine, fairly well. They were far bolder and simpler, much less artistic, and vastly more popular than Keene's.

Keene's style of drawing for publication became bolder and bolder as time went on. For his own pleasure he continued to make with his pen little masterpieces which, in their refinement, are worthy to rank with the etchings of Rembrandt and Whistler. In his studies—and he made innumerable studies for «Punch» pictures—he never varied his handling. But when working for «Punch» he either began to think more about the engraver, or else despaired of him and gave him up as hopeless; and that this latter was the case is implied in the few references to the subject in his letters. «They 'll spoil it in the engraving, but you shall have the drawing,» he wrote of a certain design to Mr. Crawhall, from whom the subject had been obtained. And to the same friend he maintained his belief «that Bewick was a greater artist than wood-engraver, and that he worked in and was hampered by an ungrateful material. . . . We have not beaten the old masters of wood-engraving (wood-cutting), in my opinion, but have tried to do too much and failed.» Would he not have modified this opinion had masters like Cole and Juengling, Florian and Baude, been his interpreters? By 1866 all the refinement which was at least attempted before has vanished from the «Punch» drawings. Instead of the elaborate cross-hatching by which the modeling and the fleshy look of his faces were obtained, short straight lines have been substituted, and a more open cross-hatching in the background, in striking contrast to the delicate, beautiful, tender studies, impossible to reproduce, made by him for the finished illustrations.

In conclusion, I should like to say a few words about Keene's work generally. As some one has written, there is in it a wonderful feeling for character, a sense of movement and proportion, and a suggestion of living things in living nature. It is in this power of making things live that Charles Keene excelled; that he is the equal of any of the world's master draftsmen. Though all his figures are studied, they are never, in his finished compositions, mere models posing. They are doing what he wanted them to do, and he has seized them at the appropriate, the most expressive moment. He had no scheme, as some one else has pointed out, to which country and town must be reduced, no formula for the expression of day or night. For, as he himself said, and the saying does not lose by repetition, «If you can draw anything, you can draw everything.» You can even make the political cartoon a thing of interest to other people besides those delineated in it; and though his few attempts as cartoonist may be unintelligible in subject, they are interesting in design. He felt everything he drew, and he often acted his subjects and posed for himself. Though the earlier drawings are so elaborate, and the later ones, or the engravings from them, so simple, all are right. His drawings also have been praised for their straightforwardness, their economy of line. I do not know whether this is a merit or a misfortune.

Beauty, his critics like to lament, he could not see; his eyes, they think, were quite blind to it—not knowing the trouble to be in their own short-sightedness. It was left for one ingenious writer to put the general verdict into words, and to declare, after the artist's death, that Keene «failed in the portrayal of beauty, elegance, respectability. A pretty woman never lurked about the point of his pencil,»—how could she? might one venture to ask,—«as she does so delightfully about those of his principal collaborators on 'Punch.' His gentlemen are snobs; his aristocracy and his clerks are cast in the same vulgar mold; and his brides are forbidding models of virtue, perhaps, but lacking every outward feminine charm.» The true beauty in his drawings must necessarily be hidden from such writers. The artist knows well enough that there is beauty, and of many kinds, in Keene's drawings—greatest of all, beauty in the method of expression, in every line set down, whether it gives the sweep of the wide moorland or the repeated house-fronts shutting in a London street; the greasy creases in Robert's coat, or the rags hanging about the little guttersnipe. And beauty there is, too, in his landscapes,—masterpieces many of them are,—and in his people, the women in voluminous skirts, the little girls in simple frocks. And, above all, there is the beauty essential to show character, however hideous in itself, or insignificant in a mere moral or social aspect. And that he could draw the typically beautiful woman when he wished, his unpublished work proves.

And his humor! Because he did not always invent his legends, he was no humorist, it has

A STUDY FOR «PUNCH.»

Digitized by Google

been argued. True, his drawings did not, like Gavarni's, depend equally for their wit and meaning upon the lines written below, these, more often than not, being the contribution or creation of a friend. But the humor is in the drawing, which needs no literary interpretation. His figures, his faces, his groups tell their story—a story of delightfully humorous quality, though not as brilliantly satirical as Gavarni's, nor, perhaps, as romantically audacious as Daumier's. His humor was more kindly, more genial, more sympathetic; never fantastic, seldom whimsical; the humor rather of a man who could see, and found his pleasure in seeing, his fellow-men as they are,—weak, foolish, vain, pert, pretentious, as it might be,—but who loved them none the less for it.

Besides this, in none of his drawings is there the slightest shadow of the vulgarity —the appalling vulgarity—that humorists like Rowlandson and Gillray substituted for the cleaner, because frank, indecency of the French draftsman. He was not a Zola, for all his realism; he was not a Phidias, with all due deference to Mr. Ruskin. He was just «C. K.,» the greatest English artist since Hogarth.

Joseph Pennell.

«'YOU 'D NEVER SEE A SINGLE SIGHT ON EARTH!'»

THE FLIRTING OF MR. NICKINS.

BY THE AUTHOR OF «STORIES OF A SANCTIFIED TOWN.»

WITH PICTURES BY F. D. STEELE.

IT was Sunday morning, and church-time at the Station. Mrs. Garry was tying on her bonnet before the looking-glass of her bureau, which article of furniture she had turned a little aslant in order that she might, while dressing, enjoy a reflected view of the people coming up the street to church. She stopped, with her bonnet-strings half tied, to thrust her head out of the window at her side, as if she saw something that demanded a more direct scrutiny. She drew her head back, and called excitedly, «Ed Garry! Come quick!»

Mr. Garry appeared in the kitchen door, with an old gun-barrel and a ramrod in his hands, and a frown of remonstrance on his face. «You know I 'm busy, Marg'et,» he grumbled.

«Ed Garry,» she exclaimed, «you know if it was n't for me you 'd never see a single sight on earth! You come here to this window!»

Thus adjured, he made slow haste across the room.

She pushed his head and shoulders out of the window. «I wish to goodness,» she said, «you 'd look at that Tommy T. Nickins a-stepping up that street!»

Mr. Garry uttered a contemptuous groan, and attempted a retreat.

His better half held him fast. «I tell you to look!» she continued, with growing excitement. «Look at them pointed shoes, and that new suit, and that hat, and that there necktie! Oh, my goodness gracious alive! And that cane! Oh, if Almira May could rise up! It 's a sin and a shame, him setting out, and her not dead in her grave three months. Yes; that 's the way you men forget us, Ed Garry.» She shook Mr. Garry by

Digitized by Google

the collar, by way of venting her indignation on the offending sex; though, if the truth be told, she might have been considered a better representative than he of the faithlessness she condemned, he being her third consort, while she was his first. «Look *at* him!» she continued, loosing her husband's collar to bestow all her attention upon Mr. Nickins, and drawing back breathlessly within the window as that young gentleman passed jauntily along the plank walk in front of her house, twirling his cane, and wearing his hat at such a dangerous angle that it must have stayed on by a miracle. She gazed until he was out of sight. Then she turned to her husband. «You mind what I say, Ed Garry,» she exclaimed. Then she solemnly and mysteriously pointed her finger straight upward, and said nothing.

Mr. Garry followed her finger with puzzled eyes. «Heaven?» he guessed.

«No,» she answered with asperity. «Tommy T. ain't any more going to heaven than you are by cleaning your old gun every Sunday when you ought to be at church.»

«Angels?» he again ventured.

«Far from it,» she answered.

He gazed hopelessly at the ceiling.

She shook his arm. «You have n't got the sight of a two-hours' kitten!» she exclaimed. «Miss Molly Casselberry!»

Mr. Garry continued his upward gaze, and a slow light began to dawn in his eyes.

At the same instant a by no means fairy tread was heard upon the steep little stairs which led down from the upper room into Mrs. Garry's, and a young woman emerged from the narrow door. It was no less a person than Miss Molly Casselberry herself, the new teacher, and Mrs. Garry's boarder. Miss Molly was a large, slow-moving blonde of the type known as strawberry. It was apparent to the most casual observer that she was a town girl. No country girl could ever have achieved such trimness of figure, such an unbending carriage, such breadth of shoulders and sleeves, and a waist so amazingly small. Her heavy suit of light-red hair was lavishly coiled and curled. Her eyes were brown and stolid, but somewhat softened by white lashes. She was dressed in quite the latest style, and her hat might have represented the creation of a floral world. She stopped in the middle of the floor, and proceeded to pull on a pair of very tight kid gloves.

Mr. Garry escaped with his beloved gun to the kitchen, and the two ladies sallied forth in the direction of church. If Miss Casselberry had anticipated a repetition of the sensation her appearance had caused in church the preceding Sunday,—her first in the Station,—she was doomed to disappointment. It is true there was a good deal of neck-craning as she came down the aisle, and also no small amount of doleful head-shaking; for Miss Casselberry's worldliness was glaringly apparent, not only in her sleeves and dress and jewelry and hat, but in the stiffness of her back as well, which made it evident that in her case vanity had struck in to the very bone. On this occasion, however, there was a counter-attraction to Miss Molly; for half-way back on the men's side, resplendent in a new suit of clothes, a glistening shirt-front and collar, an electric-blue necktie, and a sweetly resigned expression, sat Mr. Tommy T. Nickins, the recent widower, who only the Sunday before had sat in the same bench clad in rusty black clothes, a home-laundered shirt, and a straggling black tie, with unkempt hair and a look of settled gloom. The transformation was startling. The congregation found it difficult indeed to fix their attention upon the sermon. Those who did observed that even Brother Cheatham's mind wandered at times. The younger women of the congregation looked at one another with suspicious inquiry, but the older and wiser women looked straight

«THERE WAS A GOOD DEAL OF NECK-CRANING AS SHE CAME DOWN THE AISLE.»

Digitized by Google

at Miss Molly Casselberry. The sentiment of them all was probably voiced by old Mis' Gerton, who whispered to Mary Alice Welden, while they knelt on the floor during prayers: «Ah-ha! Tommy T. is setting in to make a big impression on the town girl!»

These surmises received a triumphant verification when, after preaching, Mr. Nickins was seen to linger about the church door until Mrs. Garry and Miss Casselberry came out of it, whereupon he begged the pleasure of Miss Casselberry's company home. Mrs. Garry dropped back precipitately, and, with the rest of the congregation, followed the dashing couple at a respectful distance.

What the sentiments of Mr. Nickins were upon this eventful day may best be gathered from some remarks that fell from his lips that afternoon. Mr. Nickins was the clerk in Mr. Bundy's store, and possessed a key to the back door thereof; and it had been his habit for several years to retire into its seclusion on Sunday afternoons, with Mr. Tice Deacon and other admirers among the very young men, to give them the benefit of his wisdom and experience. His utterances at these times were as eagerly listened to as oracles; for be it known that Mr. Nickins was none other than «the glass of fashion and the mold of form» for the Station youths.

His words on this occasion carried with them the more weight for the reason that during the period of a year, covering the time of his married life and widowerhood, his authority and power in the above-mentioned capacity had been in abeyance. The previous summer he, whose nimble feet had escaped so many pitfalls of similar kind, had fallen into the snares of matrimony. He had consoled himself and his friends at the time by the reflection that he was «marrying money,» and had talked largely about running his father-in-law's farm and bossing the hands—assumptions which suffered a speedy downfall, however, for the very day after the wedding Mr. Nickins was put to hard labor in the fields by his father-in-law, not as overseer or «boss,» but as a plain «hand»; and at hard labor he continued, under the stern eye of the old squire, and to his own infinite disgust, up to the very day of his young wife's death. She was hardly laid in her grave before he hastened to the Station, and begged in abject terms to be allowed to return to Mr. Bundy's store, his reinstatement therein being the happiest moment of his life. He managed to repress his joyful sense of freedom, however, and dutifully «mourned» from June until September.

«And that,» he was saying, addressing all his remarks to Tice, and allowing merely the crumbs of his wisdom to fall upon the others, «is as much as a man ought to allow himself, knowing that them which is dead is as dead and gone as they ever *will* be, and this being a vale of tears anyhow, and human folks having to skirmish around lively to keep up any spirits at all. But if the Station people thinks I am setting out, they are the worst mistaken that ever was, and have n't got the sense that God gave geese, and will sure find it out before they live much longer. No; far be it from me to ever have the least notion of marrying again; and I never expected to do it the first time, and don't know how I come to. But let bygones be bygones, and peace to their ashes, and keep a peeled eye on the future. Of course not saying anything against the ladies, that has their attractions for me, as everybody knows, and I 'm not denying. But marrying, Tice, is a different thing, and a powerful good thing to keep out of, being mighty apt to lay a man low in some way or 'nother, in ways he is least expecting of, such as having to work out in the corn-field and tobacco-patch like a nigger, when he ought rightful to be standing behind a counter. No, Tice; fly around with the ladies, and have a big time with 'em, and let 'em admire you all they want, but draw the line at marrying, is my experience and advice, which I intend to keep, and you know I did keep a long time before I got married, under circumstances which other men would have fell into sure, some of the ladies liking me like they did—not meaning to brag, but all my friends knowing it is the gospel truth. Of course I don't mean to uphold flirting, and it has hurt my feelings a many a time at being called a flirt, and everybody giving me that reputation. But when the Station folks gets to marrying me off in their minds, just because I have bought me a new cravat and a new suit, let 'em remember them days before Tommy T. Nickins ever entered into matrimony, and ponder on 'em. And there being a strange young lady in the Station, and her being a town girl, and not knowing my ways, *she* will have to find 'em out.»

This speech made a profound impression, especially the last sentence, which was translated into less delicate language by his hearers, so that before night it was pretty well understood throughout the Station that Tommy T. Nickins was going to flirt Miss Molly Casselberry.

This added a hundredfold to the interest of the situation, and speculations were rife

Digitized by Google

concerning the outcome. The attractions of Mr. Nickins for the female heart were well known, and were felt to be a credit to the Station—a credit which would be augmented by his success in this case, a result confidently predicted by many. On the other hand, a number of the people were inclined to think that, Miss Casselberry being a town girl and knowing the ways of the world, Mr. Nickins was likely to get the worst of it, and be beguiled into marriage again. On the whole, the chances were regarded as about even; and the town settled down to the contemplation and enjoyment of the contest with all the zeal it would have expended upon a horse-race, had that amusement not been regarded as deeply worldly and distinctly contrary to the Bible, flirting being looked upon as one of the very few legitimate pleasures, and as, in fact, encouraged rather than otherwise by the canons of the Old Testament.

Mr. Nickins, confident in his powers both of insinuation and retreat, flung himself gaily into the fray with the proverbial zeal of a widower. The following Sunday he appeared in church wearing a cravat of brilliant salmon-pink, and again walked home with Miss Molly, and even went so far as to remain to dinner at Mrs. Garry's. During the progress of the meal he kept up an incessant flow of talk, both Mr. and Mrs. Garry feeling that it was their place to be seen and not heard when young folks were about, while Miss Molly herself, being one of those persons who prefer to win a reputation for brilliant conversational powers and rare wisdom by the simple method of keeping silence, threw in only an occasional monosyllable.

Nor did Mr. Nickins confine his attentions merely to Sundays, as was the habit of all the other young men of the Station. He not only braved public opinion to the extent of dropping into the Garry sitting-room on week-day evenings whenever it suited his pleasure, but if any letters came for Miss Molly in the night mail, he took them up to her at the school-house the following morning, walking boldly to her desk, and calmly interrupting any recitation that might be in progress, to deliver himself of such remarks as arose in his mind. In this proceeding he took a certain pride; for it is no small matter to be perfectly at one's ease with a person of whom the rest of the community stand in great awe, as the Station people could not fail to do of a young lady of so lofty and uncommunicative a disposition as Miss Molly, and one possessing such learning that a common jimson-weed became, upon her tongue, a Jamestown plant.

Miss Molly always walked down to Bundy's to get her afternoon mail, at which times Mr. Nickins was exceedingly solicitous, apologizing profusely if no letters had arrived for her, casting the most languishing glances at her across the counter, and never allowing her to depart without a small parcel of chewing-gum or candy, which he religiously charged up to himself if Mr. Bundy was in sight. Miss Molly would immediately proceed to enjoy these delicacies, chewing away with cow-like solemnity as she leaned against the counter or passed down the street.

It may readily be believed that Miss Molly was at an early day in possession of a full and minute history of the life of Mr. Nickins.

«MR. NICKINS WAS EXCEEDINGLY SOLICITOUS.»

So intent, indeed, was that gentleman upon the discussion of the absorbing subject, that he failed to elicit any confidences in return from Miss Molly, save the single fact that one of her sisters was a fashionable dressmaker up in Louisville, and sent her the dresses which seemed to be the chief thought and joy of her life.

Upon the occasions of Mr. Nickins's calls Mr. and Mrs. Garry always retired hastily to

the kitchen, and sat there during the remainder of the evening, with the self-effacement which was expected of old married people in the Station—not, however, entirely out of earshot of Mr. Nickins's almost unbroken monologue.

«It 's funny how she lets him do all the talking,» mused Mr. Garry, one evening. «It ain't natural.»

«You ain't able to see your hand before you, Ed Garry,» his wife said sharply. «She 's giving him plenty of rope so 's he 'll do his own hanging. He 'll talk himself right into marrying her, you 'll see.»

«Tommy T. is a heap too wary for any such,» declared Mr. Garry, emphatically.

«Miss Molly Casselberry is a deep one, and you 'll live to see it, Ed Garry; and plenty able to take care of herself,» retorted his spouse—«and Tommy T., too,» she added.

Along in the latter part of November Mr. Nickins reported the progress of his case to Mr. Deacon in the following words, as they leaned upon the counter one dismal day, and Mr. Nickins looked soulfully at the dropping rain.

«I am not proud, Tice,» he said, «and the Lord forbid my setting too much store by the talents he has give me; but if ever any man has reason to hold his head high, it is him that knows he has been fell in love with by a lovely woman, and likewise intelligent-minded and town-raised. But the way I have *managed*, Tice, being the thing that makes it harder for me to walk humble than anything else, so that I have to pray continual to be delivered from pride. And if I speak to you confidential, it is for you to keep your mouth shut, especial to your grandma, only telling you for your own good and guiding. Supposing, now, as is often the fact, the case of a beautiful young lady—not calling no names—setting where you are now at, and me here across the counter from her, and having handed her her letters, but she caring so little for 'em that she slips 'em careless into her pocket—them not being the *only* objects she has come down to Bundy's for, Tice. Then I will fold my arms and look at her, Tice, and maybe groan gentle, which a woman always appreciates, and never fails. Then she will say it is a nice day, and I will say yes, but there is other nice and beautiful creatures in this world besides the weather, and more affecting to my heart. Then I will lay my hand on my heart sudden, and ketch my breath, and she will say, oh, *have* I got the heart-disease? And I will tell her to never mind, and not notice the sufferings of such as me, that have no right to expect it from her; but that, if she must know, I have it, and incurable, but what has give it to me never, never shall pass my mortal lips. Then I will fix my eye wild-like on her hair, which is red, but which it suits me better to call golden, and pleases her a heap more. ‹O lovely hair!› I will say unconscious-like, ‹but not for me!› Likewise her eyes. Then, Mr. Bundy maybe having stepped out a minute, and her hand laying on the counter, I will lay mine on it, entirely unbeknown to me, and squeeze it mournful, all the time gazing out at the railroad-track. Then I will come to and realize, and snatch my hand away, and ask her to forgive one that is that bad off he has n't got not even a speck of mind left, and ain't accountable. And she will say that my troubles downright distresses her, and if it will do me any good to speak out my mind, to do so, and confide in her; which is getting a heap too near the danger-line, Tice, and puts me some to my paces. So I tell her no, Heaven forbid; that them thoughts I have it would be heartless and wicked to speak out over a new-made grave that I am bound to consider the feelings of; that never—no, never—will I speak under a year, if then, though lonesome I am, deprived of joys both past and future. Then she will say she understands my position exact, and my feelings, having knowed others in similar; but to cheer up, that I will get over them, as others has done, to her living knowledge; that it 's a long lane that knows no turning. I reckon she 's getting to think *I 'm* a pretty long one, Tice; but, howbeit, that gives you some notion of the way I manage; and not meaning to brag, but I believe there 's a mighty few could do the same as successful. And that is the way I am going to keep on, and never a more pointed word on the subject of marrying will she ever get out of me, Tice,—no, not in *ten* years; nor no other woman; and wild horses could n't drag it out of me,—having had, as I said, all the experience I want. And a man being the one that *has* to do the proposing, if any,—that being something a woman *can't* do,—I know I am safe, and can enjoy myself walking on the slippery edge without no fear of falling in—walking on the slippery edge being to me, Tice, what gambling or drink is to some men, but which is a thing you better not try till you get older and have more experience.»

All of which was faithfully reported by Mr. Tice to his maternal grandmother, old Mis' Gerton, before sundown, and promptly

Digitized by Google

handed down, with trifling additions, by her to the town.

Matters went on in the smooth and charming way described by Mr. Nickins until the week before Christmas—that gentleman carrying out his plans to the letter, and venturing to the extreme limit of the slippery edge with never a misstep nor a waver in equilibrium. Down to the very abyss of matrimony would his talk run; but in the twinkling of an eye, by some astonishing mental gymnastic, his thoughts would be browsing upon the placid hillsides of friendship or the green grass of a grave.

His amazement may therefore be better imagined than described when, on the evening of the Sunday before Christmas, Miss Casselberry fixed firm eyes upon him, and opened her rosy and seldom-parted lips to give calm utterance to these words:

«Mr. Nickins, I have made up my mind to marry.»

Mr. Nickins stared at her with starting eyes and helplessly open mouth. The young lady continued imperturbably:

«I do not think it is well for either man or woman to live alone, but especially man; and, above all, a man who has once loved and lost—as well you know, and I have often heard you say.»

The muscles of Mr. Nickins's body suffered a relaxation which made him almost unable to keep a sitting posture.

«Feeling that I am fitted to shed a balm upon the path of such a man,» she continued, «I have decided to marry; and I think it best to speak out plain and unmistakable to you at the present time, knowing your feelings for me, and wanting things to go off smooth and pleasant to all. I have made up my mind to marry, Mr. Nickins, and to marry on Christmas day.»

Mr. Nickins gasped. «Ain't it a little soon, Miss Molly,» he tremulously inquired, «to be showing the proper respects to them that is dead and gone?»

Miss Molly opened her eyes. «I hope not,» she answered severely. «I have thought about that, and I hope I am the last one, Mr. Nickins, to step into another's shoes before the proper time. No; I have made up my mind to marry on Christmas day, in church, after morning meeting, in a golden-brown ladies' cloth trimmed in seal fur and jewel passementerie and cream-colored lace, with hat, gloves, shoes, and stockings to match, which my sister has been getting ready for me, and which will be here to-morrow by express. And I am going to have a black velvet cape trimmed in jet, and a dozen of all kinds of underclothes, and a pale-blue silk morning wrapper, and a pink cashmere tea-gown with a Watteau plait, and a dark-green silk dress with iridescent beading, and a picture hat, and an opera bonnet, and will go to Louisville on my bridal trip.»

These various items Miss Molly told off solemnly and impressively on her long white fingers, with evident relish.

Mr. Nickins listened spellbound as he felt the tremendous weight of circumstance crush in upon him. Now or never was the time for his brilliant strategic talents to assert themselves. Surely out of that eloquently open mouth would issue some saving words, some new declaration of independence, which would dispel this lowering cloud of doom, and burst asunder these frightful toils. Twice, thrice, the words seemed to rise to his dry lips; twice, thrice, they lost themselves in a gasping sigh. Oh, Mr. Nickins, where is your tongue? where is your boasted talent? whither has your gallant courage flown? Speak, speak before it is everlastingly too late; for you hang upon the uttermost edge of the abyss! Upon your action at this dreadful moment depend not only your own safety and happiness, but the pride and credit of the Station, the confident wagers of your many friends!

But the fateful moment passes; the edge, for once, is too slippery and slanting. Is it possible that in the young man who visibly shrinks within himself before the determined gaze of that large and placid young woman we behold the confident and valiant being who gave utterance, only three short months before, to the declaration that the said young woman being a town girl and not knowing his ways, she would have to find them out? Is it possible that we hear him say, in a broken voice of base capitulation, these ignoble words:

«And what would you wear if you was me, Miss Molly?»

MR. NICKINS took an early leave that evening. As he went down the street his shoulders were bowed as if with the weight of years, and every few minutes he pinched himself wonderingly. He let himself into his room over the store, and soon fell asleep from sheer brain exhaustion.

Morning, however, threw a brighter glamour over his prospects; that adaptability with which the human mind is reconciled to the inevitable began to assert itself. When Mr. Tice Deacon sauntered into the store about

Digitized by Google

ten o'clock, Mr. Nickins was in sufficient spirits mournfully to buttonhole him and escort him through the store to the back portion thereof. Here, seated upon a flour-barrel, Mr. Nickins began the following interesting confidences:

«Little did I think, or would have believed, Tice,—no, not if a' angel from heaven had blowed it on a trumpet,—that ever I would live to see what I do see, or say what I do say. Far was it from me to make any such calculations as have come round, and I honest had as little expectation of 'em as a new-born babe, or as that old dominicker hen of

«'IF I AIN'T ANYTHING ELSE, I *AM* A GENTLEMAN.'»

your grandma's had Tuesday of being e't up by a hawk Wednesday, my principles being each and every single one the direct other way. But I now realize that, like Solomon says, things is going to happen to us, no matter how much we kick against the pricks. And if any man is able to kick out of all sorts of traces, I have always thought I was, and still believe. But there is situations, Tice, that no man can kick out of—no, not even if he was a Samson—and keep his self-respects, especial when chickens has been counted before they are hatched, and wedding-clothes bought and made up. I hope, if I ain't anything else, I *am* a gentleman, and can't bear to break the heart of a weak woman, or disappoint her affections, which has twisted themselves around me so strong and tender that it is beautiful to see and hear from her own lips. No; I am not that hard heart and vile sinner, nor never could be, I pray the Lord, even if it *was* sprung on me that sudden my skin was all goose-flesh when I heard it, never expecting no such, and thinking it was a man's place to say such words as them, and not a young lady's, and not believing a woman could take such a bit as that between her own teeth. And when a man don't know a thing *can* happen, he natchully ain't able to prepare his mind for it, and got to take it as it comes, whether or no. Not saying anything against anybody, or that things don't have their advantages, which I could not see at first, but am able to see some now; for I don't know of a handsomer nowheres, not to say imposing, nor a better dresser, which is a comfort to a man not to have his women-folks look dowdy and country; and her outfit is going to open the Station's eyes. Then, being a town girl, too, is a good thing—a' indispensable, I might say, country girls not being congenial to my mind, which I know, having tried.»

Mr. Nickins paused a moment after this delicate allusion to his late spouse, and looked thoughtfully at the ceiling.

«Then, her folks being town folks, it will be perfectly natchul for them to want us to live with them in town, so I reckon you 'll see me leaving the Station before long, always having felt like the Station was n't no place for a man like me to live in. So I say, the Lord knows best, and is mighty apt to provide for us, which Mr. Bundy, being a' infidel, says there ain't no such a thing; but I know better, because if the Lord never provided for me this time, who did? I know I never done it myself. Yes; I say the Lord provides for us, though in ways unbeknown, and sometimes so unexpected and strong and sudden that they 're like my pa-in-law's old butting ram for taking a man plumb off his feet, which is the way I have been took. What has took me, Tice, being that next Sunday, it being Christmas, me and Miss Molly Casselberry are going to get married in church, right after meeting, and go up to Louisville on our wedding-trip.»

Mr. Nickins looked intently at his friend as he made this startling announcement. Mr. Deacon's fair face, with its suspicion of a mustache, flushed and then paled; his lip quivered; he caught his breath, and winked very fast.

«Tommy T.,» he faltered in a voice of profound reproach, «I am disappointed in you. I cannot deny it. I wish you joy.» He looked

Digitized by Google

at Mr. Nickins as he would have gazed upon some crumbling ruin, then crushed his hat savagely upon his head and departed.

He went straight home, and hastily unbosomed his sorrow to his grandmother, who was chopping mince-meat in the kitchen. That lady made no attempt to conceal her excitement. The chopper shook visibly in her hands; her eyes grew as sharp as an eagle's; she drew short breaths. «Tell it again, Tice,» she commanded; «every word!» He did so, repeating Mr. Nickins's language as nearly as possible. Old Mis' Gerton flung the chopper down on the table, snatched her bonnet and shawl, fastened them on with violently trembling fingers, and was gone like a flash, regardless of snow and rheumatism.

In an hour's time the amazing news was all over town that Mr. Nickins and Miss Casselberry were to be married the following Sunday; that Miss Casselberry, having ordered her trousseau beforehand, had done the proposing, and that Mr. Nickins had not had the spirit to refuse. These were savory morsels to roll under the tongues of the various gossips, and excitement ran high. A large proportion of the Station people dropped in casually during the afternoon to offer congratulations to Mr. Nickins, which he received with much composure and an air of perfect resignation.

A number of the ladies also called at Mrs. Garry's during school hours that day. Did she know Miss Molly and Tommy T. were going to get married the next Sunday? Merciful goodness, no; but she had looked for it from the first, and had told Ed Garry so, as he was called in from the wood-house to bear witness. When people had talked so big about Tommy T. Nickins being able to flirt Miss Molly Casselberry, a teacher, and a town girl, and her boarder, they had talked like the wind, which listeneth not whither it bloweth.

And while the ladies discussed the absorbing subject, there arrived by express for Miss Casselberry two large, fat pasteboard boxes, evidently from a dressmaker, which of course confirmed the matter. The ladies took what peeps they could by raising the corners of the lids. In the neighborhood of four o'clock all the visitors except old Mis' Gerton took a hasty leave—going, in fact, out of the back door, having caught sight of Miss Molly entering the front gate. Old Mis' Gerton grimly and courageously remained, and, when Miss Molly came in, demanded the truth as to her getting married Sunday. Miss Molly solemnly said that she could not deny it; that she was indeed going to marry after meeting on Sunday, in a golden-brown ladies' cloth trimmed in seal fur, jewel passementerie, and cream-colored lace, with hat, gloves, shoes, and stockings to—but here were the interesting articles themselves, which the ladies should see with their own eyes. Thereupon the boxes were opened, and the contents inspected in all lights, and condemned for their worldliness and praised for their beauty.

The entire week passed in much the same way as this first day. Every lady in the Station called during school hours to inspect the bride's trousseau, which Mrs. Garry made bold to exhibit. New boxes arrived every day, and many of the visitors were fain to call as often. If by chance Miss Molly caught any of them there on her return from school in the afternoons, they had seemingly dropped in on urgent errands, and were careful not to refer to the subject uppermost in their minds, save on one or two occasions when Miss Molly herself, in a burst of condescension, opened up a discussion of her wedding-clothes. By common consent all reference to the bridegroom was avoided, the ladies of the Station feeling that the peculiarly delicate circumstances of the case precluded any mention on their part of Mr. Nickins, unless the subject were first broached by Miss Molly, while her own thoughts soared in too high a heaven of clothes ever to drop down to the level of her prospective husband.

The feelings of Mr. Deacon were somewhat mollified by his being requested to act as his friend's best man, to which duty he looked forward with that mournful pleasure which is supposed to animate the bosom of a pall-bearer. The two gentlemen made a trip up to town early in the week, and purchased the bridegroom's clothes, and also a large and shiny black valise. These preparations had a distinctly favorable effect upon Mr. Nickins's spirits, which steadily rose, until by Saturday, when his arrangements were all completed and he had actually succeeded in borrowing the money from Mr. Bundy for his bridal trip, he was in a truly hilarious frame of mind.

Mr. Nickins saw but little of his promised bride during the week; for when he did call upon her she exhibited such an unflattering absorption in her wedding-clothes that he found it very trying to his vanity. He endeavored to interest her by describing the clothes he had bought, but without success, for she only looked at him absent-mindedly. When he inquired how she wished him to enter the church, she said, oh, of course he

must suit himself about that; and on his stating that Tice was to walk in with him, she said she was sure that was very nice. Mr. Nickins could only conclude that it was the proper and delicate way of town girls to devote all their thoughts to their trousseaux, and none to their future husbands; and of Miss Molly's affection for himself there arose in his mind not the shadow of a doubt.

On Saturday afternoon he called upon Brother Cheatham, the minister, to secure his services for the all-important event. Brother Cheatham congratulated him cordially, and said he was not unprepared, having just received a note from the lady herself. He playfully drew from his pocket a sheet of pink paper covered with Miss Casselberry's large and legible writing, begging him to hold himself in readiness to unite her in the holy bonds of matrimony to the gentleman of her choice immediately after meeting on the morrow.

SUNDAY was as clear and cold and bright as Christmas day and a wedding-day should be. Excitement was at a high pitch in the Station, and the church was crowded to overflowing. Every man, woman, and child

«'ANY ONE OF THEM TIES WOULD LOOK MORE ELEGANT.'»

in town was there, with the exception of Mr. and Mrs. Garry, who were to come later with the bride, and Mr. Nickins and Mr. Deacon. These two gentlemen were engaged in making as stunning a toilet as possible. The bridegroom gazed regretfully at three satin neckties stretched across his bureau, which were of the respective colors of lavender, pale blue, and sea-green. «Any one of them ties would look more elegant, not to say more cheerful, Tice, and becoming,» Mr. Nickins said critically, trying them severally against his complexion; «but white she said, and white it shall be, me not being the man to contradict a lovely woman, and having plenty of chance, anyhow, to wear them gayer ones on the wedding-trip.»

The toilets being completed, the gentlemen descended to the street, Mr. Deacon lugging his friend's valise down to the railroad platform. They then walked up in the direction of Mrs. Garry's house. Some distance in front of them, with stately and pompous tread, walked a portly gentleman who had come out of the hotel, and who was known to have arrived on the midnight train the night before. He was evidently a city gentleman approaching middle age, and wore a shining silk hat and elegant black broadcloth clothes. Mr. Nickins and Mr. Deacon eyed him with some curiosity, which was heightened when he turned in at Mrs. Garry's gate and was admitted to the house. They quickened their pace, and were greeted at the door by Miss Molly herself, who said she was glad to see them, and appreciated their coming, but would have to ask them to excuse her, as time was short, and she had yet to put on her hat and gloves; that she would see them a little later at the church. The middle-aged gentleman eyed them blandly from the sitting-room sofa. There was nothing left for them but to saunter up to the church, Mr. Nickins confiding to Tice on the way that the middle-aged gentleman was either Miss Molly's uncle or her brother-in-law, he could not decide which, knowing that she had several of both; that he appeared to be in fine circumstances, which was a good thing, and had evidently come to give the bride away.

The bridegroom and his best man entered the church, and sat on the back seat of the gentlemen's side. To say that every head in that congregation was turned is to do small justice to the occasion; for every head was turned not once, but many times, each seeming to be the center of a small but lively cyclone. Mr. Nickins was a man of sufficient self-possession to enjoy thoroughly the impression he was making. So intent, indeed, was he upon this that the remainder of the bridal party had entered the church and

«AT THIS POINT A SHRIEK WENT UP FROM THE BRIDE.»

were some distance up the aisle before he realized it. He sprang to his feet, seized Mr. Deacon by the arm, and hurried after them. Miss Casselberry, in the conscious glory of her golden-brown ladies' cloth, trimmed exactly as she had foretold, with hat, gloves, shoes, and stockings to match, stepped proudly up the aisle on the arm of the handsome and portly gentleman, her uncle or brother-in-law, as the case might be. Then followed Mrs. Garry and her husband, the latter hanging back painfully, and looking wildly about as if for some avenue of escape. The bridegroom, with his best man, whom he was obliged to support all the way up the aisle, brought up the rear. Arriving before the pulpit, Mr. Garry beat a retreat to the front seat, while the portly relative, the bride, the bridegroom, and the best man ranged themselves before the minister, and Mrs. Garry stationed herself in the rear.

The loud hum and buzz in the congregation subsided into a deep silence as Brother Cheatham began the marriage ceremony with a few preliminary remarks, addressed to his two dear young friends, in which he warned them of the many snares of the world, the flesh, and the devil, and of the duties of mutual forbearance and patience, following up this exhortation with a prayer, wherein he repeated for the benefit of the Omnipotent pretty much what he had said to them. The moment of intensest interest then arrived, when he signified, by a movement of his hand, that the interested parties should draw a step nearer, which all five of them did. The congregation leaned breathlessly forward as one man; the solemn words, in Brother Cheatham's best manner, rolled sonorously forth:

«Do you, Thomas T. Nickins, take this woman, Mary Ann Casselberry, to be your lawful wedded wife, to love, cherish, and protect—»

At this point a shriek went up from the bride, who had stood as if paralyzed during the utterance of these words, as also had the portly relative. «No, no,» she said weakly; «there is a mistake! Somebody has made a mistake! Mr. Nickins is not the bridegroom! Oh, my goodness gracious, what on earth—» With a hysterical sob, she looked about her, and then laid her head upon the shoulder of the portly gentleman.

The latter, seeing that the congregation gazed with fascinated horror at the bridal party, and feeling that something must be done, drew forth a card from his pocket and presented it pompously to the minister. It bore this inscription:

STEPHEN BARTHOLOMEW,
Funeral Director.
Louisville, Ky.

As this failed to enlighten the minister, having no apparent bearing upon the occasion, Mr. Bartholomew went on to declare, with considerable unction of manner, that it was evident there had been a slight misunderstanding in the present instance, which doubtless a few words would set right: that he, Stephen Bartholomew, was the chosen husband of the young lady who now wept on his shoulder, overcome by her feelings; that he had met and loved her the previous summer, but the wedding had been postponed that due respect might be shown, as was entirely proper, to a deceased; that sufficient time having elapsed since the decease of said

Digitized by Google

deceased, he now claimed his bride; and that as time, trains, and likewise the dark angel, waited for no man, he must beg the minister to proceed with the ceremony.

Thereupon Miss Casselberry lifted up her head from his shoulder, wiped her eyes with a lace handkerchief, and said, with dignity, that how Mr. Nickins could ever have thought she would be *his* bride was more than she, being a mortal woman and not a prophet, could understand, when such had never for a single minute crossed her mind, and her heart had ever beat faithful to her dear Mr. Bartholomew; and especially, she said, did it seem strange to her, when she had told Mr. Nickins, with her own lips, only the Sunday evening before, about her full intentions of getting married at this very hour that now was, and even the identical clothes she was going to marry in, being a golden-brown ladies' cloth trimmed in seal fur, jewel passementerie, and cream-colored lace, with hat, gloves, shoes, and—and handkerchief to match, which they could see for themselves bore out her word, and which she had taken particular pains to tell Mr. Nickins first of all, and enlighten his mind, he having shown her so many kind attentions, which she appreciated highly, but could not reciprocate, and not wanting Mr. Nickins to build any hopes on sand. If she had failed to mention the name of her intended, it was simply an oversight on her part, she having so many things on her mind. When Mr. Nickins had spoken to her about his clothes and those of Mr. Deacon, and, later, when she had seen the two gentlemen come up the aisle, she had supposed that they were only paying her the compliment of being her ushers. Words could not express her sad state of mind at being even the innocent cause of any unpleasant feelings to Mr. Nickins, even if it was all his own fault for being too presumptuous, and none of hers. And regretting all that had happened, and hoping it would never happen again, she must ask Mr. Cheatham to perform the ceremony, train-time being very near, and Mr. Bartholomew's business waiting.

At the conclusion of these remarks, Mr. Nickins, who had been standing with dilated eyes and a ghastly whiteness about his lips, unable to move or speak, felt his arm seized by Mr. Deacon, and realized that he was being rapidly piloted down the aisle, with the terrible eyes of the congregation upon him.

There is a merciful numbness which falls upon the human mind at some junctures when a too keen realization would prove fatal. It was not until Mr. Nickins had been put to bed in his own room by Mr. Deacon, and a strong toddy administered to him, that he came to a full sense of the situation, when he went off into as wild a fit of hysterics as could be expected of any woman, his moans and groans and cries of wounded pride being distinctly audible when the newly married couple, accompanied by the congregation, arrived at the railroad platform to wait for the train. It was observed, however, that these painful manifestations cast no damper whatever upon the spirits of the bride, who was much absorbed in contemplating, first over one shoulder and then over the other, the «set» of a handsome black velvet cape, heavily ornamented with jet, which now intervened between the wintry blasts and her wedding-dress, and who smiled a serene farewell to her friends as the rushing train stopped for an instant to receive the happy pair into the luxurious interior of its parlor-car.

But whether the dire humiliation of Mr. Nickins was the result of a premeditated and carefully arranged plan on the part of Miss Casselberry,—an opinion fostered by certain inscrutable smiles from Mrs. Garry,—or only one of those mysterious dispensations of Providence whereby a shining mark is not infrequently made a target for «the slings and arrows of outrageous fortune,» the Station has failed, even after an exhaustive discussion of the question, to make up its mind.

MARIA THERESA OF AUSTRIA, MOTHER OF MARIE-ANTOINETTE.

MARIE-ANTOINETTE AS DAUPHINE.[1]

BY THE AUTHOR OF «LIFE IN THE TUILERIES UNDER THE SECOND EMPIRE.»

THE real Marie-Antoinette has not yet been fully depicted. Recent publications of undoubted authenticity[2] throw a new light on the true character of one who was neither a saint nor yet a sinner in any grave degree, but an amiable and lovable woman, frivolous in her prosperous days, engrossed in the pursuit of amusement, thoughtless and imprudent in many of her actions and words, but who, nevertheless, in the time of adversity showed that she had inherited the heroic spirit of her mother.

Maria Theresa was a great sovereign, a woman of masculine mind; and although the mother of sixteen children, she remained essentially a politician—a *statesman*, if such an expression may be used. Her daughters were regarded principally as instruments for obtaining political alliances. The youngest and fairest she had destined from her earliest years for the heir to the throne of France.

Marie-Antoinette-Josèphe-Jeanne, of Hapsburg-Lorraine, Archduchess of Austria and future Queen of France, was born on November 2 (feast of All Souls), 1755—the day after the terrible catastrophe at Lisbon, when that city was nearly destroyed by an earthquake. Maria Theresa's daughter was taught the correct pronunciation of French by two actors of the Théâtre Français, while the French Abbé de Vermond was appointed to direct her education, which, however, was unhappily very incomplete. The writers who glorify the maternal care and vigilance of Maria Theresa are contradicted by the most trustworthy witnesses, the truth seeming to be that the great Empress, engrossed by her political cares, left her children far too completely to the discretion of governesses and subordinates, who were neither very capable nor, perhaps, very conscientious. Drawings were shown to the Empress as the work of Marie-Antoinette which the latter afterward declared she had never touched, and this «make-believe» system seems to have been carried on throughout. The Abbé de Vermond directed only her French studies; but although a good and well-meaning man, the results which he obtained were far from creditable to his efforts. He does not seem to have had the art either of interesting her in any serious pursuit, or of acquiring proper control over her mind and character. Her handwriting even, as proved by autographs, was utterly unformed and childish at the time of her arrival at the court of France, and her spelling was defective.

Through the manœuvers of her imperial mother, and the influence of the Duc de Choiseul, then prime minister of France, who favored the Austrian alliance, the mar-

[1] Readers of this article may be interested to know that the next number of THE CENTURY will contain another paper by the same writer entitled «The Last Days of Louis XVI and Marie Antoinette.»—EDITOR.

[2] Taken from the State Papers at Vienna.

riage was settled at the earliest possible age of the Dauphin and of the Archduchess, the bride being only fourteen, and the bridegroom a year older.

On January 21, 1770, Marie-Antoinette received the wedding-ring sent by the Dauphin —the very day, twenty-three years later, on which Louis XVI ascended the scaffold! On April 16 the official demand was made to the widowed Empress, in the name of the «most Christian King,» by the Marquis de Durfort. On the 17th the Archduchess solemnly renounced her rights in Austria. On the 19th a ceremony of marriage by proxy was performed (the Archduke Maximilian representing the Dauphin of France), and the official signatures were then appended to the imperial register of births, deaths, and marriages. The young Princess was then required to spend three days in meditation and prayer, as a preparation for her future state. On April 21, after receiving the holy communion, she was taken to pray before the tombs of her ancestors, where lay the father who had loved her with peculiar affection, and whom she had lost in her early childhood. Then came the final parting from her mother, the last meeting in this world; for in those days few people traveled, and sovereigns never left their states.

Before the last heartrending embrace, Maria Theresa gave her daughter a plan and rule of life «to be read over every month.» Part of this seems to be the «cut-and-dried» advice taken from a devotional book; but here and there, more particularly in a private supplement of instructions, the eager, earnest tones, evidently of the Empress herself, are in marked contrast with the rest:

«Have no curiosity—this is a point on which I have great fears for you. Avoid all familiarity with your subordinates. Ask Monsieur and Madame de Noailles,[1] and even insist, that they shall tell you what you ought to do; and request that they shall warn you sincerely of anything to be corrected in your manner or your speech, or in any other respect. Do not be ashamed of asking advice, and do nothing out of your own head. At the beginning of every month I will despatch a special messenger to Paris; meanwhile you can prepare your letters so as to send them immediately on the arrival of this messenger. Mercy[2] will have orders for his return. You can also write to me by post, but only on unimportant matters such as every one may know. Destroy my letters, which will enable me to write to you more openly; I will do the same as regards yours. Say nothing about domestic affairs here; there is nothing but what would be uninteresting and even wearisome. Speak of your family with truth and moderation.»

Elsewhere she says very sagely: «I should in no wise be desirous of your introducing any novelties or doing anything contrary to the custom of France; you must pretend to nothing peculiar to yourself, nor quote what is done here, nor try that such should be imitated.»

This judicious advice might be followed with advantage by many young brides even in private life; but the state of the court of France at that time was such as to render the future position of the innocent but thoughtless and imperfectly educated young Princess one of peculiar difficulty and peril.

The King, worn out physically and mentally by the excesses of his life, was bearing the yoke of his favorite, the Comtesse du Barry, who reigned supreme. The first Dauphin had died several years before, to the great grief of the nation, for his principles were in strong contrast to those of his father. His wife, the Dauphine, an exceedingly estimable woman strongly attached to her husband, did not long survive him. They left five children: three sons—the Duc de Berry, who after his father's death became Dauphin and heir apparent to the throne of France (afterward king as Louis XVI), the Comte de Provence, and the Comte d'Artois (later known respectively as Louis XVIII and Charles X); and two daughters—Madame Clotilde and Madame Elisabeth.

The Queen, Marie Leczinska, had died some time before the marriage of the Dauphin, her grandson; and since her death the position of «first lady in the land» had been held by her daughter, Madame Adelaide, a clever woman of an imperious, domineering temper, who was by no means pleased to yield her prerogatives, as she must needs do, to the child-wife of a boyish nephew. Madame Victoire, fat, sleepy, and good-natured, cared little for anything beyond a good dinner and her other comforts, but was led and governed by her elder sister; Madame Sophie was singularly ill-favored, very shy, very disagreeable, and utterly insignificant; the youngest and most amiable of the four sisters, Madame Louise, had recently left the court for a Carmelite convent.

Maria Theresa had a strong desire to give

[1] They were appointed to conduct the Dauphine to Versailles.

suitable guidance to her daughter. She consequently arranged with the German ambassador, Comte de Mercy-Argenteau, a secret correspondence, by which she was to be told of everything concerning the young Dauphine. Mercy kept a journal, which was regularly sent to the Empress, in which the most minute details of the daily life of the Princess are jotted down; every act, every incautious word, is registered. Being in utter ignorance of this agreement, Marie-Antoinette treated Mercy with full confidence, often expressing astonishment at the information possessed by the Empress concerning her, but never dreaming that Mercy, whom she entirely trusted, was in fact an accredited spy through whom everything was revealed.

There is, it must be owned, something revolting in the part played by Mercy. True, the revelations were made only to her mother; but she was Empress of Germany, and while Marie-Antoinette ought henceforward to have been devoted to the interests of France, the country over which her husband was to reign, the one idea of Maria Theresa was the prosperity and welfare of her own empire.

On May 6, 1770, after having, in those days of slow traveling, left Vienna on the 21st of April, Marie-Antoinette reached the last German town before Kehl, and the bridge over the Rhine. A pavilion had been erected on the island in the middle of the river, where she was to be solemnly given to the French envoys, and where she was to meet her French household.

The three envoys of the French king stood in the central division as the door opened on the Austrian side and the Archduchess appeared. She advanced toward a platform in the center of the room while the formal surrender to the French was read over; her Austrian attendants then kissed her hand, and disappeared into the Austrian division, closing the door of separation. The Princess was then taken into a room on the French side, where she was undressed and clothed from head to foot in French attire, according to custom on such occasions. When ready, the door was thrown open, and the Princess appeared in full dress, as «Dauphine.» Her French household was then formally presented to her; when, gracefully running to the Comtesse de Noailles, her *dame d'honneur*, or first lady, the young Princess embraced her, with the earnest request that she would be her guide and counsel in the performance of the new duties which awaited her.

On the French bank of the Rhine one of the sixty traveling-carriages sent to meet her took the Princess to Strasburg; but meanwhile a storm, which had grown more and more dark and lowering during the ceremony, burst over the city, and terrific peals of thunder mingled with the cheers of the crowd as Marie-Antoinette passed through the gates—a dreary entry into her future kingdom! After a short rest, the Princess continued her journey, finding in every town an enthusiastic reception.

On the 14th of May she reached Compiègne, where, at some distance from the town, she met the Duc de Choiseul, whom she welcomed as a friend. A few minutes later, as she crossed the forest of Compiègne, the King and the Dauphin, with a numerous escort, were seen coming out to meet her. Marie-Antoinette stepped from her carriage, and, running toward the King, threw herself on her knees, whereupon he raised and embraced her. The Dauphin, overpowered with shyness, hardly dared to look at his bride, but ventured to «salute her on the cheek.»

The next day the whole court left Compiègne for Versailles, stopping at St. Denis, where Marie-Antoinette, to the great delight of the nuns, wished to see her new aunt, Madame Louise, then a novice at the Carmelite convent. She spent the night at the small château of La Muette, where the King presented her with a pearl necklace that had been brought to France by Anne of Austria, and worn by the queens and dauphines of France, in which each pearl was the size of a hazel-nut and all were exactly of the same water.

On May 16, 1770, at ten o'clock in the morning, Marie-Antoinette made her official entry into that celebrated palace of Versailles which became her home till the outbreak of the French Revolution. The definitive marriage ceremony took place that morning in the chapel of Versailles, and was followed by great rejoicings. The youth of the bride, her childish grace, impressed every one favorably, and even the hostile «Mesdames de France,» daughters of the King, were propitiated. She was so young, so pretty, so ingenuous, so caressing, that the imperious Madame Adelaide at once concluded that she would be easily directed in all things. The King told Mercy that he found the young Dauphine lively, but «rather childish»; adding, however, «But that is only natural at her age.» The heavy, shy Dauphin was not demonstrative; still he admitted that he liked her face and conversa-

THE PALACE AND PARK OF VERSAILLES.

tion, that she was very agreeable, and that he was altogether well pleased.

The memoirs of the time all dwell upon the promise of her yet undeveloped beauty: the noble cast of her features, her brilliant complexion, the golden shade of her beautiful hair, her graceful manner, and the remarkable dignity of her attitude. She spoke French well, with a slight German accent and some German idioms; but she was so young and so completely surrounded by French attendants that these traces of her foreign origin soon disappeared.

On the first arrival of Marie-Antoinette at Versailles, the traditional apartments of the queens of France were not ready to receive her, and for the first six months she resided in temporary rooms on the ground floor of the palace. After this period she removed to the first floor, where a suite of splendid rooms opening out of the Galerie des Glaces, or Hall of Mirrors, was devoted to her use.

Madame de Noailles, having been dame d'honneur to the late Queen, was naturally appointed to the same post in the household of the young Dauphine. Unfortunately the habits acquired while attending a very precise and aged princess rendered her particularly unfitted to direct a wilful, merry girl of fourteen, whom she annoyed incessantly by remonstrating on some unconscious breach of etiquette. Madame de Noailles was essentially the court lady, stiff and formal, entirely absorbed by the rules of her position, and looking upon the smallest breach of custom as little less than a sin. The Princess was respectfully chided for having forgotten this or that detail of etiquette, or told that her smiles and bows had not been properly distributed according to rank, till the young Dauphine, who had a keen sense of the ridiculous, became both exasperated and diverted by the constant anxiety of her dame d'honneur. Madame de Noailles seemed to be perpetually in the agonized state attributed to some old lord-in-waiting at one of Queen Victoria's first drawing-rooms, when, seeing the Queen make a move toward a lady presented, he cried aloud in great alarm, «Don't kiss her, ma'am! She is not a peeress!»

Marie-Antoinette had been ill prepared by the simplicity of the court of Vienna for such minute observances. The Empress was so revered by the people, the imperial family was so loved, that it was not necessary to awaken respect by so many of the proverbial «externals.» On the other hand, the intense haughtiness which lay behind prevented any close contact with that half-nobility which

Digitized by Google

had pushed its way into the precincts of the court of France.

On June 8, three weeks after the arrival of the young Princess, Mercy went to the palace to deliver into her hands a letter from her mother, the Empress, full of good advice. «The only real happiness in this world,» she wrote, «is that which comes of a happy marriage. I can speak from experience. All depends on the wife, if she be obliging, amiable, and *amusing*.» Again the Empress warns her against familiarity, well knowing her good-natured, easy temper; also against the demands which would assail her from those wishing to use her influence in their favor—an error into which Marie-Antoinette, forgetting her mother's warnings, often fell at a later period.

Mercy reached the palace during the usual card-playing; but as soon as the Dauphine saw him she called him to her, saying that she wished to speak to him. He urged her to finish the game, but as soon as possible she rose. «Seeing that I had a paper in my hand,» says Mercy, «she at once understood that it was a letter from your Majesty, and seized it with great eagerness, exclaiming, ‹Gott sei Dank!› showing much joy at receiving this letter, which she read immediately.»

But troubles were already gathering round Marie-Antoinette, and her wise mother not being within reach, she was anxious to consult Mercy as to what she ought to do. It was indeed necessary for the poor child to have a friend near her, for she was surrounded by opponents, not the least important of whom was the Duc de la Vauguyon, state tutor, or, as it was termed, «governor,» of the Dauphin. In this instance there was no personal animosity, but only excessive jealousy of any influence which might counterbalance his own over the docile but apathetic and obtuse Dauphin. He knew that the pretty young wife was too childish to be feared, but those about her might make her their instrument, and he particularly disliked and dreaded the Abbé de Vermond. The difficulty which Marie-Antoinette wished to lay before her adviser reveals the extraordinary disorder which prevailed in the court; for she informed Mercy that the persons who now held posts in her household, and who previously were employed in other ways, had not been paid their salaries for six months, and that Madame de Noailles urged her to interfere by speaking herself to the Contrôleur-Général. What was she to do?

Mercy approved, but had no time to say more, as supper was served. When he went out the Comtesse de Noailles summoned him to her apartments, and there he learned that

the Duc de la Vauguyon was trying to get rid of the Abbé de Vermond on the ground that his office of reader was a mere sinecure, and that he was useless and out of place at court. Mercy exerted all the influence that he could command to smooth over difficulties and pacify quarrels, interfering successfully with the King to prevent the dismissal of the Abbé de Vermond.

The cloud had blown over, but Mercy took advantage of the threatened storm to work upon the good feelings of Marie-Antoinette by telling her that the Abbé could not, in justice to himself, retain his position unless the Princess accepted his services. The good Abbé had never known how to interest his pupil in her studies or readings, and certainly seems to have been something of what is familiarly called a bore; but affectionate and warm-hearted as was Marie-Antoinette, she could not bear to be the cause of the departure of an old and tried friend. Consequently, though with evident reluctance, she promised to resume regular occupation under his direction. She had just reached the age when emancipation from school-room tasks is most earnestly desired, although she was still so childish that Mercy complains of her hoidenish ways, her fondness for romping with the young children of her attendants, and the consequent disorder of her dress. He notes also what were always marked characteristics of Marie-Antoinette —a strong sense of the ridiculous, and considerable pungency in the manner of calling attention to anything of the kind which caught her fancy.

HOUSE OF THE SEIGNEUR, PETIT TRIANON.

In this, as in many other respects, Madame de Noailles ought to have exercised a wise and restraining influence; but she incessantly tormented the wilful young Princess, who, wearied and impatient, finally gave her the nickname of «Madame l'Etiquette.»

Two months after her arrival at Versailles, Marie-Antoinette relates the particulars of her daily life, in a letter to her mother:

THE TEMPLE OF LOVE, VERSAILLES.

«CHOISY,[1] 12th July.

«MADAME MY VERY DEAR MOTHER: I cannot express how much I am affected by your Majesty's kindness, and I protest that I have not yet received one of your dear letters without tears of regret filling my eyes at being parted from such a kind and tender mother; and although I am very happy here, I should earnestly wish to return to see my dear, very dear family, if only for a short time. . . .

«We have been here since yesterday, and from one o'clock in the afternoon, when we dine, till one in the morning, we cannot return to our own apartments, which is very disagreeable to me. After dinner we have cards till six o'clock; then we go to the play till half-past nine; then supper; then cards again till one o'clock, sometimes even half-past one; only yesterday the King, seeing that I was tired out, kindly dismissed me at eleven, to my very great satisfaction, and I slept very well till half-past ten.

«Your Majesty is very kind to show so much interest in me, even to the extent of wishing for an account of how I spend my time habitually.[2] I will say, therefore, that I rise at ten o'clock, or nine, or half-past nine, and after dressing I say my prayers; then I breakfast, after which I go to my aunts',[3] where I usually meet the King. This lasts till half-past ten. At eleven I go to have my hair dressed. At noon the ‹Chambre› is called, and any one of sufficient rank may come in. I put on my rouge[4] and wash my hands before everybody; then the gentlemen go out; the ladies stay, and I dress before them. At twelve is mass; when the King is at Versailles I go to mass with him and my husband and my aunts; if he is not there I go with Monsieur the Dauphin, but always at the same hour. After mass we dine together before everybody,[5] but it is over by half-past one, as we both eat quickly. I then go to Monsieur the Dauphin; if he is busy, I return to my own apartments, where I read, I write, or I work: for I am embroidering a vest for the King, which does not get on quickly; but I trust that, with God's help, it will be finished in a few years [!]. At three I go to my aunts', where the King usually comes at that time. At four the Abbé comes to me; at five the master for the harpsichord, or the singing-master, till six. At half-past six I generally go to my aunts'

when I do not go out. You must know that my husband almost always comes with me to my aunts'. At seven, card-playing till nine; but when the weather is fine I go out, and then the card-playing takes place in my aunts' apartments instead of mine. At nine, supper; when the King is absent my aunts come to take supper with us; if the King is there, we go to them after supper, and we wait for the King, who comes usually at a quarter before eleven; but I lie on a large sofa and sleep till his arrival; when he is not expected we go to bed at eleven. Such is my day.

«I entreat you, my very dear mother, to forgive me if my letter is too long; but my greatest pleasure is to be thus in communication with your Majesty. I ask pardon also for the blotted letter, but I have had to write two days running at my toilet, having no other time at my disposal; and if I do not answer all questions exactly, I trust that your Majesty will make allowances for my having too obediently burned your letter. I must finish this, as I have to dress and go to the King's mass. I have the honor to be your Majesty's most submissive daughter,

«MARIE-ANTOINETTE.»

DUC DE LA VAUGUYON.

Google

After reading this graphic account of the frivolous obligations inseparable from the court life of the period, can any one be surprised that a girl not yet fifteen was carried away by the current of the stream, and felt no inclination for a more useful or more serious life? It was so easy and natural to plead impossibility; all the princesses she saw lived in the same manner, and did little but courtesy to the King at stated hours, and put on and off their cumbrous court dresses.[1] Why should she alone be expected to employ her time usefully and cultivate her mind?

In her letters to Mercy, the Empress complains bitterly of her daughter's handwriting and spelling, and again and again urges the necessity of taking up her education seriously. But it was very late to begin regular studies.

In answer to an indignant letter from Maria Theresa, Mercy states that he spoke to the Abbé de Vermond, who acknowledged deficiencies, but maintained that the Dauphine never wrote so badly as when addressing her mother; the reason being that she did not consider what she wrote to be safe, and consequently delayed till the special messenger was about to leave, writing then in such haste that her letters were full of «inaccuracies due to precipitation.» Whether with just cause or not, the Dauphine considered no papers safe in her apartments; she feared the use of false keys, or that her own would be taken from her pockets at night. Her fears were carried to such an extent that she actually took her mother's letters to bed with her, as the only means of keeping them secure till the next day.

That the caution of Marie-Antoinette was not entirely unfounded is proved from the fact that the Duc de la Vauguyon was actually caught listening at the door of the room where the Dauphine was conversing privately with her husband. Marie-Antoinette, in a letter to her mother, relates this disgraceful act, saying: «A servant, who was either very honest or very stupid, threw the door open, and there was the Duke standing bolt upright, without being able to get away. I remarked to my husband how very objectionable it was for people to listen at doors, and he took it very well.»

As yet there was only childish friendship between the boyish Prince and his young wife; he was amused at her playful ways, and good-naturedly submitted to all her wishes, even to the prohibition of his favorite dainties, which disagreed with him, and which she ordered to be removed from the dinner-table without allowing him to partake of them. As he possessed the enormous appetite which characterized the Bourbons, this must have been a trial of temper for the young husband.

Meanwhile the Duc de la Vauguyon was not inactive, and did not scruple to put forward Madame du Barry as a means of keeping his influence over the Dauphin. The latter had boyishly expressed a wish to join the King's private hunting and shooting parties. Madame du Barry, to whom this was made known, immediately informed the King, who gave the required permission. The consequence was that the Dauphin, a boy of fifteen, was thus authorized not only to join the sport, but also to attend the suppers with the favorite which followed at the King's shooting-box, called Saint-Hubert, where, as Mercy solemnly states, «the rules of propriety are not always scrupulously observed.»

The «Mesdames,» not unnaturally, were much alarmed at this emancipation of the young Prince, and at once determined to acquaint him with the real position of Madame du Barry and all the mischief that she had already caused. The Dauphin was much shocked; his honest nature at once revolted, and from that time he treated Madame du Barry with marked aversion. To his young wife he showed increased affection and confidence, entirely agreeing with her feelings as to the Duc de la Vauguyon, and expressing his own with regard to Madame du Barry, though not without his usual caution.

In vain Maria Theresa writes to her daughter: «Keep a neutral position in everything. . . . I desire you to be more reserved than ever as regards what is going on; listen to no secrets, and have no curiosity. I am sorry to be obliged to say, *confide nothing*—even to your aunts, whom I esteem so much. I have my reasons for saying this.» But the open-hearted nature of Marie-Antoinette often prevented the prudence which her wise mother so earnestly inculcated.

The young Dauphine had a great wish to ride on horseback, which, in modern days, would give rise to no objections; but Mercy, foreseeing the disapprobation of the Empress, applied to the King, through the Duc de Choiseul, pleading the youth of the Princess and the probable want of moderation that she would show in the practice of «such violent exercise.» The King satisfied them by refusing his consent to the use of horses, but

allowed donkeys. Some exceedingly quiet animals were chosen, and the Dauphine rode with her ladies in the forest, Mercy gravely assuring the Empress that « these animals are not at all dangerous.»

Nevertheless, Marie-Antoinette managed to slip from her saddle and have a harmless fall. Her ladies, much alarmed, flew to her assistance. She sat on the ground, suppressing a strong inclination to laugh, but would not be raised till they had ascertained « what was the etiquette to be observed when a dauphine of France fell from a donkey.» History does not enlighten us as to the rules observed on this momentous occasion, or the decision of « Madame l'Etiquette.»

The Dauphine continued to ride her donkeys, but with an ever-increasing desire for real equestrian exercise, notwithstanding the strong objections of her mother, who wrote that she would spoil her complexion and her figure, besides many other evils. Still the wilful young Princess longed more and more for a horse instead of the humble substitute.

Madame Adelaide—whether from a good-natured wish to satisfy her, or from a more

Digitized by Google

treacherous motive, does not seem clear—suggested that she might set out for one of her donkey excursions, sending beforehand an equerry with a horse, and that at a stated place she might meet the horse and dismiss the donkey. The Dauphine, though strongly tempted, pleaded the fear of displeasing her mother, also that the King might refuse his permission; but Madame Adelaide overruled all scruples, and finally the Dauphine consented. At the appointed place the horse met her, and the young Princess rode with great delight and no danger, an equerry holding the bridle, and several attendants walking by her side. Marie-Antoinette enjoyed her ride, and not less the prospect of seeing «how Mercy would look,» as she told the Duchesse de Chaulnes, who, of course, immediately repeated the childish jest to Mercy. The latter delayed attending her evening circle for a day or two, although he had letters from the Empress to deliver; but finally he made an ominously solemn entrance into the presence of the young Dauphine, who at once called him to her, asking if he knew that she had «ridden a horse.» Mercy bowed low, and gravely answered, «Oui.» The Dauphine then rejoined, with evident nervousness: «I was in great haste to tell you, but I did not see you, although every one immediately congratulated me on what had given me so much pleasure.»

Still solemn, Mercy replied that he should be much mortified if she supposed that he could join those who complimented her; that as he had real zeal and respect for what concerned her, he could only be grieved at what he thought injurious and likely to displease the Empress.

At this the poor girl's countenance changed, and, exceedingly frightened, she said earnestly, with childlike simplicity: «You would throw me into despair if you said that I could grieve the Empress; I assure you that I am in great anxiety,» then eagerly bringing forward as her justification the King's consent and her wish to please the Dauphin by sharing his favorite exercise. Mercy made no reply, but solemnly delivered the letters, and retired, leaving poor Marie-Antoinette more frightened than ever. The whole, according to modern appreciation, would seem to be a case of «much ado about nothing.»

The next day the Princess sent for Mercy, and entreated him to take her part and to justify her in the sight of her mother, the Empress, which he consented to do, provided she would promise not to follow hunts on horseback or to gallop. Mercy, in fact, warned Maria Theresa that as the King had consented, and the Dauphin had approved, it would be impossible to prevent Marie-Antoinette from continuing to indulge in exercise on horseback, and that the fruitless attempt might have injurious consequences with regard to the moral authority of the Empress over her daughter. Maria Theresa answered that she knew her daughter sufficiently well to be quite convinced that nothing would prevent her from doing anything that she strongly wished to do; but that, nevertheless, she would write to her.

Marie-Antoinette waited with great anxiety for her mother's answer with regard to equestrian exercise, and eagerly asked Mercy if he had «good news» to give her. The letter of Maria Theresa, although hardly satisfactory, sufficed as a half authorization, of which she took advantage heartily. «You say that the King approves, also the Dauphin; they must dispose of all concerning you. I have given them my pretty Antoinette.» But the Empress dwells at length on all the evils which may result from this concession, and concludes: «Now that I have laid all this before you, I shall say no more, and shall try not to think about it.»

Marie-Antoinette had carried her point, and this was all for which she really cared. Notwithstanding her childish wilfulness, her nature was so bright and amiable that it was easy for her to win general popularity; but in what concerned the King her life was a perpetual struggle with court cabals, which created incessant difficulties.

Still, the pretty and winning Dauphine managed playfully to keep in favor with «papa,» as she called the King. The Dauphin, heavy and almost stupid as he seemed, was more and more captivated by his young wife, submitting to be scolded by her for his uncivilized ways, and ever ready to further her wishes, even when contrary to his own. He hated dancing, but as she liked it he arranged to have a ball every Monday in the private apartments of the young couple, but without ceremony, the ladies wearing white dominoes, the gentlemen their ordinary court dress. These balls were highly approved by Maria Theresa as «a great advantage to the Dauphin,» whose somewhat boorish manners really considerably improved, while he retained, nevertheless, the good-natured simplicity which had always characterized him. Madame de Noailles having given a ball in her own private apartments, the Dauphin took his young wife on

AFTER A PHOTOGRAPH BY BRAUN, CLEMENT & CO. N. Y. OF THE PAINTING BY JEAN-MARC NATTIER.

his arm and walked in unexpectedly, saying graciously to the hostess: «I hope, madame, that you will admit both husband and wife. We come not to inconvenience you in any way, but only to share your amusements.» This condescension was highly appreciated by all present, and the Dauphine was credited with having civilized the young Prince.

The minute difficulties and inconveniences which beset the Princess in her daily life would hardly be believed but for the testimony of competent witnesses. Mercy states in a letter to Maria Theresa: «I must call attention to the fact that the Dauphine, whose purse is nominally of six thousand livres[1] a month, has in reality not a single crown at her disposal. There are scandalous abuses here as regards money matters. The Dauphine's purse is given into the care of her treasurer, who keeps back two thousand five hundred livres every month for pensions granted by the late Queen, and which have fallen on the Dauphine without her knowing anything about them. Her *garçons de chambre* receive one hundred louis a month for the Dauphine's card-playing. Whether she wins or loses, no one sees anything more of this money. The bedchamber women take charge of all the remainder, which is usually distributed in gifts suggested by Madame de Noailles, with the forced consent of the Dauphine, who thus keeps no money at her own disposal. She is certainly not well dressed, but that is the fault of the lady who has the charge of her wardrobe. This lady pays little attention to it, and has not much taste.»

[1] The livre was rather more than the modern franc.

Digitized by Google

The Dauphine was allowed a sum of 120,000 livres for her dress alone; but she never interfered in any way, and everything was decided, without consulting her, by the *dame d'atour*, who ordered what was necessary according to her own appreciation, and settled the bills of the tradesmen. At the end of the year she presented incomprehensible accounts, which the Dauphine was required to approve, with the result that her expenses greatly exceeded the allotted sum, through no fault of hers. Mercy was called to the rescue, and discovered the most absurd extravagance. For instance, three ells of ribbon, to tie the powdering-gown of the Dauphine, were put down daily; also several ells of silk (daily!) to cover the basket in which her gloves and fan were deposited, with many other items of the same kind, noted by Mercy in solemn reprobation. With all this waste, the arrangements about her were strangely deficient in comfort.

The Dauphine followed the King's hunting-parties two or three times a week, and in her ready good nature she desired cold meats and refreshments to be taken in her carriage, which she herself distributed among the courtiers as a collation. The natural consequence was that all the young men crowded about her, with the result of too much freedom and buoyancy of spirits on all sides, which greatly displeased the King. The kindness of Marie-Antoinette, which often led her into difficulties, was not deficient on more serious occasions, and no accident or injury to any of her servants ever failed to awaken her warmest sympathy, which was shown in the most efficacious manner.

Her mother's severe letters, the troublesome interference of Mercy, the exhortations of the Abbé de Vermond, never ruffled her sweet temper or provoked a word of rebellion. «I admire every day her gentleness and docility,» says the Abbé de Vermond. «She allows me, in the presence of her dame d'honneur and her bedchamber women, to express truths which, though respectfully worded, are firm, and stronger than what I used to say to her at Vienna in her private room. I know that I owe her confidence to the approbation of the Empress; but is it not remarkable that it should be persistent, and that the Dauphine should have the moral courage to keep near her a troublesome monitor in the midst of so much flattery and adulation?»

But although always gentle and submissive, there was one point in which no satisfactory result could be obtained—that of regular occupation. She was full of good resolutions, sincerely promised amendment, and with much self-reproach—went on as before! She romped with children; she played with dogs; she laughed and chatted with «my aunts»; she followed hunts even on horseback, notwithstanding her word pledged to her mother; she danced; and so her life passed despite her dread of «mama's» scrutinizing letters.

The attention of the wise mother became, however, engrossed by a more serious matter. The fall of Choiseul was not only of the greatest importance to Maria Theresa, by withdrawing from the French government her most valuable friend, but it was also an event which gained greater magnitude as a criterion of the influence to be attributed to Madame du Barry. Choiseul had always treated the favorite with the contempt that she deserved, and the ladies of his family had spoken of her in unsparing terms. Consequently she hated the whole family, and was determined to remove their obnoxious presence from Versailles, leaving nothing untried to reach this end. She playfully but incessantly teased the King, winding up her arguments by tossing oranges as she laughingly repeated, «Jump, Choiseul! Jump, Praslin!»[1] Meanwhile her supporters importuned the King more seriously, calling his attention to the supposed danger of Choiseul's liberal views and his alleged connivance with the rebellious Parliament. The peace of the indolent old monarch was sufficiently disturbed to induce him to get rid of Choiseul at any cost. The prime minister was informed of his disgrace by a stern letter from the King expressing great dissatisfaction with his services, and enjoining him to retire to his country house, which he was not to leave without permission.

Mercy writes shortly afterward (April 16, 1771) to Maria Theresa, giving a strange picture of the court:

«It is almost impossible that your Majesty should form a correct idea of the horrible confusion which reigns here. The throne is disgraced by the extensive and indecent influence of the favorite, and the wickedness of her partizans.

«The nation shows its feeling by seditious remarks and disloyal pamphlets, where the person of the sovereign is not spared. Versailles is the abode of treachery, spite, and hatred; everything is done through motives of personal interest, and all honorable feeling seems to be discarded.»

[1] The Duc de Choiseul was also Duc de Praslin.

LOUIS XVI

MARIE-ANTOINETTE AT THE AGE OF 15 YEARS

Digitized by Google

Madame du Barry had proved her power, and Maria Theresa was too good a politician not to draw her own conclusions as to the necessity of conciliating the favorite. But here she met with unexpected resistance from Marie-Antoinette, who would not stoop to any advances toward a woman she despised.

In vain Maria Theresa brought forward the plausible argument that the Dauphine had no right to judge her grandfather or to look upon Madame du Barry's position as different from that of any other lady admitted to the court. For once Marie-Antoinette was rebellious, and plainly declared to her mother that she would do anything to satisfy her except what was «contrary to honor.»

Great was the wrath of the Empress, who in her reply showed so much indignation at the insinuation that she could advise anything «contrary to honor» that the poor young Dauphine finally was driven to half measures, which, as usual, satisfied no one, and decidedly displeased Madame Adelaide, whose aversion for Madame du Barry was not concealed, and who required the same attitude from her nephew's wife. In all these difficulties the Dauphin was too timorous and too undecided in his actions to be of any real use or support to the young wife thus besieged by conflicting advice and exigencies. Although the marriage of the Comte de Provence was in serious preparation, the royal brothers were still such absolute school-boys that they quarreled and fought even in the presence of Marie-Antoinette, who on one occasion hurt her hand in trying to separate them. They were all, in fact, mere children, and should be judged as such.

The Dauphin had received a good, plain education, and possessed a considerable amount of stolid good sense, with the best and most honorable feelings. He was thoroughly kind-hearted and good-natured; unfortunately, he was aware of his external deficiencies, and was consequently so painfully shy and timid that his natural awkwardness was considerably increased. He seldom knew what to say or do, or when it should be said or done. This unfortunate hesitation followed him through life, and was the principal cause of many misfortunes. Even toward his young wife, whom he deeply loved, he could not bring himself to show his real affection; and although always kind and particularly good-natured, he seemed indifferent and even cold in his treatment of her.

The Comte de Provence was more intelligent than his elder brother, and rather pedantic, fond of classic studies and quotations. He was jealous of the Dauphin's superior rank, and quite convinced that he himself was far more capable of filling his position. In this he was, perhaps, not wholly mistaken. He was reserved and prudent, but neither straightforward nor sincere; he had, however, far more tact than the Dauphin, and knew better how to steer his way through court intrigues and cabals.

The Comte d'Artois was a complete scapegrace, who behaved like a spoiled child and followed his very questionable tastes without restraint. Nevertheless, his appearance and manners distinguished him favorably from his brothers—that is, when he chose to behave like a gentleman, which was not always the case.

The question of the marriage of the Comte de Provence, soon to be followed by that of the Comte d'Artois, was a subject of fresh anxiety to Maria Theresa and her faithful Mercy. Would the Princess chosen be a friend or an enemy? What would be her influence over the King and the «Mesdames»? To the latter the final choice of a princess of Savoy, daughter of the Prince of Piedmont (afterward King of Sardinia), was agreeable,—any one rather than an Austrian,—and many cutting insinuations were thrown out by Madame Adelaide, sometimes endured with seeming unconsciousness, sometimes taken up sharply, by Marie-Antoinette.

«If mama could see how things go on here, she would be less severe in her judgment of me,» said the Dauphine to Mercy; «matters are really unendurable.»

The Princess of Savoy arrived—shy, insignificant, and absolutely devoid of beauty. Her portraits give the idea of a dark, full face with coarse features and thick lips, redeemed only by fine dark eyes. But the first impression of the King was unfavorable. «She is very ugly,» was his characteristic remark. The Dauphin, with his usual blunt sincerity, expressed much the same opinion to his brother, who, to his credit, replied with dignity, «I like her as she is.»

There could be no comparison between the Dauphine and her sister-in-law—a fresh source of envy, increased by the marked preference shown by the King to the pretty and graceful Dauphine. With her natural warmth of feeling, aided by the politic advice of Mercy, Marie-Antoinette tried in every way to propitiate the Comtesse de Provence, and, though with some fluctuations due to ill-natured remarks from the «Mesdames,» she succeeded in establishing friendly intercourse; but from time to time

small incidents revealed a degree of duplicity on the part of both the Comte and Comtesse de Provence which especially shocked and chilled the open-hearted frankness of Marie-Antoinette.

On one of these occasions she ran to her husband and embraced him, saying earnestly: «I feel that I love you every day more and more. Your honesty and frankness charm me, and the more I compare you with others, the more I know how much greater your worth is than theirs.»

This effusive speech, although so evidently sincere, did not suffice to give confidence to the too diffident Prince. Some time after this incident he suddenly asked his wife, «Do you really love me?» She earnestly replied, «Indeed I do; and every day I esteem you more highly.»

He seemed happy on receiving this assurance; but his uncouth manners and awkward ways often irritated the Dauphine, who lost patience and reproved him sharply. He showed no anger at these remonstrances, but his eyes would fill with tears. When she saw this she would embrace him, and her own tears would flow; but notwithstanding her efforts and his good intentions, the attempt to civilize the Dauphin seemed hopeless.

As a boy he had been neglected, and, with his very sensitive heart, the absence of all tenderness and affection about him had made him shrink within himself and become incapable of expressing what he well knew how to feel. After the death of his mother he had said mournfully: «Whom can I love now? No one loves me here!» He now loved his wife, but could hardly believe that she returned his affection.

The death of the Duc de la Vauguyon delivered Marie-Antoinette from an adversary, if not an enemy. Unhappily, the Duc d'Aiguillon, who had replaced Choiseul as prime minister, headed the anti-Austrian party, and was on terms of intimate friendship with Madame du Barry. This was enough to cause intense dislike on the part of Marie-Antoinette, which she showed with her characteristic but impolitic frankness. In vain her wary mother and Mercy remonstrated, both understanding only too well that she was wilfully creating a dangerous enemy.

The marriage of the Comte d'Artois to the sister of the Comtesse de Provence soon followed, attended by the usual intrigues. The Princess was not endowed with more beauty or grace than her sister, though with a better complexion—her only superiority. But she was less intelligent and more disagreeable in manner. From the first arrival of the Piedmontese princesses, the daughter of the German Cæsars could not maintain her position without incessant struggles. In her dislike for court trammels, she had gladly allowed Madame Adelaide to continue to preside over the official circle in the evenings, which was her own prerogative as future queen; but Mercy now insisted upon her right being immediately claimed, lest it should be usurped by the Comtesse de Provence, who would thus be placed in a superior position.

«Trifles light as air» caused incessant squabbles, notwithstanding the amiable efforts of Marie-Antoinette to promote peace and affectionate intimacy with her sisters-in-law. The aunts interfered, taking part now with one, now with another, but more frequently blaming Marie-Antoinette.

The state visit of the Dauphin and Dauphine to Paris, which ought to have taken place on their marriage, but which had been constantly deferred, was at last granted by Louis XV. The Dauphine won all hearts by her grace and charm of manner; even the Dauphin sufficiently conquered his habitual shyness to produce a favorable impression; and when they both appeared on that balcony of the palace of the Tuileries [1] where so many princesses have been presented to the population of Paris, the enthusiasm with which the Dauphine was greeted knew no bounds.

Marie-Antoinette, describing the scene to her mother, the Empress, exclaims: «How happy we should feel in our state, on winning so easily the love of a whole nation! And yet nothing is so precious. I felt this deeply, and shall never forget it.»

The Empress continued her exhortations and reprimands, without ever provoking rebellion on the part of her really remarkably submissive daughter, who tried to improve, renewed her resolutions, and, though with fluctuations, read more regularly with the Abbé de Vermond, studied music, and made considerable progress, especially on the harp, which she particularly liked. She also danced very gracefully and well. The poor Dauphin took lessons with her, but with his ungainly figure and heavy steps never reached the desired result. The Empress complained of her daughter's letters as too laconic and cold; but when exhorted by Mercy on the subject of showing affection to her mother, poor Marie-Antoinette replied: «I love the Empress; but I fear her, even at a distance. When I write I never feel at ease with her.»

[1] The last royal bride who appeared there was the Empress Eugénie.

Digitized by Google

To this Maria Theresa replies: «Do not say that I scold, that I preach, but say: 'Mama loves me, and has constantly my advantage in view; I must believe her and comfort her by following her good advice.' You will find the benefit of this, and there will then be no further shadow between us. I am sincere, and I exact great sincerity and candor toward myself.»

But in writing to Mercy the Empress speaks severely of Marie-Antoinette. «Notwithstanding all your care and discernment in directing my daughter, I see only too clearly how unwilling are her efforts to follow your advice and mine. In these days only flattery and a playful tone are liked; and when, with the best intentions, we address any serious remonstrance, our young people are wearied, consider that they are scolded, and, as they always suppose, without reason. I see that this is my daughter's case. I shall, nevertheless, continue to warn her when you see that it may be useful to do so, adding some amount of flattery, much as I dislike that style.» She adds that she has not much hope of conquering her daughter's «indolence.»

Notwithstanding her mother's asperity, Marie-Antoinette really loved her; if she knew that the Empress was ill in health or unhappy, she wept bitterly and seemed miserable. With regard to the vexed question of the readings with the Abbé, the few books the titles of which are quoted are so uninteresting that her dislike for them cannot cause surprise.

The enthusiastic reception which the young couple had met from the Parisians led them to return to Paris and appear at the opera and theaters, where they were always well received. But the young members of the royal family, encouraged by the free use of these pleasures, took a strong fancy to see the public masked ball at the Opéra. Every precaution being taken as to the manner in which they were surrounded, so as to obviate the evident drawbacks to such an amusement, the King consented to the freak, which was much enjoyed. Unfortunately, this was the beginning of the excessive liking shown at a later period by Marie-Antoinette for such diversions.

Theatricals also became a passion. The young princes and princesses got up charades and even plays in their private apartments, with only the Dauphin as spectator; and so far there was no harm. The Dauphin, seeing how much all this was enjoyed, established a small theater in his apartments, where short, amusing plays were performed by professional actors; these, too, were received with delight. There were, however, balls given in the palace which the Dauphine liked sufficiently to remain till six o'clock in the morning; she then heard mass, and went to bed till two o'clock in the afternoon. On such occasions it may be supposed that the literary interviews with the Abbé were omitted.

The pleasures which they shared with the King, had other serious drawbacks. In one evening at the King's play of lansquenet, the Dauphine won twelve hundred louis.[1] Much annoyed at her success, she tried to lose the sum again; finally, at the end of the game, she retained seven hundred louis. The next morning she sent fifty louis to each of the two principal parishes of Versailles for the poor, and consulted Mercy as to the disposal of the remainder, declaring that she would keep nothing for herself. Mercy advised her to divide the sum between her servants, who had now remained a year and a half without wages; this the Dauphine effected immediately, which caused general satisfaction. Mercy notes that she was not naturally generous, and in general she did not spontaneously show even sufficient liberality for the requirements of her high position.

On April 28, 1774, Louis XV felt the first symptoms of illness while at Trianon, his favorite summer palace adjoining Versailles, to which he returned immediately. During the night of the 29th the characteristic eruption of smallpox appeared in its worst form. With admirable devotedness, the King's daughters came to his bedside, notwithstanding the dreadful danger of contagion, and remained there day and night till his death. Marie-Antoinette had asked admittance to his room, but, for very evident reasons, neither the heir apparent nor his wife was allowed to breathe an atmosphere so dangerous that more than fifty persons took the smallpox, merely from having crossed the gallery before the door of the King's room. Monsieur de Létorières took the disease fatally, merely through having opened the door to look at the King for two minutes.

Regardless of danger, the Archbishop of Paris came to Versailles. He was anxious to secure the means of repentance and a Christian death to the wretched sinner; but, at the same time, he declared that he would not allow the last sacraments of the church to be administered to the dying man unless Madame du Barry were previously dismissed

[1] The louis was then worth nearly twenty-five francs (between four and five dollars).

Digitized by Google

from the palace. On the 4th of May the Duchesse d'Aiguillon took her to a country house belonging to the Duc d'Aiguillon. There was consequently no further obstacle to the administration of the last rites of the church. Shortly afterward his condition became more alarming, and it was evident that the end was at hand.

The courtiers crowded in the large room called the «Salle de l'Œil de Bœuf,» where they habitually awaited the King's pleasure. The carriages were in readiness to take the royal family to Choisy; a lighted candle placed in the window of the King's apartment was to be extinguished as the signal for departure, which the fear of contagion, in addition to other considerations, caused to be impatiently expected.

The candle was extinguished; the great clock was stopped at the fatal hour—3 P. M. It was the 10th of May, 1774. The rush of the courtiers, with a noise like thunder, as they hastened to pay homage to the new sovereign, was the first announcement of the great event to the young heir and his wife. Louis XVI and Marie-Antoinette burst into tears, and with a joint impulse fell on their knees, exclaiming: «God help us and protect us! We are too young to reign!» The King was not yet twenty; the Queen was in her nineteenth year.

Madame de Noailles came into the room where they had remained together in seclusion and anxious expectancy, and addressing them by their new titles, begged them to receive the dignitaries who had come to pay homage to the King and Queen. The Queen appeared leaning on the King's arm; weeping bitterly, she received the first visits of the royal family and the principal officials; but the physicians urged the necessity of immediate departure. The carriages were ready, and the whole court set off for Choisy, leaving the wretched remains of the late sovereign to the care of servants and workmen. The unfortunate man who soldered the lead coffin died within twenty-four hours. The body was taken to St. Denis, the burial-place of the kings of France, during the following night, with a military escort, followed by the execration of the populace loudly expressed on the way. The scandalous reign of Louis XV was ended; a new reign was beginning.

«Le roi est mort!»

«Vive le roi!»

Anna L. Bicknell.

THE BLOOD-RED BLOSSOM.

«WHENCE comest thou, Child, when April wakes,
So phantom-fair through these green brakes?
Why wilt thou follow, fond and fain,
My footsteps to the wood again?

«Why, as I rest by this gray rock,
Do thy wet eyes the violets mock?
Oh, tell me why in thy white bosom
Thou ever wearest the blood-red blossom?»—

«Thou comest to watch the violets die,
And over early love to sigh;
Thou comest to watch the wild rose waken,
And drop thy tears o'er love forsaken.

«And wouldst thou know why these three years,
When April wakes, I rise in tears?
And wouldst thou know why in my bosom
I wear forever the blood-red blossom?

«'T was here I grew, warm nature's child,
Too young to be by love beguiled;
I took the mantle of the spring
To be my infant covering.

«My heart was full of tender loves,
Soft as a dove-cote full of doves;
I brought the violets kisses true,
Warm as the sun and fresh as dew;

«Loved to-day and wished the morrow,
Went blue-eyed and knew no sorrow,
Dreaming what I saw, and seeing
What I dreamed, a gentle being;

«Seeing, dreaming, loving all,
What should such a child befall,
Save the sunshine, save the breeze
Blowing to the shining seas?

«Oh, fair I flowered in opening youth,
Too pure to doubt that love is truth;
I took the fragrance of the May
To be the sweetness of my clay.

Digitized by Google

«Came the spirit of desire;
Came the finding of the lyre;
Came the night without repose;
Came the singing of the rose.

«I saw it open, fresh and fair,
And spread upon the country air;
I saw the shy bud swell apart,
And at the last give all its heart.

«I felt a tremor seize my breast,
And hopes unknown and unconfest;
I only knew some joy to be
By joy that then was dear to me.

«And down I knelt, and kissed it oft—
Kisses many, pure, and soft;
I thought—I was so childish wise—
God planted it in Paradise.

«Oh, blithe beneath the branch of June
My heart danced with the stars in tune;
And, throb on throb, deep nature's flood
Grew warm and gladdened in my blood.

«Oh, love began as Phosphor bright
Melts on the rosy breast of light;
Oh, love began as this wild wood
Quires with its red-throat multitude!

«I gave my body to sweet desire;
I gave my soul to the shrill lyre;
And all night long, without repose,
I sang the beauty of the rose.

«And I forgot the violets dead,
And many a lily's golden head;
And I passed by all gentle flowers
Wherewith love decks his mortal bowers.

«My blood is faint, my cheeks are pale,
Since I began the deathless tale;
And thee I follow, fond and fain,
When to the wood thou goest again.

«By this gray rock I stand, a child;
My eyes are wet, my looks are wild,
I see a deep wound in thy breast,
And tears bedew thy secret rest.

«The wood shall wilt, the grass shall wither,
But with the spring will I come hither;
And when from all things here I fade
With lovers dead shalt thou be laid.

«And now thou knowest why these three years,
When April wakes, I rise in tears;
And now thou knowest why in my bosom
I wear forever the blood-red blossom.»

George Edward Woodberry.

HUGH WYNNE, FREE QUAKER:

SOMETIME BREVET LIEUTENANT-COLONEL ON THE STAFF OF HIS EXCELLENCY GENERAL WASHINGTON.

BY DR. S. WEIR MITCHELL,
Author of «Far in the Forest,» «Roland Blake,» etc.

WITH PICTURES BY HOWARD PYLE.

XXIX.

«WHEN,» continues Jack, «I found Delaney had gone away, I was in a quandary. I by no means desired to go alone to see Captain Wynne. At last I made up my mind to ask Hugh. If there came a quarrel, it should be mine. I resolved there should be no fight if I could help it, and that there might be trouble if Hugh were first to see his cousin I felt sure. The small sword was out of the question, but the pistol was not. I intended no such ending, and believed I had the matter well in my own hands. When I found Hugh at the quarters I told him quietly the whole story.

«That he was in a mad rage at his aunt I saw. I hate to see Hugh smile in a certain way he has, with his lips set close. He said nothing save that he would go with me, and that I was altogether in the right. He was reluctant to promise he would leave me to speak alone, but at last I did get him to say so.

«Mr. Arthur Wynne was alone in his room at the inn, and would see us. He was writing, and turned from his table, rising as we entered. He looked red and angry, in a soiled dressing-gown, and I thought had been drinking. He did not ask us to be seated, and we remained standing until our unpleasant talk came to a close.

«He said at once, ‹My good cousin, I presume I owe to you the note I have had from Miss Peniston to-day.›

«‹You do not,› said Hugh, not looking at all displeased.

Digitized by Google

«‹Indeed? I had hoped you had come to offer me the only satisfaction in life your slanders have left me. My health is no longer such as to forbid the use of a pistol.›

«‹Pardon me,› said I, ‹this is my affair, and not Mr. Wynne's. I have had the honour of late to hear Mr. Delaney relate what passed in the jail.›

«‹Have you, indeed? An old story,› said Arthur Wynne.

«‹None the less a nasty one. I had also the pleasure to tell Miss Peniston that you suggested to the traitor Arnold to use my friend's known loyalty as a safe means of getting to Sir Henry Clinton a letter which was presumably a despatch as to exchange of prisoners, but was really intended to convey to Sir Henry the news that the scoundrel Arnold was willing to sell his soul and betray his country.›

«‹Who told you this nonsense?› said the captain, coming toward us.

«‹Major André,› said I. ‹You may have my friend's word for that.›

«‹It is a lie!› he cried.

«‹Men about to die do not lie, Mr. Wynne. It is true.›

«The man's face changed, and he got that slack look about the jaw I have heard Hugh describe. To my astonishment, he did not further insist on his denial, but said coldly, ‹And what then?›

«‹Nothing,› said I. ‹Having told what I knew to a woman, I had no mind to have you say I had slandered you behind your back. That is all.›

«‹Is it, indeed? And which of you will give me the honour of your company to-morrow?›

«‹Neither,› said I. ‹We do not meet men like you.›

«His face flushed. ‹Coward!› he said.

«‹If I am that,› said I, pretty cool, and shaking a little after my silly way, ‹you know best, and will remember, I fancy, for many a day. Good-morning, sir.›

«On this he cried out, ‹By——! this shall not pass! I—I will post you in every inn in town, and my cousin too. No man shall dare—›

«‹Stop a little,› said Hugh. ‹If it comes to that I shall know what to do, and well enough. I have no desire to put my own blood to open shame, but if this matter goes further, I shall publish Mr. Delaney's statement, and that, sir, will close to you every gentleman's house here and in London too.›

«‹And shall you like it better to have it known that you were General Arnold's agent?›

«I saw Hugh's face lose its quiet look, and again he smiled. ‹In that case,› he said, ‹I should tell my own story and Mr. André's to his Excellency, and then, my good cousin, I should kill you like a mad dog, and with no ceremony of a duel. You warned me once when I was a mere boy. It is my turn now. As there is a God in heaven, I will do as I have said.›

«‹Two can play at that game,› said Arthur. Hugh made no reply.

«And on this we left the man standing, and went forth without another word.

«‹I think his fangs are drawn,› said Hugh. And indeed that was my opinion. I made up my mind, however, that at the least unpleasant rumour of any kind, I would take such a hand in the matter as would save Hugh from having to go to extremities.»

With the date of a week or so later I find added: «The man thought better of it, I dare say, when the drink wore off; how much of his folly was due to that I cannot tell. It was plain that my dear Darthea had let him go at last. Was it because her sweet pity distressed her to wound a man once dear that she was held so long in this bondage? or was it that absence, said to be the enemy of love, was, in a woman of her sense of honour, a reason why she should not break her word until she had a more full assurance of being right?

«I think he slowly lost his place in the heart won when Darthea was younger and perhaps carried away by vain notions which lost value as time went on. Such men have for the best of women a charm we cannot understand.»

I have left Jack to tell a part of my life which I am glad to leave to another than I. I heard no more of my cousin, except that he had made up his mind to go home under his parole. This did not fill me with grief. I had the sense to know that for many a day Darthea were better left alone.

My Aunt Gainor had recovered from the remorse which, as usual with her, followed upon some futile attempt to improve the machinery of other folks' fates. In fact, although Darthea closed her doors upon Mistress Wynne and would on no account see her, my aunt was already beginning to be pleased with the abominable trap she had set, and was good enough to tell me as much.

For three days after Jack had informed me as to the drama my aunt had planned I stayed away from her, being myself in no very happy state of mind, and unwilling to trust myself. When at last, of a Saturday afternoon, I came in on Mistress Wynne, she got up from her

Digitized by Google

accounts, which she kept with care, saying at once: «It is a week since you were here, sir, and of course I know why. That long-tongued girl-boy has been prating, and your lordship is pleased to be angry, and Darthea is worse, and will not see me because I had the courage to do what you were afraid to do.»

«Upon my word, Aunt Gainor,» said I, «you are a little too bad. I was here four days ago, and have I said an impatient word? If I was angry I have had no chance to say so.» Nor had I.

«Then if you are not angry you ought to be.» She seemed to me bigger than ever, and to have more nose than usual. «You ought to be. I made a fool of myself, and all for you; and because I have burned my fingers in pulling your goose out of the fire, you must get into a passion. You have no need to smile, sir. I suppose it were finer to say chestnuts, but a goose she is, and always will be, and I love her like a child. Your soft-hearted Excellency was to see me last week, and saying that he had no children, I, that have no right to any, said I was as ill off, and we looked at each other and said nothing for a little, because God had given to neither the completeness of life. Is he stern, sir? I don't think it. We talked of General Arnold, and of poor Peggy his wife, and as to all this he was willing enough, and frank too. Despite Dr. Rush and Mr. Adams, he can talk well when he has a mind to. But when I said a word of poor André, I had better have kept my tongue quiet, for he said quickly: 'Mistress Wynne, that is a matter I will never hear of willingly. I ask your pardon, madam.' I could do no more than excuse my want of thought, and we fell to discussing tobacco-growing.»

«But what more of Darthea?» said I, for all the generals in the world were to me as nothing compared with one little woman.

«Oh, there is no more, except that I am unhappy. I will never again be kind to anybody. I am only a miserable, useless old maid.» And here she began to cry, and to wet a fine lace handkerchief.

Just now comes in saucy Miss Margaret Chew,—we call her Peggy,—and is rather flustered by my aunt in tears. «Oh, Mistress Wynne,» she says, «I beg pardon. I—»

«What for?» says my aunt. «My Manx cat has eaten the raspberry jam. That is all.» Whereon we laugh, and the little lady, being pretty-spoken, says she wishes she was Mistress Wynne's cat, and while my aunt dries her eyes goes on to say, «Here is a note for you to dine with us and Mr. Washington, and I was bid write it, and so I did on the back of the queen of hearts for a compliment, madam,» and with this she drops a curtsey.

My aunt, liking beauty and wit combined, kissed her, and said she would come.

This diversion cleared the sky, which much needed clearing, and Miss Chew being gone away, my aunt detained me who would willingly have followed her.

After that I comforted her a little as to Darthea, and said she could no more keep up being angry than a June sky could keep cloudy, and that, after all, it was just as well Darthea knew the worst of the man. I related, too, what Jack had told, and said that now my cousin would, I thought, go away, and we—thank Heaven!—be quit of him forever.

«And yet I must see him once,» she said, «and you too. I have put that deed in the hands of James Wilson, and he has taken counsel of our friend Mr. Attorney-General Chew.»

«I suppose you are right, Aunt Gainor,» said I. «The man is bad past belief, but he has lost Darthea, which is as much punishment as I or any could desire. I think with you this estate business should some way be settled, and if it is to be his, I have no mind to leave the thing in doubt, and if it be mine or my father's, I for one do not want it. I have enough, and no wish to muddle away my life as a Welsh squire.»

«We shall see,» said my aunt, not at all of my opinion, as I readily perceived. «We shall see. He shall have justice at our hands, and James Wilson will be here at four to-morrow, and you too, Hugh, whether you like it or not.»

I did not, and I said so. She had written my cousin that she desired to see him concerning the deed. Whether from interest, or what, I know not, he had replied that he would be with her at half-past four.

Thus it happened that I was to see Arthur Wynne once more, and indeed I felt that my aunt was right, and that it were as well all our accounts with this man were closed. Just how this would come about I knew not yet, but closed they should be; as to that I was fully advised in my own mind.

XXX.

AT four punctually arrived my friend the famous lawyer. He was not a handsome man, but possessed a certain distinction, which he owed to a strong face, well-modeled head, and a neatly powdered wig, the

hair being tied back, after the fashion of the bar, in a black queue-bag with, at the end, a broad black ribbon. He took the snuff my aunt offered, carefully dusting the excess off the collar of his brown velvet coat, and sat down, saying, as he took some papers from a silk bag, that it was altogether an interesting and curious question, this we had set before him. And why had we held this deed so long and said nothing?

I told him of my father's and my grandfather's disinclination to open the matter, and why and how the estate had seemed of little worth, but was now, as I believed, more valuable.

Hearing this, he began to question my aunt and me. He learned from our replies that at the time I got the deed from my father none but my parent had any clear idea of what this old family compact meant, but that now we were in possession of such facts as enabled us to understand it. I then went on to make plain that my aunt was full of the matter, and eager, but that I had no inclination at any time to enter on a long and doubtful litigation in another country.

To myself I confessed that I desired no immediate settlement until I saw what Arthur meant to be at. It was one more hold on a scamp still able to do me mischief. If it was clearly his father's estate, and not ours, he should soon or late be relieved of any possible doubt this deed might still make as to questions of title.

When Mr. Wilson turned to my aunt he found a more warlike witness. She delighted in the prospect of a legal contest.

«When a child,» she said, «I used to hear of my father's having consented to make over or give away to his brother William an embarrassed estate, and that the crown officers were in some way consenting parties to the agreement, my father engaging himself to go to America when let out of jail.

«There is no doubt,» she went on, «that Wyncote was under this arrangement legally transferred by my father to his next brother. Our Welsh cousins must have this conveyance. It seems, from the deed you have examined, that privately a retransfer was made, so as, after all, to leave my father possessed of his ancestral estate. If ever he chose to reclaim it he was free to do so. The affair seems to have become more or less known to the squires in that part of Merionethshire. William was, we presume, unwilling to take an unfair advantage of his brother's misfortune, and hence the arrangement thus made between them.»

«You state the case admirably,» said the lawyer. «And what else is there?»

«But little. Letters of affection and esteem came and went at long intervals. I recollect hearing bits of them, but cannot say if the estate matter were ever mentioned. After William's death the correspondence may or may not have ceased. His brother Owen came into the property without interference, and, dying, left a young son, Owen, who is still alive. His son Arthur, Captain Wynne, is to be here to-day. There are personal matters involved, into which there is no need to go. The Welsh branch is no doubt desirous in some way to clear the matter; but having held the estate for a century they are, we may presume, not very eager to give it up. In justice to Owen Wynne, I may say that it is probable that because of a long minority he only began, as I think, a few years ago to have any doubt as to his title. I may add,» my aunt went on, «that Captain Wynne came and went during the war, and that only of late has this deed turned up.»

«And your brother is quite unfit to help us?» said Wilson.

«Yes; and unwilling if he were able.»

«I see, madam, I see; a difficult business.»

«And this deed?» said my aunt; «you were about to speak of it.»

«It is,» he replied, «a simple act of sale for one shilling, a reconveyance of Wyncote from William to Hugh, the date October 9, 1671. It is in order, and duly witnessed.»

«Well?»

«As to its present value, Mistress Wynne, there is a consensus of opinion between the Attorney-General and myself.»

«That is to say, you agree,» said my aunt.

«Precisely, madam. It is our belief that the lapse of time has probably destroyed the title. There is no annexed trust, on William's part, to hold for his brother's use, and the length of undisputed, or what we lawyers call adverse, possession—something like an hundred years or more—*seems* to make it impossible for my friends to oust the present holder. Am I clear?»

«Too clear, sir,» said my aunt. «Is that all?»

«No; I said, ‹seems.› There are other questions, such as the mention of the matter in letters. If the succeeding brothers in letters or otherwise from time to time acknowledged the rights of Hugh Wynne, that might serve to keep alive the claim; if, too, it can be proved that at any time they paid over to Hugh or his son, your brother, madam, rents or dues, as belonging to these American

Digitized by Google

claimants, this too would serve to give some validity to your present claim. It is a question of dates, letters, and of your possession of evidence in the direction of repeated admissions on the part of the Welsh holders.»

My Aunt Gainor was at once confident. Search should be made. She had some remembrance in her childhood of this and that. In fact, my aunt never admitted the existence of obstacles, and commonly refused to see them. Mr. Wilson shook his head dubiously. «There seems to have been negligence or a quite culpable indifference, madam. The time to be covered by admissions is long, and the statutes of 32 Henry VIII and 21 James I, 1623, do, I fear, settle the matter. The lapse in the continuity of evidence will be found after the death of Hugh. Twenty years will suffice, and I am forced to admit that your claim seems to me of small value. It was simply an estate given away, owing to want of the simplest legal advice.»

«Wait until I look through our papers,» said my aunt. «We are not done with it yet, nor shall be, if I have my way, until the courts have had a chance to decide.»

«It will be mere waste of money, my dear lady. Now, at least, you can do nothing. The war is not over, and when it is, none but an English court can settle the title. I confess it seems to be a case for amicable compromise.»

«There shall be none—none,» said my aunt.

«And we are just where we began,» said I.

«Not quite,» he returned. «You may have a case, but it seems to me a weak one, and may lie in chancery a man's lifetime. I, as a friend as well as a lawyer, knowing you have no need of the estate, hesitate to advise you to engage in a suit of ejectment. I should rather counsel—ah, that may be Mr. Wynne.»

It was a clamorous knock at the hall door, which caused Mr. Wilson to cut short his advice with the statement that it would need longer discussion, and that this must be the other party.

It was, in fact, my cousin, who was set down in a chair, as I saw by a glance through the window. When Jack and I had seen him at his inn he had been a little in liquor, and wore a sort of long chintz bedgown wrapper, with his waistcoat buttoned awry—not a very nice figure. He was now Arthur Wynne at his best. He stood a moment in the doorway, as beautiful a piece of manhood as ever did the devil's work. His taste in all matters of dress and outer conduct was beyond dispute, and for this family meeting he had apparently made ready with unusual care. Indeed this, my last remembrance of Arthur Wynne, is of a figure so striking that I cannot resist to say just how he looked. His raiment was costly enough to have satisfied Polonius; if it bore any relation to his purse, I know not. It was not «expressed in fancy,» as was that of the macaroni dandy of those early days. He knew better. As he stood he carried in his left hand a dark beaver edged with gold lace. His wig was small, and with side rolls well powdered, the queue tied with a lace-bordered red ribbon. In front a full Mechlin lace jabot, with the white wig above, set his regular features and dark skin in a frame, as it were, his paleness and a look of melancholy in the eyes helping the natural beauty and distinction of a face high-bred and haughty. The white silk flowered waistcoat, the bunch of gold seals below it, the claret-tinted velvet coat and breeches, the black silk clocked hose with gold buckles at ankle and knee, and a silver-hilted dress-sword in a green shagreen sheath, complete my picture. I wish you to see him as I saw him, that in a measure you may comprehend why his mere personal charms were such as to attract and captivate women.

He came forward with his right hand on his heart and bowed to my aunt, who swept him a space-filling curtsey, as he said quite pleasantly, «Good afternoon, Cousin Gainor; your servant, Mr. Wilson.» To me he bent slightly, but gave no other greeting. It was all easy, tranquil, and without sign of embarrassment. As he spoke he moved toward the table, on which Mr. Wilson had laid his papers and bag. Now, as always, a certain deliberate feline grace was in all his movements.

«For a truth, he is a beauty,» said my Aunt Gainor after our meeting was over. «And well-proportioned, but no bit of him Wynne. He has not our build.» Nor had he.

«Pray be seated,» said my aunt. «I have asked my friend and counsel, Mr. James Wilson, to be present, that he may impartially set before you a family matter in which your father may have interest. My nephew, Hugh Wynne, is here at my earnest solicitation. I regret that Mr. Chew is unable, by reason of engagements, to do me a like favour. Mr. Wilson will have the kindness to set before you the nature of the case.»

Mistress Wynne, sitting straight and tall in a high cap, spoke with dignified calmness.

«At your service, madam,» said the lawyer, looking Arthur over with the quick glance of a ready observer. Before he could go on

Digitized by Google

to do as he was bidden I found my chance to say, «You will be so good, Mr. Wilson, as to state Mr. Owen Wynne's case, as well as our own, with entire frankness; we have no desire to wrong any, and least of all one of our blood.»

«I think I understand you fully,» said Wilson. «A deed has been put in the hands of Mr. Attorney-General Chew and myself, and as to its value and present validity an opinion has been asked by Mistress Wynne and her nephew.»

«Pardon me,» said Arthur; «is not my Cousin John the proper person to consider this question?»

«Assuredly,» returned Mr. Wilson, «if his state of mind permitted either his presence or an opinion. No interests will be affected by his absence, nor can we do more than acquaint those who are now here with what, as lawyers, we think.»

«I see,» said Arthur. «Pray go on.»

«This deed seems to convey to my client's grandfather—that is to say, Mistress Wynne's father—certain lands situate in Merionethshire, Wales. I understand that you, sir, represent the present holder.»

«I am,» said Arthur, «the son of the gentleman now in possession of Wyncote, and have full permission to act for him. If, indeed, you desire further to learn on what authority—»

«Not at all, not at all,» interposed Wilson. «Your presence suffices; no more is needed. This meeting commits no one.»

«I was about to ask the date of this document,» said Arthur.

«Certainly; here it is.» And so saying, the lawyer spread the deed out on the table. «It is a conveyance from William Wynne to Hugh of that name; the date, 1671, October 9; the witnesses are Henry Owen and Thomas ap Roberts. It is voluminous. Do you desire to hear it?»

«No; oh, no! What next?»

«We believe,» continued the lawyer, «that this deed has ceased to have effect, owing to lapse of time and the appearance—pray note my words—the *appearance* of undisputed ownership by the younger branch. Neither is there any trust to hold the estate for Hugh; it is a mere conveyance.»

«There can be, of course, no doubt,» returned Arthur—«I mean as to a century of unquestioned possession.»

«I am not secure as to the point you make,» said Mr. Wilson, courteously. «I cannot now decide. I am asked to state the matter impartially. My clients wish justice done to all, and will take no unfair advantage. It may be you have no case. There may have passed frequent letters on both sides, admitting the claim or reasserting it, and thus keeping it alive. Rents may have been paid. Facts like these may open questions as to the length of undisputed holding. Only your own courts can decide it, and that with all the evidence before them.»

«I am obliged by your frankness,» said my cousin. «I had hoped to see the matter fully settled.»

«That will never be,» said my aunt, «until I have carried it through every court in England.»

«As you please,» replied Arthur.

«Mr. Wynne,» said I, «while my father lives we shall do nothing; nor even afterward, perhaps. I do not want the money, nor the old home. What is done may depend much on your own actions, sir.» I had no desire to lose this hold on him. As I spoke I saw him look up astonished, as was also, I thought, the lawyer, who knew nothing of our quarrels.

«If,» said I, «you had come to us frankly at first, and stated why you came, we should have said what I now say. No, *I* should have said far more. I believe this ends the matter for the present.» My aunt lifted her hand, but I added, «I pray you let it rest here, aunt,» and for a wonder she held her peace.

Arthur, too, seemed about to speak, but his worse or better angel, I know not which, prevailed, and quietly saluting us all, he rose and took his leave.

«We shall see when this war is over,» said my aunt, taking the deed. «Many thanks, Mr. Wilson; I should like to have your opinion in writing.»

«I shall send it in a week or two. Mr. Arthur Wynne seems to have come over, as I judge from what he said, with authority to act for his father. Why he did not at once relate his errand I cannot see. Had you had no deed it would have closed the matter. If he found you had one he would have been only in the position he is now in to-day.»

«I fancy he may have been fearful and over-cautious, not comprehending the nature of those he had to deal with,» said I. «You must have known him as I do, Mr. Wilson, to understand his actions. I was sorry you did not let him tell us what powers he really had. I was curious.»

«Yes, yes, I interrupted him. It was a mistake.» And so saying he rose.

«It shall not rest here,» said my aunt.

Digitized by Google

«Something shall be done.» And on this I too went away, declining further talk.

When Arthur came over to learn what he could as to their title to Wyncote, he failed to see that we were people whom no prospect of gain could lead into the taking of an advantage. He thus lost the chance a little honest directness would have given him. When, later, my father threw in his way the opportunity of absolute security as to the title, the temptation to get secretly from him a legal transfer, or—God knows—perhaps the power to destroy the deed, was too much for a morally weak and quite reckless nature. I was the sole obstacle, or I seemed to be. We loved the same woman; she had begun to doubt her English lover. If I had died he had become assured, not only of the possession of Wyncote, but of being ultimately my father's heir.

Of this Jack writes: «Here was a whole brigade of temptations, and he could not stand it. He would have broken that tender heart I loved. God help me! I think I should have killed him before he had the cruel chance.»

If to the estate and other worldly baits was added the remembrance of the blow a mere boy gave, I do not know. It is certain that at last he hated me, and as sure that I had as little love for him.

XXXI.

EARLY in March of 1782 Jack and I concluded that the war was over, or was to be but a waiting game, as indeed it proved. After some thought over the matter we both resigned, and as it was desired to lessen the list of officers, we were promptly released from service.

On March 22 his Excellency rode away from town under escort of Captain Morris's troop of light horse. I went along as far as Burlington, being honoured when I left by the personal thanks of the general, and the kind wish that I might discover it to be convenient to visit him at Mount Vernon.

April was come, and we gladly turned again to the duties which awaited us both. His Excellency had gone to watch Sir Guy Carleton penned up in New York. Congress wrangled, our gay world ate and danced, and the tardy war fell to such slackness that it was plain to all a peace must soon come, although we were yet to see another winter pass before the obstinate Dutchman on the English throne gave up a lost game.

In July my father died of a sudden afflux of blood to the head; and although he was blooded by Dr. Rush several times, never was so far bettered as to speak to me. Only once, as I am told is not rare, he so revived when in the very article of death as to look about and say, thinking my hand in his was my mother's, that she must not grieve for him.

Alas! he had been as one dead to me for many a year. I wore no black for him, because I was and am of the opinion of Friends that this custom is a foolish one. My aunt was ill pleased at my decision, and put herself and all her house in mourning. None the less, for my part, did I regret, not so much the natural, easy death, as the sad fact it seemed to fetch back so plainly, that from my youth up here were two people, neither of them unkindly or ill-natured, who were all through life as completely apart as if no tie of a common blood had pledged them to affection.

I saw—I can see now—the gray and drab of the great concourse of Friends who stood about that open grave on Arch street. I can see, too, under the shadow of his broad gray beaver, the simple, sincere face of James Pemberton, my father's lifelong friend. He spoke, as was the custom of Friends, at the grave, there being no other ceremony, an omission of which I confess I do not approve. Much moved, he said:

«Our friend John Wynne departed this life on the 23d of July of this year [being 1782]. For many years he hath carried the cross of afflicting sickness, and hath unceasingly borne testimony to the doctrine and conduct upheld of Friends. He was a man of great abilities, and, like our lamented William Penn, of an excellent gravity of disposition, without dissimulation, extensive in charity, having neither malice nor ungratefulness. He was apt without forwardness, yet weighty, and not given to unseemly levity. The wise shall cherish the thought of him, and he shall be remembered with the just.» And this was all. One by one they took my hand, and with my Aunt Gainor I walked away. I closed the old home a day or two later, and went with my aunt to her farm.

I had not seen Darthea for many a day. «Let her alone,» said my aunt. I think Jack was often with her; but he knew to hold his tongue, and I asked no questions. At last, a week after the funeral, I recognised her hand in the address of a note to me. I read it with a throbbing heart.

«SIR: I have heard of your great loss with sorrow, for even though your father has been

this long while as one lost to you, I do think that the absence of a face we love is so much taken from the happiness of life. You know that your aunt hurt me as few could, but now I am not sorry for what then befell. The thought of death brings others in its train, and I have reflected much of late. I shall go to see Mistress Wynne to-day, and will you come and see me when it shall appear to you convenient? I am for a little at Stenton, with Madam Logan.»

Would I, indeed? My dear old Lucy, a little stiff in the knees, carried me well, and seemed to share my good humour as I rode down the long road from Chestnut Hill.

The great trees about the home James Logan built were in full leaf, and under their shade a black groom held two horses as I rode up. Darthea came out, and was in the saddle before she saw me.

The rich bloom of health was again on her cheek, and deepened a little as I went toward her.

I said I was glad to see her, and was she going to my Aunt Gainor's? If so, and if it were agreeable to her, the groom might stay. I would ride back with her. Then Mrs. Logan, at the door, said this would suit very well, as she needed the man to go to town. After this we rode away under the trees and up the Germantown road, Miss Peniston pushing her horse, and we not able on this account to talk. At last, when I declared Lucy too old to keep up the pace, the good beast fell to walking.

Soon we went by the graveyard where the brave Englishman, General Agnew, lay; and here Darthea was of a mind to be told again of that day of glory and defeat. At the market-house, where School-house Lane comes out into the main street of Germantown, she must hear of the wild strife in the fog and smoke, and at last of how I was hurt; and so we rode on. She had gotten again her gay spirits, and was full of mirth, anon serious, or for a moment sad. Opposite Clieveden I had to talk of the fight, and say where were Jack and Sullivan and Wayne, although Jack more concerned her. As we rode up the slope of Mount Airy I broke a long silence.

«Darthea,» said I, «is it yes, or always no?»

«Will you never be contented?» she returned. «Is n't it mean to say these things now? I can't get away. I have half a mind to marry Jack, to be rid of you both.»

«Is it *yes* or *no*, Darthea?»

«Yes,» she said, looking me in the face. I am a strong man,—I was so then,—but a great rush of blood seemed to go to my head, and then I went pale, as she told me later, and I clutched at Lucy's mane. I felt as if I might fall, so much was I moved by this great news of joy.

«Are you ill?» she cried.

«No, no,» I said; «it is love! Thy dear love I cannot bear. Thank God, Darthea!»

«And do you love me so much, Hugh? I—I did not know.» She was like a sweet, timid child.

I could only say, «Yes, yes!»

«Oh, Hugh!» she cried. «How can you forgive me? But I am not like other women. My word—you will know—and then you will forgive me.» Her eyes were full of tears, her face all aglow.

«There is—there never will be anything to forgive.»

«But I was so foolish—and—I was so foolish.»

«Let us forget, Darthea. I have thy love. God knows it is enough.»

«Thank you, Hugh. Don't speak to me for a little, please.» And under the warm August afternoon sky we rode on at a footpace, and said no word more until we came to my aunt's door. Then Darthea slyly put on her riding-mask, and we went in.

My aunt had her in her great arms in a moment. The mask fell, and then my aunt held her off a little, looked from her to me, and said, «Has he made you cry, sweetheart? He always was a fool. I am very glad. You have made an old woman's heart sing with joy. It is not your fault. Hugh's silly face was enough. Lord! girl, how pretty you are! Do you suppose I never was in love? I never was, but I know the signs.» Darthea, released, was pleased enough to be let go up to my aunt's room. By and by she came down, saucy and smiling, and later came Jack, when my aunt, being too happy to hold her dear old tongue, told him, while poor Darthea looked at him with a tender gravity I did not understand. He went away very soon, saying he had business in town, and this is what he writ that night:

«And so she will have my Hugh, and he the best lady alive. I pray the good God to keep them from all the sorrows of this world. If he love her as I love her, she can ask no greater love; and he will—he cannot help it. Now I will write no more. God bless thee, Darthea!» It was thus a gallant gentleman loved in those stormy days.

And here, with this dear name, his records close, and there is the date of August 1, 1782, and a line drawn underneath.

The new relation soon to be established

Digitized by Google

between us of necessity brought Madam Peniston and my aunt into frequent council. There were matters of dress to be considerately dealt with, and I was told it must be six months before orders could be filled from France, England being just now out of the question. Where the mysteries of women's garments are concerned a man hath no better resort than to submit humbly, as to a doctor or a lawyer. Here of a certainty knowledge is power, and as to this matter, a man had best learn to conceal amazement under a show of meekness.

When I ventured to remonstrate Darthea looked serious, and would I ever have fallen in love with her unless she had laid snares of gown and ribbon, and how was my love to be kept if for the future there were not provided a pretty variety of such vanities? Even my Aunt Gainor refused to discuss the question. I must wait; and as this was the single occasion known to me when she had declined a hand at the game of talk, I began to perceive that ignorance is weakness, and so at last, calmly confessing defeat, I waited until those consulting chose to advise me, the patient, of their conclusions.

Meanwhile Mrs. Peniston had ceased to grieve over the lost lover and the great estate—it never was really great.

My aunt could not let go of the notion that we must have a fight for Wyncote. This tendency to become possessed by an idea, I came to see later, was a family trait, of value if wisely kept in due place, but capable, also, of giving rise to mischief. My aunt, in some of her talks with Darthea's relative, heard of that good dame's past regrets at the loss of a title and estate and a British lover, and of how flattered we ought to be.

I presume poor Madam Peniston was well and sharply answered; but it was not in my Aunt Gainor not to boast a little of how we were the elder branch, and of what might chance in the fairy future. When Mrs. Peniston saw the deed, and was told of the search my aunt was making for letters to support our claims, she was too excited not to let out enough to disturb Darthea, and this although my aunt told Mrs. Peniston of my dislike of the whole matter, and how it was never to be mentioned or known to any until more evidence came to light. Thus cautioned, she was just mysterious enough to excite my quick-witted maid, who was as curious as any of her sex.

When of course she questioned me, and some notion of the mischief on hand came thus to my knowledge, I saw at once how it might annoy Darthea. I said that it merely concerned a question in dispute between Arthur Wynne's family and my own, and ought not, I thought, to be discussed just now. The mere name of her former lover was enough to silence her, and so I begged her to put it aside. She was willing enough. I had happier things on my own mind, and no present desire to stir in the matter. In fact, I wished most earnestly to keep it awhile from Darthea. How much she knew I could not tell, but I was well aware that she was, above all things, sensitive as to any reference to Arthur Wynne. That she had once loved him with the honest love of a strong nature I knew, and somewhat hated to remember; but this love was dead, and if the sorry ghost of it haunted her at times, I could not wonder. My aunt had once or twice mentioned him casually, and each time Darthea had flushed, and once had asked her never to speak of him again. I meant soon —or more likely later—to discuss the matter quietly with Darthea; for then, as always, I held to the notion that the wife should have her share in every grave decision affecting the honour and interests of her husband.

After this I spoke most anxiously of the matter to my aunt, and entreated her to quiet Madam Peniston, and to let the thing rest in my hands. This she declared most reasonable, but I knew her too well not to feel uneasy, and indeed the result justified my fears.

My aunt, as I have said, had gone wild a bit over that deed, and when Darthea was not with her was continually discussing it, and reading over and over Mr. Wilson's opinion. I got very tired of it all.

One night, late in October, I rode out from town, and, after a change of dress, went into the front room with the dear thought in my mind of her whom I should see.

A welcome fire of blazing hickory logs alone lighted up the large room, for my aunt liked thus to sit at or after twilight, and as yet no candles had been set out. As I stood at the door, the leaping flames, flaring up, sent flitting athwart the floor queer shadows of tall-backed chairs and spindle-legged tables. The great form of my Aunt Gainor filled the old Penn chair I had brought from home, liking myself to use it. Just now, as usual, she was sitting erect, for never did I or any one else see her use for support the back of a chair. At her feet lay Darthea, with her head in the old lady's lap—a pretty picture, I thought.

Digitized by Google

Darthea leaped up to run to me. My aunt

said nothing, not so much as «Good evening,» but went out, and in a minute or two came back, exclaiming, in an excited way, that she had waited all day, and now at last she had great news, and we must hear it.

I was bewildered until I saw she had in one hand the deed and in the other a bundle of letters. Then I knew what a distressful business was to be faced, and that it was vain to cry «Stop!»

«What is it?» said Darthea.

«It can wait,» said I. «I insist, Aunt Gainor.»

«Nonsense! The girl must know soon or late, and why not now?»

«I must hear, Hugh,» said Darthea.

«Very well,» I returned, as angry with the old lady as ever I had been in all my life.

«It is a thing to settle,» cried Aunt Gainor, in her strong voice. «We must agree—agree on it—all of us.»

«Go on,» said I. And Darthea insisting, I said nothing more, and was only concerned to be done with it once for all.

«The war will soon end,» said my aunt, «and something must be done. These letters I have come upon put a new face on the matter. I have not yet read all of them. But among them are letters to your grandfather of great importance.»

I was vexed as I have rarely been. «I never doubted, Aunt Gainor, that in my grandfather's life some acknowledgments may have passed; but it is the long lapse of time covered by my father's life which will fail as to evidence.»

«It shall not!» she cried. «You shall be mistress of Wyncote, Darthea. These letters—»

«I? Wyncote?» said Darthea.

«Let us discuss them alone, aunt,» I urged, hoping to get the matter put aside for a time.

«No; I will wait no longer. I am deeply concerned, and I wish Darthea to hear.»

«Why not refer it to Mr. Wilson? Unless these letters cover far more of a century than seems likely, they cannot alter the case.»

«That is to be determined,» said the old lady. «I shall go to England and settle it there. You shall be Wynne of Wyncote yet, sir.»

«What! what!» cried Darthea. «What does all this mean? Tell me, Hugh. Why is it kept from me?» It was plain that soon or late she must know.

«My aunt thinks Wyncote belongs to us. There is an old deed, and my aunt will have it we must go to law over it. It is a doubtful matter, Darthea—as to the right, I mean. I have no wish to stir it up, nor to leave my own land if we were to win it.»

I saw Darthea flush, and in a moment she was at my aunt's side.

«Stop!» said I. «Remember, dear, I have not hid it from you. I desired only that some day you and I should consider it alone and tranquilly. But now there is no help for it, and you must hear. The deed—»

«Is this it?» she broke in, taking the yellow parchment off the table where my aunt had laid it.

«Yes, yes,» said my aunt; «and you must bring Hugh to his senses about it, my dear. It is a great estate, and rich, and the old house—we have its picture, Darthea. Madam Wynne of Wyncote, I shall come and visit you.» The old lady was flushed, and foolishly eager over this vain ambition.

Darthea stood in the brilliant firelight, her eyes set on the deed. «I cannot understand it,» she said.

«I will send for candles,» cried Mistress Wynne, «and you shall hear it, and the letters too»; and with this she rang a hand-bell, and bade Cæsar fetch lights.

I looked on, distressed and curious.

«And this,» said Darthea, «is the deed, and it may give you, Hugh—give us the lands?»

«But *I* do not want it,» cried my aunt, greatly excited. «It is to be Hugh's. Yours, my dear child.»

«If,» said Darthea, speaking slowly, «the elder brother dies, as he surely will before long, it will be—it will be Arthur Wynne who, on his father's death, will inherit this estate?»

«That is it,» said my aunt. «But he shall never have it. It is ours. It is Hugh's.»

My dear maid turned to me. «And it would be ours,» said Darthea, «if—»

«Yes,» cried Miss Wynne. «There are no ifs.»

«Do you want it, Hugh—these Welsh lands?» asked Darthea.

I thought she looked anxiously at the deed in her hand as she stood. «Not I, Darthea, and least of all now. Not I.»

«No,» she went on; «you have taken the man's love from him—I think he did love me, Hugh, in his way—you could not take his estate; now could you, Hugh?»

«No!» said I; «no!»

«Darthea, are you mad?» said Aunt Wynne.

«I will not have it!» cried Darthea. «I say I will not have it, and it concerns me most, madam.» I had never before seen her angry.

Digitized by Google

«Do you love me, Hugh Wynne?» she cried. «Do you love me, sir?»

«Darthea!»

«Will you always love me?»

«Dear child!» I exclaimed. «What is it?»

«Give me that deed,» said my aunt. «Are you crazy fools, both of you?»

«Fools, Mistress Wynne?» said Darthea, turning from me, the deed still in her hand. «You are cruel and unkind. Could I marry Hugh Wynne if he did this thing? Are there no decencies in life, madam, that are above being sold for money and name? I should never marry him if he did this thing—never; and I mean to marry him, madam.» And with this she unrolled the deed, crumpled it up, and threw it on the red blaze of the fire.

There was a flash of flame and a roar in the chimney. It was gone in a moment, and our Welsh lands were so much smoke and cinders.

My aunt made a wild rush to rescue them, but struck her head against the chimney-shelf, and fell back into a chair, crying, «You idiot! you fool! You shall never marry him!»

I picked up the slim little lady in my arms, and kissed her over and over, whilst, as she struggled away, I whispered:

«Thank God! Dear, brave heart! It was well done, and I thank you.»

My aunt's rage knew no bounds, and I may not repeat what she said to my Darthea, who stood open-eyed, defiant, and flushed.

I begged the furious old lady to stop. A whirlwind were as easily checked. At last, when she could say no more, my dear maid said quietly:

«What I have done, Hugh should have done long since. We are to live together, I trust, madam, for many years, and I love you well; but you have said things to me not easy to forget. I beg to insist that you apologise. For lighter things men kill one another. I await, madam, your excuses.»

It was a fine sight to see how this fiery little bit of a woman faced my tall, strong aunt, who towered above her, her large face red with wrath.

«Never!» she cried. «I have been—it is I who am insulted and put to shame, in my own house, by a chit of a miss.»

«Then good-by,» said Darthea, and was by me and out of the house before I could see what to do or know what to say.

«She is gone!» I cried. «Oh, Aunt Gainor, you have broken my heart!»

«What did I say, Hugh?» said my aunt. I do truly think she did not know what she had said; and now she was off, and I after her, knocking over Cæsar and our belated candles, and out of doors after Darthea. I saw her join her a few yards away, and did wisely to hold back. I knew well the child-heart my aunt carried within that spacious bosom.

What the pair of them said I do not know. In a few minutes they were back again, both in tears, the whole wretched business at an end. I thought it better to go away and leave them, but my aunt cried out:

«Wait, sir! I am an old ass! If either of you ever mention this thing again, I—I will wring your necks. I make free to say that some day you will both regret it; but it is your affair and not mine. O Lord! if Cat Ferguson ever comes to know it—»

«She never will,» said Darthea; «and we will love you and love you, dear, dear mother, and I am sorry I hurt you; but I had to—I had to. If I was wise I know not; but I had to end it—I had to.»

Never before had I heard the sweet woman call my aunt mother. She often did so in after years. It melted the old spinster, and she fell to kissing her, saying:

«Yes, I am your mother, child, and always will be.» But ever after Mistress Wynne was a trifle afraid of my little lady, and there were no more such scenes.

When my aunt was gone away to bed, though not to sleep, I fear, my dear maid came and sat at my feet on a cushion, and for a time was silent. At last, looking up, she said, «Hugh, was I wrong to burn it?»

Then I was silent a little while, but from the first I was resolved to be ever outright and plain with my lady, who was impulsive, and would need help and counsel and government, that her character might grow, as it did in after years. I said; «Yes, Darthea. It was not yours, nor altogether mine; it was my father's land, if it belonged to any of us. It is better for me to tell you the simple truth. It would have made no difference had the deed been left undestroyed; it would only have given you the chance to know me better, and to learn that no consideration would have made me take these lands, even had our title been clear. Now you have destroyed my power of choice. I am not angry, not even vexed; but another time trust me, dear.»

«I see! I see,» she exclaimed. «What have I done?» and she began to sob. «I was—was wicked not to trust you, and foolish; and now I see Aunt Gainor had reason to be angry. But you are good and brave to tell me. I could not have said what you said; I should have declared you were right. And now I know it was weakness, not strength, that made me do it. I shall pray God to for-

give me. Kiss me, Hugh; I love you twice as much as ever I did before.»

When I had done her sweet bidding, I said, «Darthea, let us forget all this. Wrong or right, I at least am pleased to have the thing at rest forever; and, wrong or right, I thank you. I was honest, Darthea, when I said so; and now good-night.» At this she looked me in the eyes, and went slowly out of the room, and, I fear, had no better slumbers than my Aunt Gainor.

XXXII.

EARLY in February of 1783 we were married by the Rev. William White, long after to be our good bishop. Christ Church was full of my old friends, my Aunt Gainor in the front pew in a magnificent costume, and Mrs. Peniston with Jack, very grave of face, beside her. As no De Lanceys were to be had in our rebel town, Mr. James Wilson gave away the precious gift of Darthea Peniston. We went in my aunt's chariot to Merion; and so ends the long tale of my adventures, which here, in the same old country home, I have found it pleasant to set down for those who will, I trust, live in it when I am dead.

In April, 1783, peace was proclaimed. In November of that year I heard from Colonel Hamilton that our beloved general would, on December 4, take leave of his officers, and that he was kind enough to desire that all of his old staff who wished should be present. I was most pleased to go.

In New York, at Fraunce's Tavern, near Whitehall Ferry, I found the room full of the men who had humbled the pride of England and brought our great war to a close. His Excellency entered at noon, and seeing about him these many companions in arms, was for a little so agitated that he could not speak. Then with a solemn and kindly expression of face, such as I had once before seen him wear, he filled a glass with wine, and, seeming to steady himself, said:

«With a heart full of love and gratitude, I take my leave of you, most devoutly wishing that your latter days may be as prosperous and happy as your former ones have been glorious and honourable.»

So saying, he drank his wine, and one after another went by him, shaking his hand. No word was said, and these worn veterans of the winter camps and the summer battle-fields moved out, and saw their former general pass down, between lines of infantry, to the shore. There he got into a barge. As he was rowed away he stood up and lifted his hat. All of us uncovered, and remained thus till he passed from sight, to be seen no more by many of those who gazed sadly after his retreating form.

There is an old book my grandchildren love to hear me read to them. It is the «Morte d'Arthur,» done into English by Sir Thomas Malory. Often when I read therein of how Arthur the king bade farewell to the world and to the last of the great company of his Knights of the Round Table, this scene at Whitehall slip comes back to me, and I seem to see once more those gallant soldiers, and far away the tall figure of surely the knightliest gentleman our days have known.

My years go on in peace. We have enough —far more than enough—for all the wants and even for the luxuries of life. It is late in the night, and Christmas-time, in the great stone house at Merion. The noise of little ones—and they are many—has ceased. I hear steps and laughter in the hall. The elder ones troop in to say good-night. There are Darthea and Gainor, mothers of the noisy brigade now in bed, and here is Hugh, the youngest, and Jack, with the big build of his race. And soon all are gone and the house quiet.

I looked up where, under my dear Jack Warder's face, which Stuart did for me, hangs Knyphausen's long blade, and across it Jack's sword. Below, my eye lights on the Hessian pistols, and the sword-knot the gallant marquis gave me.

I watch the crumbling fire, and seem to see once more the fierce struggle in the market-place, the wild fight on the redoubt, and my cousin's dark face. The years have gone by, and for me and mine there is peace and love, and naught a man in years may not think upon with joy.

Suddenly two hands from behind are over my eyes; ah, well I know their tender touch! Says a dear voice I hope to hear till life is over—and after that, I trust—«What are you thinking of, Hugh Wynne?»

«Of how sweet you have made my life to me, my darling.»

«Thank God!»

THE END.

S. Weir Mitchell.

WHAT IS AN AURORA?

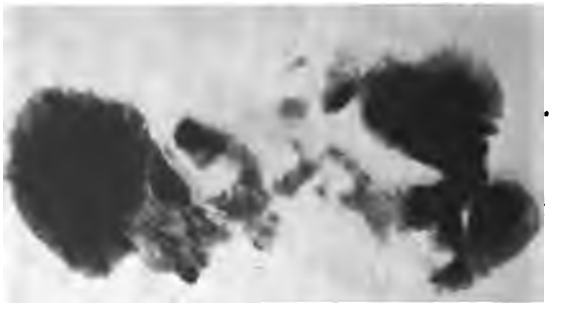
WEST END OF AN AURORAL BAND.
Photographed February 1, 1892, by Dr. Brendel, and sent by him to Mr. James P. Hall, and by him given to the writer.

ON the first day of January, 1892, Dr. Brendel and Herr Raschen reached the Alten Fiord, Lapland, to remain several months, studying auroral displays and magnetic disturbances. Brendel succeeded in photographing the aurora, a very difficult thing to do, as all who have attempted it know. The deep reds which are so beautiful to the eye make little impression on the photographer's plates, and the light itself is generally feeble and flickering. Not unaptly have the quivering auroral beams been called «merry dancers.» Even the bright displays are hard to photograph, as we may see from an entry in General Greely's note-book on January 21, 1882. «A most beautiful aurora,» he says, «with intense light, at times sufficiently bright to cast my shadow on the snow. Rice exposed a sensitive plate without effect, but the constantly changing position of the aurora may have been the cause.»

But, some one will say, photographing an aurora, while interesting from a scientific standpoint, is not a very momentous matter to men or nations. And we make haste to answer that these auroral displays are linked with phenomena which have a very practical interest. Long before the now well-known relations of solar phenomena and terrestrial magnetism had been determined, Sir William Herschel thought he could from meager data detect evidence that the price of wheat was generally higher at times of few sun-spots. In later days we have Stanley Jevons tracing a connection between financial crises and sun-spots, and a host of writers tabulating the allied phenomena—of auroras, sun-spots, magnetic disturbances—and tracing in their periodicities a close relation to famines, commercial crises, and abnormal weather. What a wonderful achievement it would be to foresee the weal and woe of a decade!

While such relations are conjectural, there is little doubt that auroras and solar and magnetic disturbances are closely linked. They do not come and go by chance. The astrophysicist knows that these phenomena will be very numerous in 1903. He knows that a similar condition will not again occur until 1915, the mean period being eleven years. How was this period discovered? Professor Langley tells us in his «New Astronomy,» page 76:

> It does not seem to have occurred to any one to see whether they [sun-spots] had any regular period for coming or going, till Schwabe, a magistrate in a little German town, who happened to have a small



PHOTOGRAPH OF SUN-SPOTS OF AUGUST 8, 1893. MADE AT LICK OBSERVATORY BY PROFESSOR C. D. PERRINE.

Digitized by Google

telescope and a good deal of leisure, began for his own amusement to note their number every day. He commenced in 1826, and with German patience observed daily for forty years. He first found that the spots grew more numerous in 1830, when there was no single day without one; then the number declined very rapidly, till in 1833 they were about gone; then they increased in number again till 1838, then again declined, and so on, till it became evident that sun-spots do not come and go by chance, but run through a cycle of growth and disappearance, on the average about once in every eleven years. While amusing himself with his telescope, an important sequence in Nature had thus been added to our knowledge by the obscure Hofrath Schwabe, who indeed compares himself to Saul, going out to seek his father's asses and finding a kingdom.

Once the sun-spot period was clearly established, it was only necessary to ransack chronological lists of auroras to find how intimately auroras and sun-spots were connected. Three patient investigators, Wolf, Fritz, and Loomis, soon proved that auroras were most frequent when sun-spots were most numerous. The next step was to find individual relations. One bright September morning thirty-seven years ago, Carrington and Hodgson, separately studying the face of the sun, saw a remarkable outburst near the edge of a great spot. For some days the magnetometers at Kew showed unusual perturbation, and for several nights magnificent auroral displays were seen over two continents. It was long thought that a violent magnetic disturbance occurred *simultaneously* with the outburst, but recent examination of the records disproves this. In 1872 Professor Young noticed a disturbance in the chromosphere in the neighborhood of a sun-spot, and upon asking the astronomers at Greenwich and Stonyhurst to examine their magnetic records, it was found that great disturbances had occurred about that time. Ten years later the astronomer at Greenwich sent out a message that read something like this: «Remarkable sun-spot now visible. . . . Area of whole spot, $\frac{247}{10000}$ of the sun's visible surface.» Try to imagine what this means, and fancy yourself on the sun while that tremendous storm was in progress. We know

that here on earth there was a magnetic storm with auroral displays that beggar description. Beginning a little before daylight on November 17, 1882, not a wire of the Western Union Telegraph Company could be used for three hours. The market quotations could not be sent. Late in the afternoon the trouble seemed to decrease, but at night there was a brilliant auroral display, and all telegraphic service was again interrupted. A very short circuit from Boston to Dedham showed the disturbance equally with other circuits. The cables to Europe and the wires to Chicago were alike unworkable. A message was sent from Bangor to North Sidney, seven hundred miles, by cutting out the regular batteries and allowing the energy of nature to have its own way. The current was just as strong as if a hundred cells had been at work. At Albany the switchboard was ignited; and in telephone offices generally the annunciators dropped continually. Switchboards and wires were burned at Chicago. Incandescent lamps were illuminated in St. Paul, and even in far San Francisco the telephone operators were nigh distracted. Over half of North America, across the Atlantic, and on over northern Europe, it seemed as if legions of ethereal demons were busy inciting electric and magnetic apparatus to strange and mischievous antics.

It so happened that about the pole that year were clustered representatives from twelve nations. The Russian international expeditions were at the Lena Delta and Nova Zembla; the Norwegian at Bossekop; the Dutch at Dicksonhavn; the German at Kingua Fiord; the Finnish at Sodankyla; the Swedish at Spitzbergen; the Danish at Godthaab; the Austro-Hungarian at Jan Mayen; and the British at Fort Rae. France had two stations in the antarctic region, and our own country had the well-known Lady Franklin Bay party under Greely, and the Point Barrow party under Ray.

November 14–19, 1882, was a period never to be forgotten by these arctic prisoners. While we at home saw the display of a decade, the observers of the frozen North, turning

APPEARANCE OF THE AURORA BOREALIS IN THE EAST, AS SEEN AT CAPE THORDSEN, DECEMBER 21, 1882.
From the report of the Swedish expedition, «Aurores Boreales,» by Carlheim-Gyllenskiold.

their eyes southward or westward or eastward, saw visions glorious by *day* as well as by night, and felt perhaps some measure of recompense for their isolation and peril. Coming out of their dark quarters, they were startled and at first blinded, and General Greely writes: «The curtain appeared at one time so near our heads that Gardner and Israel speak of having unconsciously dodged to avoid it.» In Ralston's diary is the entry: «The aurora appeared so low down that I raised my hand instinctively, expecting to bathe it in the light»; and Brainard relates a like impression. What a pity that under such conditions no electrometric apparatus was available! With Thomson water-dropping collectors and multiple-quadrant electrometers, records of the electrification of the lower air could have been obtained, and a few more threads raveled out from nature's tangled skein. Some observations of the potential of the air, made by Andrée, who was a member of the Swedish party at Cape Thordsen, Spitzbergen, seem to show that the electric potential diminished very rapidly during an aurora, and in fact became negative. As is well known, this same Andrée has lately attempted to reach the pole in an air-ship. Not the least valuable result of the adventure will be the increase in our knowledge of the electricity of the air in polar regions. We shall learn a little more about the height of auroras. We know now that while they are from fifty to seventy miles high in latitude 50°, the height decreases as we approach 68°. At Godthaab, Paulsen measured many with theodolites, and found that some were less than two fifths of a mile high. Hildebrandsson and others have seen auroras below the clouds. Such results lead us to believe that the time is ripe to suggest a new classification of auroral displays. It has been further noticed that the colorless and quiescent auroras were *not* necessarily coincident with magnetic disturbances, while those of brilliant color and rapid change were. Many so-called auroras are probably what the Germans would call *wetter-leuchten*, and akin to silent lightning.

Our little planet unquestionably responds to solar disturbances. The intense auroral displays that occur simultaneously over continents are, one may think, answering signals to the messages flashed from the sun through the quivering ether. But we may also have our own little storms and

Google

disturbances; and while appearances may be similar, the phenomena are of different origin. Some of the difficulties and discrepancies which have been met in tabulating sun-spot, magnetic, and auroral phenomena can be thus explained. One wise remark by Professor Young should not pass unnoticed. «The solar tumult,» he says, «may be the brother, and not the father, of our aurora.» But this much is plain: the phenomena are closely allied, and mastery of the terrestrial displays will enable us to reach out and attempt the conquest of the solar ones. It may be frankly said that the man of science feels that the aurora has baffled his scrutiny. Unlike lightning, this mysterious light is as harmless as it is beautiful. Weyprecht, who did so much to establish the circumpolar stations, watching from the deck of his ice-bound corvette, thus describes what he saw:

In the south a faint, scarcely visible band lies close to the horizon. All at once it rises and spreads rapidly east and west; . . . the waves of light drive on violently; . . . the edges assume a deep red and green color, and dance up and down; the rays shoot up more rapidly and become shorter; all rise together and approach nearer and nearer the magnetic pole. It looks as if there was a race, and each aspired to reach the pole first. The whole sky is in flames. Involuntarily we listen; such a spectacle must, we think, be accompanied with sound. But unbroken stillness prevails. No pencil can draw it, no colors can paint it, no words describe in all its magnificence the aurora of the coming storm.

In 1881–2 Lemström covered a hillside at Oratunturi with uncovered copper wire having at certain intervals discharging points. A powerful electric current was sent through this, and the peak of the hill at night, it was said, glowed with a pale-yellow or blue light.

None of the neighboring peaks were thus marked. This was an attempt at artificial production of the aurora, and may in some respects be fairly compared with Franklin's kite experiment with the lightning. Experiments elsewhere, however, have failed to give similar results. Tromholt, with similar apparatus and in high latitudes, and Vaussenat at the Pic du Midi de Bigorre, where an area of six hundred and forty square meters was covered with wire having fourteen thousand discharging points, obtained no artificial auroras.

One well-nigh forgotten experiment of the Faraday of America may be recalled. Joseph Henry in 1872 concentrated by a small concave mirror a beam of auroral light, and allowed it to fall upon a paper on which were written some letters with sulphate of quinine, and these became visible just as when illuminated by a discharge of electricity. He also noticed the effect upon a galvanometer needle during an aurora, observing that the needle was deflected, and that a like deflection was always observed «when a flash of lightning took place within the visible horizon of Washington.»

Finally, what has that most powerful pry of modern science, the spectroscope, revealed? It tells us what metals are flaming in distant worlds; what can it tell us of the aurora? When the light emitted by an incandescent gas is examined with a spectroscope, bright bands or lines are seen, and these are so characteristic that they serve to identify the substance. When the light passes through a gas, however, certain rays are absorbed, depending upon the intervening gas; and in the spectrum *black* lines are seen exactly where characteristic bright lines would have been. The aurora gives a spectrum something like that given by lightning, or rather like several lightning spectra superposed. One bright line is always present, but as many as eleven lines had been seen up to 1883. The Cape Thordsen observers ran the number up to thirty-two. Sixteen of these lines nearly coincide with air-lines, eight with the positive-pole spectrum of nitrogen, four with the nitrogen negative pole, and three with hydrogen lines. From spectroscopic evidence we should say that the aurora was a discharge of electricity in rarefied air. Lockyer has built up a spectrum almost identical with that of the aurora by taking low-temperature spectra of manganese, magnesium, lead, and thallium. It is not the auroral spectrum, however. Very recently Berthelot succeeded in condensing the new gas argon with benzine vapor, and obtained a magnificent green-and-yellow fluorescence under the influence of a gentle electrification. The spectrum was very much like that of the aurora, and it is suggested that through some combination of argon in the upper air under electrical influences an auroral appearance might result. This brings us to the views which have been put forward by Paulsen abroad and Bigelow at home. The former thinks that the aurora may be a luminous electrification of the upper air, brought about by the absorption of radiant energy of a certain character and alteration of the wave-length. The auroral light, then, would be a kind of fluorescence. Bigelow, independently of Paulsen, had suggested a similar explanation. He regards the aurora as a phosphorescence due to the transformation of vibrating energy by the air. In other words, certain motions of the ether, which we have no way of recognizing, are altered just enough to convert them into light.

Before leaving the question of the origin of the aurora, we should mention that occasionally in the southern part of the United States feeble sporadic displays are seen. These are now known to occur at times of great thunder-storm activity.

We have been called «children of the sun,» and there is truth as well as poetry in the designation. Year by year the man of science drags himself a little closer to the great central engine. When Faraday, in his mind's eye, saw lines of force traversing space, and when his great disciple Maxwell bequeathed to us the electromagnetic theory of light, men of science felt that a path had been staked out across the maze of solar mysteries. The sun no longer shone as a giver of heat and light only, for in the ether were nerve-like waves of every description. Children of the sun, we respond not only to the great periodic changes, but to every passing spasm and disturbance. Auroras are associated with solar change. In studying them we may fathom the secrets of the sun.[1]

Alexander McAdie.

[1] Astrophysicists look forward with interest to the opening of the new Yerkes Observatory of the University of Chicago. Already, at the Kenwood Observatory, Professor Hale has photographed certain solar disturbances, attempting to identify them with magnetic disturbances. «It is yet premature,» he says, «to draw conclusions; but the magnetic disturbances seem to synchronize closely with spot activity.»

CAMPAIGNING WITH GRANT.

BY GENERAL HORACE PORTER.

THE SURRENDER AT APPOMATTOX AND THE CLOSE OF THE WAR.

GRANT'S RIDE TO APPOMATTOX.

IT was proposed to the general to ride during the day in a covered ambulance which was at hand, instead of on horseback, so as to avoid the intense heat of the sun; but his soldierly instincts rebelled against such a proposition, and he soon after mounted «Cincinnati,» and started from Curdsville toward New Store. From this point he went by way of a cross-road to the south side of the Appomattox, with the intention of moving around to Sheridan's front. While riding along the wagon-road which runs from Farmville to Appomattox Court House, at a point eight or nine miles east of the latter place, Lieutenant Charles E. Pease of Meade's staff overtook him with a despatch. It was found to be a reply from Lee, which had been sent into our lines on Humphreys's front. It read as follows:

April 9th, 1865.

GENERAL: I received your note of this morning on the picket-line, whither I had come to meet you and ascertain definitely what terms were embraced in your proposal of yesterday with reference to the surrender of this army. I now request an interview, in accordance with the offer contained in your letter of yesterday, for that purpose.

Very respectfully, your obedient servant,
R. E. LEE, General.

LIEUTENANT-GENERAL U. S. GRANT.
Commanding U. S. Armies.

Pease also brought a note from Meade saying that, at Lee's request, he had read the communication addressed to Grant, and in consequence of it had granted a short truce.

The general, as soon as he had read these letters, dismounted, sat down on the grassy bank by the roadside, and wrote the following reply to Lee:

April 9th, 1865.

GENERAL R. E. LEE, Commanding C. S. Army:

Your note of this date is but this moment (11:50 A. M.) received, in consequence of my having passed from the Richmond and Lynchburg road to the Farmville and Lynchburg road. I am at this writing about four miles west of Walker's Church, and will push forward to the front for the purpose of meeting you. Notice sent to me on this road where you wish the interview to take place will meet me.

Very respectfully, your obedient servant.
U. S. GRANT, Lieutenant-General.

He handed this to Colonel Babcock of the staff, with directions to take it to General Lee by the most direct route. Mounting his horse again, the general rode on at a trot toward Appomattox Court House. When five or six miles from the town, Colonel Newhall, Sheridan's adjutant-general, came riding up from the direction of Appomattox, and handed the general a communication. This proved to be a duplicate of the letter from Lee that Lieutenant Pease had brought in from Meade's lines. Lee was so closely pressed that he was anxious to communicate with Grant by the most direct means; and as he could not tell with which column Grant was moving, he sent in one copy of his letter on Meade's front, and one on Sheridan's. Colonel Newhall joined our party, and after a few minutes' halt to read the letter we continued our ride toward Appomattox. On the march I had asked the general several times how he felt. To the same question now he replied: «The pain in my head seemed to leave me the moment I got Lee's letter.» The road was filled with men, animals, and wagons, and to avoid these and shorten the distance, we turned slightly to the right and began to «cut across lots»; but before going far we spied men conspicuous in gray, and it was seen that we were moving toward the enemy's left flank, and that a short ride farther would take us into his lines. It looked for a moment as if a very awkward condition of things might possibly arise, and Grant become a prisoner in Lee's lines instead of Lee in his. Such a circumstance would have given rise to an important cross-entry in the system of campaign bookkeeping. There was only one remedy—to retrace our steps and strike the right road, which was done without serious discussion. About one o'clock the little village of Appomattox Court House, with its half-dozen houses, came in sight, and soon

THE SURRENDER AT APPOMATTOX.

Digitized by Google

we were entering its single street. It is situated on rising ground, and beyond it the country slopes down into a broad valley. The enemy was seen with his columns and wagon-trains covering the low ground. Our cavalry, the Fifth Corps, and part of Ord's command were occupying the high ground to the south and west of the enemy, heading him off completely. We saw a group of officers who had dismounted and were standing at the edge of the town, and at their head we soon recognized the features of Sheridan. No one could look at Sheridan at such a moment without a sentiment of undisguised admiration. In this campaign, as in others, he had shown himself possessed of military traits of the highest order. Bold in conception, self-reliant, demonstrating by his acts that «much danger makes great hearts most resolute,» fertile in resources, combining the restlessness of a Hotspur with the patience of a Fabius, it is no wonder that he should have been looked upon as the wizard of the battle-field. Generous of his life, gifted with the ingenuity of a Hannibal, the dash of a Murat, the courage of a Ney, the magnetism of his presence roused his troops to deeds of individual heroism, and his unconquerable columns rushed to victory with all the confidence of Cæsar's Tenth Legion. Wherever blows fell thickest, there was his crest. Despite the valor of the defense, opposing ranks went down before the fierceness of his onsets, never to rise again, and he would not pause till the folds of his banners waved above the strongholds he had wrested from the foe. Brave Sheridan! I can almost see him now, his silent clay again quickened into life, once more riding «Rienzi» through a fire of hell, leaping opposing earthworks at a single bound, and leaving nothing of those who barred his way except the fragments scattered in his path. As long as manly courage is talked of, or heroic deeds are honored, the hearts of a grateful people will beat responsive to the mention of the talismanic name of Sheridan.

Ord and others were standing in the group before us, and as our party came up General Grant greeted the officers, and said, «How are you, Sheridan?» «First-rate, thank you; how are you?» cried Sheridan, with a voice and look which seemed to indicate that, on his part, he was having things all his own way. «Is Lee over there?» asked Grant, pointing up the road, having heard a rumor that Lee was in that vicinity. «Yes; he is in that brick house, waiting to surrender to you,» answered Sheridan. «Well, then, we 'll go over,» said Grant.

HOW LEE REACHED McLEAN'S HOUSE.

THE general-in-chief now rode on, accompanied by Sheridan, Ord, and others; soon Colonel Babcock's orderly was seen sitting on his horse in the street in front of a two-story brick house, better in appearance than the rest of the houses. He said General Lee and Colonel Babcock had gone into this house half an hour before, and he was ordered to post himself in the street and keep a lookout for General Grant, so as to let him know where General Lee was. Babcock told me afterward that in carrying General Grant's last letter he passed through the enemy's lines, and found General Lee a little more than half a mile beyond Appomattox Court House. He was lying down by the roadside on a blanket which had been spread over a few fence-rails placed on the ground under an apple-tree which was part of an old orchard. This circumstance furnished the only ground for the wide-spread report that the surrender occurred under an apple-tree, and which has been repeated in song and story. There may be said of that statement what Cuvier said of the French Academy's definition of a crab—«brilliant, but not correct.»

Babcock dismounted upon coming near, and as he approached Lee sat up, with his feet hanging over the roadside embankment. The wheels of wagons, in passing along the road, had cut away the earth of this embankment, and left the roots of the tree projecting. Lee's feet were partly resting on these roots. Colonel Charles Marshall, his military secretary, came forward, took the despatch which Babcock handed him, and gave it to General Lee. After reading it the general rose, and said he would ride forward on the road on which Babcock had come, but was apprehensive that hostilities might begin in the meantime, upon the termination of the temporary truce, and asked Babcock to write a line to Meade informing him of the situation. Babcock wrote accordingly, requesting Meade to maintain the truce until positive orders from Grant could be received. To save time, it was arranged that a Union officer, accompanied by one of Lee's officers, should carry this letter through the enemy's lines. This route made the distance to Meade nearly ten miles shorter than by the roundabout way of the Union lines. Lee now mounted

Digitized by Google

THE SOFA IN THE McLEAN HOUSE.

his horse, and directed Colonel Marshall to accompany him. They started for Appomattox Court House in company with Babcock, followed by a mounted orderly. When the party reached the village they met one of its residents, named Wilmer McLean, who was told that General Lee wished to occupy a convenient room in some house in the town. McLean ushered them into the sitting-room of one of the first houses he came to; but upon looking about, and seeing that it was small and unfurnished, Lee proposed finding something more commodious and better fitted for the occasion. McLean then conducted the party to his own house, about the best one in the town, where they awaited General Grant's arrival.

The house had a comfortable wooden porch with seven steps leading up to it. A hall ran through the middle from front to back, and upon each side was a room having two windows, one in front and one in rear. Each room had two doors opening into the hall. The building stood a little distance back from the street, with a yard in front, and to the left on entering was a gate for carriages, and a roadway running to a stable in rear. We entered the grounds by this gate, and dismounted. In the yard were seen a fine, large gray horse, which proved to be General Lee's favorite animal, called «Traveller,» and a good-looking, dark-colored mare belonging to Colonel Marshall. An orderly in gray was in charge of them, and had taken off their bridles to let them crop the grass.

TABLE AT WHICH LEE SAT.

MEETING BETWEEN GRANT AND LEE.

GENERAL GRANT mounted the steps, and entered the house. As he stepped into the hall, Colonel Babcock, who had seen his approach from the window, opened the door of the room on the left, in which he had been sitting with General Lee and Colonel Marshall awaiting General Grant's arrival. The general passed in, and as Lee arose and stepped forward, Grant extended his hand, saying, «General Lee,» and the two shook hands cordially. The members of the staff, Generals

CHAIR IN WHICH LEE SAT.

Sheridan and Ord, and some other general officers who had gathered in the front yard, remained outside, feeling that General Grant would probably prefer his first interview with General Lee to be, in a measure, private. In a few minutes Colonel Babcock came to the front door, and, making a motion with his hat toward the sitting-room, said: «The general says come in.» It was then about half-past one on Sunday, the 9th of April. We entered, and found General Grant seated in an old office arm-chair in the center of the room, and Lee sitting in a plain arm-chair with a cane seat beside a square, marble-topped table near the front window, in the corner opposite the door by which we entered, and facing General Grant. Colonel Marshall was standing at his left, with his right elbow resting upon the mantelpiece. We walked in softly, and ranged ourselves quietly about the sides of the room, very much as people

Digitized by Google

enter a sick-chamber when they expect to find the patient dangerously ill. Some found seats on the sofa standing against the wall between the two doors and on the few plain chairs which constituted the furniture, but most of the party stood.

CHAIR IN WHICH GRANT SAT.

The contrast between the two commanders was singularly striking, and could not fail to attract marked attention as they sat, six or eight feet apart, facing each other. General Grant, then nearly forty-three years of age, was five feet eight inches in height, with shoulders slightly stooped. His hair and full beard were nut-brown, without a trace of gray in them. He had on his single-breasted blouse of dark-blue flannel, unbuttoned in front and showing a waistcoat underneath. He wore an ordinary pair of top-boots, with his trousers inside, and was without spurs. The boots and portions of his clothes were spattered with mud. He had worn a pair of thread gloves of a dark-yellow color, which he had taken off on entering the room. His felt «sugar-loaf,» stiff-brimmed hat was resting on his lap. He had no sword or sash, and a pair of shoulder-straps was all there was about him to designate his rank. In fact, aside from these, his uniform was that of a private soldier.

Lee, on the other hand, was six feet and one inch in height, and erect for one of his age, for he was Grant's senior by sixteen years. His hair and full beard were a silver-gray, and thick, except that the hair had become a little thin in front. He wore a new uniform of Confederate gray, buttoned to the throat, and a handsome sword and sash. The sword was of exceedingly fine workmanship, and the hilt was studded with jewels. It had been presented to him by some ladies in England who sympathized with the cause he represented. His top-boots were comparatively new, and had on them near the top some ornamental stitching of red silk. Like his uniform, they were clean. On the boots were handsome spurs with large rowels. A felt hat which in color matched pretty closely that of his uniform, and a pair of long, gray buckskin gauntlets, lay beside him on the table. We endeavored afterward to learn how it was that he wore such fine clothes, and looked so much as if he had turned out to go to church that Sunday afternoon, while with us our outward garb scarcely rose to the dignity even of the «shabby-genteel.» One explanation was that when his headquarters wagons had been pressed so closely by our cavalry a few days before, it was found that his officers would have to destroy all their baggage, except the clothes they carried on their backs; and each one naturally selected the newest suit he had, and sought to propitiate the god of destruction by a sacrifice of his second-best. Another reason given was that, in deference to General Grant, General Lee had dressed himself with special care for the purpose of the meeting.

CONDUCTING THE SURRENDER.

GRANT began the conversation by saying: «I met you once before, General Lee, while we were serving in Mexico, when you came over from General Scott's headquarters to visit Garland's brigade, to which I then belonged. I have always remembered your appearance, and I think I should have recognized you anywhere.» «Yes,» replied General Lee; «I know I met you on that occasion, and I have often thought of it, and tried to recollect how you

TABLE ON WHICH GRANT WROTE THE ARTICLES OF SURRENDER.

looked, but I have never been able to recall a single feature.» After some further mention of Mexico, General Lee said: «I suppose, General Grant, that the object of our present meeting is fully understood. I asked to see you to ascertain upon what terms you would

Digitized by Google

receive the surrender of my army.» General Grant replied: «The terms I propose are those stated substantially in my letter of yesterday; that is, the officers and men surrendered to be paroled and disqualified from taking up arms again until properly exchanged, and all arms, ammunition, and supplies to be delivered up as captured property.» Lee nodded an assent, and said: «Those are about the conditions which I expected would be proposed.» General Grant then continued: «Yes; I think our correspondence indicated pretty clearly the action that would be taken at our meeting, and I hope it may lead to a general suspension of hostilities, and be the means of preventing any further loss of life.»

Lee inclined his head as indicating his accord with this wish, and General Grant then went on to talk at some length in a very pleasant vein about the prospects of peace. Lee was evidently anxious to proceed to the formal work of the surrender, and he brought the subject up again by saying:

«I presume, General Grant, we have both carefully considered the proper steps to be taken, and I would suggest that you commit to writing the terms you have proposed, so that they may be formally acted upon.»

«Very well,» replied Grant; «I will write them out.» And calling for his manifold order-book, he opened it, laid it on a small oval wooden table which Colonel Parker brought to him from the rear of the room and proceeded to write the terms. The leaves had been so prepared that three impressions of the writing were made. He wrote very rapidly, and did not pause until he had finished the sentence ending with «officers appointed by me to receive them.» Then he looked toward Lee, and his eyes seemed to be resting on the handsome sword that hung at that officer's side. He said afterward that this set him to thinking that it would be an unnecessary humiliation to require the officers to surrender their swords, and a great hardship to deprive them of their personal baggage and horses; and after a short pause he wrote the sentence: «This will not embrace the side-arms of the officers, nor their private horses or baggage.»

When he had finished the letter he called Colonel Parker to his side, and looked it over with him, and directed him as they went along to interline six or seven words, and to strike out the word «their,» which had been repeated. When this had been done the general took the manifold writer in his right hand, extended his arm toward Lee, and started to rise from his chair to hand the book to him. As I was standing equally distant from them, with my back to the front window, I stepped forward, took the book, and passed it to General Lee. The terms were as follows:

APPOMATTOX CT. H., VA., April 9, 1865.
GENERAL R. E. LEE, Commanding C. S. A.

GENERAL: In accordance with the substance of my letter to you of the 8th inst., I propose to receive the surrender of the Army of Northern Virginia on the following terms, to wit: Rolls of all the officers and men to be made in duplicate, one copy to be given to an officer to be designated by me, the other to be retained by such officer or officers as you may designate. The officers to give their individual paroles not to take up arms against the Government of the United States until properly [exchanged], and each company or regimental commander to sign a like parole for the men of their commands. The arms, artillery, and public property to be parked and stacked and turned over to the officers appointed by me to receive them. This will not embrace the side-arms of the officers, nor their private horses or baggage. This done, each officer and man will be allowed to return to his home, not to be disturbed by the United States authorities so long as they observe their paroles and the laws in force where they may reside. Very respectfully,

U. S. GRANT, Lieutenant-General.

Lee pushed aside some books and two brass candlesticks which were on the table, then took the book and laid it down before him, while he drew from his pocket a pair of steel-rimmed spectacles, and wiped the glasses carefully with his handkerchief. He crossed his legs, adjusted the spectacles very slowly and deliberately, took up the draft of the terms, and proceeded to read them attentively. They consisted of two pages. When he reached the top line of the second page, he looked up, and said to General Grant: «After the words ‹until properly› the word ‹exchanged› seems to be omitted. You doubtless intended to use that word.»

«Why, yes,» said Grant; «I thought I had put in the word ‹exchanged.›»

«I presumed it had been omitted inadvertently,» continued Lee; «and, with your permission, I will mark where it should be inserted.»

«Certainly,» Grant replied.

Lee felt in his pocket as if searching for a pencil, but he did not seem to be able to find one. Seeing this, I handed him my lead-pencil. During the rest of the interview he kept twirling this pencil in his fingers and occasionally tapping the top of the table with it. When he handed it back, it was carefully treasured by me as a memento of

Digitized by Google

the occasion. When Lee came to the sentence about the officers' side-arms, private horses, and baggage, he showed for the first time during the reading of the letter a slight change of countenance, and was evidently touched by this act of generosity. It was doubtless the condition mentioned to which he particularly alluded when he looked toward General Grant, as he finished reading, and said with some degree of warmth in his manner, «This will have a very happy effect upon my army.»

General Grant then said: «Unless you have some suggestions to make in regard to the form in which I have stated the terms, I will have a copy of the letter made in ink, and sign it.»

«There is one thing I should like to mention,» Lee replied, after a short pause. «The cavalrymen and artillerists own their own horses in our army. Its organization in this respect differs from that of the United States.» This expression attracted the notice of our officers present, as showing how firmly the conviction was grounded in his mind that we were two distinct countries. He continued: «I should like to understand whether these men will be permitted to retain their horses.»

«You will find that the terms as written do not allow this,» General Grant replied; «only the officers are permitted to take their private property.»

Lee read over the second page of the letter again, and then said: «No, I see the terms do not allow it; that is clear.» His face showed plainly that he was quite anxious to have this concession made; and Grant said very promptly, and without giving Lee time to make a direct request:

«Well, the subject is quite new to me. Of course I did not know that any private soldiers owned their animals; but I think we have fought the last battle of the war,—I sincerely hope so,—and that the surrender of this army will be followed soon by that of all the others; and I take it that most of the men in the ranks are small farmers, and as the country has been so raided by the two armies, it is doubtful whether they will be able to put in a crop to carry themselves and their families through the next winter without the aid of the horses they are now riding, and I will arrange it in this way. I will not change the terms as now written, but I will instruct the officers I shall appoint to receive the paroles to let all the men who claim to own a horse or mule take the animals home with them to work their little farms.» (This expression has been quoted in various forms, and has been the subject of some dispute. I give the exact words used.)

Lee now looked greatly relieved, and though anything but a demonstrative man, he gave every evidence of his appreciation of this concession, and said: «This will have the best possible effect upon the men. It will be very gratifying, and will do much toward conciliating our people.» He handed the draft of the terms back to General Grant, who called Colonel T. S. Bowers of the staff to him, and directed him to make a copy in ink. Bowers was a little nervous, and he turned the matter over to Colonel Parker, whose handwriting presented a better appearance than that of any one else on the staff. Parker sat down to write at the oval table, which he had moved again to the rear of the room. Wilmer McLean's domestic resources in the way of ink now became the subject of a searching investigation, but it was found that the contents of the conical-shaped stoneware inkstand with a paper stopper which he produced appeared to be participating in the general breaking up, and had disappeared. Colonel Marshall now came to the rescue, and took from his pocket a small boxwood inkstand, which was put at Parker's service, so that, after all, we had to fall back upon the resources of the enemy to furnish the «stage properties» for the final scene in the memorable military drama.

Colonel Marshall then took a seat on the sofa beside Sheridan and Ingalls. When the terms had been copied, Lee directed his military secretary to draw up for his signature a letter of acceptance. Colonel Marshall wrote out a draft of such a letter, making it formal, beginning with, «I have the honor to acknowledge,» etc. General Lee took it, and after reading it over very carefully, directed that these formal expressions be stricken out, and that the letter be otherwise shortened. He afterward went over it again, and seemed to change some words, and then told the colonel to make a final copy in ink. When it came to providing the paper, it was found that we had the only supply of that important ingredient in the recipe for surrendering an army, so we gave a few pages to the colonel. The letter when completed read as follows:

HEADQUARTERS, ARMY OF NORTHERN VIRGINIA,
April 9th, 1865.

GENERAL: I have received your letter of this date containing the terms of the surrender of the Army of Northern Virginia as proposed by you. As they

Digitized by Google

are substantially the same as those expressed in your letter of the 8th inst., they are accepted. I will proceed to designate the proper officers to carry the stipulations into effect.

Very respectfully, your obedient servant.
R. E. LEE, General.

LIEUTENANT-GENERAL U. S. GRANT,
Commanding Armies of U. S.

While the letters were being copied, General Grant introduced the general officers who had entered, and each member of the staff, to General Lee. The general shook hands with General Seth Williams, who had been his adjutant when Lee was superintendent at West Point some years before the war, and gave his hand to some of the other officers who had extended theirs; but to most of those who were introduced he merely bowed in a dignified and formal manner. He did not exhibit the slightest change of features during this ceremony until Colonel Parker of our staff was presented to him. Parker being a full-blooded Indian, when Lee saw his swarthy features he looked at him with evident surprise, and his eyes rested on him for several seconds. What was passing in his mind no one knew, but the natural surmise was that he at first mistook Parker for a negro, and was struck with astonishment to find that the commander of the Union armies had one of that race on his personal staff.

Lee did not utter a word while the introductions were going on, except to Seth Williams, with whom he talked cordially. Williams at one time referred in a rather jocose manner to a circumstance which had occurred during their former service together, as if he wished to say something in a good-natured way to thaw the frigidity of the conversation; but Lee was in no mood for pleasantries, and he did not unbend, or even relax the fixed sternness of his features. His only response to the remark was a slight inclination of the head. General Lee now took the initiative again in leading the conversation back into business channels. He said:

«I have a thousand or more of your men as prisoners, General Grant, a number of them officers, whom we have required to march along with us for several days. I shall be glad to send them into your lines as soon as it can be arranged, for I have no provisions for them. I have, indeed, nothing for my own men. They have been living for the last few days principally upon parched corn, and we are badly in need of both rations and forage. I telegraphed to Lynchburg, directing several train-loads of rations to be sent on by rail from there, and when they arrive I should be glad to have the present wants of my men supplied from them.»

At this remark all eyes turned toward Sheridan, for he had captured these trains with his cavalry the night before near Appomattox Station. General Grant replied: «I should like to have our men sent within our lines as soon as possible. I will take steps at once to have your army supplied with rations, but I am sorry we have no forage for the animals. We have had to depend upon the country for our supply of forage. Of about how many men does your present force consist?»

«Indeed, I am not able to say,» Lee answered, after a slight pause. «My losses in killed and wounded have been exceedingly heavy, and, besides, there have been many stragglers and some deserters. All my reports and public papers, and indeed some of my own private letters, had to be destroyed on the march to prevent them from falling into the hands of your people. Many companies are entirely without officers, and I have not seen any returns for several days, so that I have no means of ascertaining our present strength.»

General Grant had taken great pains to have a daily estimate made of the enemy's forces from all the data that could be obtained, and judging it to be about 25,000 at this time, he said: «Suppose I send over 25,000 rations, do you think that will be a sufficient supply?» «I think it will be ample,» remarked Lee, and added with considerable earnestness of manner, «and it will be a great relief, I assure you.»

General Grant now turned to his chief commissary, Colonel M. R. Morgan, who was present, and directed him to arrange for issuing the rations. The number of officers and men surrendered was over 28,000. As to General Grant's supplies, he had ordered the army, on starting out, to carry twelve days' rations. This was the twelfth and last day of the campaign.

Grant's eye now fell upon Lee's sword again, and it seemed to remind him of the absence of his own, and by way of explanation, and so that it could not be construed as a discourtesy, he said to Lee:

«I started out from my camp several days ago without my sword, and as I have not seen my headquarters baggage since, I have been riding about without any side-arms. I have generally worn a sword, however, as little as possible—only during the active

Digitized by Google

operations of a campaign.» «I am in the habit of wearing mine most of the time,» remarked Lee, «when I am among my troops moving about through the army.»

General Sheridan now stepped up to General Lee, and said that when he discovered some of the Confederate troops in motion during the morning, which seemed to be a violation of the truce, he had sent him (Lee) a couple of notes protesting against this act, and as he had not had time to copy them, he would like to have them long enough to make copies. Lee took the notes out of the breast pocket of his coat, and handed them to Sheridan, with a few words expressive of regret that the circumstance should have occurred, and intimating that it must have been the result of some misunderstanding.

After a little general conversation had been indulged in by those present, the two letters were signed. Grant signed the terms on the oval table, which was moved up to him again for the purpose. Lee signed his letter of acceptance on the marble-topped table at which he sat. Colonel Parker folded up the terms, and gave them to Colonel Marshall. Marshall handed Lee's acceptance to Parker.

AFTER THE SURRENDER.

BEFORE parting Lee asked Grant to notify Meade of the surrender, fearing that fighting might break out on that front, and lives be uselessly lost. This request was complied with, and two Union officers were sent through the enemy's lines as the shortest route to Meade, some of Lee's officers accompanying them to prevent their being interfered with. A little before four o'clock General Lee shook hands with General Grant, bowed to the other officers, and with Colonel Marshall left the room. One after another we followed, and passed out to the porch. Lee signaled to his orderly to bring up his horse, and while the animal was being bridled the general stood on the lowest step, and gazed sadly in the direction of the valley beyond, where his army lay—now an army of prisoners. He thrice smote the palm of his left hand slowly with his right fist in an absent sort of way, seemed not to see the group of Union officers in the yard, who rose respectfully at his approach, and appeared unaware of everything about him. All appreciated the sadness that overwhelmed him, and he had the personal sympathy of every one who beheld him at this supreme moment of trial. The approach of his horse seemed to recall him from his reverie, and he at once mounted. General Grant now stepped down from the porch, moving toward him, and saluted him by raising his hat. He was followed in this act of courtesy by all our officers present. Lee raised his hat respectfully, and rode off at a slow trot to break the sad news to the brave fellows whom he had so long commanded.

General Grant and his staff then started for the headquarters camp, which, in the meantime, had been pitched near by. The news of the surrender had reached the Union lines, and the firing of salutes began at several points; but the general sent an order at once to have them stopped, using these words: «The war is over; the rebels are our countrymen again; and the best sign of rejoicing after the victory will be to abstain from all demonstrations in the field.» This was in keeping with his order issued after the surrender of Vicksburg: «The paroled prisoners will be sent out of here to-morrow. . . . Instruct the commanders to be orderly and quiet as these prisoners pass, and to make no offensive remarks.»

There were present in the room in which the surrender occurred, besides Sheridan, Ord, Merritt, Custer, and the officers of Grant's staff, a number of other officers and one or two citizens, who entered the room at different times during the interview.

Mr. McLean had been charging about in a manner which indicated that the excitement was shaking his nervous system to its center; but his real trials did not begin until the departure of the chief actors in the surrender. Then relic-hunters charged down upon the manor-house, and began to bargain for the numerous pieces of furniture. Sheridan paid the proprietor twenty dollars in gold for the table on which General Grant wrote the terms of surrender, for the purpose of presenting it to Mrs. Custer, and handed it over to her dashing husband, who galloped off to camp bearing it upon his shoulder. Ord paid forty dollars for the table at which Lee sat, and afterward presented it to Mrs. Grant, who modestly declined it, and insisted that Mrs. Ord should become its possessor. General Sharpe paid ten dollars for the pair of brass candlesticks; Colonel Sheridan, the general's brother, secured the stone inkstand; and General Capehart the chair in which Grant sat, which he gave not long before his death to Captain Wilmon W. Blackmar of Boston. Captain O'Farrell of Hartford became the possessor of the chair in which Lee sat. A child's doll was found in the room, which the younger officers tossed from one to

the other, and called the «silent witness.» This toy was taken possession of by Colonel Moore of Sheridan's staff, and is now owned by his son. Bargains were at once struck for nearly all the articles in the room; and it is even said that some mementos were carried off for which no coin of the republic was ever exchanged. The sofa remains in possession of Mrs. Spillman, Mr. McLean's daughter, who now lives in Camden, West Virginia. Colonel Marshall presented the boxwood inkstand to Mr. Blanchard of Baltimore. Of the three impressions of the terms of surrender made in General Grant's manifold writer, the first and third are believed to have been accidentally destroyed. No trace of them has since been discovered; the second is in the possession of the New York Commandery of the Military Order of the Loyal Legion, which purchased it recently from the widow of General Parker. The headquarters flag which had been used throughout the entire Virginia campaign General Grant presented to me. With his assent, I gave a portion of it to Colonel Babcock.

It is a singular historical coincidence that McLean's former home was upon a Virginia farm near the battle-ground of the first Bull Run, and his house was used for a time as the headquarters of General Beauregard. When it was found that this fight was so popular that it was given an encore, and a second battle of Bull Run was fought the next year on the same ground, Mr. McLean became convinced that the place was altogether lacking in repose, and to avoid the active theater of war he removed to the quiet village of Appomattox, only to find himself again surrounded by contending armies. Thus the first and last scenes of the war drama in Virginia were enacted upon his property.

Before General Grant had proceeded far toward camp he was reminded that he had not yet announced the important event to the government. He dismounted by the roadside, sat down on a large stone, and called for pencil and paper. Colonel Badeau handed his order-book to the general, who wrote on one of the leaves the following message, a copy of which was sent to the nearest telegraph-station. It was dated 4:30 P. M.:

HON. E. M. STANTON,
Secretary of War, Washington.

General Lee surrendered the Army of Northern Virginia this afternoon on terms proposed by myself. The accompanying additional correspondence will show the conditions fully.

U. S. GRANT, Lieutenant-General.

Upon reaching camp he seated himself in front of his tent, notwithstanding the slight shower which was then falling, and we all gathered about him, curious to hear what his first comments would be upon the crowning event of his life. But our expectations were doomed to disappointment, for he appeared to have already dismissed the whole subject from his mind, and turning to the chief quartermaster, his first words were: «Ingalls, do you remember that old white mule that So-and-so used to ride when we were in the city of Mexico?» «Why, perfectly,» said Ingalls, who was just then in a mood to remember the exact number of hairs in the mule's tail if it would have helped to make matters agreeable. And then the general-in-chief went on to recall the antics played by that animal during an excursion to Popocatepetl. It was not until after supper that he said much about the surrender, when he spoke freely of his entire belief that the rest of the Confederate commanders would follow Lee's example, and that we should have but little more fighting, even of a partizan nature. He then surprised us by announcing his intention of starting for Washington early the next morning. We were disappointed at this, for we wished to see something of the opposing army, now that it had become civil enough, for the first time in its existence, to let us get close up to it, and to meet some of the officers who had been acquaintances in former years. The general, however, had no desire to look at the conquered,—indeed, he had little curiosity in his nature,—and he was anxious above all things to begin the reduction of the military establishment, and diminish the enormous expense attending it, which at this time amounted to nearly four millions of dollars a day. When he considered, however, that the railroad was being rapidly put in condition as far as Burkeville, and that he would lose no time by waiting till noon of the next day, he made up his mind to delay his departure.

GRANT'S FINAL CONFERENCE WITH LEE.

ABOUT nine o'clock on the morning of April 10, Grant with his staff rode out toward the enemy's lines; but it was found, upon attempting to pass through, that the force of habit is hard to overcome, and that the practice which had so long been inculcated in Lee's army of keeping Grant out of its lines was not to be overturned in a day, and he was politely requested at the picket-lines to wait till a message could be sent to headquarters

Digitized by Google

asking for instructions. As soon as Lee heard that his distinguished opponent was approaching, he was prompt to correct the misunderstanding at the picket-line, and rode out at a gallop to receive him. They met on a knoll that overlooked the lines of the two armies, and saluted respectfully by each raising his hat. The officers present gave a similar salute, and then withdrew out of ear-shot, and grouped themselves about the two chieftains in a semicircle. General Grant repeated to us that evening the substance of the conversation, which was as follows:

Grant began by expressing a hope that the war would soon be over; and Lee replied by stating that he had for some time been anxious to stop the further effusion of blood, and he trusted that everything would now be done to restore harmony and conciliate the people of the South. He said the emancipation of the negroes would be no hindrance to the restoring of relations between the two sections of the country, as it would probably not be the desire of the majority of the Southern people to restore slavery then, even if the question were left open to them. He could not tell what the other armies would do, or what course Mr. Davis would now take; but he believed that it would be best for the other armies to follow his example, as nothing could be gained by further resistance in the field. Finding that he entertained these sentiments, General Grant told him that no one's influence in the South was so great as his, and suggested to him that he should advise the surrender of the remaining armies, and thus exert his influence in favor of immediate peace. Lee said he could not take such a course without first consulting President Davis. Grant then proposed to Lee that he should do so, and urge the hastening of a result which was admitted to be inevitable. Lee, however, in this instance was averse to stepping beyond his duties as a soldier, and said the authorities would doubtless soon arrive at the same conclusion without his interference. There was a statement put forth that Grant asked Lee to see Mr. Lincoln and talk with him as to the terms of reconstruction, but this was erroneous. I asked General Grant about it when he was on his death-bed, and his recollection was distinct that he had made no such suggestion. I am of opinion that the mistake arose from hearing that Lee had been requested to go and see the «President» regarding peace, and thinking that this expression referred to Mr. Lincoln, whereas it referred to Mr. Davis. After the conversation had lasted a little more than half an hour, and Lee had requested that instructions be given to the officers left in charge to carry out the details of the surrender, that there might be no misunderstanding as to the form of paroles, the manner of turning over the property, etc., the conference ended. The two commanders lifted their hats and bade each other good-by. Lee rode back to his camp to take a final farewell of his army, and Grant returned to McLean's house, where he sat on the porch until it was time to take his final departure. It will be observed that Grant at no time actually entered the enemy's lines.

THE DAWN OF PEACE.

INGALLS, Sheridan, and Williams had asked permission to visit the enemy's lines and renew their acquaintance with some old friends, classmates, and former comrades in arms who were serving in Lee's army. They now returned, bringing with them General Cadmus M. Wilcox, who had been one of General Grant's groomsmen; Longstreet, who had also been at his wedding; Heth, who had been a subaltern with him in Mexico, besides Gordon, Pickett, and a number of others. They all stepped up to pay their respects to General Grant, who received them very cordially, and talked frankly and pleasantly with them until it was time to leave. They manifested a deep appreciation of the terms which had been accorded to them in the articles of surrender, but several of them expressed some apprehension as to the civil processes which might ensue, and the measures which might be taken by the government as to confiscation of property and trial for treason.

The hour of noon had now arrived, and General Grant, after shaking hands with all present who were not to accompany him, mounted his horse, and started with his staff for Burkeville. Lee set out for Richmond, and it was felt by all that peace had at last dawned upon the land. The charges were now withdrawn from the guns, the camp-fires were left to smolder in their ashes, the horses were detached from the cannon to be hitched to the plow, and the Army of the Union and the Army of Northern Virginia turned their backs upon each other for the first time in four long, bloody years.

In this campaign, from March 29 to April 9, the Union loss was 1316 killed, 7750 wounded, and 1714 prisoners—a total of 10,780. The enemy lost about 1200 killed, 6000 wounded, and 75,000 prisoners, including the captures at Appomattox.

GRANT AVOIDS VISITING RICHMOND.

THE repairers of the railroad had thought more of haste than of solidity of construction, and the special train bearing the general-in-chief from Burkeville to City Point ran off the track three times. These mishaps caused much delay, and instead of reaching City Point that evening, he did not arrive until daylight the next morning, April 11. A telegram had been sent to Mrs. Grant, who had remained aboard the headquarters steamboat, telling her that we should get there in time for dinner, and she had prepared the best meal which the boat's larder could afford to help to celebrate the victory. She and Mrs. Rawlins and Mrs. Morgan, who were with her, whiled away the long and anxious hours of the night by playing the piano, singing, and discussing the victory; but just before daylight the desire for sleep overcame them, and they lay down to take a nap. Soon after our tired and hungry party arrived. The general went hurriedly aboard the boat, and ran at once up the stairs to Mrs. Grant's state-room. She was somewhat chagrined that she had not remained up to receive her husband, now more than ever her «Victor»; but she had merely thrown herself upon the berth without undressing, and soon joined us all in the cabin, and extended to us enthusiastic greetings and congratulations. The belated dinner now served in good stead as a breakfast for our famished party.

The general was asked whether he was going to run up to Richmond on the steamer, and take a look at the captured city, before starting for Washington. He replied: «No; I think it would be as well not to go. I could do no good there, and my visit might lead to demonstrations which would only wound the feelings of the residents, and we ought not to do anything at such a time which would add to their sorrow»; and then added, «But if any of you have a curiosity to see the city, I will wait till you can take a trip there and back, for I cannot well leave here for Washington anyhow till to-morrow.»

Several of us put our horses aboard a boat, and started up the James. As a portion of the river was supposed to be planted with torpedoes, we sat close to the stern, believing that in case of accident the bow would receive the main shock of the explosion. We reached the lower wharf of Richmond in safety, put our horses ashore, and rode about for an hour, looking at the city upon which we had laid covetous eyes for so many months. The evacuation had been accompanied by many acts of destruction, and the fire which our troops found blazing when they entered had left a third of the place smoldering in ashes. The white population were keeping closely to their houses, while the blacks were running wildly about the streets in every direction.

GRANT'S RESPECT FOR RELIGION.

UPON our return that evening to City Point, we found aboard the headquarters boat a clergyman, a member of the Christian Commission, who was personally acquainted with the general. He had called to see him to tender his congratulations, and during their conversation made the remark: «I have observed, General Grant, that a great many battles in our war have been fought on Sunday. Shiloh occurred on that day, the surrender of Donelson, Chancellorsville, the capture of Petersburg, the surrender at Appomattox, and, I think, some other important military events. How has this happened?» «It is quite true,» replied the general. «Of course it was not intentional, and I think that sometimes, perhaps, it has been the result of the very efforts which have been made to avoid it. You see, a commander, when he can control his own movements, usually intends to start out early in the week so as not to bring on an engagement on Sunday; but delays occur often at the last moment, and it may be the middle of the week before he gets his troops in motion. Then more time is spent than anticipated in manœuvering for position, and when the fighting actually begins it is the end of the week, and the battle, particularly if it continues a couple of days, runs into Sunday.» «It is unfortunate,» remarked the clergyman. «Yes, very unfortunate,» observed the general. «Every effort should be made to respect the Sabbath day, and it is very gratifying to know that it is observed so generally throughout our country.» It was always noticeable that he had a strict regard for the Sabbath, and this feeling continued through life. He never played a game of any kind on that day, nor wrote any official correspondence if he could help it. He had been brought up a Methodist, and regularly attended worship in the Methodist Episcopal Church, but he was entirely non-sectarian in his feelings. He had an intimate acquaintance among clergymen, and counted many of them among his closest friends. He rarely, if ever, spoke about his own religious convictions. It was one of those subjects not to be discussed lightly, and was so purely personal that he naturally shrank

Digitized by Google

from dwelling upon it, for he always avoided talking upon any subject which was personal to himself. There was such a total lack of egotism in his nature that he could not see how anything touching his own personality could be of interest to others. He was imbued with a deep reverence, however, for all subjects of a religious nature, and nothing was more offensive to him than an attempt to make light of serious matters, or to show a disrespect for sacred things. His correspondence makes mention of his recognition of an overruling Providence in all the affairs of this world; and in his speech to Mr. Lincoln accepting the commission of lieutenant-general he closed with the words: «I feel the full weight of the responsibilities now devolving on me, and I know that if they are met it will be due to those armies, and, above all, to the favor of that Providence which leads both nations and men.» He was always a liberal contributor to church work, and in fact to every good cause. His fault was that he was not sufficiently discriminating. Every mail brought begging letters, and he gave away sums out of all proportion to his means. When pay-day came, it took all the persuasion of those about him to prevent him from parting in this way with the greater part of his pay, his only source of revenue.

GRANT'S ENTHUSIASTIC RECEPTION AT WASHINGTON.

PREPARATIONS were made to break up headquarters, and the next afternoon the party started by steamer for Washington, reached there the morning of the 13th, and took up their quarters at Willard's Hotel. It soon became noised about that the conqueror of the rebellion had arrived in the city, and dense crowds thronged the streets upon which the hotel fronted. During the forenoon the general started for the War Department. His appearance in the street was a signal for an improvised reception, in which shouts of welcome rent the air, and the populace joined in a demonstration which was thrilling in its earnestness. He had the greatest difficulty in making his way over even the short distance between the hotel and the department. At one time it was thought he would have to take to a carriage as a means of refuge, but by the interposition of the police he finally reached his destination.

That afternoon the Secretary of War published an order stating that, «after mature consideration and consultation with the lieutenant-general,» it was decided to stop all drafting and recruiting, curtail the purchases of supplies, reduce the number of officers, and remove restrictions on commerce as far as consistent with public safety. This was a sort of public declaration of peace, and the city gave itself over to rejoicing. Bands were everywhere heard playing triumphant strains, and crowds traversed the streets, shouting approval and singing patriotic airs. The general was the hero of the hour and the idol of the people; his name was on every lip; congratulations poured in upon him, and blessings were heaped upon him by all.

GRANT'S LAST INTERVIEW WITH LINCOLN.

GENERAL GRANT visited the President, and had a most pleasant interview with him. The next day (Friday) being a cabinet day, he was invited to meet the cabinet officers at their meeting in the forenoon. He went to the White House, receiving the cordial congratulations of all present, and discussed with them the further measures which should be taken for bringing hostilities to a speedy close. In this interview Mr. Lincoln gave a singular manifestation of the effect produced upon him by dreams. When General Grant expressed some anxiety regarding the delay in getting news from Sherman, the President assured him that favorable news would soon be received, because he had had the night before his usual dream which always preceded favorable tidings, the same dream which he had had the night before Antietam, Murfreesboro, Gettysburg, and Vicksburg. He seemed to be aboard a curious-looking vessel moving rapidly toward a dark and indefinite shore. This time, alas! the dream was not to be the precursor of good news.

The President and Mrs. Lincoln invited the general and Mrs. Grant to go to Ford's Theater and occupy a box with them to see «Our American Cousin.» The general said he would be very sorry to have to decline, but that Mrs. Grant and he had made arrangements to go to Burlington, New Jersey, to see their children, and he feared it would be a great disappointment to his wife to delay the trip. The President remarked that the people would be so delighted to see the general that he ought to stay and attend the play on that account. The general, however, had been so completely besieged by the people since his arrival, and was so constantly the subject of outbursts of enthusiasm, that it had become a little embarrassing to him, and the mention of a demonstration in his honor at the theater did not appeal to him as an argument in favor of going. A

Digitized by Google

note was now brought to him from Mrs. Grant expressing increased anxiety to start for Burlington on the four-o'clock train, and he told the President that he must decide definitely not to remain for the play. It was probably this declination which saved the general from assassination, as it was learned afterward that he had been marked for a victim. It was after two o'clock when he shook Mr. Lincoln's hand and said good-by to him, little thinking that it would be an eternal farewell, and that an appalling tragedy was soon to separate them forever. Their final leave-taking was only thirteen months after their first meeting, but during that time their names had been associated with enough momentous events to fill whole volumes of a nation's history.

JOHN WILKES BOOTH SHADOWS GRANT.

THE general went at once to his rooms at the hotel. As soon as he entered Mrs. Grant said to him: «When I went to my lunch today, a man with a wild look followed me into the dining-room, took a seat nearly opposite to me at the table, stared at me continually, and seemed to be listening to my conversation.» The general replied: «Oh, I suppose he did so merely from curiosity.» In fact, the general by this time had become so accustomed to having people stare at him and the members of his family that such acts had ceased to attract his attention. About half-past three o'clock the wife of General Rucker called with her carriage to take the party to the Baltimore and Ohio railroad-station. It was a two-seated top-carriage. Mrs. Grant sat with Mrs. Rucker on the back seat. The general, with true republican simplicity, sat on the front seat with the driver. Before they had gone far along Pennsylvania Avenue, a horseman who was riding in the same direction passed them, and as he did so peered into the carriage. When Mrs. Grant caught sight of his face she remarked to the general: «That is the same man who sat down at the lunch-table near me. I don't like his looks.» Before they reached the station the horseman turned and rode back toward them, and again gazed at them intently. This time he attracted the attention of the general, who regarded the man's movements as singular, but made light of the matter so as to allay Mrs. Grant's apprehensions.

GRANT'S INTERRUPTED VISIT TO BURLINGTON.

ON their arrival at the station, they were conducted to the private car of Mr. Garrett, then president of the Baltimore and Ohio railway company. Before the train reached Baltimore a man appeared on the front platform of the car, and tried to get in; but the conductor had locked the door so that the general would not be troubled with visitors, and the man did not succeed in entering. The general and Mrs. Grant drove across Philadelphia about midnight from the Broad street and Washington Avenue station to the Walnut street wharf on the Delaware River, for the purpose of crossing the ferry and then taking the cars to Burlington. As the general had been detained so long at the White House that he was not able to get luncheon before starting, and as there was an additional ride in prospect, a stop was made at Bloodgood's Hotel, near the ferry, for the purpose of getting supper. The general had just taken his seat with Mrs. Grant at the table in the supper-room when a telegram was brought in and handed to him. His whereabouts was known to the telegraph people from the fact that he had sent a message to Bloodgood's ordering the supper in advance. The general read the despatch, dropped his head, and sat in perfect silence. Then came another, and still another despatch, but not a word was spoken. Mrs. Grant now broke the silence by saying: «Ulyss, what do the telegrams say? Do they bring any bad news?» «I will read them to you,» the general replied in a voice which betrayed his emotion; «but first prepare yourself for the most painful and startling news that could be received, and control your feelings so as not to betray the nature of the despatches to the servants.» He then read to her the telegrams conveying the appalling announcement that Mr. Lincoln, Mr. Seward, and probably the Vice-President, Mr. Johnson, had been assassinated, and warning the general to look out for his own safety. A special train was at once ordered to take him back to Washington, but finding that he could take Mrs. Grant to Burlington (less than an hour's ride), and return to Philadelphia nearly as soon as his train could be got ready, he continued on, took her to her destination, returned to Philadelphia, and was in Washington the next morning.

LINCOLN'S ASSASSINATION.

IT was found that the President had been shot and killed at Ford's Theater by John Wilkes Booth; that Mr. Seward had received severe but not fatal injuries at the hands of Payne, who attempted his assassination; but that no attack had been made on the Vice-President. When the likenesses of Booth ap-

Digitized by Google

peared, they resembled so closely the mysterious man who had followed the general and Mrs. Grant on their way to the railroad-station in Washington, that there remained no doubt that he had intended to be the President's assassin, and was bent upon ascertaining the movements of the general-in-chief. An anonymous letter was afterward received by the general saying that the writer had been designated by the conspirators to assassinate him, and had been ordered by Booth to board the train and commit the deed there; that he had attempted to enter the special car for this purpose, but that it was locked, and he was thus baffled; and that he thanked God that this circumstance had been the means of preventing him from staining his hands with the blood of so great and good a man.

Washington, as well as the whole country, was plunged in an agony of grief, and the excitement knew no bounds. Stanton's grief was uncontrollable, and at the mention of Mr. Lincoln's name he would break down and weep bitterly. General Grant and the Secretary of War busied themselves day and night in pushing a relentless pursuit of the conspirators, who were caught, and were brought to trial before a military commission, except Booth, who was shot in an attempt to capture him. John H. Surratt, who escaped from the country, was captured and tried years later, the jury disagreeing as to his guilt.

I was appointed a member of the court which was to try the prisoners. The defense, however, raised the objection that as I was a member of General Grant's military family, and as it was claimed that he was one of the high officials who was an intended victim of the assassins, I was disqualified from sitting in judgment upon them. The court very properly sustained the objection, and I was relieved, and another officer was substituted. However, I sat one day at the trial, which was interesting from the fact that it afforded an opportunity of seeing the assassins and watching their actions before the court. The prisoners, heavily manacled, were marched into the court-room in solemn procession, an armed sentinel accompanying each of them. The men's heads were covered with thickly padded hoods with openings for the mouth and nose. The hoods had been placed upon them in consequence of Powell, *alias* Payne, having attempted to cheat the gallows by dashing his brains out against a beam on a gunboat on which he had been confined. The prisoners, whose eyes were thus bandaged, were led to their seats, the sentinels were posted behind them, and the hoods were then removed. As the light struck their eyes, which for several days had been unaccustomed to its brilliancy, the sudden glare gave them great discomfort. Payne had a wild look in his wandering eyes, and his general appearance stamped him as the typical reckless desperado. Mrs. Surratt was placed in a chair at a little distance from the men. She sat most of the time leaning back, with her feet stretched forward. She kept up a piteous moaning, and frequently called for water, which was given her. The other prisoners had a stolid look, and seemed crushed by the situation.

SHERMAN'S TERMS TO JOHNSTON.

As soon as the surrender at Appomattox had taken place, General Grant despatched a boat from City Point with a message to Sherman announcing the event, and telling him that he could offer the same terms to Johnston. On April 18 Sherman entered into an agreement with Johnston which embraced political as well as merely military questions, but only conditionally, and with the understanding that the armistice granted could be terminated if the conditions were not approved by superior authority. A staff-officer sent by General Sherman brought his communication to Washington announcing the terms of this agreement. It was received by General Grant on April 21. Perceiving that the terms covered many questions of a civil and not of a military nature, he suggested to the Secretary of War that the matter had better be referred at once to President Johnson and the cabinet for their action. A cabinet meeting was called before midnight, and there was a unanimous decision that the basis of agreement should be disapproved, and an order was issued directing General Grant to proceed in person to Sherman's headquarters and direct operations against the enemy. Instead of merely recognizing that Sherman had made an honest mistake in exceeding his authority, the President and the Secretary of War characterized his conduct as akin to treason, and the Secretary denounced him in unmeasured terms. At this General Grant grew indignant, and gave free expression to his opposition to an attempt to stigmatize an officer whose acts throughout all his career gave ample contradiction to the charge that he was actuated by unworthy motives. The form of the public announcement put forth by the War Department aroused great public indignation against Sherman, and it was some time before his motives were fully understood.

Digitized by Google

Grant started at daybreak on the 22d, proceeded at once to Raleigh, explained the situation and attitude of the government fully to Sherman, and directed him to give the required notice for annulling the truce, and to demand a surrender of Johnston's army on the same terms as those accorded to Lee. Sherman was, as usual, perfectly loyal and subordinate, and made all haste to comply with these instructions. When he went out to the front to meet Johnston, Grant remained quietly at Raleigh, and throughout the negotiations kept himself entirely in the background, lest he might seem to share in the honor of receiving the surrender, the credit for which he wished to belong wholly to Sherman. The entire surrender of Johnston's forces was promptly concluded. Having had a talk with the Secretary of War soon after General Grant's departure, and finding him bent upon continuing the denunciation of Sherman before the public, I started for North Carolina to meet General Grant and inform him of the situation in Washington. I passed him, however, on the way, and at once returned and rejoined him at Washington.

THE END OF HOSTILITIES.

HOSTILITIES were now brought rapidly to a close throughout the entire theater of war. April 11, Canby compelled the evacuation of Mobile. By the 21st our troops had taken Selma, Tuscaloosa, Montgomery, West Point, Columbus, and Macon. May 4, Richard Taylor surrendered the Confederate forces east of the Mississippi. May 10, Jefferson Davis was captured; and on the 26th Kirby Smith surrendered his command west of the Mississippi. Since April 8, 1680 cannon had been captured, and 174,223 Confederate soldiers had been paroled. There was no longer a rebel in arms, the Union cause had triumphed, slavery was abolished, and the National Government was again supreme.

THE GRAND REVIEW AT WASHINGTON.

THE Army of the Potomac, Sheridan's cavalry, and Sherman's army had all reached the capital by the end of May. Sheridan could not remain with his famous corps, for General Grant sent him post-haste to the Rio Grande to look after operations there in a contemplated movement against Maximilian's forces, who were upholding a monarchy in Mexico, in violation of the Monroe doctrine.

It was decided that the troops assembled at Washington should be marched in review through the nation's capital before being mustered out of service. The Army of the Potomac, being senior in date of organization, and having been for four years the more direct defense of the capital city, was given precedence, and May 23 was designated as the day on which it was to be reviewed.

During the preceding five days Washington had been given over to elaborate preparations for the coming pageant. The public buildings were decked with a tasteful array of bunting; flags were unfurled from private dwellings; arches and transparencies with patriotic mottos were displayed in every quarter; and the spring flowers were fashioned into garlands, and played their part. The whole city was ready for the most imposing fête-day in its history. Vast crowds of citizens had gathered from neighboring States. During the review they filled the stands, lined the sidewalks, packed the porches, and covered even the housetops. The weather was superb.

A commodious stand had been erected on Pennsylvania Avenue in front of the White House on which were gathered a large number of distinguished officials, including the President; the members of his cabinet, who had won renown in the cabinet of Lincoln; the acting Vice-President; justices of the Supreme Court; governors of States; senators and representatives; the general-in-chief of the army, and the captor of Atlanta, with other generals of rank; admirals of the navy; and brilliantly uniformed representatives of foreign powers.

General Grant, accompanied by the principal members of his staff, was one of the earliest to arrive. With his customary simplicity and dislike of ostentation, he had come on foot through the White House grounds from the headquarters of the army at the corner of 17th and F streets. Grant's appearance was, as usual, the signal for a boisterous demonstration. Sherman arrived a few minutes later, and his reception was scarcely less enthusiastic.

At nine o'clock the signal-gun was fired, and the legions took up their march. They started from the Capitol, and moved along Pennsylvania Avenue toward Georgetown. The width and location of that street made it an ideal thoroughfare for such a purpose. Martial music from scores of bands filled the air, and when familiar war-songs were played the spectators along the route joined in shouting the chorus. Those oftenest sung and most applauded were «When this cruel war is over,» «When Johnny comes marching home,»

Digitized by Google

and «Tramp, tramp, tramp! the boys are marching.»

At the head of the column rode Meade, crowned with the laurels of four years of warfare. The plaudits of the multitude followed him along the entire line of march; flowers were strewn in his path, and garlands decked his person and his horse. He dismounted after having passed the reviewing-stand, stepped upon the platform, and was enthusiastically greeted by all present. Then came the cavalry, with the gallant Merritt at their head, commanding in the absence of Sheridan. The public were not slow to make recognition of the fame he had won on so many hard-fought fields. Conspicuous among the division commanders was Custer. His long golden locks floating in the wind, his low-cut collar, his crimson necktie, and his buckskin breeches, presented a combination which made him look half general and half scout, and gave him a daredevil appearance which singled him out for general remark and applause. When within two hundred yards of the President's stand, his spirited horse took the bit in his teeth, and made a dash past the troops, rushing by the reviewing officers like a tornado; but he found more than a match in Custer, and was soon checked, and forced back to his proper position. When the cavalryman, covered with flowers, afterward rode by the reviewing officials, the people screamed with delight.

After the cavalry came Parke, who might well feel proud of the prowess of the Ninth Corps which followed him; then Griffin, riding at the head of the gallant Fifth Corps; then Humphreys and the Second Corps, of unexcelled valor. Wright's Sixth Corps was greatly missed from the list, but its duties kept it in Virginia, and it was accorded a special review on June 8.

The men preserved their alinement and distances with an ease which showed their years of training in the field. Their movements were unfettered, their step was elastic, and the swaying of their bodies and the swinging of their arms were as measured as the vibrations of a pendulum. Their muskets shone like a wall of steel. The cannon rumbled peacefully over the paved street, banks of flowers almost concealing them.

Nothing touched the hearts of the spectators so deeply as the sight of the old war-flags as they were carried by—those precious standards, bullet-riddled, battle-stained, many of them but remnants, often with not enough left of them to show the names of the battles they had seen. Some were decked with ribbons, and some festooned with garlands. Everybody was thrilled by the sight; eyes were dimmed with tears of gladness, and many of the people broke through all restraint, rushed into the street, and pressed their lips upon the folds of the standards.

The President was kept busy doffing his hat. He had a way of holding it by the brim with his right hand and waving it from left to right, and occasionally passing his right arm across his breast and resting the hat on his left shoulder. This manual of the hat was original, and had probably been practised with good effect when its wearer was stumping east Tennessee. As each commander in turn passed the reviewing-stand, he dismounted and came upon the platform, where he paid his respects to the President, was presented to the guests, and remained during the passage of his command.

A prominent officer of the engineer brigade, while riding by, led to a slight commotion on the platform. He wore a French chasseur cap, which he had had made of a pattern differing from the strict regulation head-gear in having an extra amount of cloth between the lower band and the crown. As he came opposite the President and raised his sword in saluting, he paid an additional mark of respect by bowing his head. At the same moment the horse, as if catching the spirit of its rider, kicked up behind and put down its head. This unexpected participation of the horse in the salute sent the officer's head still lower, and the crown of his cap fell forward, letting out the superfluous cloth till it looked like an accordion extended at full length. The sight was so ludicrous that several of us who were standing just behind the President burst out into a poorly suppressed laugh. This moved him to turn squarely round and glare at us savagely, in an attempt to frown down such a lack of dignity before, or rather behind, the Chief Magistrate of the nation.

For nearly seven hours the pageant was watched with unabated interest; and when it had faded from view the spectators were eager for the night to pass, so that on the morrow the scene might be renewed in the marching of the mighty Army of the West.

The next day the same persons, with a few exceptions, assembled upon the reviewing-stand. At nine o'clock Sherman's veterans started. Howard had been relieved of the command of the Army of the Tennessee to take charge of the Freedmen's Bureau, and instead of leading his old troops he rode with

Sherman at the head of the column, his armless right sleeve giving evidence of his heroism in action.

Sherman, unknown by sight to most of the people in the East, was eagerly watched for, and his appearance awoke great enthusiasm. His tall, spare figure, war-worn face, and martial bearing made him all that the people had pictured him. He had ridden but a little way before his body was decorated with flowery wreaths, and his horse enveloped in garlands. As he approached the reviewing-stand the bands struck up «Marching through Georgia,» and played that stirring air with a will. This was the signal for renewed demonstrations of delight. When he had passed, he turned his horse into the White House grounds, dismounted, and strode rapidly to the platform. He advanced to where the President was standing, and the two shook hands. The members of the cabinet then stepped up to greet him. He took their extended hands, and had a few pleasant words to say to each of them, until Stanton reached out his hand. Then Sherman's whole manner changed in an instant; a cloud of anger overspread his features, and, smarting under the wrong the Secretary had done him in his published bulletins after the conditional treaty with Johnston, the general turned abruptly away. This rebuff became the sensation of the day. There was no personal intercourse between the two men till some time afterward, when General Grant appeared, as usual, in the rôle of peacemaker, and brought them together. Sherman showed a manly spirit of forgiveness in going to see Stanton in his last illness, manifesting his respect and tendering his sympathy.

Sherman's active mind was crowded with the remembrance of past events, and he spent all the day in pointing out the different subdivisions of his army as they moved by, and recalling in his pithy and graphic way many of the incidents of the stirring campaigns through which they had passed.

Logan, «Black Jack,» came riding at the head of the Army of the Tennessee, his swarthy features and long, coal-black hair giving him the air of a native Indian chief. The army corps which led the column was the Fifteenth, commanded by Hazen; then came the Seventeenth, under Frank P. Blair. Now Slocum appeared at the head of the Army of Georgia, consisting of the Twentieth Corps, headed by the gallant Mower, with his bushy whiskers covering his face, and looking the picture of a hard fighter, and the Fourteenth Corps, headed by Jefferson C. Davis.

Each division was preceded by a pioneer corps of negroes, marching in double ranks, with picks, spades, and axes slung across their brawny shoulders, their stalwart forms conspicuous by their height. But the impedimenta were the novel feature of the march. Six ambulances followed each division to represent its baggage-train; and then came the amusing spectacle of «Sherman's bummers,» bearing with them the «spoils of war.» The bummers were men who were the forerunners, flankers, and foragers of the army. Each one was often his own commanding officer. If a bummer was too short-sighted to see the enemy, he would go nearer; if he was lame, he would make it an excuse to disobey an order to retreat; if out of reach of supplies, he would wear his clothes till there was not enough of his coat left to wad a gun, and not enough of his shirt to flag a train. He was always last in a retreat and first in an enemy's smoke-house. In kindling his camp-fire, he would obey the general order to take only the top rail of the neighboring fences, but would keep on taking the top rail till there were none of the fences left. The trophies of his foraging expeditions which appeared in the review consisted of pack-mules loaded with turkeys, geese, chickens, and bacon, and here and there a chicken-coop strapped on to the saddle, with a cackling brood peering out through the slats. Then came cows, goats, sheep, donkeys, crowing roosters, and in one instance a chattering monkey. Mixed with these was a procession of fugitive blacks—old men, stalwart women, and grinning piccaninnies of all sizes, and ranging in color from a raven's wing to a new saddle. This portion of the column called forth shouts of laughter and continuous rounds of applause.

Flowers were showered upon the troops in the same profusion as the day before, and there was no abatement in the uncontrollable enthusiasm of the vast assemblage of citizens who witnessed the march.

Comparisons were naturally instituted between the Eastern and Western armies. The difference was much less than has been represented. The Army of the Potomac presented a somewhat neater appearance in dress, and was a little more precise in its movements. Sherman's army showed, perhaps, more of a rough-and-ready aspect and a devil-may-care spirit. Both were in the highest degree soldierly, and typical representatives of the terrible realism of relentless war.

At half-past three o'clock the matchless pageant had ceased. For two whole days a

Digitized by Google

nation's heroes had been passing in review. Greeted with bands playing, drums beating, bells ringing, banners flying, kerchiefs waving, and voices cheering, they had made their last march. Even after every veteran had vanished from sight the crowds kept their places for a time, as if still under a spell and unwilling to believe that the marvelous spectacle had actually passed from view. It was not a Roman triumph, designed to gratify the vanity of the victors, exhibit their trophies, and parade their enchained captives before the multitude: it was a celebration of the dawn of peace, a declaration of the reëstablishment of the Union.

GRANT'S PLACE IN MILITARY HISTORY.

GENERAL GRANT now stood in the front rank of the world's greatest captains. He had conquered the most formidable rebellion in the annals of history. The armies under his immediate direction in Virginia had captured 75,000 prisoners and 689 cannon; the armies under his general command had captured in April and May 147,000 prisoners and 997 cannon; making a total of 222,000 prisoners and 1680 cannon as the achievement of the forces he controlled.[1]

Most of the conspicuous soldiers in history have risen to prominence by gradual steps, but the Union commander came before the people with a sudden bound. Almost the first sight they caught of him was at Donelson. From that event to the closing triumph of Appomattox he was the leader whose name was the harbinger of victory. He was unquestionably the most aggressive fighter in the entire list of the world's famous soldiers. He never once yielded up a stronghold he had wrested from his foe. He kept his pledge religiously to «take no backward steps.» For four years of bloody and relentless war he went steadily forward, replacing the banner of his country upon the territory where it had been hauled down. He possessed in a striking degree every characteristic of the successful soldier. His methods were all stamped with tenacity of purpose, originality, and ingenuity. He depended for his success more upon the powers of invention than of adaptation, and the fact that he has been compared at different times to nearly every great commander in history is perhaps the best proof that he was like none of them. He realized that in a sparsely settled country, with formidable natural obstacles and poor roads, and in view of the improvement in range and rapidity of fire in cannon and small arms, the European methods of warfare and the rules laid down in many of the books must be abandoned, and new means devised to meet the change in circumstances. He therefore adopted a more open order of battle, made an extensive use of skirmish-lines, employed cavalry largely as mounted infantry, and sought to cultivate the individuality of the soldier instead of making him merely an unthinking part of a compact machine. He originated the cutting loose from a base of supplies with large armies and living off the invaded country. He insisted constantly upon thorough coöperation between the different commands, and always aimed to prevent operations of corps or armies which were not part of a joint movement in obedience to a comprehensive plan. His marvelous combinations, covering half a continent, soon wrought the destruction of the Confederacy; and when he struck Lee the final blow, the coöperating armies were so placed that there was no escape for the opposing forces, and within forty-seven days thereafter every Confederate army surrendered to a Union army. He had no hobby as to the use of any particular arm of the service. He naturally placed his main reliance in his infantry, but made a more vigorous use of cavalry than any of the generals of his day, and was judicious in regulating the amount of his artillery by the character of the country in which he was operating.

His magnanimity to Lee, his consideration for his feelings, and the generous terms granted him, served as a precedent for subsequent surrenders, and had much to do with bringing about a prompt and absolute cessation of hostilities, thus saving the country from a prolonged guerrilla warfare.

He was possessed of a moral and physical courage which was equal to every emergency in which he was placed. He was calm amid excitement, patient under trials, sure in judgment, clear in foresight, never depressed by reverses or unduly elated by success. He was fruitful in expedients, and had a facility of resource and a faculty of adapting the means at hand to the accomplishment of an end which never failed him. He possessed an intuitive knowledge of topography, which prevented him from ever becoming confused as to locality or direction in conducting even the most complicated movements in the field. His singular self-reliance enabled him at critical junctures to decide instantly ques-

[1] These figures relate to the final campaign alone. The whole year's captures were of course much larger. EDITOR.

tions of vital moment without dangerous delay in seeking advice from others, and to assume the gravest responsibilities without asking any one to share them.

His habits of life were simple, and he enjoyed a physical constitution which enabled him to endure every form of fatigue and privation incident to military service in the field. His soldiers always knew that he was ready to rough it with them and share their hardships on the march. He wore no better clothes than they, and often ate no better food. There was nothing in his manner to suggest that there was any gulf between him and the men who were winning his victories. He never tired of giving unstinted praise to his subordinates. He was at all times loyal to them. His fidelity produced a reciprocal effect, and is one of the chief reasons why they became so loyally attached to him. He was never betrayed by success into boasting of his triumphs. He never underrated himself in a battle; he never overrated himself in a report.

General Sheridan, in his «Memoirs,» says of his chief, in speaking of the later campaigns: «The effect of his discomfitures was to make him all the more determined to discharge successfully the stupendous trust committed to his care, and to bring into play the manifold resources of his well-ordered mind. He guided every subordinate then, and in the last days of the rebellion, with a fund of common sense and a superiority of intellect which have left an impress so distinct as to exhibit his great personality. When his military history is analyzed after the lapse of years, it will show even more clearly than now that during these, as well as his previous campaigns, he was the steadfast center about and on which everything else turned.»

General Longstreet, one of his most persistent foes on the field of battle, says in his reminiscences: «General Grant had come to be known as an all-round fighter seldom, if ever, surpassed; but the biggest part of him was his heart.» And again: «As the world continues to look at and study the grand combinations and strategy of General Grant, the higher will be his reward as a soldier.»

While his achievements in actual battle eclipse by their brilliancy the strategy and grand tactics employed in his campaigns, yet the extraordinary combinations effected, and the skill and boldness exhibited in moving large armies into position, should entitle him to as much credit as the qualities he displayed in the immediate presence of the enemy. With him the formidable game of war was in the hands of a master.

THE END.

Horace Porter.

THE CONQUERED.

WE who so eager started on life's race,
And breathless ran, nor stinted any whit
For aching muscles or the parching grit
Of dust upon the lips; who set the face
Only more desperately toward the place
Where the goal's altar smoked, if runners knit
With stronger limbs outran us; we who sit
Beaten at last—for us what gift or grace?

Though we have been outstripped, yet known have we
The joy of contest; we have felt hot life
Throb through our veins, a tingling ecstasy;
Our prize is not the wreath with envy rife,
But to have been all that our souls might be:
Our guerdon is the passion of that strife.

Arlo Bates.

UP THE MATTERHORN IN A BOAT.

BY THE AUTHOR OF «A DAY IN TOPHET,» «A JUDICIAL ERROR,» ETC.

WITH PICTURES BY GEORGE WRIGHT.

PART IV.

V.

I SAW Hill's lips move two or three times, but it was impossible to hear a word in the uproar by which we seemed engulfed. Have you ever seen a withered leaf caught in the angle of some big building, and hurled hither and thither, round and round, up and down, almost dropped, perhaps skimming the surface of the ground in search of some peaceful spot on which to rest, and then caught up again and hurled on high, a plaything for the autumn winds? Well, that was precisely the position we were in for what seemed a cycle of time. In reality I suppose not more than a minute or two elapsed before the crashing roar beneath died away, and the last of the avalanche disappeared down the mountain-side. Beneath us, where that strange rushing field had been only a moment before, there lay a great jagged trough, a furrow plowed out by a power before which iron would have been like paper, and steel like wisps of straw. And then, as if the forces of the air lost interest as soon as the great dance was ended, the winds passed in a howling gust, after driving us with only moderate force against the towering wall of the mountain. Here a precipice rose above us, straight and tall; and against this the balloon was lightly tossed now and then, rebounding like a ball, but drawn back again to the rocky cliff as if by a magnet. Probably that was the secret of the unaccountable attraction the *Cloud Queen* exhibited for the earth in preference to the air —an attraction that forced us to be constantly on the alert to push the craft away from projecting points of rock toward which we were continually being drawn perilously near. This slow, seemingly cautious ascent gave the balloon the appearance of feeling its way like a person giddy with the height above and the depth beneath; and it did not take us long to realize that we were enjoying a unique experience, even though our nerves were somewhat shaken. As for Hill, he revived from danger as a gull does from a dash of spray, and events that would have turned an ordinary man's hair white seemed to him unworthy any special comment.

«How 's this?» he asked Clambor, pushing the boat away from an arm of rock that seemed reaching for it. «Does n't this beat your method of climbing?»

«Well, rather!»

«Less exertion required, and, according to my way of thinking, less anxiety.»

«Wait a bit,» said I. «You may call this trip free from anxieties; but if I get back alive, I mean to pay the premium on my accident policy with humble gratitude and my congratulations to the company.»

Hill looked at me quizzically, and nodded to Clambor.

«Pretty poor performance, that, on the fiddle-string of friendship, eh? Here I 've pulled him through everything so far, and yet he expresses doubts as to my ability. There 's nothing like judging a man's future by his past. However, Jabez and I don't worry, do we, Jabez?»

Being aroused from a light slumber by this question and the prod of a boot-heel, Jabez wagged consent at once—but he was a bit of a wag anyway. He then for the first time became aware of the vicinity of the mountain, and he at once sized it up as a trespasser, and pounced upon it accordingly.

«Can't you read a sign when you see it?» he indignantly inquired of the Matterhorn. «What does ‹Keep off the grass› mean, anyhow? ‹Come and sit down›? Well, I rather guess not! You 'd better go to school, you had.»

Jabez paused, but the mountain maintained a haughty silence which irritated him, and he went on:

«I 've had my eye on you for some time, and I wish to say right now that of all the ugly-looking mugs I ever saw, yours is the best specimen of that kind of architecture. Wow! Go off and hang yourself to something high, and get out of the way!»

I had often encouraged Jabez to express himself freely, but I had more than once had occasion to lament his tendency to drop at

Digitized by Google

once into personalities. He ought to have edited a city daily or been a politician. I could see that he was working himself up to a pitch of profanity, and I tried to calm him. This timely effort would no doubt have succeeded had not the edge of the boat caught just then upon a sharp projection of rock beyond Hill's reach. In an instant Jabez had it by the throat.

«You miserable Castle Garden importation, you!» he growled. «What do you get for your vote, anyhow? Fifty cents—eh? And when you 've floated it on a deluded democracy, you don't know whether you 've voted for justice of the peace or president of the Guatemalan republic, do you?» (Jabez thought he was shaking the mountain savagely, but it was himself chiefly.) «You 're a pretty specimen of darkest Africa to be let loose in a civilized world, you are! I 'll teach you the difference between a good, free, stand-up-and-fight democracy and a set-down-and-die-away European monarchy before I 'm through with you—see if I don't!»

Just then the balloon wrenched us free, and Jabez was flung violently to the bottom of the boat. He picked himself up at once, and scrambled to the side, where he supported himself with his fore paws, panting with rage.

«You just do that again, if you want me to give you what for! You 'll want to crawl into your kennel and die when I get through with you next time.»

«Go for him, Jabez!» said Hill, encouragingly. «Don't you hesitate to tell that Matterhorn fellow what you think of him. You ease your feelings and hurt his all you want to, and I 'll keep the price of board down just as if nothing had happened.»

I suppose that men who had climbed up by foot and hand to where we were would not have been in a very hilarious mood. I could imagine the way they would have felt by the way I felt trying to climb out of the crevasse and cutting my steps as I went. That method is pretty hard grubbing. It 's like comparing the struggles of the worm with the flight of the butterfly, and almost any one will admit that crawling is not to be compared with flying. But ballooning goes to your head; it 's intoxicating; and I could understand how Hill had grown to the point of absolute physical superiority to fear of airy distances and depths, through familiarity with them and many successful ascents and descents. I knew this to be his position,—I had seen it demonstrated,—and I aspired to share it, although I knew that I could not so easily shake off that bugaboo of mankind, the fear of death.

«Let 's have a look,» said Clambor, intently studying the map of rock and glacier and precipice below us. Presently he pointed to a spot some little distance down. «I think it must have been about there I lost my footing and began to slide. By Jove! it 's deuced uncomfortable to think my mother and sisters at home believe I 've been lost in some awful way here in the Alps. They did n't want me to do the Matterhorn.»

«You mean they did n't want the Matterhorn to do you,» amended Hill. «But you will probably find out that every one thinks a great deal more of you now than before your demise—and that 's not intended as any reflection on you or on their powers of affection. It 's the way of the world. A man has to die to find out how much he is really worth in cash and character—and then others find it out, not he. It amounts to this, that a man never can get a proper estimate of himself.»

«Quite so,» assented Lord Clambor, readily; and he seemed wonderfully cheered by this view of the case. I concluded that perhaps some English maiden on whom his young affections were riveted might have been obdurate—until she knew he had fallen off the Matterhorn. Women are like that sometimes. When a man is here they wish him somewhere else; and when he 's dead at last they want him back again. At any rate, dead or alive, they like him none the worse for having done something really big, and Lord Clambor certainly had. We had seen him do it, and could witness his claim.

We were now at that portion of the final precipice guarding the top of the mountain from which four of the seven men composing the first party ever making a successful ascent up that terrible height had fallen to destruction while descending. Such toll the giant claimed of those who passed his gate of victory failing to read the sign:

«Here thou shalt not.»

Above us were the overhanging turrets of the monster's castle, and below us a drop of nearly a mile to the glacier's hard bed. Now and then we passed bits of rope attached to the rocks, as blackened as frosted ferns, and tasseled with icicles from the tips of which the water dripped in the sun. Thin, glass-like ice clung to corners where the heat had not yet penetrated, while the exposed points were wet and warm, steaming in the cold air as the south slant of a roof will in a February thaw. The thought that

Digitized by Google

little human things were ambitious to crawl over that stony countenance, to play hide-and-seek with death in the frowns of that awful face, where a false step would flirt them into eternity as if the giant shook his head, was appalling to me. But it made the true sportsman's blood in Lord Clambor's veins tingle with enthusiasm. He exclaimed. He was enchanted. He even forgot his monocle; and the passage of expression over his physiognomy, disturbing surfaces unaccustomed to it (like the big Alpine face before us), displaced the glass, and it fell continually like loosened rocks from the mountain's face.

«St. George and the dragon!» he cried presently, «this is what I call ripping fine sport.»

«How does it compare with golf?» asked Hill, blandly.

«Well, you know it 's different—quite different.»

«Does n't work in links, eh? Now there 's polo, for instance: how does polo compare with ballooning?»

But I interrupted. I did not propose to have the young lord quizzed into another facial paralysis.

«I should say those two sports were about alike so far as promise of a broken neck is concerned. You can do it in either game, ballooning or polo. Exceptional facilities offered in steeplechasing, too.»

«Quite so,» agreed Clambor, evidently relieved.

«Now,» cried Hill, abruptly, leaning out and looking up, «take a last look at Zermatt and the Gorner Grat, for we are going to inspect Italy next. Gentlemen, I congratulate you upon having done what no man has ever accomplished before you: you have made the ascent of the Matterhorn in a boat!»

Hardly had his words reached our ears, and the realization of what they meant made itself clear to us, than we were on the ridge of the mountain. As every one knows, the top of the Matterhorn bears the same relation to the rest of it that the spinal column bears to the bulk of the human body. But there is this difference: the body of the Matterhorn slopes away sheer and precipitous from the narrow line of its backbone, so to speak. Our boat caught, and for a few moments we looked along that uninviting ledge of schistose rock and snow, no wider in some places than the saddle of a hobby-horse, and as gnarled as the knuckles of age. It was literally a ledge of rock seemingly resting on the air, a sliver of terra firma uptilted into space, and apparently defying gravitation and every law ascribed by the finite to the infinite mind as contrived to preserve the equilibrium of terrestrial things. Hill swung a switch, and I knew by the sound that he had lowered the anchor-claw.

«You may as well get out,» he said airily—as might have been expected. «This boat touches here to discharge cargo and load. Ten minutes' stop for inspection. Trading or bartering with the natives prohibited.»

I had never felt any mountainward-soaring ambition, so I merely put one leg over and touched my toes to earth. It was enough to justify any statement I might wish to make thereafter about having actually «set foot» on the Matterhorn. But Lord Clambor scrambled out eagerly, and began collecting pieces of rock. He had filled one pocket when Hill said to me:

«I wonder if he is thinking of taking home a load from this quarry—enough to build an ancestral hall, or something?»

Jabez had looked over the edge of the boat, and decided there was no attraction for him in the lay of that land, at which he sniffed suspiciously; and when our English visitor came on board once more we were ready to weigh anchor and sail on. But by one of those contrarieties of fate by which persons depending upon electricity are sometimes annoyed, we did neither the one nor the other. We could neither weigh nor away. In vain Hill touched buttons and wielded switches. Like a penny-in-the-slot machine, we were out of order. The anchor-claw was overboard and gripping the Matterhorn like grim death. The cable that held it might have been filed, for it was not as big as a barrel nor as long as a crusader's pedigree; but, like Mercutio's wound, it was «enough,» for it was out of reach even if we had been provided with a file, which we were not. And cold! Gods of the arctic regions and snow-mountains, how cold it was! The thermometer did not say this, but we felt it keenly, for there was a bleak wind blowing, and it pierced to the bone. Moreover, we had been comparatively comfortable in the crevasse until we lighted the gas—or found it, rather. Then, what with our exertions and excitement, we had been far too warm. As a matter of fact, we were drenched with perspiration, and considering that Hill and I were both incased in two suits of the thickest procurable all-wool underwear, this was not surprising. We had not dared to lay off a pair, knowing that we should need both as soon as we were out again. Lord Clambor wore thick silk and a

knitted sweater under his jacket, so he was not so uncomfortably warm below, and naturally did not find it so freezingly cold above. Jabez, too, having been less inconvenienced by temperature of one kind, was not so susceptible to the change.

Hill took up some planks, and went to work in what would have been the hold if we 'd had one, and left us time to spare in the contemplation of our surroundings. There may be things or places in this world more beautiful than the panorama beneath us. I have seen some spots in Japan that I thought lovelier than any known portion of the globe,—known to me, I mean to say,—and I have championed the Himalayas, and Darjeeling, with its glimpse of Kunchinjinga, many a time. Also, I have waxed eloquent (after the third course) at many a dinner when I dwelt in memory upon the beauties of that hill of the Moors,—that European treasure-house of Oriental history in tangible form,—the Alhambra, with the Darro flowing under its walls, and the snowy Sierra Nevada glimpsing the sky beyond it. And then there is Ceylon, the Garden of Eden—but all these comparisons are futile. There is no place like the Matterhorn. I shall not try to describe it, for it would be impossible to do it justice. Besides, we were viewing it under disadvantageous circumstances. There we were, anchored to a rock, with no certainty of ever letting go our hold, with no spiked shoes or guides or ropes, with no lanterns, no experience, no toboggan—no nothing of anything that is usually considered essential to climbing up or down a cold, unsympathetic mountain like the Matterhorn. There was a certain anxiety connected with our position which any conservative man can understand. And all the while I did Hill full justice—as much justice as any man ever gets in this world. I took reasonable account of what he had done, but I held to the knowledge that human ingenuity is fallible, and that, however brilliant his achievements might have been in the past, there was no telling what disaster might overtake him yet.

So while he tinkered with his machinery Clambor and I looked at the world: at all the horns of the Alps—the Rimpfischhorn, the Breithorn, the Rothhorn, the Gabelhorn, none like the one that impaled us. We had not even the satisfaction of knowing that our dilemma had two horns, and that we were between. The Matterhorn was built like a rhinoceros, and we were fast to the business end. Our only comfort—and it was a cold one, as cold as a refrigerator-car—lay in our view. Mont Blanc towered over everything about it, a white mountain of grand proportions. Other peaks stood about like ninepins about a hunchback player. At one side there was a Niagara (reproduced upon a large scale) of clouds tumbling and boiling over a mountain damming the Italian skies; and these nebulous torrents, so tangible to the eye, melted suddenly into a different temperature, and vanished like some lost river of the air.

Hill lifted his head presently to catch breath. «Don't go ashore again,» he said. «If we ever get shut of this grab-bag game, we may leave suddenly, without blowing a whistle.»

He continued to putter with his electrical apparatus, and we continued to contemplate the beauties of nature in lofty altitudes, for perhaps another quarter of an hour. No one seemed to feel communicative. It makes a difference in one's conversational ability whether one has anything to say or not. Speaking for myself, and I judged that Clambor felt as I did, my intellectual energies were devoted to the problem of how we were going to get down in case the balloon could not be released. I did not see that we were any better off than we were in the crevasse. Then we were afraid that something was going to fall on us, and now we were afraid that we were going to fall on something. Neither Hill nor I was a mountain-climber, and Clambor's record was not distinguishing. He might better be listed with mountain-tumblers; and I could see by the anxious pucker in the brows over the monocle that he had small relish for a return to earth by pedestrian methods. In my own mind I suspected that, for a while at least, his nerve was pretty well shaken. As to Hill, he was not to be considered speculatively. He could be depended upon as being game to the last, and he might get the machine in shape—he had pulled us along so far. But I felt gloomy. Pretty soon he bobbed up again.

«Well,» said he, «we may as well take our midday repast here as anywhere.»

«I like that,» said I, with my best ironical inflection, «considering the fact that we have nothing to repast on.»

He looked at me for a moment with both eyes, and then he slowly and impressively shut one, and looked at me with the remainder of his optical equipment.

«You just hop out and gather a few icicles, won't you? I 'll melt them for drinking-material.»

«I say,» said Clambor, «let me.»

Digitized by Google

«My young friend,» remarked Hill, earnestly, «I have caught you on the fly once when you came flying down, and I have cheerfully assisted you to come flying up to our present exalted station in life. I have done these things at great expense and with exceeding labor, but I protest against your getting up any further entertainment. If you take a header from this quarter of the globe now it will be U P with you; so compose yourself and sit still. But you»—to it, and hitched along slowly. The wind was rising, and as I worked away from the boat, it seemed to pierce the side of my body most exposed to it with sharp, hornet-like stings.

«Look sharp!» shouted Clambor. «If he stumbles you 'll come a deuce of a cropper.»

«Keep a tight rein!» yelled Hill. «If he kicks up you 're a goner.»

They were having a good time at my expense, and I thought if it pleased them it

«KEEP A TIGHT REIN!»

me—«you shatter your composure for a minute, and fetch me an armful of icicles. I 'll have the steak ready in a jiffy.»

«Steak!» exclaimed Clambor.

«Steak!» yelled I.

«Steak!» barked Jabez.

«You did n't suppose I was going to come away from any such refrigeration as that with an empty larder, did you? Our bill of fare might be more varied, gentlemen, but I doubt if it could be more sustaining.» He opened a little cupboard where he had stored provisions when we had any, and having lighted the gridiron, as he called it, proceeded to lay a big mule-steak upon it.

«Why,» said I, as I crawled cautiously overboard, «I had been thinking what fools we were to come off without a mouthful.»

«I 'm not such a fool as I look,» retorted Hill. «Will you get those icicles, or won't you?»

I finally managed to get out,—feeling curiously stiff in the joints, which I attributed to sitting still so long,—and started icicle-hunting. I soon found that it was not safe for me to try to walk on that narrow ledge, because of giddiness; so I sat astride certainly did not displease me. An occasional appetizing smell of roasted flesh was wafted to me, and it did a great deal toward keeping me in good humor. I suspected it also raised their spirits.

«I say, is n't he going to bolt?»

«Somebody head off that mule—he 's got the bit between his teeth.»

«I saw Buffalo Bill in London, don't you know; and upon my word, he exhibited nothing like this. He had some ripping rough-riders, too.»

«Ladies and gentlemen, you will now see an unequaled exhibition of skill and daring by Texas Tuck, the world-renowned and only King of the Bucking Bronco Steerers, rounding up a herd of icicles over a piece of the roughest riding in the world.»

«You fellows can come out here and round up your own icicles in about one minute—if I hear much more of your cheek,» said I. I had my pockets full of young and presumably tender specimens, and two or three big, hard-shelled samples were under my arm, so I concluded to turn around and go back. They both gave me the benefit of their advice over this movement.

Digitized by Google

«Pull hard on the right rein, and grip tight with your knees,» contributed Clambor.

«You 'd better tack, if you can,» hailed Hill. «Take in a reef, and try not to run us down.»

I scrambled up to a wider place, and turned around. It was wide enough for me to lose sight of the precipice below, and I felt that I could shake my fist at the mockers without shaking myself off the mountain; so I did it with all the muscle I could muster. The process of lifting my arm was exceedingly tiresome, and as to getting up and down as I had been obliged to do in order to accomplish the turn, I was amazed to find that the stiffness I had at first noticed chiefly in my joints now seemed to extend all over me. My back might have been eighty years old, so far as its youthful spring was concerned. But I managed to start back without accident. The *Cloud Queen*, glittering like a silver corselet, and showing glimpses of changing color between the links of fine metal lace, was swaying in the freshening breeze as gracefully as a lily on its stalk. I could see the anchor-claw gripped on a boulder below, and the boat itself grazed the top of the mountain and shone resplendently. Flashes of light from its mirror-like surface dazzled my eyes as the sunshine caught it; and what with the blue above and the distance and depth all about, it was a magnificent spectacle. Hill and Lord Clambor grinned like demons over the side, and Jabez had his pointed nose aimed at me as it rested between his paws.

«You 'll need some patching done when you get home,» said Hill, as I drew alongside. «I should say the effects of that exercise would beat cellar doors all to pieces.» He reached over the edge and relieved me of the icicles under my arm, and I contrived with great effort to climb back unassisted. Then I emptied my pockets of their cold cargo, and rolled myself up in my blanket. Hill melted an icicle, poured in some brandy, and served it all round.

«Grog it is when tea it is not,» said he, with unimpaired cheerfulness. He kept up a continuous fire of funning all through the meal, and when it was finished went back to work on his machinery, smoking like a chimney. We found solace in tobacco, too; but I could not get the idea of my strange sensations out of my head, and conversation languished on my part. The wind blew ever fiercer and fiercer, and our position was becoming more and more unpleasant. In case of any phenomenal disturbance of the air, the balloon might be beaten down against the rocks, torn to pieces, perhaps blown clean away from the boat. In any event, that meant an immediate capsizing of our craft and an indiscriminate spilling of passengers down the mountain-side. In lulls of the increasing gale we could hear detonations of varying degrees of sound below, where detached boulders started on their rounds of echoing leaps, touching the earth at intervals with explosive pops like the discharging of guns. These died away in the abysmal depths, and according as they were big or little, few or many, they resembled the sharp rattle of small arms, the boom of big guns, the roaring of artillery, or the all-enveloping thunders of an avalanche. Clouds began to roll about us as we poised perilously on the topmost brink. The world was shut away, and we seemed to be the focusing-point of an Alpine blizzard, in the thick snows of which the *Cloud Queen* was lost to sight above, as the farthermost parts of a ship melt into nothingness in a fog at sea.

VI.

THE violence of the storm abated after a couple of hours, and then the snow fell gently, bringing the darkness with it. I never saw such flakes. If Mother Winter was picking her geese in the cold clouds above us, she owned a remarkable flock. Judged by the size of the feathers on the Matterhorn, her geese must have been ostriches. These huge flakes fell softly about us, obliterating the rocks, and changing the outline of the knife-back of earth to which we were moored. After a time it also ceased; but the moon and the stars were obliterated by dense clouds. Hill had succeeded in getting all his electrical contrivances in order—except the anchor-claw, of course. We could have done without all the others, and naturally they were what we had at our disposal. It was cheerful, however, to have the light-gun to fire into the darkness about us. It turned the mountain into a lighthouse, and, we afterward learned, carried consternation into the towns below, where people forsook their beds to marvel and wonder if a star had fallen and caught upon the peak—a star the light of which was often obscured by drifting clouds. Every guide within sight started that night to make the ascent and investigate the phenomena, and one party already *en route* turned back under the impression that the Matterhorn was developing volcanic symptoms. I asked Hill what effect he thought the light-balls would

Digitized by Google

have upon the imaginations of the inhabitants, and he said:

«None whatever. They probably look no bigger than lightning-bugs at this distance.»

«But they move,» I persisted; «and I believe they are reflected upon the clouds beyond and increased until they present a very noticeable illumination.»

In point of fact, this was actually the case, and the light-gun of the *Cloud Queen* revived those old legends concerning the city of demons on the peak—that ghostly city superstitious folk believed in until human eyes had actually seen the top at close quarters. Even then there were those who said that a phantom city could not be visible in the sun, anyhow; but had not they themselves seen it—tower and battlement, wall and dome, uplifted often and often against the skies, tipped with roseate hues at sunrise, or standing black and grim against the clouds at night? Of course; they had seen it with their own eyes. And now strange will-o'-the-wisp lights streamed from this goblin stronghold. Perhaps the cycle had come round,—the hundred years or the thousand years,—the gala time when the castle was gay with the ghost of beauty, and the fortress was manned by shadowy yeomanry whose thin blades dazzled weirdly in the moonlight. For the moon was rising over some white shoulder of the Alps, and like a silver sea the clouds had melted before her. The sight was magnificent beyond description.

I had noticed that Hill had been quiet for some time, talking but little, though when he did speak it was in his usual happy-go-lucky style. I had hesitated to say anything concerning my own feelings, for I felt we had enough to worry about without adding any new and inexplicable ailment of one of us to the situation. We had managed to rig a blanket over the boat during the snow-storm, and this we had taken off, shaken as well as we could, and when it came time to go to sleep we had tried to wrap up as usual. I was half dead for sleep, and yet I was unable to move hand or foot, and the knowledge of this kept me from closing my eyes.

«We shall have to help Jabez keep dog-watches through the night,» said Hill. I felt that I could remain silent no longer.

«Hill,» said I, «I 'm sorry to say anything about it, but there is something wrong with me.»

«The deuce, you say!»

«No, I did n't say the deuce, but I feel deuced queer.»

«Egad! I 've been feeling that way myself for the last twelve hours.»

«You don't say!»

«It 's a fact, though. Lord Clambor, are you O. K.?»

«Never more fit in my life, bar nothing but too much appetite for too little dinner.»

«Jabez,» said I, «come out here, you beggar. How do *you* feel?»

Jabez came wriggling out from under the blanket, and I saw at a glance that he was in possession of all his faculties. I drew a sigh of relief. Thank Heaven, we had two able-bodied passengers! We all looked at one another, and I could see Clambor's eyeglass fairly twinkling with interest.

«I say,» said he to Hill, «are you feeling seedy?»

«Seedy!» retorted Hill. «I 've gone to seed. I 'm nothing but a dry and lifeless pod. I can turn my head and my wrists, and wriggle my fingers, but that is the end of my abilities.»

«By Jove!» exclaimed Clambor, genuinely alarmed. The monocle glittered in the moonlight like the diamond-crusted hilt of Excalibur in the eyes of good Sir Bedivere. He looked apprehensively at me, and Hill said judicially:

«Holdem, state your symptoms.»

«I have n't any,» said I; «I have n't a symptom to hang a statement on. I have no pain, I think as clearly as ever, I see as well as ever, my mouth does not taste livery; but I 've had a stroke. I can turn my head as you can, and have the use of my hands as you have; but otherwise I 'm a dead man.»

«How very extraordinary!» exclaimed Clambor.

«Yes,» I went on; «I 've either had a stroke, or else I 'm frozen to death and don't know it.»

«Same way with me,» said Hill. «I expect it was exposure in that confounded crevasse.»

«Oh,» groaned I, not with pain, but mental anguish, «they say death by freezing is painless. Maybe that 's what ails us.»

Clambor unrolled, and went to first one and then the other. He felt us over carefully, and tried to take our pulses. I suppose he wished to do something professional to cheer us up.

«Aw,» said he, with due deliberation, «you —aw—you can't be frozen, you know. You're warm.»

«Do you know anything about medicine?» I asked. He was obliged to admit that he did not. It was like his British cheek to give an opinion about something he knew nothing at all about. Was n't science always making

new discoveries? Were not medical reports always full of unprecedented cases and diseases that the medicos had to think up new names for? And freaks—were there any prospects of ever getting to an end with freaks? How, then, did he presume to say that we were not frozen just because we were warm? Mighty little he knew about it! But he wrapped us up in blankets just as if he thought they would do us good, and went on with his asinine driveling.

«On the other hand, you are not feverish. I 've had fever myself,—a jolly bad spell of it, too,—so I know it is n't fever.»

Fever! Two men dead from frost, and yet suspected, even, of having fever!

«Do you think you could let me see your tongue?» Clambor next asked me. Idiot! But I knew he had his hands full with us both, so I was willing to gratify him to that extent if it would make him feel any better. It could do me no harm, even exposing it to

«I LET ME SEE YOUR TONGUE.!»

the night air like that. He did not know how to shoot with our light-gun, so he scratched a match, and burned the brimstone under my nose while he examined that tongue as if he were trying to decipher hieroglyphics on an obelisk. He would have looked wise and made me keep my mouth open until I had chilled my lungs and added pneumonia to my other miseries, had not Jabez taken an interest in the examination, and tried to crawl down my throat, which gave me an excuse to shut my mouth without appearing rude. But when Clambor scrambled over to Hill on his errand of mercy, and scratched another match to illuminate another tongue, Hill was rude.

«Get out!» said he, not considering the difficulties attending that instruction if Clambor tried to follow it. «You would n't know a human tongue from a pickled sheep's or a smoked beef's if you saw all three on a plate together. I won't have any man but a dentist prying into my mouth, and I never had one of them try it but I came within an ace of knocking him into the middle of next week. My tongue is all right, my lord. You can tell that by the sound— O shades of the great departed!»

I never heard an able-bodied seaman express himself more fluently and eloquently than Hill did during the next six hours. I should have remonstrated with him if his expressions had not agreed so perfectly with my sentiments. As for the Englishman, if he was shocked he managed to conceal it. I could not make out whether it was natural politeness or profanity welling up in him.

«I wish you 'd punch some of these buttons for me,» said Hill to Clambor, as viciously as if they had been heads. Under his instructions, Clambor fired off the light-gun, and also turned on the current under the gridiron. Then, Hill acting as *chef*, with Clambor as a sort of scullery-boy, they cooked the last of our mule-steak.

«We 've got to have breakfast now,» Hill explained, «and we might just as well eat everything we have, for I 'm going to consume all the electricity in order to release that anchor-claw. It 's the only way. I hesitated to do it at first, because I did not want to exhaust our power; but there 's no use hesitating any longer. It 's our only chance to get off this blankety-blank mountain. I 've always wondered how a camel's hump felt; but it seems to me we are doing the hump act now with a vengeance.» He trailed off into broken wanderings that I will not record.

We ate our breakfast at midnight, Clambor feeding us each in turn, like a big one-eyed robin bringing up a brood of phenomenally early birds. But I think to any discerning eye we would have resembled a nest of nightmares rather than a nest of nightingales or robins. We were as helpless as babes; and as a diet of meat and brandy had made our chief want that of something to drink, Clambor finally gave us each an icicle to suck, and Hill and I lay there and glared at each other, like a pair of bad-tempered, overgrown twins in a cradle trying to extract comfort from their bottles. Thus the night passed slowly; but about four o'clock we saw the balls from our light-gun, which had been constantly discharged into the darkness since twelve o'clock, fade gradually away; and after their

disappearance there was a tinkle from our anchor-claw as its strength departed from it. The next moment we rose into the air and floated off, released at last.

Oh, the joy, the satisfaction, of that sensation! the pleasure of seeing that mountain receding over our stern! We felt as Prometheus would if Jupiter had said hocus-pocus over his liver and set him free. And then the sunrise! Catching its heavenly hues, and illuminating like a fleet at sea for some emperor's fête, the valley clouds rose about us, and we descended softly into them as if launched into a fairy ocean. But as the sun rose higher and higher, and the clouds dispersed, and it became necessary for Hill to take our bearings in order that we might make a proper descent, I perceived that he was merely a log like myself, with the use of only his head and his hands, all three members attached to immovable sticks, as mine were. Clambor executed all orders with cheerful alacrity, and manned the craft, under Hill's direction, as well as any one could, now that we had no complicated machinery to look after. With the coming of daylight our English friend inspected us minutely, and after a deliberation that seemed truly medical he diagnosed our cases as paralysis.

«THERE WAS A CRASH.»

«You be blessed!» said Hill, irreverently. «I tell you, I am not paralyzed. Why, did you ever know a true case that did not extend to the mental faculties, and also affect the facial muscles? Does this look like paralysis?» He winked with his right eye, and then with his left. «Or this?» He elevated his frosted nose, off which the skin was peeling, until it seemed to grow between his eyebrows like a Japanese pug's. «Or this?» He slid his ears up and down on his head, and wound up with a succession of the most awful distortions of countenance that I ever looked at.

«Hill,» said I, after I had watched this performance for a minute or two, «you could earn your living making faces for the public. What the world wants is amusement, and I never saw so unique a talent hidden under such a bushel as yours before.»

His eyes twinkled, and he took kindly to the idea.

«If I find out that I have ossified, or petrified, or done anything past revision up here, I will remember that suggestion, and try to get a job making faces in a museum.»

We had been so entertained by this exhibition that the balloon had been left to its own devices; but now, glancing ahead, we were horrified to see that we were approaching Mont Blanc at railroad speed. It was really Mont Blanc this time, and if we kept on there was no reason to doubt that we should strike about half-way up the mountain in very short order. I never saw Hill wink so fast, and I knew that all the repressed energy in his body had been transmitted to those lids.

«Throw all these seats overboard!» he shouted. Clambor tumbled us off unceremoniously, and did as directed. «Throw out the blankets!» again yelled Hill, seeing that no effect had been produced. «Throw out the dog—anything that is n't nailed down!»

Now when he said, «Throw out the dog,» Jabez knew what he meant as well as I did. He looked at Hill reproachfully, and then, the instinct of self-preservation being strong even in a dog, he tried to hide himself under me. But, fortunately for Jabez and his master, there was something else to do; for by the time the first articles had gone by the board Hill was shouting other orders:

«Pull the valve-rope! It 's no use trying to do anything else. Let the gas escape as quick as you can, and when we reach the ground the dangling anchor-claw will break our fall somewhat.»

Digitized by Google

Clambor was adjusting his monocle and squinting about for the rope; but Hill was impatient. Like the average man, his temper was not improved by sickness and adversity.

«Oh, hang the eyeglass!» he shrieked. «Pull the rope, man! pull the rope! Look at that blankety mountain ahead!»

But it was too late. The next moment there was a crash, an explosion, and we were buried under a mass of fine chains and gassy-smelling silk. The balloon had been blown a few feet in advance of us, and I shall always think that saved our lives; for nothing but the mesh of chains over the top of the boat prevented us from being fired right at the mountain when the craft struck. As it was, we were caught by the fallen mass of the balloon, which had itself hit a projecting boulder and collapsed with a big pop like an air-inflated paper bag on a large scale.

«WE STOPPED WITH A JERK.»

I have always admired nerve in a man,—probably because I have none too much of it myself,—and I have regarded Hill as the nerviest person of my acquaintance. But I must say that, for an Englishman, Clambor made a pretty good exhibition of that quality. He struggled until he had freed himself, and then he contrived to pull us up by the shoulders and give us air. Jabez did not require assistance; for, after giving two or three yelps when the crash came, he speedily took account of himself, and finding that he was in good working order, he followed his nose out without loss of time. We were moving, but not with the motionless ease of air-transportation. We seemed to be bumping along like a springless wagon over a bad road, but going at a good pace.

«What 's the matter now?» asked Hill, not nearly so tart as before. A danger passed always raised his spirits. It was then that Clambor rose in my estimation to sublime heights of nerve. He had made a wad of the balloon material to sit on, the seats being gone; and he now took a handkerchief out and polished his monocle as carefully and painstakingly as he ever did in his life. Then he put it on, and steadied himself by a hand on the side of the boat, for we seemed to be increasing our speed.

«I 'm blowed if we are not on the tail-end of a blasted avalanche!» he said sulkily. But he was just as calm as if he had said, «We are in the Duke of Sutherland's conservatory.» I could not help looking at him admiringly.

«Great guns!» cried Hill, his eyes sparkling. He thought a moment, and then exclaimed: «Well, that may be as good a way of getting down as we could wish—if we don't try any leap-frogging over something bigger than we are. I did n't plan the *Cloud Queen* with a view to playing leap-frog, or doing any tobogganing or snow-shoe act.»

Lord Clambor looked as vexed as if he thought we had put up that avalanche job on him, and for a while he sulked like a salmon. Of course we did not expect him ever to see a joke. As for Jabez, he had barked at the convent, at the clouds, at the flag, at the crevasse, at the mountain, and he now barked at the avalanche. He barked at it from the front, and the rear, and both sides; and from whichever way he saw it, he was unable to discern any virtue in it. In his opinion, it had a tumbled, tousled, dissipated, just-been-out-all-night-and-have-n't-combed sort of look that was to the last degree disreputable. So he barked, and Lord Clambor sulked, and Hill and I waited.

The chief objection to going avalanching is that you never know when you are going to stop, or how; and as the same sort of troubles beset you before starting, I feel that I am safe in making the statement that, in my judgment,—based upon experience,—there is nothing about it to warrant its ever becoming a popular pastime. But I

Digitized by Google

have always advocated the theory that whatever is, is for the best, and I felt more than justified in my belief by the final experiences of that trip. It very often happens that things we can only regret at the time, that seem specially calculated for our vexation or undoing, turn out to be the traditional disguised blessings. For instance, had Clambor pulled that valve-rope when Hill wanted him to, we should have dropped far afield in the avalanche, and been buried somewhere at the foot of the Alps to-day, instead of pursuing our separate vocations (Clambor has none, but he 's married—and married to the girl who would n't have him before he fell off the Matterhorn) as we are. That delay in doing what seemed to be the best and wisest thing at the moment saved us. As it was, we jogged along with the anchor-claw trailing after; and presently this caught on something we had bumped over, and we stopped with a jerk. Lord Clambor and Jabez took headers from where they were sitting; and Hill and I, in our plaster casts, catapulted out indiscriminately, and raked along a little way on our own account after we landed. But the avalanche had gone on.

I received a smart rap on the head from something we passed, and this rendered me unconscious for a few minutes. I remember coming hazily back, and getting a dim glimpse of Clambor at work over Hill. He had a knife in his hands, and had every appearance of being engaged in the operation of skinning him. A horrible thought that Hill was dead and Clambor gone mad flashed through my mind before I again lost consciousness. My next sensations were of blessed freedom, of restored strength and animation in my poor body. I jumped at the conclusion that I had died and gone to heaven; but the sound of unholy laughter and loud barking disabused my mind of that pleasant fiction. I judged I must be in the other place until I recognized Jabez's voice. Then I tried my arms; they moved. I tried my legs; they were alive. I concluded to sit up; and I sat up. Lord Clambor was holding his sides and shrieking with laughter; and Hill was trying to hold his sides and wipe his eyes at the same time; but he was a little stiff yet. I looked at myself. My hands were red and swollen, and my body was ribbed in red and white of a curiously familiar pattern. A pile of small-sized, thick, shrunken-looking garments lay between Hill and me, and they were raveled and ragged where they had been cut, but in their cast-off estate they bore the same resemblance to the human body that a snake's skin does to his.

«Hill,» said I, with a gasp,—I was beginning to comprehend our paralysis, our having been dead, but yet being alive,—«it—it was n't—»

«Yes, it was,» gurgled Hill, between hysterical breaths; «all wool, and a yard wide, too.» He rolled over on his back, and writhed as if he had recovered the use of himself.

Clambor sat down on a rock left by the avalanche, and said weakly, «Oh, I 'm blowed!»

He was, literally. And while he wept for joy, and we joined in, content that he had at last seen a joke, we also dressed by degrees, as our strength would permit; and Jabez barked and gamboled about like a dog gone mad. We were not even damaged—as Hill said, not even our feelings hurt.

So we trudged merrily to the nearest town. We had lost our balloon and our woolens; but what did it matter? We were ourselves intact, and we had been up the Matterhorn in a boat.

«WE TRUDGED MERRILY TO THE NEAREST TOWN.»

THE END.

THE DAYS OF JEANNE D'ARC.

BY MARY HARTWELL CATHERWOOD,
Author of «The Romance of Dollard,» «The White Islander,» etc.

WITH PICTURES BY BOUTET DE MONVEL.

XIV.

THE May afternoon was waning in Compiègne. It had been a golden day for the north provinces at that season of the year, and the city was put in a joyful stir by the coming of the pucelle. She had arrived at dawn, with about five hundred men, from Crépy, and entered on the south side, unseen by the besiegers on the north. Splendidly mounted and equipped, her saddle-cloth made of cloth of gold, a crimson levite belted over her armor, her standard displayed, she cantered with her troops toward the bridge gate; for it had been concerted with the Captain of Compiègne that she should strike and surprise the Burgundians at Margny before the sun went down, cutting off the farther camp of Clairoix from the English at Venette.

It was not the first time the maid had been seen in Compiègne since Easter. In April, when English captains were about to embark fresh troops for France, they refused to go. «The witch is out again,» they declared to their angry officers. «It is true she hath not been seen in the north since autumn; but soldiers have this feeling only when she is afield.» They deserted in crowds. Beating and imprisonment had no effect on them. Only those who could not escape were forced on board.

Then the Duke of Bedford heard the maid was actually at Melun, and had helped the inhabitants drive out the English garrison. As swiftly, she was at Lagny-sur-Marne, striking English marauders. She had leaped again into the field, for there had never been any truce with the invaders, and Charles's truce with the Duke of Burgundy expired at Easter. The French were renewing their struggle without the king. The Bastard of Orléans, who had been made Count Dunois, was pushing, with the Duc d'Alençon, toward St. Denis. At first it was told in terrified Paris that the maid was coming to renew her attack. She certainly attempted, both by Soissons and Pont-l'Evêque, to break her way southward. But Compiègne, the most important town of northern France, often besieged and harried by the invaders, holding fast to its loyalty, was at this time threatened by both Burgundians and English. The French captains flocked to the maid. The Duke of Bedford at once issued a proclamation against soldiers and officers who should «be terrified by the enchantments of this pucelle.»

Her squire and the Chevalier du Lys, her brother, knew with what force she had sprung into the field. They rode alone with her out of Sully-sur-Loire without the king's knowledge or consent, a few needful things strapped behind their high saddle-backs. It was a three-days' ride to Melun across rough country and up the long ridge of Fontainebleau forest. Pierre thought with hatred of Sully-sur-Loire, the most inhospitable place in France—a many-towered castle, with pointed roofs, and curtains of stone, rising from a river-like moat. It stood beside the Loire; but how dreary was the great river at Sully, running deep along the high bank, and spreading far off in shallows, seeming to cut France off from the north!

At Sully, Pierre had watched day after day in vain for Madeleine Power. The morning the court left Bourges he was early afoot, determined to press his suit again; but a page wearing the De Beuil livery came to him with a message for the pucelle. The demoiselle Power sent word that her marriage was to be postponed, and she was to join the court at Sully. So easy was it for Pierre to believe what was told him that he suspected no trick until La Trémouille's insolent hospitality, which made every mouthful of bread bitter, forced the truth upon him. Madeleine Power was not brought to Sully, and he heard no more of her. He thought of dashing out by himself to Loches. But if he were there, what had he to offer a demoiselle who had merely looked at him? Should he carry her off by violence?

Digitized by Google

«Pierrelo,» Jeanne once said to him, «do you remember the huge red snails about Bermont spring? They must be creeping forth; and all the Meuse valley is quickening with green. I cannot stay here idling any longer, where we are not wanted, and so little time remains to me.»

«God he knoweth I have no stomach for this place,» answered Pierre, «and less care what becomes of me now, so I go free of it.» What lonelier spot was there in France than this old village of worm-eaten carved timbers clustering about a feudal stronghold? And how delicious was the forest of Fontainebleau after Sully-sur-Loire!

The second night the three riders came to a deep oval valley in the forest, a vast cup of white and gray rock. Sunset was behind as they descended into the gorge, a pink flame mounting the sky, sparkles upon sparkles, the rosy smoke sweeping the zenith. And when they had picked their way across, and ascended to the opposite forest level, there, in sand as soft as ashes, rock turned to dust without grain, stood ruined walls which they knew to be the ancient abbey of Franchard, to which a peasant had directed them as a landmark. There was enough roof to shelter them for the night. They heard the bubblings of nightingales; and near them were moss-crusted elms dropping finger-tips of branches almost to the ground, white-pillared, forming cathedral naves in the forest; white birch, pine, and oaks; hills and dales of springing fern. Jeanne closed her eyes, thinking how near also was Paris; and Bertrand closed his, contented to be anywhere with her.

To Bertrand this was the happy spring of his life. He felt riding to heaven alone with her, for Pierre was moody, and lagged. She had grown so accustomed to his tendance that there was communion between them without talk. He had her to himself, depending on his presence, while the English began to feel the coming terror. She told him before she told Pierre that her voices had warned her she was to be taken prisoner before St. John's day. Always reticent in speaking about this unseen counsel, she sometimes turned a startled face toward Bertrand as they rode. Her lips parted; her lifted eyes filled with light. He held his breath.

This twenty-third day of May in Compiègne his nearness to her was incredibly crowned: Jeanne and Pierre and Bertrand took the sacrament in the church of St. Jacques at the morning mass, kneeling in the fifth small chapel from the entrance, on the right-hand side of the church. As they passed into the aisle it happened that the bells began to chime. Bertrand and Jeanne both lifted their faces. Did he hear a faint tone of some unearthly voice—a sweet, still articulation under the clamor?

Jeanne leaned, pallid, against a pillar opposite the chapel. The paneled and flower-carven wood, supporting shorter stone pillars near the clearstory, threw her face into relief. At once the early worshipers in St. Jacques's church drew toward her, smiling, and some of them secretly touched her. Bertrand had seen her stand godmother to many a baby during her campaigns, and every boy that she held was christened Charles for the king.

«My friends,» spoke out Jeanne, «I am soon to be taken and sold into captivity, and then I can never again have it in my power to help France and the king. Pray for me.»

Bertrand remembered what awe struck through the listening faces. But the people of Compiègne could not think of such forecasting when the pucelle rode out to make her attack on Margny.

«Did you know,» Bertrand inquired, as he helped her mount, «this Captain of Compiègne was appointed to his post by favor of La Trémouille?»

The maid, startled, looked at her squire. «No, I did not. But for the honor of France he is bound to support us in this sally. En nom Dé, if I thought I should be taken at this time I would not go out. God grant I may perish when I am taken, for it is far easier to trust my soul to him than my body to the English. But St. Jean's day is a month distant, and we must do all we can.»

Poton de Xantrailles rode beside her, and the setting sun shone on the left side of their faces as they galloped over the lowered drawbridge and the rosy Oise, where archers were taking to boats to support the attack from the river.

The Oise flows southwestward, and Compiègne is on the left bank. A fortified bridge then joined it to the northeast shore, where defensive works were further guarded by a deep foss. Over this a stationary bridge was built, and it seemed the entrance to a high causeway stretching across the marshy meadows. In the north, bounding the wet land, was a low range of hills. Straight ahead, beyond the causeway, could be seen the church tower of Margny, a third of a league from Compiègne, and there lay the

Burgundian camp she meant to strike. Beyond that, and at twice the distance, was Clairoix, the second Burgundian camp, which she meant, by this quick blow at an unexpected hour, to cut off from the English camp at Venette, a half-league to the west of her route.

The archers in the boats saluted the pucelle as the armor of her troops flashed across the Oise bridge. Five hundred strong, the attacking party took at speed the long line of the causeway. A little lower and a little ruddier, the level-lying sun touched the walls of Compiègne and the great forest lying behind them. It promised to be a pleasant May twilight, clear and fair. The waiting bowmen laughed and talked to one another, even after the noise of combat reached them from Margny. The pucelle would doubtless bring in many prisoners. The Duke of Burgundy was himself said to be at Clairoix, and a surprised duke would he be when he found himself suddenly cut off from his allies at Venette.

People on the walls of Compiègne could see what the archers at the river level could not see. Venette was aroused by the clamor in Margny. English troops were streaming out to attack the French rear. Gunners on the walls made haste to train cannon which they dared not fire, and the silenced archers in the boats made ready shafts which they dared not discharge. For back came French and English together, pell-mell, crowding the causeway, pushed off into the marsh, a fighting, struggling mass, the Burgundians of Margny pressing behind; and the Captain of Compiègne did nothing.

The archers, unable to shoot without wounding their friends, gathered refugees into the boats. Alarm-bells were rung in the city; men and women ran to the open gates. The pucelle and her body-guard could be seen covering the rear of her panic-stricken troops. Now she rode back and lashed the pursuers, and now she turned to rally her own soldiers. Her brother and her squire and De Xantrailles, the one captain who never left her, pressing about her, fought with desperate courage. Shouts and the clang of weapons seemed to fill that little sunset world. The entrance to the Oise bridge was wedged with struggling bodies, and horses trampled their own dying riders. The pucelle, when she could no longer cover her troops, conspicuous in her crimson garment, was seen to make a dash for the marshes. Surrounded by Burgundians, she was dragged from her plunging horse by her robe, and yells upon yells of triumph drowned the noise of battle, The pucelle was taken! It would be shouted long after nightfall at Clairoix by drunken soldiers, and repeated with joyful derision from camp to camp. The witch was caught. Trumpets which usually called to arms shrieked discordant fanfares over this great prisoner. Captains taken with her counted as nothing; they might easily ransom themselves. But the witch of the Armagnacs, worth more than the ransom of a king,—the terror of England,—was at last a captive, dragged off to the Burgundian camp! The Duke of Burgundy would that very hour send out despatches bearing the news to the regent and all Christendom.

Men and women of Compiègne ran struggling across the Oise bridge, as the mob of soldiers cleared away, to fall with any weapon on the rear of their retreating foes. What did English and Burgundians care at that moment for Compiègne? They had done enough that great day. The inspired maid was taken!

It was four days afterward that Jeanne turned in her saddle to watch that dear town of Compiègne grow less in the distance, as she rode among her captors northward along the course of the Oise. A score of men-at-arms guarded her, and wherever a device appeared on their housings, it was the rampant two-tailed lion of Burgundy. Wooded hills lay along the horizon at their left, and at their right, in the low ground, flowed the pleasant Oise.

Jeanne could not speak to her squire, for he was held in charge by troopers at the rear; but she took comfort from the thought: «We are prisoners to the Burgundians, not to the English. While the Lord of Luxembourg, a vassal of the Duke of Burgundy, holds us to ransom, it might be worse with us.»

Pierre and De Xantrailles were yet in the camp at Clairoix, slightly wounded. She hoped she was not going far from them; but late in the day the cavalcade passed Noyon, winding among the path-like streets of the ancient gray town. Huge white oxen, yoked by the horns in many pairs, were crowded to the walls to let them go by. The people of Noyon ran to look at the captive pucelle paraded to their sight; and some were sorrowful, while others, having it in mind to stand well with Burgundy, shouted as she rode with her head bowed. Charlemagne had been crowned in Noyon.

Bertrand noticed with dull attention the carved beam-ends and oaken cross-pieces in

Digitized by Google

house-fronts, and the little leaded windows. Beyond Noyon he made a landmark of every windmill standing with spread arms against the fading sky. Neither Jeanne nor he had given parole not to escape, but there was small hope of escape. Both were mounted on poor horses, the refuse of the camp.

The moist May night closed over desolate fields as they turned westward into a path lined with no villages and no lights. Remote and lonely exile waited behind unknown horizons. It grew chill, and the jaded horses lagged until they heard the barking of a dog. A cluster of houses where no fires burned skirted the way. Then a moat showed its livid water on the right hand, as the party mounted a short ascent and turned into an orchard.

«What place is this?» inquired Bertrand of his guards.

«This is the tower of Beaulieu.»

«I see no tower.»

But as they drew nearer to a drawbridge he saw its low top against the sky. It was a round tower of brick, at one end of a long, dusky château. The only lights came through two south windows of this tower. The cavalcade called impatient curses on the keeper before the gates were opened. Bertrand noticed, as they rode across the lowered drawbridge which came down creaking on its unused chains to meet them, an oblong hole in the bricks, about three feet above the water in the moat, made noticeable by shine reflected from a wall within.

One old man held up a candle in the brick-paved court, where the horses were crowded against one another, so near was the opposite wall, and he smiled without teeth at the liberal abuse he received as he locked the gates under the archway again.

Thought Bertrand, «This does not seem a strong place.»

«Now, Messire d'Aulon,» said the captain of the escort, using the name which Bertrand had given at his capture, «you will do your last service to the maid, and disarm her.»

The servants of the party led away the horses. Jeanne was already in the tower, and her squire followed her. She had been stripped in camp of her crimson levite, her courser, and her cloth-of-gold saddle-housings; but the Lord of Luxembourg, her captor, had allowed her to remain in her armor, according to her custom among men in the field.

Many spurs jingled on the paved floor, and as soon as the jailer had turned a huge key behind the prisoner, her escort, taking candles and bidding him bring them firing and supper in fewer minutes than it had required to open the gates, trooped through another door into the château.

Opposite this door in the tower was a high, shallow fireplace with an oven beside it. On the pot-hanger hung a seething kettle. The lazy blaze and the old man's candle showed brown timbers and many cross-pieces hung with cobwebs overhead, flooring the concave of the tower, and roofing the circular walls. A table, a bench, a kind of lair which could not be called a bed, and some cooking-vessels, were all the furniture.

Jeanne stood spreading her hands before the blaze while Bertrand knelt to unbuckle her mail. Her supple body drooped. He did not let himself say, «This is the last time I shall take off her harness,» but his fingers fondled every strap. The cleft between her lower lip and her chin seemed more deeply indented than ever, and her eyes were weary. She was recalling the dark face and broad-tipped nose of Philip of Burgundy, surnamed the Good, whom her king in youth had offended with deadly offense. Her usual distrust of him, which the magnificent man in black velvet had courteously shaken by a few words of pride in her,—being French himself, and unable to repress them,—had begun to revive. She was prisoner to Burgundy's vassal; but would he stand between her and the English?

The old man, trotting from side to side of the tower, paused with his back and hands laden as Bertrand said to him sternly:

«Before you carry fire or food to rough men-at-arms, your duty is to the pucelle. For this unmannerly treatment of such a prisoner your Lord of Luxembourg will hold you to account.»

Opening and shutting his mouth with indecision, the jailer put down his loads, and dipped broth from his kettle, and put wine and bread on the table, taking them from a kind of buttery within the château door. He pacified with high-pitched voice impatient calls for his service ringing through empty rooms beyond.

«Where is the pucelle to lodge?» asked the squire, laying down the last piece of her armor.

The old man beckoned, and trotted with his candle down three steps at the left side of the chimney, Jeanne and Bertrand following. He thrust the light beside an iron-clamped oaken door over three steps at right angles to the first descent, showing behind the fireplace a vaulted cell about six feet high and nine feet long and less than three

Digitized by Google

feet wide. They could hear the lapping of the moat through that slit in the wall which Bertrand had noticed as he crossed the drawbridge, and which let in all the air a prisoner could hope for when the door was shut and locked. The floor was stone. The farther end of the cell was concave.

«I have lain hard many a time,» said Jeanne, laughing; «but never before was I put to sleep in a tomb.»

«The pucelle is not to be lodged in this dungeon?»

Her keeper nodded.

«Let me lie here,» entreated Bertrand. «There must be better places in a château for a noble maid.»

«You, messire?» chuckled the old man. «Who cares to hold you? That is simply a matter of ransom between you and your captor. But this is the witch of the Armagnacs.»

«Have you no fear of her?»

The jailer shook his head hardily. «I am a Christian man.»

«I have known men who called themselves so, yet they durst not move hand or foot when they would approach her,» whispered the squire at the old man's ear as he ascended the steps behind that disturbed servitor.

The men-at-arms were by this time clamoring in such wrath that he seized his loads again and ran through the château rooms.

«Quick!» whispered Bertrand, holding the bowl of broth to Jeanne. She understood him, and swallowed. He put some pieces of bread in his pouch while she drank. The jailer's steps had not passed out of hearing on resounding floors within when both prisoners were outside, locking the door behind them.

They turned toward the front of the château, for there seemed no way except this. So habitually had Jeanne let herself be guided by others since the warning of capture had followed her, that she took no thought but Bertrand's, and stooped as he did, running under the windows. Damp greenness, gathered on the outlines of old bricks, came to their nostrils. A wall bounded them on the left, and it turned at right angles on a walk which led to a gate at the top of a terrace. The gate was fast, but it was low, and both scrambled over it. A high balustrade of brick with a coping of stone guarded one side of the stairs; a wall guarded the other.

They were feeling their way downward into the moist darkness when Bertrand turned and caught Jeanne's hands. He saw the dim guards below, but they had also seen him. Shouts of warders, oaths, and the rattle of swords leaping from scabbards drove them back over the gate. The front of the château flashed with candles, and men dropped from the low windows.

The prisoners, grasped by many hands, faced each other in one look before they were separated. All Bertrand's patience and faithfulness and self-restraint, and his sympathy like a discerning god's, the maid owned and blessed as she lost them. The dungeon closed upon her. She heard no sound but the lapping of the moat.

XV.

THE Old World's reek, a stench left by death and ignorance and sudden flight, met a party of knights and men-at-arms at the entrance of a village. Coucy Castle could yet be seen in the wooded world behind them. The village was empty, and as silent as the withered bush hanging in front of what had been the wine-shop. No dog barked at the cavalcade, and the late afternoon sun probed desolate houses through the open doors. But deserted villages were common in northern France. This one was intersected by a road coming from the west, and at its junction with the road from Coucy the men drew rein and screened themselves by the church wall. Two archers dismounted, and went along the bending street, stooping to examine marks in the dust.

«English,» said one of them, pointing with his bow-end at many hoof-prints having a triangular shape. Horseshoes made in France were round, but the English horseshoes had a broader base of iron, forming a triangle in the center.

«Here be the tracks left by Messire du Lys's troop,» said the other archer, and they went back with their information.

Both captains pushed up their pointed vizors, showing disturbed faces. «By my baton,» swore the broad-backed knight, «if the pucelle's guards have escaped us, Poton, La Hire will curse thee as no fit man to lead a sortie.»

«What have these shoe-prints to do with the pucelle's guards?» returned De Xantrailles. «Her guards are Burgundians, the vassals of Luxembourg. Mounted on English-shod coursers they may be; but by this token there is more than one troop to meet, and the Chevalier du Lys will find himself hard pressed on the north road.»

«What certain information have you that

Digitized by Google

the pucelle is to be removed from Beaulieu tower at this time?»

«It is not a far cry from Beaulieu to Coucy. The place hath been watched for me nearly three months, and I know that Luxembourg is about to carry her to his château of Beaurevoir in the north. It hath a strong, high tower. If you had come to my help sooner, we might have broken into Beaulieu.»

«Come to thy help sooner? Had not La Hire enough to do to hold his own town of Louviers, in the very teeth of Rouen, where the English have their stronghold?»

«And not a coin didst thou send to my ransom,» continued De Xantrailles, his wrath gathering. «By hardship did I get free, for I never made myself rich with pillage, and the country is destroyed, as thou dost see, about Coucy. The pucelle's ransom I could not pay, but I sent a messenger at once to the king showing her state. It was only this month that I was able to exchange some prisoners I had taken for her brother and her squire; and they added the churchman, Brother Pasquerel, her confessor, who, since he is also ordained to priestly offices, my mother hath employed at Coucy. By St. Martin, I have been too poor this summer to pay for mass and candles.»

«Is La Hire rich himself? In running this venture he hath scarce a coin in his strong box stored against need. And Louviers is a slippery holding, while Coucy is impregnable, only to be taken by surprise. And against all counsel thou didst leave it open to surprise, with so few warders, when we rode away.»

«Since Compiègne I have few warders to leave. By St. Martin, I cannot make men-at-arms.»

«And if thou couldst, they were better patterned on another than thyself.»

«I wish I had the making of thee over,» said De Xantrailles, savagely. «I would not use a damned atom of thy old substance.»

La Hire sat stiff, a head and shoulders below his friend, and glared at De Xantrailles.

«What hath La Hire ever seen in Poton de Xantrailles to love?»

«A well-made man, one able to sit down without holding a great lapful of bowels.»

«Well made, thou sayest? Can a man call himself well made who knows not hunger from the backache?»

Having reached this pitch of disagreement, both knights laughed in the hollows of their casques. Their retinues, accustomed to the pair, kept guard, and watched about the church wall for the approach of the pucelle.

«Where is the young Chevalier du Lys, that he was not left in charge of Coucy?»

«Have I not told thee many times I sent him out with part of my retinue to watch the northern road from Beaulieu while we take the southern?»

«If La Hire had reached Coucy in time, that had been better ordered.»

«Who made thee captain over me, Étienne de Vignolles?»

«God Almighty,» shouted La Hire, standing up in his stirrups. «He gave thee length of legs and arms, but no head; for saith he to himself, 'The fool will lose it; let us make it a separate member, and call it La Hire.'»

«Fat-witted I was never called before,» sneered Poton de Xantrailles. «It doth cut me to the heart.»

«Whoever doth cut thee to the heart will find no blood on his knife,» retorted La Hire. «Where is Bertrand de Poulengy? Did you send the squire also with the chevalier?»

«Since I must read you the tale of all my men, Bertrand de Poulengy hath been my spy on Beaulieu since he came to Coucy, and it is he that I now expect to give me warning of the maid's approach. He hath a good horse under him.»

«That was not ill planned.»

«God be praised,» said Poton de Xantrailles, «that one device at least was not ill planned.»

«Yea, amen; though La Hire dreads winning by this ride a bed that will cool him after the fever in Louviers.»

«In God's name, if you were laid low with the fever, La Hire, why have you let me accuse you?»

«To ease thee, Poton; to ease thee. It was the wound taken with Louviers. All flesh is not the flesh of the pucelle, that closes in four or five days.»

«Well, then, a truce to words between us. It put me in a rage to ride alone, when we have fought elbow to elbow so long.»

«Slit La Hire's tongue if he has offended thee, Poton. Thou art the bride and the son of a ruffian, but the ruffian loves thee.»

«I am but half a knight without you,» acknowledged De Xantrailles. «If you had been at Compiègne the pucelle had not been taken.»

«La Hire is no amulet to keep off evil; but whatever befalls at Coucy, his hand is in thine.»

They embraced each other as well as they could in armor and on horseback, and swore that this should be their first and last tilt with words. Their retinues, who had heard

Digitized by Google

many first and last tilts with words, smiled idly, and pulled leaves to chew or struck at floating mosquitos. The horses moved restless feet, for time was passing, and the sun shone horizontally across the village, throwing longer shadows of the stone houses on unplanted fields.

Its light dazzled the men's eyes, and they drew their lids together, watching through slits for the cavalcade on which they intended to pounce. Some of them had ridden with their masters to Rheims, and they remembered the pucelle's compassion on the French prisoners at Troyes. She would not permit the English garrison to carry them away. So intently had the waiting troops fixed their minds on the west that clashing arms and a whirlwind of pursuit through the crooked northern street took them unawares.

The Chevalier du Lys came into sight, fighting and flying with a handful of men before a full retinue of English. La Hire saw with rage that there was a concerted ambush; for behind, on the Coucy road, galloped another company of English.

It was the evening time when maids drove in their geese, and peasants with laden panniers appeared from the fields. This untenanted village, this graveyard of the people, was filled with a brief resurrection; but it was the life of war—battle-cries, the scream of slaughtered horses, the encounter, ax to ax, sword to sword, club against club. Coucy had been taken by surprise, and the French were surrounded. At dusk victors and prisoners, all who were not left to increase the breath of pestilence among empty stone houses, moved up the ascent to Coucy Castle. An English warder raised the portcullis and let down the drawbridge.

So sudden and ruinous had been the result of this sortie that Pierre beheld the facts about him with slow receptiveness, a peasant's inability to compass the unusual returning upon him. He saw La Hire and De Xantrailles led to the dungeons: Jeanne's two friends—the only friends of all her thousands who had made any attempt to rescue her. And he heard De Xantrailles's mother weeping aloud among her women. And Coucy, the great seat of the Duke of Orléans, vaster and more beautiful than any other feudal hold in the dismembered kingdom, full of such gathered art in marble and paintings as comforted men who had little to live for—a palace suited with everything known as luxury, a fortress proof against assault, had fallen into the hands of the English.

Pierre's captors began to strip off his armor in the court. There were many of them, talking English and Franco-Norman, and the hubbub calmed him. They seemed to have many prisoners, and to have swept much country in every direction about Coucy. Free companions were among these regular troops. He saw faces scowling at him that he traced slowly back to Lagny-sur-Marne, where Jeanne had dealt with English marauders.

He stood with the great round tower behind him, and was glad of the open night sky and the cool August night air. The underground dungeons at Coucy were deep, yet torches continued to spin about the court, and he was guarded, and not housed as the knights had been. A hand gentler than the hands that had stripped him touched his arm, and there stood Brother Pasquerel fixing dark eyes of pity on him.

«We have added prisoners to the English instead of taking any from them, Brother Pasquerel,» said the chevalier. His desperate laugh made the monk sadder. «What will become of my sister now?»

«Think now of thine own salvation, my son. The hour has come.»

«What do they intend to do with me?»

Pierre felt the embarrassment of not being able to take the churchman seriously. He said to himself, «I am to die»; but that seemed to matter very little. He knew nothing of death, though he faced it every day; but that it had arrived gave the moment a stinging novelty, and nothing more.

«The free companions in this troop are permitted to take revenge on you for the man who was turned over to justice at Lagny-sur-Marne,» said the monk.

«Do you understand their words, Brother Pasquerel?»

«I understand their intentions; but they brought in an illustrious prisoner, who now waits in the chapel for ransom, and he knows their tongue, and has told me what they say. The Archbishop of Rheims, journeying from Bourges to his own diocese, hath been molested by these lawless companions.»

«The Archbishop of Rheims,» said Pierre, «will find ransom an easy matter to arrange with his friends the English. If I were brother to Messire la Trémouille, my head would be fast enough on my shoulders.»

A firm-set head it looked, his undergarment being stripped to the waist, showing the round neck and young pink brawn of the torso.

«You confessed to me this morning, my son,» said Brother Pasquerel, as Pierre's

Digitized by Google

elbows were grasped by his executioners; and the young man had a solemn sense of prayers in his ears as he walked across the court. At the foot of a flight of stone steps leading from one of the towers was a stone block which the knights of Coucy had used in mounting their coursers. Beside it stood the free companion who was to act as headsman, his sleeves turned well back, and a ferocious readiness in his face. His mighty battle-ax would have beheaded a bull.

Pierre looked up at the filmy sky and all about him, feeling that he had neglected giving to the world all the attention it deserved. This was death—this coming withdrawal from things. He felt already far away, but neither afraid nor regretful. He thought of Jeanne, and of one other, and that reminded him of saying a prayer, which he whispered, his young features as placid as marble, having its fine heroic grain. Brother Pasquerel had absolved many a dying man in the pucelle's first campaign, and in her last, to which he had followed her from Tours. But absolving the dying was an easy religious task compared with seeing the life stuck brutally out of this young chevalier whom he loved. He had been from man to man, pleading against the slaughter with imploring gestures,—for the language of the victors he could not speak,—and they pushed him out of their way. The Archbishop of Rheims, with his frightened retinue, had taken sanctuary in the chapel; and Brother Pasquerel had despairingly asked his intercession, receiving an impatient reply from a prisoner who felt little interest in the pucelle or her relatives.

«The pucelle hath been taken in her stubborn pride,» said the archbishop; «she would not listen to counsel, and it is a just judgment that hath fallen upon her. As for this chevalier, I have no power to help him, being hindered on mine own journey, with all these poor people. If Poton de Xantrailles had guarded his own, and left the pucelle and her family to their devices, he could have given me better welcome in Coucy.»

Torches showed the intent and savage faces of their bearers gathered about the stone horse-block. Pierre was forced to his knees. His arms were tied behind his back, and on his naked breast from armpit to nipple was ridged a clean red scar. The headsman spat upon both palms with a zest of anticipation, and Pierre heard the friar's shaking voice like a distant humming of bees as it went on with its office. He looked at the stone, and thought he would stretch his neck well across the hollow worn by feet. And then he felt his head seized by arms and squeezed against the yielding bosom of a woman, and her draperies about his naked shoulders and over him. Thus shut in and stifled by heavenly odors like linden flowers, he could hear nothing but her heart and the rush of her breath.

His own pulses boomed. Oh, this was dying—to have all he desired in life encompassing him as his head was about to drop! Though Pierre knew his state was fixed, he laughed under Madeleine Power's cloak, exulting over the English, and La Trémouille, and the Archbishop of Rheims. It is better to die in the full flower of joy and effort than to linger even a little late.

The headsman rested his ax on the stone, for he saw there would be a controversy with this woman, and the Archbishop of Rheims in wrath pushed through the circle to reach his niece. If these favored prisoners had been shut in a tower before the execution began, much trouble would have been saved. Yet the new Captain of Coucy and all his men admired her, standing her ground in a whirlpool of three languages; for every man in the fortress had somewhere a woman in whose arms he secretly longed, yet scarcely hoped, to lay his head in his last hour. Ravaging and killing was their trade, yet a woman might have her way with them, as it had been since the creation, and particularly since Mary the Virgin had been lifted like a lily over Christendom.

«This man is my betrothed husband,» declared Madeleine in English. «I claim his life.»

«Shame upon you!» spoke her uncle the archbishop at her ear.

«Let her prove it!» shouted some of the torch-bearers, accustomed in their own country to the encroachments of monastic brethren on the offices of priests. «Here is the friar; let him marry them.»

«Hold your base tongues,» said the new Captain of Coucy. «This demoiselle is niece to his lordship of Rheims and to the little king's chancellor. She is not to be wedded for a show to men-at-arms.»

«Off with his head, then! There be plenty of better men to comfort the demoiselle.»

«He goes to the dungeon for ransom,» decided the captain. «A brother of the pucelle and nephew of the chancellor to the little King of Bourges should bring good ransom.»

«Franquet d'Arras was handed over by the pucelle to be beheaded at Lagny,» was grumbled under the smoky glare of torches.

«Stand forth, you free riders who are not satisfied with the government of Coucy!» cried the captain, wheeling in his place. «By St. George, there be cells enough under this rock for all of you! To the dungeon with this man, and with every free rider that hath aught to say further about Franquet d'Arras.»

Pierre's arms were released. He stood up, dazzled in the torch-light, and took Madeleine openly into them—and the archbishop withdrew from the court, leaving her to her own devices. It had not been at his desire that this half-Scot was thrust on him for discipline. He sent her frightened waiting-woman after her—a middle-aged maid who walked close to the black skirts of Brother Pasquerel.

Chinon was like a large inclosed garden, but Coucy was a perfect feudal castle, with central court and massive ancient round towers. The prisoner and Madeleine followed the jailer and his torch down a winding stone staircase. So close were the circular descending walls that Brother Pasquerel and the attendant and a warder following them found the dangerous stone footing scarcely wide enough for one; but they were not borne up by angels. Pierre and Madeleine walked side by side, and his naked guarding arm grazed the rock. He thought of Bertrand, free, outside of Coucy, and felt sorry for poor Bertrand.

They reached the first underground floor before they remembered that they were forgetting to talk, and this separation might last for years.

«Come on,» urged the keeper, waiting below, and lifting his flambeau in the darkness. «We go down to the prisons beneath.»

«Oh!» said Pierre and Madeleine, both drawing a breath of relief. There would be another flight of heavenly stairs, though the dungeon door waited like the grave at its foot. At this stage of their journey Madeleine put her arm about Pierre. She slipped into his hand and closed his fingers upon what had now become their love-token, the small purse of coin, the price of Jacques d'Arc's horse in Tours. France was an impoverished country, yet hoarded money, an unspent treasure, thus passed from hand to hand. The germ of home went hid therein. Pierre forecasted, with the happy certainty which brought good things to him, all the future to grow out of that seed. He saw the fair white-towered château he afterward built in Orléans, and the worship there given to this woman his wife, and to his mother, the mother of the pucelle. For the first time he thought of Jehannette without a rush of anguish.

«At Bourges I could not see you,» said Pierre, implying how much better it had befallen him at Coucy.

«At Bourges I began to think of you instead of my father,» revealed Madeleine.

Then he remembered there was such a person as Louis de Coutes, and inquired, as if such a tie would be of trivial importance compared with this exaggerated moment:

«They did not celebrate your marriage after you left court?»

«No,» answered Madeleine, also slighting the subject. And she added in simple explanation, «I will never have any husband but you.»

«I will never have any wife but you.»

«Here is your cell, messire,» spoke the jailer below.

Pierre and Madeleine clung together and kissed each other with their first kiss at parting. The garments which had been stripped from Pierre were tossed into the dungeon by his keeper. Not a glint of daylight would ever penetrate to this depth under Coucy. Once more, and yet once more, they kissed each other, and he went smiling alone to the chain which his jailer clanked beside the wall.

XVI.

THE lethargy which fell on France during the year Jeanne d'Arc lay in prison was like the sullenness of a beast that has been goaded to its last effort. The momentum she had given to war being withdrawn, the struggle ceased; yet at that very time the tide turned at Orléans was running out toward Britain, carrying the invaders with it.

From Beaurevoir along northern provinces to the sea her journey of captivity had been watched with tears. When she descended the coast and Rouen Castle inclosed her, the English held her by purchase from the Burgundians, and France slept on nearly a quarter of a century before rousing to demand what had been done in the name of law with its maid, at the end of that year's imprisonment.

Other nations took knowledge that a pucelle «of such high chivalry,» says a chronicler, «that there was no knight in Christendom whose fame overshadowed hers,» was on trial among her enemies; that she was put in a cage in the tower of Rouen Castle, chained with three chains, her feet manacled to a log of wood at night, and common soldiers occupied the room with a maid who

Digitized by Google

had veiled the life of her body from man; that in Rouen, the real capital of English France, it was believed the English would never have any success in arms while she lived.

So low had war-ridden and dismembered France sunk that not only was French money paid by the English purchasers of the pucelle, but Frenchmen were found in a corner of the realm willing to condemn her for the English. Pierre Cauchon, the Count-Bishop of Beauvais, who had resented some horse-dealings of her household, and all of the power so young a creature had acquired over armies, made himself her judge because she was taken in his diocese, and allowed her no counsel for defense. If the king had moved in her favor, he might have had her tried at Rome or Basel, where a religious conference was then in progress. She was accused of intending to settle the claims of the three quarreling popes.

Only one lawyer of Paris had the courage to declare her trial illegal from beginning to end, and he was obliged to leave Rouen in haste and betake himself to a place where he would be safer.

The Inquisition and the University of Paris were ordered to appear in the case against her, but not even a priest was permitted to speak for her.

When Jeanne was at Beaurevoir there was a tale told that she fell from the high tower, and was taken up for dead, in her frenzied attempt to escape and go back to the help of Compiègne; but it is not recorded that Orléans or Compiègne, or any other town, offered anything but processions and prayers for her release.

The Archbishop of Rheims issued from his part of the realm a comforting letter to his flock, assuring them that the maid had been abandoned as an instrument of heaven, but that they might count on the shepherd boy from the mountains.

In Bourges and Sully the winter was merry with cards and lute-playing. There the maid, when any one thought of her, was blamed for leaving court and throwing herself into danger. Perhaps Queen Yolande, and of a certainty Agnes Sorel, moved for her ransom; but meanness bred of long poverty held back, and the English neither held back nor hesitated to tax France for the money.

La Hire and De Xantrailles and her brother were in prison; but where were the young Duc d'Alençon, the Bastard of Orléans, and all those fair captains who had followed her banner to victory?

Seventy accusations, finally reduced to twelve Latin articles, were brought against the prisoner, chief of which were wearing man's clothes, leading troops to battle, pretending to have heavenly voices, blasphemy, and witchcraft. Only six public sessions were held, but the trial with closed doors dragged daily from February until nearly the end of May. An emaciated, fetter-worn maid, not yet nineteen years old, tormented by endless cunning questions, was driven to recite such matters as her secret prayer before the court: «Very tender God, in honor of your holy passion, I pray you, if you love me, that you will reveal to me how I ought to answer these churchmen. I know well, as to this habit, the commandment why I took it; but I do not know in what manner I ought to leave it off. Be pleased therefore to teach me.»

Or she was taunted about those voices, of whom she had spoken only when necessary in her life; or she was lured to confess sorcery in her victories, and answered indignantly: «En nom Dé, I did nothing but tell the men to go in boldly, and I went in myself; and I think it would be a good thing for France if I did now as I did before. Why do not the English quit France and begone into their own country?»

In Domremy the people waited some dreadful event, but Choux enjoyed the May sunshine in front of the Widow Davide's wine-shop. He resorted there because he had long been forbidden to come nearer her door than the boundary of the manure-heap. When Choux encroached beyond that stone line the Widow Davide made a sally with water, which usually struck him in the face and gave him his only experience of it. With his woolen cap-strings dripping, he slapped his breast and danced before his enemy.

«Does the Widow Davide think she can drown me? It is not permitted. Come out and drag me again to the Meuse, Widow Davide!»

«Have a care, or it shall yet be done, thou foul sorcerer!» threatened the Widow Davide. «Thou art spared for Jehannette d'Arc's sake, because she hath taken the tax off Domremy and Greux.»

«Things go better with me than with Jehannette d'Arc. Regard me! I have had a voice above two years, and I am not put in prison. I am indeed the flower of the Meuse valley.»

«Shut the door against him, Haumette,» said the Widow Davide to her daughter. «He will vaunt himself until poor Jacques d'Arc overhears his words. The D'Arcs may be en-

nobled, and Jehannette may have been a great general riding with the king, but Jacques d'Arc sits a broken-hearted man, and she is a prisoner. I see not that the D'Arcs are better off than I am, and I bore much scandal from thy roving summer, and the child that Aveline Laxart found by miracle in the church of Bury-la-Côte and killed by over-nursing. Since she hath found one of her own this year without miracle, and can rest her tongue concerning St. Catherine and that other, it may die out of memory; but I see not that the D'Arcs, with two children laid in English prisons, are better off than I am.»

Haumette herself, gazing with chastened black eyes along Domremy street and across the interval to Greux, knew, as her mother did not, that hush of suspense, that martyr-worship of the maid's family, which hung over the villages. The greatness that had flashed upon her and struck her for her sin, and repented the blow in one agonized look of memory and tenderness, was stamped on Haumette forever. She was not sorry about the child in Bury-la-Côte, there being no maternity in her; but she repented with many prayers every day on her knees that she had been unfit for the touch of Jeanne d'Arc's sword.

In the May weather Mengette had the sense of some divine, terrible presence on the hills as she led her geese out early. She looked down at the church, thinking fearfully of St. Michael. If Isabel had not needed her so much during the year, her lonely life would have been unendurable. But Jacquemine d'Arc was now home from Vaucouleurs, and she was careful to keep out of his way. He looked at her in church, and he walked past her house when his work was done. He also sent his mother to reason with Mengette, and to prove that troth had never been broken between them by their quarrel. Mengette listened to Isabel without a word, and avoided Jacquemine.

He had not fared very well in Vaucouleurs. Gerardin d'Épinal said the people of Vaucouleurs refused him at sight as the brother of the pucelle; but when he adopted the name of Du Lys they rose up and cast their official over the city wall. He was needed at Domremy before he came riding dejectedly home; for Jacques d'Arc no longer went afield, or even tended the sheep, but sat always with Jeanne's letter, written before she went into France, spread open on the table.

Jacquemine had been home since midwinter. Usually when Mengette saw him approaching and increased the space between them, he turned off, or retraced the way he had come; but while she was watching her geese nip the short May grass which broke through the white hill soil, he drew quite close to her stealthily. Mengette left the gander quavering at this intrusion, and walked toward the oak woods, pulling wool on her distaff as if she thought only of spinning. Jacquemine followed her. She turned on the upland, having him at her heels, and her geese waddled in a long line to meet her.

«Mengette,» said Jacquemine, «I intend to come to speech with you this day, wherever you may set your face.»

She continued her walk.

«Gerardin d'Épinal says you do well to be rid of me, for I am a poor stunted creature, and you will make a better marriage.»

Mengette turned upon him. «That is not the truth.»

She saw at arm's length how wasted he was, and that the dear lines of his face, which had been hers since his boyhood, were stamped deep by care.

«I wish I had not gone to the vineyard the day we quarreled. I wish I had never gone to Vaucouleurs. Domremy is good enough for me. My father is plainly dying on account of Jehannette, and Pierre also is in prison. My brother Jean is settled at Vauthon. Whether my name be D'Arc or Du Lys, whether I be noble or simple, I have these old people to feed, and you have Choux. I must take my father's place, and tend the fields and vineyards.»

All the little jealousies of Jacquemine's life were swallowed up in fraternal love and anguish, and a sob almost rent his slight body.

«O Jehannette! O Pierrelo!»

Mengette dropped her distaff, and wept upon her own hands.

«But Choux,» said Jacquemine, still sobbing, «will live forever. My mother counsels that we marry at once, without waiting for him to die. We can take care of him together. If your mind be not fixed on making a better marriage, in God's name put me off no longer.»

«My mind was never turned to marriage with any other man, Jacquemine d'Arc.»

He picked up her distaff, and she took it, drawing out a thread, and brightening over the accustomed labor. Long talk and much spinning, following the geese through the grass, seeing their own peaceful world lying at their feet—these were the homely, sweet comforts which would never come to a man

Digitized by Google

on another hillside at the opposite corner of France.

Moist lush hills, holding Rouen in their lap, sloped skyward, though where the soil cropped out it was white like the soil of the Meuse valley. The Seine, full of wooded islands, flowed at their feet. A little later, cowslips and poppies would be showing through the green—thousands of lustrous-petaled cups massed in smears of yellow and crimson.

The ocean tide came up to Rouen. Bertrand de Poulengy watched the morning glint upon the river at intervals, but his mind was fixed within the walls, where the life of the city was spread below him, diminished only by distance. His horse grazed behind him on the heights which rolled toward Bonsecours chapel. He wore no plate-armor, and his lean body shrunk from his hose and leather cuirass and short tunic of chain mail. On his knees he had spread out a piece of the linen banner Jeanne d'Arc carried through all her battles. An archer had cut it up at Compiègne, and Bertrand's own captor the more willingly divided his fragment with his prisoner because he half feared the magic of the thing.

Bertrand traced over and over the city walls about which he had skirted helplessly. The gray pinnacled mass of Rouen Castle was grim even in May-time. Bedford was lord of that castle, though Warwick was captain of Rouen. Broad light upon hills and long Seine valley showed one of the fairest parts of Normandy; for here the peasant was guarded at his labor, Louviers, still held by La Hire's garrison, being the only unconquered town near by.

He noticed a bell tolling in Rouen, and the blackness made by congregated people, even when their raiment or armor is bright, showed in one quarter of the city near him. It was not very far from the castle's grayness that they were swarming together; and after a while a yellow glare struggled up in the midst of them. Wavering and lofty rose a pillar of smoke.

Bertrand de Poulengy stood up with his arms stretched behind him, the wrists back to back. He knew Jeanne d'Arc had not been condemned to perish at the stake. All the world knew she was a prisoner in Rouen Castle, yet undergoing trial. But who was chained to the iron stake in the market-place below him?

Bertrand began to feel the faintness of excessive heat, and to breathe the quivering air which whirled its white anguish about him. He felt his clothing scorch, and the shame of its cracking upon him, leaving him naked to cruel eyes.

«Water!» he whispered; «holy water!»

And then the flames rose about him, and he was alone in this red, stifling death, sinking in coals and hot plaster as fagots crumbled, breathing flame, his flesh running in liquid agony, his bones warping.

«Jesus!» he gasped; «Jesus!»

And then he felt himself drawn slowly upward, he heard music, he smelt a thousand sweet odors as numbness passed to gladness, the music became half distinct words, and he laughed in exultation:

«The voices!»

Light as air, he shot aloft from the earth, and turned his head to see, shooting up with the same impulse from the smoke in Rouen, a dove. He forgot his own flight, and hung watching it. Without flutter of wings or swerve of body, it rose and rose, and was gone in the dazzle. Sinking, he watched in a kind of trance for that dove to reappear, remembering skylarks on the Vosges hills, and forgetting that he had ever suffered.

Mists gathered from the void, and set a lower sky betwixt the dove and him. The emotions which come like winds from we know not what hollows of space to play upon us, poor helpless stringed instruments of flesh and spirit, played on him and made eternity about him. Bertrand lay on the hill overlooking Rouen until late afternoon.

The rain with sudden little whip-lashes cut him, and water ran in minute tricklings about him. The sun broke out, and the smoke, curved and driven into fantastic shapes by the wet air, again rose straight from Rouen, thinning to airy blueness. He was in peace, as in some divine ether. Sometimes the breathing and low grinding of his courser, the companion of many a long journey on the earth, intruded near by. But the horse was not insistent like a man who stood over him, heavy shod in the herbage, shaking him and saying:

«Bertrand! Bertrand de Poulengy!»

He looked at the man with slow interest.

«Is it thou, Bertrand? There is little left of thy face except the bones and blue eyes.»

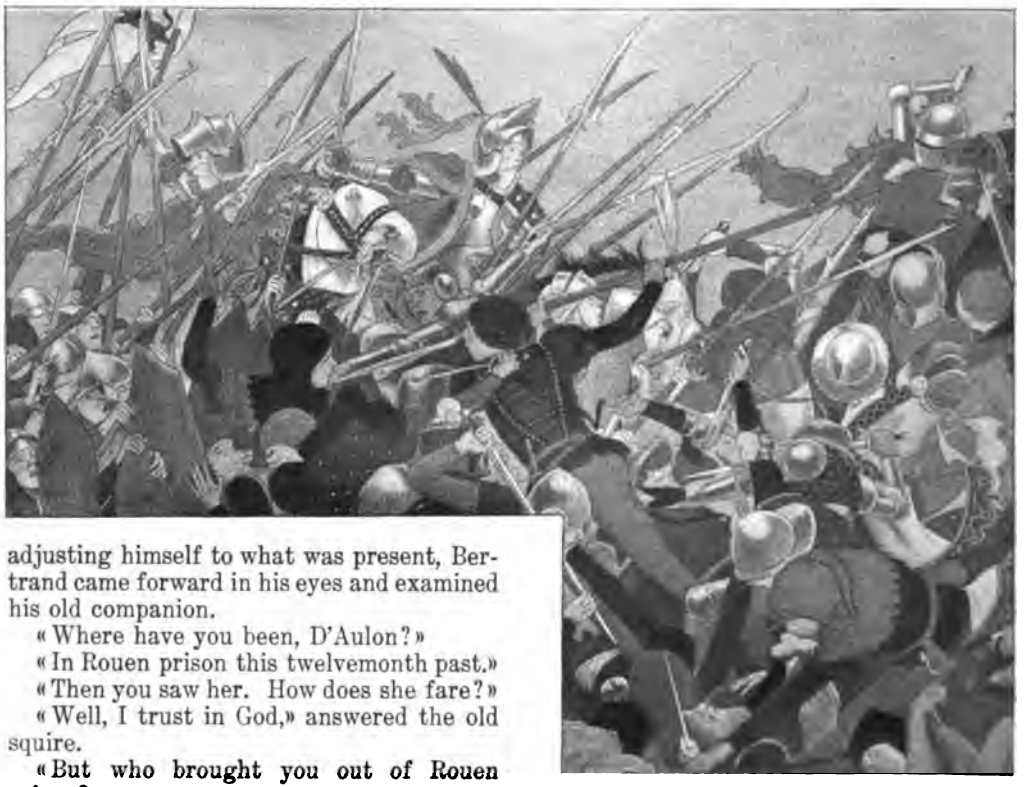
«D'Aulon, have you died also?»

«What ails thee, lad? Has prison made a ghost of me?»

«I think I dreamed.» The young squire sat up, and the old squire sat on the ground beside him.

The air was sweet after rain, and all scent of smoke was gone. With the instinct of

Digitized by Google



THE CAPTURE OF

adjusting himself to what was present, Bertrand came forward in his eyes and examined his old companion.

«Where have you been, D'Aulon?»

«In Rouen prison this twelvemonth past.»

«Then you saw her. How does she fare?»

«Well, I trust in God,» answered the old squire.

«But who brought you out of Rouen prison?»

«The pucelle's ransom money that she sent from Bourges a year ago.»

«Yes, she sold all her nags. She ransomed you; but no one ransoms her. D'Aulon, did they burn a prisoner in Rouen to-day?»

«I heard so.»

«Was it a man or a woman?»

«It was a woman, lad.»

Bertrand looked down, and twisted his fingers in the grass.

«Doubtless it was some poor old woman.»

The other squire leaned forward, sheltering his face with both hands. «No; she was young.»

«We are used to war, you and I, D'Aulon. Never mind the woman they burned, but tell me about the pucelle. Does she think we have all forgotten her?»

«Would a poor squire be allowed any speech with the pucelle, lad?»

«No, no; I never have learned in all my service how far beneath her I am.»

«Where have you been, Bertrand, this twelvemonth past?»

«All over the northern provinces, trying to collect robbers to attack Rouen, since there are no longer any soldiers in France. You say they burned a woman to-day. But she was not the age of the pucelle?»

«About the age of the pucelle,» answered the old squire, and he broke into groans and tears, bending forward upon his knees and weeping aloud.

Bertrand made no noise but an audible swallowing, as if struggling for breath in the midst of smoke. He waited a long time for the other to be done wailing.

«They burned a young maid alive—a young maid about the age of the pucelle,» he resumed. «Did you see it done, D'Aulon?»

«No, I did not see it. I could not see a thing like that done, but the streets were full of weeping women, and weeping men, too, as I came out of the prison. Her name was on every side.»

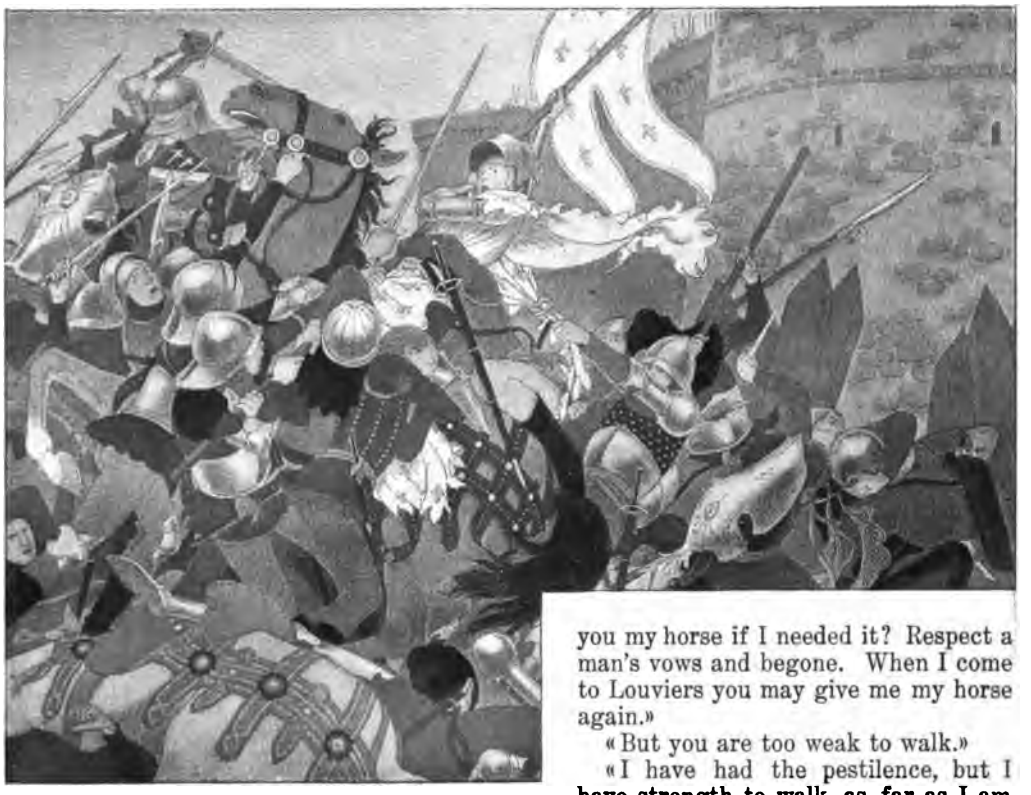
«Do not speak her name,» said Bertrand, sharply. «Did this young maid suffer long?»

«I think not very long, though the pile was purposely built so high that the executioner could not reach her to shorten her suffering. She had a cross brought from the nearest church, and held up where she could see it, and she called out for holy water.»

D'Aulon still hid his face in his hands.

«The priest stayed with her until he was in danger of burning also. Then she made him come down off the pile. It was afterward

Digitized by Google



JEANNE AT COMPIÈGNE.

that she called for water. And the people say she also cried aloud the name of Jesus. No, it was not very long that the blessed maid was forced to suffer. For her head soon fell upon her breast. The flames took wonderful shapes as of wings. And there were men near who heard her speak of something else.»

«What was it?»

D'Aulon looked aside at the young squire, and whispered: «She spoke of voices. And a soldier fell in a fit. He saw a dove rise from the fire.»

Both squires sat like stone, the younger one with an unwinking gaze fixed on Rouen. When the sun was gone he said, without turning his head:

«D'Aulon, I took your name while you were in prison. Whatever I did as her squire was done in your name.»

«Why did you take my name?»

«God knows. It was my whim. She praised you once. I give it back to you with my horse. Take my horse and ride to Louviers. You will find friends in Louviers.»

«By St. Martin, I will not take the courser from under you and leave you here alone in sight of this cursed city.»

«D'Aulon, I never loved you. Would I give you my horse if I needed it? Respect a man's vows and begone. When I come to Louviers you may give me my horse again.»

«But you are too weak to walk.»

«I have had the pestilence, but I have strength to walk as far as I am to go.»

«Let me put you on the courser and fare beside you.»

«Take him, or another may seize his bridle with less right.»

The shadows would overtake D'Aulon on his perilous ride. When he was gone, the young squire made haste down to the Seine and waited there until a great Norman horse came out of the city gates, drawing a cart. A haggard man walked beside the cart, and he turned and carefully backed his horse near the water. Iridescent brine and the reflected rosiness of sunset made pools of fire-opal in the Seine. The tide was up. When it ran out it would carry drenched refuse of a funeral pile, plaster in which the stake had been fixed, ashes, charred bone, and one great darkly crimson clot like a ruby.

«Her heart it was so full of blood it would not burn,» muttered the man beside the cart; and looking across his load, he saw a pinched blue-eyed face at the other wheel. The Norman peasant took off his cap to his superior.

«Are you the executioner of Rouen?»

«Yes, messire.»

«Did you burn a woman there to-day?»

«Yes, messire.»

«For what was she condemned?»

Digitized by Google

«Sorcery, messire, though there be many say she died a martyr, and ten thousand people wept.»

«When was she condemned?»

«Early this morning, messire. God forgive her judges!»

Bertrand clung with both lean hands to the spokes of the wheel. «What was her name?»

«Jeanne d'Arc, messire—that great captain of the French called the pucelle.»

Jeanne d'Arc!—a splash in the Seine, a dissolving of ashes, a spread of sinking fragments. No! There was a mightier presence in that sunset land. It was the time of evening when she rode in to her victories.

Behind the carter's back, and so quietly that his sinking made no sound, Bertrand let himself down into the water to float with her to the sea. He heard the rush of troops, the clang of armor, the crash of falling walls, and a woman's voice, a leader's voice, an angel's voice, bell-like, spreading its tones wave upon wave, until they seemed to reach the horizon, to ripple over France and around the world:

«Amys! Amys! ayez bon courage! Sus! Sus! Ils sont tous nostres!»

THE END.

Mary Hartwell Catherwood.

WILD ANIMALS IN A NEW ENGLAND GAME-PARK.

THE CORBIN GAME PRESERVE.

HERD OF BUFFALOES.

THE propagation of the nobler wild animals under such conditions as suit their native instincts has passed beyond the realm of experiment at the game-park founded by the late Austin Corbin at Newport, New Hampshire. There, a wire fence girdling twenty-six thousand acres, picturesquely composed of mountain, forest, and meadow, imprisons nearly four thousand shy creatures, to find which elsewhere the sportsman or sightseer must penetrate some remote and primitive wilderness where—

> Great Nature dwells
> In awful solitude, and naught is seen
> But the wild herds that own no master's stall.

Yet that can scarcely be called a prison wherein the inmates have such happy freedom of range that they do not know they are captives; where all the disguises of habitat closely follow the dictates of nature; where the moose, the buffalo, the elk, the wild boar of the German Black Forest, and the stag of Great Britain, live very much at home. In the diversities of a park nearly eleven miles long by more than four in width, with every variety of highland and lowland, woodland, thicket, and open, the artifice of man has only modified first estate along those lines which tend to save. The bull moose trumpets to the call of his mate on the wooded crests of Croydon Mountain as lustily as in the thickets of Nova Scotia; elks and stags and buffaloes lock horns and gore each other there as freely as in wilds where man has never trod; and one may see in some glade the great head of a boar scowling in his garniture of tusks and bristles, where, disturbed from his dinner of beechnuts, he lingers uncertain whether to fight or fly.

It is true that in the atmosphere of the «animal-garden» one can never feel the

Digitized by Google

DRAWN BY CHARLES R. KNIGHT.

A GROUP OF BUFFALOES.

genuine poetry of the wilderness. The conditions cannot distil that quintessence of delight which sweetens the cup of the sportsman or naturalist gone back to savage habit. The screech of a railway whistle is a sad dispeller of illusions. A group of elk crunching fruit in an apple-orchard (the Corbin preserve includes many abandoned farms) spoils a little the romance of nature; and it is a disenchantment, in facing the red eye of a bull buffalo glaring out of a shag of hair not fifty feet away, to feel that the huge creature is interested only in chewing his cud and whisking away the flies.

Blue Mountain Forest Park, as the preserve is called, includes parts of four townships, and lies near the enterprising borough of Newport on the Concord and Claremont branch of the Boston and Maine Railroad. It is said to be the biggest game-park in the world, except one owned by the Duke of Sutherland in Scotland, and one or two royal demesnes on the Continent. Of course, in making comparisons one must exclude those immense public preserves, as big as provinces, where the British government of India seeks to save the elephant from extinction, and our own national parks in the West. The name of Blue Mountain attaches to the entire spur of hills which bisects the park, while Croydon designates its highest shoulder, rising to the height of nearly three thousand feet. The steep and densely wooded heights of Croydon, curving like a hump, break the sky-line in the shape of a camel's back; nearby a skirting cañon opens a carriage-route across the mountain. In characteristics it belongs rather to the Green Mountain than to the White Mountain range, though it seems disconnected from both. The verdure of an immense forest of spruce, fir, hemlock, pine, birch, beech, and maple infolds it to the very crest, with here and there a brown patch of clearing. The perspective unrolls none of the grandeur of distinctive mountain scenery which makes northern New Hampshire a famous goal of summer pilgrimage. The aspect is gracious, idyllic, picturesque, with that variety of charm which caresses rather than startles the eye. Yet whoever toils up the acclivities of Croydon, through tangled wood and thicket, may easily fancy himself a thousand miles from the haunts of men. He may miss the glimpse of a moose crashing through the trees with leveled antlers; for this shy creature is rarely visible, and must be stalked with patience or watched for many days. But the forest itself is centuries old, primeval in its interlocked gloom, with but little sifting of sunshine through the umbrella-like top. In this section—midland New Hampshire—tree-life is prodigious in its force. The flora

Digitized by Google

Elk Doe.

of the great glacial trough which sweeps down the Vermont valley and that of the Connecticut River is richer in variety than that of any other portion of the United States or of all Europe. The greater part of the Corbin inclosure consists of abandoned farms, many of them already beginning to bristle with saplings; for the woods are on the march. Dismantled houses with windows and doors gaping like holes in a skull, ramshackle barns rotten and weather-stained, the wreck of stone fences thick-set with brambles—these meet the eye at every turn.

The general outline of the park is that of an ellipse with respective diameters of about four and a half and eleven miles, and the surface is cut diagonally by a backbone of mountain running northeast. The lower slopes and the meadow-levels are diversified with brooks and swamp land, while extensive groves of second growth profusely dot the surface. It is in these that the wild swine, the progenitors of which clashed their tusks against the boar-spears of medieval kings and barons, root and propagate their kind with a fecundity which is a marvel to the keepers. One can scarcely grasp the bigness of the park by figures. But let the reader fancy a demesne considerably more than double the size of Boston and all its suburbs; thirty times the area of Central Park, New York; almost ten times bigger than Fairmount Park, Philadelphia; or fourteen times the acreage of the whole park system of Chicago. Roads, many of them thoroughfares of days gone by, variously intersect the inclosure, and an excellent carriage-track crosses the park from east to west through the picturesque notch. On the western side the declivity is more sloping and open, but has the same agreeable diversity of scene. A wire fence, partly mesh, partly barbed, nearly eight feet in height and twenty-seven miles in circuit, confines the four-footed tenants within its steel barrier. The same posts which support the fence until the trees which have been set shall have grown to take their place, string a telephone connecting the nine substations at the different gates with the central station, the home of the superintendent, the Corbin villa, and the town of Newport. The keepers and other employees of the park vary from twenty-five to fifty, according to the season of the year. It need scarcely be said that the needs of attendance compel a vigilance which never rests. Merely to watch the fence, lest it should have parted somewhere by accident or wanton malice, requires an inspection twice a week. This is the duty of two men who live respectively at the extreme north and south ends of the park. They begin their tramp at dawn, and approach each other on the east side. Crossing the inclosure in company through the notch to the West Pass gate, where there is a little tumble-down hamlet,—Poppy Squash,—now pretty much a matter of bygone days, they part and return to their respective stations.

Listening to the Buck.

These park constables possibly find their duty-round, pursued through rain and sunshine, cold and heat, a dull itinerary, without touch to kindle the fancy or give a tingle to the blood. «The hand of little employment hath the daintier sense,» and one can imagine in these recurrent tours such chances of delightful observation as rarely come to others.

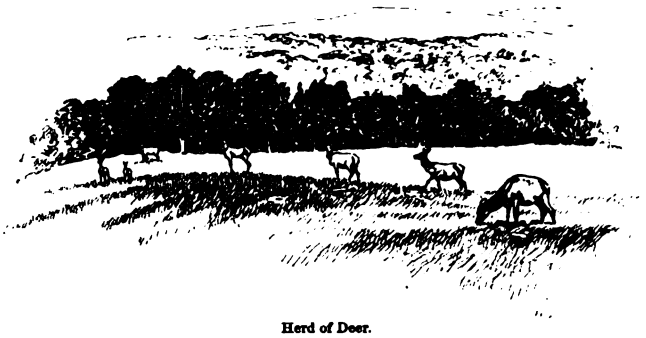
Reports about all matters of interest are made to the superintendent every morning from each substation. The wanderings of the animals, so far as they can be followed, are specially noted; for in the early day the shyer ones more aptly appear in search of breakfast. They are on principle left as much as possible to care for themselves, as in their primitive estate. To insure abundance of drink, however, stone troughs fed by running water are scattered over every square mile; and here and there artificial salt-licks provide what is necessity and luxury alike to all the deer and ox tribes. With few exceptions, the animals find their own shelter, forage for their own food in summer heats and winter frosts, bring forth and provide for their young according to their instincts, without help or hindrance from man. His wardship is practised only to guard against any in-

Doe.

Digitized by Google

terference with natural laws. The central station, near the southeast corner of the park, is the great ganglion of the system of oversight. Here Superintendent Stockwell, who has had the management since the outset, makes his headquarters, and news converges to him from all directions. His horse stands saddled for him at all times to meet any emergency for his presence, though such flying trips are rarely needed. Here are the barns where is stored the green fodder in siloes for the winter feeding of the buffalo herd and the polled Angus cattle. It may be noted, however, in passing that the full-grown buffaloes, armor-clad against the most cutting wind and cold in the sheathing of their heavy coats, prefer a knee-deep billet in the snow to the shelter of the sheds. Here, also, the boar-hounds are kenneled under the charge of an experienced keeper. To many visitors the dog-kennels are scarcely less attractive than the other spectacles of the park. The eye chiefly fastens on that most stalwart of the canine race, the Great Dane, made recently more famous by companionship with Bismarck, and used in Germany for bringing the wild boar to bay, as more stanch and powerful than any other breed. Its huge bulk is suggestively wrapped in a brindled hide which blends the spots of the leopard and the tiger-stripes, and so befits the ferocity with which it buckles itself to its prey. While these dogs have been successfully used in bringing the wild boar to bay amid the brakes of Blue Mountain Forest, its purpose has hitherto looked rather to the multiplication of animal life as a problem of scientific and practical interest than to its extinction in the pleasures of the chase.

The principle of game-preserving betrays different aspects according to the point of view. In history it has been closely linked with chartered barbarism, with caste proscription, and with the cruelest laws on the statute-book. The same spirit has not yet been wholly uprooted in Europe by the march of time. On the other hand, the preservation of four-footed or feathered game on a large or small scale, to save them from otherwise inevitable extinction, is a righteous exercise of power by the State or the private owner. The annihilation of many interesting forms of animal life in the United States and throughout the world is a threat at which we cannot easily blink. The so-called buffalo, properly designated the bison, a hundred years ago roamed in countless herds from the Alleghanies to the Rocky Mountains. In George Washington's diary of his journey immediately after the Revolutionary War, through what is now western Virginia and eastern Ohio, he mentions that the only well-defined paths through the wilderness were the routes to the salt-licks trampled by the buffaloes. At the time of the opening of the Union Pacific Railroad (1869) they numbered, by the estimate of Mr. W. T. Hornaday of the Smithsonian Institution, about six millions. Three years ago there were supposed to be about two hundred head of buffalo in the Yellowstone National Park, designed to be the great game-preserve of the nation. But even the cavalry force under the command of the superintendent has not saved this forlorn herd from the rifle of the poacher. The last report estimates the survivors at fewer than fifty. Captain Anderson recommends that even this remnant should be at once distributed among the zoölogical gardens and private preserves of the country to insure their safety and further increase by breeding.



Herd of Deer.

A great diminution is also true, though in less degree, of the moose and the elk. As in this article the popular names have been given to animals, it may be explained that our so-called moose is the true elk, and that our elk is simply the wapiti deer or stag, the American representative of the red deer of Europe. The moose was once common over the whole

DRAWN BY CHARLES R. KNIGHT.

LOOKING NORTH.

United States, from New England to the Pacific coast, in the mountainous sections. It is now, in lessening numbers, found only in northern Maine; and before many years its range will be limited to Canada. The same probability holds true as respects the caribou, or American reindeer. The facts, political and geographical, which retard the rapid growth of human society will probably keep that immense region eminently suitable to the increase and development of wild animals, and one of the favorite hunting-grounds of the world. The elk, from the great range of its habitat, and its more omnivorous feeding-habit, will linger longer; but with the tightening pressure of the farm, the cattle-range, and lumbering enterprise in the wilder regions of the West, and the annual swarming thither of American and European sportsmen, the elk, too, before many years will have disappeared.

The inception of Blue Mountain Forest Park occurred less than eight years ago. Austin Corbin, a native of Newport, New Hampshire, began a unique enterprise amid scenes endeared by early memory and well ordered by nature for the end in view. The germ of the project was paltry beside the bigness and celerity of its evolution, for the plot grew with its planning. The capitalist who, despite his great business operations, had never lost his love of nature was warmly interested in preserving the wilder face of his native region. The Corbin family farm of three hundred acres, which was afterward increased to a spacious country-seat of fourteen hundred acres, lay on the edge of what is now the great animal-preserve. Yet the beginning of the land purchases constituting the park was in part a matter of accident. It led, however, to the further acquirement of desirable property which adjoined at the outset, with the notion of attracting friends to establish summer homes amid picturesque and healthful surroundings. Another factor soon came to the fore. Mr. Corbin had received, several years before, a present of a pair of deer, buck and doe, from his brother, and these he kept at his Long Island country-seat. His love of animals, spurred by ob-

Digitized by Google

servation, induced further purchases of deer of several varieties, and the herd soon grew to a respectable size. The moist climate of the island did not prove favorable to any but the white-tailed or Virginian deer, which is indigenous to the region; so in the most natural way the thought of his newly acquired New Hampshire property linked itself with the preservation of the wild stock which languished in its sea-bound home.

Out of this stage the larger conception of a park in which could be preserved a representative collection of such of the larger game animals of the North American continent as could safely harbor together, had a rapid birth in the mind of a man whose imagination ran *pari passu* with his passion for animated nature, and who had wealth to execute his purpose. Mr. Corbin, after he had roughly outlined the dimensions and topography of the tract which seemed to be needed, began at once to negotiate for the adjacent properties. His enthusiasm kindled with each step and expanded the scope of his plan as he foresaw the possibilities of a great nursery and breeding-forest of the creatures of the wilderness, from which the wants of other parks might be supplied. It took three years to consummate the purchase, involving from first to last the transfer of three hundred and seventy-five titles. Many of these tracts had been in the ownership of the same families since the first settlement of the country. Many of them were farms wholly or partly abandoned, and some of them ranges of mountain forest where the woodsman's ax had never cut a chip, while a few were as highly cultivated as any agricultural lands in New England. To secure them in continuity required nice diplomacy, and the masking of the Corbin project as long as possible. Some of the parcels were bought in other names, and now and again rural shrewdness pitted itself not unsuccessfully against financial experience. Yet, on the whole, there was no serious trouble in arranging satisfactory terms from one dollar to twenty-five dollars per acre. Superintendent Stockwell, native of a farm now within the park limits, who knew the landholders and land values for many miles about, was the adroit agent of his chief in effecting this web of purchases.

Nor did the stocking of the preserve offer any obstacles not easily overcome by the enthusiasm of the owner. The first-comers of the buffalo colony were purchased in Iowa, where a few had been semi-domesticated, and the last ten were secured from a somewhat noted Western character, «Buffalo» Jones of Omaha, Nebraska. This personage conducted a small wild-stock farm, and his pair of buffalo bulls tamed to the plow, and his team of elk broken to harness, inspired many a newspaper paragraph. The elk and moose were derived from different sources in Minnesota, North Dakota, Montana, and Maine, at prices ranging from eighty to one hundred and twenty-five dollars for elk, and from one hundred to two hundred dollars for moose. The wild swine from the German Black Forest were imported through Hagenbeck, the famous animal-merchant, at a cost of one thousand dollars for the fourteen progenitors of the droves which now swarm in the Blue Mountain woods. Mr. Corbin's interest soon extended to the inclusion of foreign as well as indigenous fauna. The fallow and red deer were derived from Great Britain, the black-tail deer from Montana, while the Adirondacks and the Aroostook forests of Maine contributed the common Virginian deer, the caribou having also been sent from the last-named region. The prodigious increase in these originals is a suggestive object-lesson, indeed, on the facility with which parks and preserves may be stocked with wild animals.

Of the large fauna indigenous to New Hampshire, the wolf passed long ago with the native elk and moose; and in the vicinity of Newport the visit of a bear, a panther, or a deer was so rare before the founding of the Corbin preserve that such an event was a nine days' wonder. Among the quadrupeds, racoons, foxes, and squirrels (both varieties, the fox and the red) furnished the rural sportsman with his most attractive game. But since the establishment of the park there has been a change full of interest and significance. Several large bears have been killed on the very edge of the inclosure,

DRAWN BY J. SMIT.

MOOSE.

and many have been seen in the neighboring forests. Panthers and wildcats too have become by no means uncommon in a region where they had been previously nearly extinct, and wild deer have become plentiful in the vicinity. This opens a curious field of speculation to the scientist and the natural-history observer. Can it be possible that some mysterious affinity has lured back creatures once native from their distant retreats? or that accidental spies have carried the news, and that the instinct of companionship or the desire of prey has been irresistible? If the fact is authentic as to this reappearance of the *ferœ naturœ* in the vicinity of the Corbin preserve (and there seems no reasonable doubt), it suggests additional reason for the institution of game-parks by the lovers of wild field-sports. It becomes a question not only of preserving animals, but of the stocking of wood and mountain, by the force of natural law, about a carefully guarded nucleus, in a region where the utilities of life cannot be economically pursued.

It is roughly estimated that Mr. Corbin's enterprise has cost nearly a million dollars, aside from the expense of annual maintenance, which equals the interest on half as much more. The details of administration have been managed with a skill and care parallel with the lavish expense of money. Study of habit has gone hand in hand with provision against the accidents of a wild state to produce a spectacle fascinating to lovers of the animal kingdom. In the parade of the creatures represented in Blue Mountain Forest it is fitting to give precedence to the buffalo. It is in many ways the most typical animal of the North American continent. The boundless profusion of the herds which marked an earlier period proved how it fared in the natural war known as the survival of the fittest. The buffalo's bellicose front is a ludicrous paradox. Formidable in mass, when its army of glancing horns and shaggy breasts could easily have demolished a regiment of Napoleon's cuirassiers, the individual buffalo is as pacific as a milch-cow. The writer approached one grazing by the roadside with a call of «Bos! bos!»—the same cry with which the Yankee farm-lad and the Roman herdsman twenty centuries ago have called the cattle home. The great creature immediately sidled up with lolling tongue, as if begging a handful of salt. Its ugliness of aspect comes of the enormous size of its head, behind which the great muscles attached for its support build a hump on the shoulders. It is this hump which furnishes one of the epicure's favorite game dishes. Long, shaggy hair of dark brown covers the forehead and shoulders, and in winter this becomes a curly, felted mane extending half-way to the animal's flanks. The small red eyes gleaming from their thicket of hair look singularly sullen and vicious. The great convexity of the forehead, which bulges out and overhangs like a beetling cliff, so different from the angles of the skull characterizing the other *Bovidæ*, adds greatly to the menace of its aspect. The horns curve laterally, and are so hidden in shag that their length can scarcely be appreciated, though they are used with terrible execution by the bulls in their fights. The largest of the bulls at the Corbin preserve is so dangerous a duelist that he is not allowed at large. Last year he killed a rival in what must have been a Homeric battle, though no one saw the conflict. The earth was plowed up and reddened for many square rods, and the vanquished hero was frightfully gored. The victor was found pawing the ground and bellowing with triumph, as proud as Achilles dragging the corpse of Hector around Ilium. However pugnacious with its own kind during the rutting-season, the buffalo, unlike other animals in the preserve, shows no disposition to attack man.

The domestication of the buffalo, and the possibilities of crossing the breed, have been

Digitized by Google

subjects of experiment at the park. The variety of cattle known as «polled Angus,» foremost among British herds in bigness of bone, milk-giving quality, and delicacy of flesh, was selected for the trial. The buffalo bulls were eager to vanquish the native lords in the trial of horns, and to add the cows to their own following, but beyond this the results have not been encouraging. The attempt, however, has not been abandoned, as there seems to be no important structural difference. Darwin, in his «Domestication of Animals and Plants,» lays stress on the fact that the taming of wild animals to the use of man was a matter of uncounted ages, consummated by very gradual steps in the process of selection, and by a wise use of the accidents of variation. Man, even as savage or barbarian, had scientific instincts. It is a curious fact, too, that the domesticated animal relapses so easily into wildness, and that some of the most formidable creatures in their wild state become the most docile servants of man. The elephant and the buffalo of India and South Africa are illustrations of this. The urus, or primitive ox of Europe, which attained such a size that Cæsar describes it as only a little smaller than the elephant, has been within historic times the hunter's quarry solely. The great Roman emphasizes its ferocity as sparing neither man nor beast, and offering a splendid school of daring for the young German warriors. Yet the bones of the urus have been found so profusely mixed with the bronze, polished flints, and pottery relics of the Swiss and Bavarian lake-dwellers as to make it certain that among this primitive race the savage beast was usefully domesticated. On the other hand, all man's art has failed to tame the native wild cattle of Great Britain, supposed to be the nearest modern relatives of the urus, still preserved at Chillingham, Cadzow forest, and other English parks. The docile temper of the buffalo ought to present no difficulties to its complete domestication, and experiment has gone far enough to prove that its kind will live and breed as certainly as ordinary cattle, with even less protection from stress of weather.

The Old-World congener of the buffalo, the aurochs of the Germans, was two hundred years ago scattered well over central and eastern Europe. Larger and fiercer than its American relative, it attacks man fearlessly, charging the peaceful wayfarer as well as the hunter. A recent report limits their present number to less than five hundred, a rapidly diminishing herd preserved by the Russian czar in a Lithuanian forest. Imperial protec-

VIRGINIA DEER.

tion has failed where Mr. Corbin's treatment has been highly successful. The herd in Blue Mountain Forest now numbers seventy, and a dozen or more calves are looked for in the spring. At the expected rate of increase, not many years should elapse before the Corbin preserve can supply all the park and menagerie needs of America, and perhaps of Europe. It is true that a care is bestowed on this animal which no others in the park receive. The calves and yearlings are housed in sheds during the winter, each grade being kept separate from the others, and the adults have access at will to a similar protection. They are fed with green maize fodder and hay, which serve well in lieu of the famous buffalo-grass, as no attempt to grow it in the park has succeeded. Widely distributed over the Western prairies and mountain-slopes in great patches, this seems to partake of the nature of a leguminous plant as well as of a true grass. During the winter its dried and twisted leaves coil into a bulb, which sheathes a tender green heart, full of sweetness and succulence, as of fragrant clover-blossoms, where bees hum the busiest. The wild herds scent its presence beneath the deep snow with unerring prescience. But the sleek hides of the animals in Blue Mountain Forest after a winter's siege indicate a toothsome substitute.

The cows calve in April and May, and the young ones are weaned in the autumn, just before the early snowfall, though in the natural state they follow their mothers for several years. The process of separation is one of difficulty, not to say danger, and is somewhat dreaded by the gamekeepers; yet cow and calf quickly forget each other. When the snow flies the adult herd is driven into winter quarters by horsemen. The coat now fades to a dingy yellow, which deepens again with the spring running, till late autumn burnishes the fur into a glossy dark brown, and grows it to a downy thickness. Aside from the change wrought by greater familiarity with and indifference to the presence of man, the buffalo of the park and the wild animal of the plains are quite the same in habit. The captives wander about in two parties, sometimes augmented by the Angus cattle, the larger of the shaggy bands accompanied by that valiant bull which has won the primacy in battle. They roam from

Digitized by Google

ten to twenty miles a day through the lower levels of the park, never consorting with the *Cervidæ*, or deer-people, as Kipling would call them, lazily browsing wherever the herbage is most tempting. But they rarely fail to visit the sand-wallows, in which they roll and scour their hides; for *Bison americanus* is a cleanly fellow in spite of his unkempt and bearded aspect, which promises an abode for clans of parasites.

Up to a very recent date only seven of the buffalo herd had been sold; but at the time of this writing a further disposition of twenty-six head to Van Cortlandt Park, New York City, is said to have been negotiated. The prices demanded have been much below the real value, from four hundred to four hundred and forty dollars each, as sales have been made to favored customers only, public park or private menagerie. The animals are transferred from the park to the freight-station in huge wheeled crates; and when these vehicles are backed up to the car, and the door opened wide, the captives, restless in their close quarters, promptly retire crab-fashion into their new prison. When a single buffalo is shipped, he is kept in his crate till the journey's end.

The gregarious habit of the buffalo is much less noticeable in the elk, or wapiti deer, the American representative of the European stag. In Blue Mountain Forest this species numbers not less, probably considerably more, than a thousand. Surpassed only by the moose in size, and far more graceful, it towers a foot higher than the stag, and is correspondingly bigger in horns and barrel. The buck has the most majestic bearing of the cervine tribe, and tosses such a crown of antlers as to make this the coveted prize which, more than any other cause, leads to its pursuit, for as food the flesh is coarse. The neck is long, the color shading from tan to brown, except on the hind legs, where white patches edged with black stamp the universal badge of the elk. The antler-

FALLOW-DEER.

points grow forward and fork into tines numerous and wide-spreading; for it is not rare to find this crowning ornament from four to five feet in width by three in height. They reach their full size at rutting-time in September, when the buck is armed at all points for his annual duels, and are shed during the spring months, unlike other members of the deer tribe, which drop their antlers in the winter. The elk is the most pasha-like in family habit, and its jealousies are curiously human. The duels of the bucks, however, are rarely fatal. Interlocking their great horns, they wrestle with such obstinacy as sometimes to break off a portion of the antlers; sometimes, indeed, one may toss his antagonist: but they rarely gore each other, perhaps from the wide spread of the horns and the too great distribution of the force of impact, for one may fancy the inclination not lacking. Sometimes the bucks turn «rogues,» and are habitually fierce. These may charge working-parties or visitors with fury at any time, so they are speedily shot; but any of the bucks are likely to try conclusions with humankind in the September-October season.

Many are the anecdotes of narrow escape from hoof and horn at Blue Mountain, and these are always associated with the capricious antics of the stag elk. The does bring forth their young in May, amid the dense thickets, and it is not till midsummer that they emerge into the open with their frolicsome offspring. They are rarely seen in association of more than half a dozen, and the sexes do not mingle except at the rutting-

season. Once the stag has beguiled or annexed as large a herd as possible, he becomes for the while the most uxorious of husbands. The superintendent of the park related a curious comedy of animal life in an instance of an elk's cross-purposes, his pugnacity inflamed yet thwarted by conjugal ardor. Driving through the notch, he happened on a large family guarded by its pasha. The jealous stag at once lowered his antlers and prepared to charge. But one eye was ever on the terrified hinds, which scattered in different ways; and though the discharge of a gun had not moved him, the flight of his spouses despatched him on a gallop to round up the fugitives. This done, his ire rekindled, and bellowing with deferred wrath, he threatened again to charge, when the hinds again broke, and again the worried stag postponed action. This was repeated several times before it ended in the total flight and disappearance of the herd. Probably no wild animal is better suited to park purposes than the elk. It is extremely hardy and adaptable to food and climate. This is shown by its immense natural range, extending from the Atlantic to the Pacific, and far down into a warm climate as well as up toward Arctic cold. Its stately beauty of form is unequaled, its fecundity reliable. The only drawback to semi-domestication in parks is its capriciousness of temper. When the rutting-season begins the gates of Blue Mountain Forest are closed to the general visitor, and this exclusion lasts till spring.

One may be fairly sure of seeing groups of buffalo and elk, but he would search long and far for a glimpse of a moose, the colossus of his race, though a numerous herd of them lie ambushed in the upland forests and thickets of the great park. In the spring they sometimes descend early in the morning to wallow in the marshes, but at other times they hide in a home virtually as secluded as a Canadian fastness. Once only, after a repeated search, and then by a lucky chance, has an attempt availed to secure a photograph of a bull moose in Blue Mountain woods. The stalk in the dead of winter for a snap-shot with the camera was even more exciting than if the hunter's weapon had been loaded with deadlier ammunition than a sensitive plate. In its native wilds this hermit is not often allured from its retreats to be seen of men, except by that music of the birch-bark trumpet, more difficult to master than flute or fiddle, which counterfeits the thrilling summons of the cow to her mate. The American moose, dubbed in other lands the elk, is the king of the deer kind. The shoulders overtop a horse, and the palmated antlers slope a little backward from a head two feet long. A coarse, thick brown fur pads the fore body against anything less than Arctic winter. The horns attain maturity in the fifth year, but they augment in size and weight until fourteen branches fork from their base, and then only a strong man could lift the antlered skull. With head thrown back, the alarmed bull will cleave the tangled woods with the rush of a steamship through the water; yet his walk is so velvet-footed that it scarcely rustles a dead twig. Less polygamous than the elk or the buffalo, the ferocity of this animal in rutting-time, though ordinarily the most timid of creatures, is proverbial among Canadian woodsmen, and an attack on any intruder, man or beast, is inevitable. The danger of such an onset, unless stopped by a bullet, may be fancied from the fact that a well-planted stroke of the hoof, the favorite weapon of attack, has been known to kill a wolf or a panther. The augmentation of the stock in Blue Mountain Forest shows how well its moose have thriven; for the dozen originally imported have increased to one hundred and fifty. The cows calve in the springtime, often bearing twins. After this event the family retires to the deepest seclusion of the woods, away even from its lord, and the young calves often remain with the mothers two years. Perhaps in time, as the number increases, this denizen of Blue Mountain will be more visible, and thus add greatly to the attractions of the park. Less graceful than the elk, the strength and grandeur

of the bull moose's clumsy bulk, and the huge antlers, solid enough to shatter a stone wall, make a picture that, once seen, is not easily forgotten. If the pleasures of the chase are ever added to the more important uses of this vast breeding-farm of wild creatures, it will share with the wild boar that brevet of distinction which comes of greater difficulty and danger in pursuit. Though the visitor rarely sees a moose, its tooth-marks can be noted with half an eye. In common with the elk, it browses on the forest twigs and leaves, and in winter it devours the bark and smaller branches with avidity. Everywhere the trees of the upper woodlands, especially the birches, maples, and beeches, are disfigured with patches peeled from the surface; sometimes, indeed, the lower growing branches are completely stripped as with an ax. One may be sure that this is the «blazing» of a moose on a foraging expedition.

ROEBUCK.

In addition to the larger *Cervidæ*, there are in the park twelve hundred deer of other varieties, most of them our common American deer, including a few of the black-tailed species, yet with a considerable minority of the European stag and fallow or spotted deer. Both the latter-named have thriven in their transplanted homes, and the stag is one of the most beautiful and stately animals in the park, though one of the shyest. Its pedigree is interwoven with the history, poetry, and romance of the Old World, and recalls, in a magic mirror, a legion of recollections fascinating to old and young. The stag or red deer has vanished from its indigenous haunts, except in parts of the Scottish Highlands and in eastern Europe; and in all cases it survives only by the gamekeeper's care, doomed to time-honored fate at the hands of a privileged few. Its habits are closely analogous to those of the elk, its antlers and carriage scarcely less lofty, and its home in the Corbin preserve appears to furnish an environment fit for all its needs.

Interesting as are such foreigners added to our native fauna with the possibility of giving them a firm foothold, the main significance of a park like Blue Mountain Forest glances another way. Several of the experiments with alien varieties of bird and beast have ended badly—as, for example, the European reindeer, though the same ill-luck befell its American relative, the caribou. So, too, the Himalayan goats paired off with the Rocky Mountain sheep, in the vain attempt to survive the exigencies of a New Hampshire climate. In the catalogue of failures one must not overlook that most skilful of four-footed mechanics, the beaver. A pair put into the park about four years ago built a dam with great celerity, felling a ring of trees as unerringly in place as would choppers smiting with the sharpest of steel axes. Having built this monument, they vanished down the waterway which they had fortified. Wire fencing proved as worthless a barrier to the «royal pheasants» so lavishly introduced; for the native partridge, or ruffed grouse, and the woodcock seem to be the only feathered game thoroughly at home in these New Hampshire woods.

But if there have been some failures, how splendid the successes! This can be more vividly grasped in a recapitulation which sums up the results in a few figures. The buffalo herd, which now numbers about eighty-five, has sprung from four bulls and ten cows procured in 1889, and two bulls and eight cows added in 1892. It is the largest conventicle of these gentle savages in existence, except, perhaps, some unknown wild herd roaming in British America, and yet not a few of them have been sold to other parks. Of the moose kind, fewer than a score pur-

Digitized by Google

chased in 1889 have begotten a progeny now rounding a total of one hundred and fifty or more. The elk herd has grown from one hundred and forty, introduced in 1889–90–91, to what is believed to be little short of one thousand; and the higher estimate of twelve hundred attaches to the increase of the original one hundred and twenty deer of four varieties. A limited number of bull elks and bucks are shot every fall to control the inevitable increase. Four-

WILD BOARS.

teen wild swine of the German Black Forest, the brakes of which harbored the breed in a savage state centuries before Cæsar carried the Roman eagles across the Rhine, have populated the Blue Mountain thickets with eight hundred or more savage-looking offspring, and each year accelerates the ratio of increase. In all these figures it must be remembered that there is a factor of uncertainty except as regards the buffalo. Scattered over forty square miles, largely dense and tangled forest, many of the animals have never been seen by human eye, and hide themselves in what is virtually an aboriginal wilderness. But in the inevitable guesswork, the park statistics, it is claimed, aim at under- rather than over-counting.

The prolific breeding of the wild hogs will, in the course of the next decade, make their great reduction a necessity. So perhaps one of the most exciting of medieval sports may be revived in this latter day, when again

> The babbling echo mocks the hounds
> Replying shrilly to the well-tuned horns.

The pig-sticking (a butcher-like name for a manly sport) of the Anglo-Indian ranks as an adventure scarcely less exciting than tiger-hunting. Though the wild boar of Hindustan is less savage and powerful than its European representative, it would soil the sportsman's unwritten code to use any weapon more deadly to his game, and less risky to himself, than the spear. This means close quarters and personal courage, though the modern sport is less perilous than that which faced the royal game on foot with spear and hounds; for in the forests of Europe the hunter dismounted to assail the boar held at bay by his dogs. The brave Abyssinian of to-day faces the spring of the lion with lance and sword.

The conditions of Blue Mountain Forest, with its teeming herds of wild swine of a pedigree insuring their ferocity if brought to bay, offer a noble opportunity for introducing a kind of hunting than which none

could better test skill and manhood. It would be far more pulse-stirring than perforating grizzlies with steel-pointed bullets pumped from an unfailing magazine. The aspect of the boar—such a one as the writer was lucky enough to see—rooting in the edge of a wood, yet forever on guard with a wicked eye, ennobles him at once as an enemy to be held in honor. The huge head and snout gleaming with tusks, the square shoulders, the gaunt body with brawny flanks built for a swiftness which almost outruns the horse or dog, all covered with coarse, long brown bristles, made an impressive picture. These swine in the Blue Mountain woods banquet royally on beech-mast in the fall, and it is not often that they show themselves. But when the thickets are whipped clean, and the trees are silhouetted from bole to topmost pinnacle, and the pale winter sunshine filters into the heart of every nook and covert, one does not need to wander far. Then, too, these suspicious animals are lured from solitude to the open glades, where daily rations of corn eke out the scanty provender of nature.

The purpose of the founder of Blue Mountain Forest Park, among several objects eminently worth attaining, included the naturalization of wild animals under such conditions as would effect in some cases modification by cross-breeding. The buffalo, so far, has not crossed with domestic cattle, nor has the elk, so far as known, crossed with its European congener the red deer. Such experiments can come to an issue only with time and patience, and this royally planned preserve is not yet eight years old. But if this problem is yet in embryo, others have met with a full reward. Most of all as a vast nursery of wild creatures indigenous to our continent, the park has multiplied results on a scale outfooting expectation. It is safe to say, for example, that it has insured, not merely the existence of the buffalo, but its increase in a measure to make possible the extensive stocking of other parks. The disposition to found public and private preserves has grown smartly within recent years. Aside from provision to gratify our human taste for more rarely seen forms of animal life in city parks, individuals and clubs have taken steps to enrich and protect hunting-grounds and create artificial wildernesses. Judge Caton's well-known preserve in Ohio, though on a much smaller scale than the Corbin park, and more limited in its variety of animals, antedated it, and is noteworthy as the place where a careful study of the wapiti, or elk, was first made. Mr. George Vanderbilt's later inclosures at his Biltmore estate in North Carolina, though his plans seem as yet unshaped, are big with promise. So, too, the Gould park in the Adirondacks, and Dr. Seward Webb's nine-mile inclosure in the same splendid wilderness, bear testimony to the influence of the Corbin example. Newspaper report also credits Mr. William C. Whitney with the purpose of establishing a great animal-preserve in the Berkshire Hills of Massachusetts. But it is rather in less audacious enterprises that the value of the inspiration of Blue Mountain Forest Park will find its effective vent in regions topographically planned like northern New York, northern New England, and extensive tracts of Pennsylvania.

Mountain lands by the hundred thousand acres, where the farm is giving up its long fight, lie within little more than a half-day's journey from the great Eastern capitals. These regions do not respond to agriculture. Their sole big crops are stones and trees and wild animals. The returns of the harvesters of pulp-wood scarcely pay the chopping. The very corner-stone of sound economics is finding use in the channel of fitness along the line of least resistance. With this thought in mind, the transformation of vast tracts of mountainous New England back to a state of nature loses, even on its sentimental side, somewhat of the repugnance which attaches to the notion of a backsliding of civilization. The entire plateau, from ten to twenty miles in width, which roofs the Green Mountains of Vermont, for example, a section of noble woods and picturesque lakes, is thinly settled, and yields a reluctant livelihood to man. Whole townships, six miles square, with only a dozen voters who send one another by turns to the legislature, may be easily cited. Regions like this seem fashioned by nature's hand for natural uses, such as may be found in park and preserve and the pleasures of woodland sport. The Green Mountain plateau so fitly meets the needs of wild animal life that its woods already swarm with bear and deer. The close law enacted about ten years since, which prohibited deer-shooting until 1900, has so favored multiplication that the does and fawns frequently herd with cows on the slopes and meadows.

THE BABY CORPS.

(Being some account of the little cadets of the Virginia Military Institute who stood the examination of war at New Market, Va., May 15, 1864, in the front line of the Confederate forces, where more than three hundred answered to their names, and all were perfect.)

WE were only a lot of little boys—they called us a baby corps—
At the Institute in Lexington in the winter of '64;
And while the broad South was a ruin of war, no sign of peace in sight,
We thought it would end in a battle or two if they 'd only let us fight.

We longed for the glory of going to war, and some by night ran away;
And every cadet in the school agreed 't was a greater disgrace to stay;
And General Smith and the faculty had their peck of trouble filled
Every time there was news of a battle lost or a Southern hero killed.

One night when the boys were all abed we heard the long roll beat,
And quickly the walls of the building shook with the tread of hurrying feet;
And when the battalion stood in line we heard the welcome warning:
«Breckinridge needs the help o' the corps; be ready to march in the morning.»

And many a boastful tale was told through the lingering hours of night,
And the teller fenced with airy foes to show how heroes fight;
We challenged Sleep at the gate o' the eye when he tried to cross our line,
And drove him away with a volley of yells and laughed at his countersign.

Some sat in nature's uniform mending their suits of gray,
And some stood squinting across their guns in a darkly suggestive way.
The battalion was off on the Staunton pike as soon as the sun had risen,
And we turned and cheered for the «V. M. I.,» but yesterday a prison.

At Staunton the soldiers chaffed us, and the girls of the city schools
Giggled and flirted around the corps till we felt like a lot of fools;
They threw us kisses and tiny drums and a volley of baby rattles,
Till we thought that the fire of ridicule was worse than the fire of battles.

We made our escape in the early dawn, and, camping the second night,
Were well on our way to the seat of war, with Harrisonburg in sight;
And the troopers who met us, riding fast from the thick of the army hives,
Said, «Sigel has come with an awful force, and ye 'll have to fight fer yer lives.»

But we wanted to fight, and the peril of war never weakened our young desires,
And the third day out we camped at dusk in sight of the picket fires;
Our thoughts, wing-weary with homeward flight, went astray in the gloomy skies,
And our hearts were beating a reveille whenever we closed our eyes.

«Hark! what 's that? The sentry call? A galloping horseman comes.
Hey, boys! Get up! There 's something wrong! Don't ye hear 'em a-thumpin' the drums?»
Said the captain, who sat in the light of the fire tying his muddy shoes;
«We must toe the line of the Yankees soon, an' we have n't much time to lose.

«Come up here, boys,» the captain said, as he waved his only arm;
«A moment of counsel before we start won't do us a bit o' harm.
Why, Jim, you 're standing there asleep! Who 's that you 're whisperin' for?
Yer father! Wake up! You ain't to home; you 're on yer way to the war.

Digitized by Google

«Hats off!» And we all stood silent while the captain raised his hand
And prayed, imploring the God of war to favor our little band.
His voice went out in a whisper at last, and then, without further remark,
He bade the battalion form in fours, and led us away in the dark.

«I 'm tired o' marchin' night an' day on a road that 's heavy an' wet;
It 's six hours now since daylight came, and we have n't got there yet.
Skirmishers comin'? The Yanks are nigh!» «Swing out at the top o' the hill.»
«There 's New Market! Look at the soldiers there—all o' them standing still.»

The league-long hills are striped with blue, the valley is lined with gray,
And between the armies of North and South are blossoming fields of May;
There 's a mighty cheer in the Southern host as, led by the fife and drum,
To the front of the lines with a fearless tread our baby cadets have come.

«Forward!» The air is quaking now; a shrill-voiced, angry yell
Answers the roar of the musketry and the scream of the rifled shell.
The gray ranks rushing, horse and foot, at the flaming wall of blue
Break a hole in its center, and some one shouts, «See the little cadets go through!»

A shell shoots out of its hood of smoke, and slows mid-air and leaps
At our corps that is crossing a field of wheat, and we stagger and fall in heaps;
We close the ranks, and they break again when a dozen more fall dying;
And some, too hurt to use their guns, stand up with the others trying.

«Lie down an' give 'em a volley, boys—quick there, every one!
«Lie down, you little devils! Quick! It 's better to die than run.»
And, huddling under the tender wheat, the living lay down with the dead,
And you could n't have lifted your finger then without touching a piece of lead.

«Look up in the sky and see the shells go over, a-whiskin' their tails;
Better not lift yer hand too high or the bullets 'll trim yer nails.»
Said the captain, «Forward, you who can!» In a jiffy we 're all on our feet
An' up to their muzzles a-clubbin' our guns, an' the Yanks have begun a retreat.

Said a wounded boy, peering over the grain, «Hurrah! see our banner a-flyin'!
Wish I was there, but I can't get up—I wonder if *I 'm* a-dyin'?
Oh, Jim, did you ever hear of a man that lived—that was hit in the head?
Say, Jim, did you ever hear of a man that lived—My God! Jim 's dead!»

A mist, like a web that is heavy with prey, is caught in the green o' the fields;
It breaks and is parted as if a soul were struggling where it yields;
The twilight deepens and hushes all save the beating of distant drums,
And over the shuddering deep o' the air a wave of silence comes.

By lantern light we found the boys where, under the wheat, they lay
As if sleep—soft-fingered, compelling sleep—had come in the midst of play.
The captain said of the bloody charge and the soldiers who fought so well,
«I believe that the army 'd have followed the boys if they 'd entered the flames o' hell.»

Irving Bacheller.

THE HEART OF A MAID.

IN the first happy confidences after the engagement Maurice had told Nora all about the dear niece down in Alabama. He had been born so long after his brothers and sisters that it had put him out of step with his world; he had belonged to neither generation until Lili claimed him. From his description Nora made a perfectly distinct picture of the sensitive woman-child. He said her round, sleek head, with its heavy braid of black hair, had the swift, shy movements of a spirited and yet a gentle creature. In the old days, when in the intervals of canal-work he went home from Panama, it was quite as much to see her, whose especial property he had so long been, as to see his mother. She made a jubilee of these rare home-comings: when he went to his room he found fresh roses on the high mantel-shelf, while the candlesticks and window-glasses shone with a significant brightness, and in the wide block fireplace was an unlighted fire so cunningly laid that a touch of a match would send it off with a roar; but Lili herself was nowhere to be seen. Once, when she was a little child, he had traced her by tiny bare footprints in the dust from the back porch to the sugar-house loft; but usually the search was a long one, and he would go calling about the place, from the barn to the spring-house, and down into the dark grove of magnolia that stretched to the right of the house. When at last she was captured, it was in a shivering rapture of nervous ecstasy at being taken and kissed.

Nora was hungry for news of all those years before she had known Maurice, and Lili seemed the one being, besides his mother, who had ever gone far beneath the reserve that was an essential part of the man's nature; so to Lili she turned with a tenderness that was an extension of what she felt for Maurice. She made many plans for the time when they should go South to visit Maurice's people. She knew that there was some history connected with the little photograph that his mother had sent her. It was taken of a baby boy in long trousers buttoned half-way between waist and chin with staring white buttons to the little cotton shirt; the tiny hand that clutched his hat was deeply dimpled, and the bare feet thrust angrily beneath the seat of his chair seemed associated in some way with the cloud from a recent squall that hung upon the brow so babyish, and yet so like Maurice's, that it touched thrillingly upon two of the strongest chords of the girl's awakened heart. She had not been able, after studying it, to satisfy herself about what sort of baby he had been. She saw that it was fatuous to write of these things to people she had never met, and Maurice's own testimony in relation to this early epoch was wretchedly inadequate. Down in Alabama there was his mother for the first half of the story, and Lili for the second; they would be as glad to tell as she to listen.

Maurice said he almost dreaded to go back of late years, it was so hard to get away. The last time he recalled perfectly. He and Lili had been for a ride along Sugar Creek; they raced, he on his brother Marshall's big stallion, and she on Bel Esprit. He had been badly beaten, and came pounding along behind, while she, drawn up beside the road, laughing and panting, with her hand pressed against her side, waited for him. Just as he reached her a little negro came toward them at a dog-trot, flapping a thin letter in his outstretched hand. It was Maurice's order to go straight back to Panama. He handed the sheet to Lili. She gave one glance; then, cutting Bel Esprit over the ears, took the low fence, and went galloping across the open fields. As she rode he noticed that her shoulders gave a queer little rising and falling motion. Maurice caught only a glimpse of her face a few hours later, as she ran across the porch and slipped into her own room.

«And you know,» he said, «nothing makes a man feel quite such a hound as to be cried over.»

In the course of time Nora wrote a propitiatory letter to Lili. It was worded with the humble tact of the victorious; but it brought only a very stiff little reply from the finishing academy where Lili was learning to write letters without a flaw upon their sparsely covered sheets.

«Poor child!» Nora said; «she has n't forgiven me»; and she looked with sympathy at the pretty little square photograph of Lili that Maurice carried in his pocket when he

happened to have on the coat he wore when it came. In the picture Lili's hair was not smoothed back, as Nora fancied it would be, but was cut in a short, wavy fringe over the square forehead; but the eyes were, as Maurice had said, very large and beautiful. Her dress, made after a childish fashion with a velvet yoke, wrinkled over the flat and childish breast. She was curiously immature for a far-Southern girl with a strain of Creole blood in her veins that should have warmed the rest to quick maturity.

Again, after her marriage, Nora wrote to the school-girl, and several letters came and went. In them Nora confessed that she had never seen an orange-tree in bloom, and they exchanged statistics concerning their heights, weights, and the size of the shoes that each wore. All these details were in Lili's favor; for although she had a shockingly large foot,—the largest in her family,—she wore a number one and a half shoe, while Nora, who had always been rather vain of her foot, wore a number three. The correspondence languished. Maurice took up this matter of the shoe, and suddenly became aware of the size of Nora's foot. Somewhere from the Lethean ooze of his memory he dug up the fact that his mother wore a number twelve. The morning of this reminiscence, as Nora sat on the edge of the bed regarding her outstretched foot, snug in a prosaic merino stocking, with dawning distrust, he told her, in a burst of unwonted candor,—for he was usually a remarkably lovable fellow unvisited by candor,—that it reminded him of the old plantation song about

De holler ob his foot make a hole in de groun'.

«I don't see why you wanted to marry such a deformity,» she had said, and then managed to laugh a little with Maurice.

The time came at last, after almost two years, when they were really on their way South. Maurice still pronounced it in the caressing Southern way, though his tongue had learned some harsher tricks. It was to be a mere extension of a business trip just long enough to say, «How d' ye?» Maurice said; but they had talked of it a great deal, and were still upon the theme as they leaned back, trying to make a luxury of the hard seats of the car that was taking them over the little single-track line to Meridan. Maurice kindled into almost garrulous animation as one familiar station after another was called. «When I was a boy,» he had said three times, when there was a whirl of skirts and talk behind, and a tiny old lady holding a great, gorgeous club of flowers made a rush at both of them, crying, «Oh, Boy, Boy! It is you and Nora!»

It was with a queer, choking rapture that Nora saw her husband fold the mother and the roses and jasmine in the tenderest embrace.

«And you too, Nora,» she cried, straightening herself instantly. «And Jim,» she added briskly, recovering from clasping Nora. «This is Jim Hawkins; he is our conductor now. You remember Jim, don't you, Boy?» Maurice and Jim shook hands like restored brothers. There was a delicious contagion in the homecoming. Nora felt stirred to the heart by these strange people who had once been near to her husband. «I told Jim I knew you-all would be on this train, and to take me to you; and if he did n't know you, to take me to a gentleman with a pretty young lady. And these are for you,» she added, dropping the flowers into Nora's lap. «Cousin Elizabeth Hogarth gave them to me. She has changed her garden all around since you saw it, Boy.» Then, in a lowered tone of confidence: «I just could n't stand it to wait at home today, so I went off to see Cousin Elizabeth without telling anybody. I knew I would come back on the same train with you from Mobile, and see you before any one else did.» Light-hearted laughter bubbled up among the words.

As she talked, Maurice leaned forward and touched her wrinkled old hand, that lay gloveless upon the back of the seat in front, and Nora saw the quiver about the fine lines of his mouth that she had never seen except for herself; and her heart tightened with a tender pride at his faithfulness to this dear first love. It was a sweet old face, with bright eyes, gay in spite of a little fading and blending of the hazel-brown into the white. The soft, wrinkled skin, and the crisp hair that curled and showed color through the ash of years, seemed so much older than her spirit. The whole face was of the physical mold that she knew in Maurice's; but the gay, expansive nature had drawn lines as strong as the original, and made for itself a character entirely different.

«And Lili,» the mother was saying,—Nora listened,—«Lili is back from school, and she is crazy about your coming home. She has been in your room all day, with the door locked.»

Out on the platform of the car, Nora was a little confused by the Meridan station lamp shining full into her eyes. Maurice sprang out first to lift his mother down; but before

he found his footing, Nora saw a brilliant apparition in scarlet—an astonishing-looking young woman—seize him about the neck and rain kiss after kiss upon his lips and cheeks and eyes.

«Who is it?» Nora exclaimed, with an intonation of disgust, to the little lady, whose activity in alighting she was trying to supplement with a helping hand.

«Why, that is Lili,» she answered, laughing; «she has always been perfectly devoted to Boy.»

«And is this Aunt Nora?» said the tall young woman, half turning, but still clinging to Maurice with a hand so white that it shone against his coat. She shook hands, and placed a misdirected kiss somewhere on Nora's face. «I am very glad to see you, Aunt Nora. I hope you had a pleasant journey, and are not very tired. And, oh, Uncle Boy, won't you ride beside me? I am driving the carryall to-night.»

When they had all climbed in, Nora found herself next the mother, and Maurice beside Lili. Her companion said many things in her high, clear voice, and the two in the front seat were talking in half-tones; but Nora could hear only one passionately repeated question:

«You don't love anybody better than me, do you? You said you never would.»

Maurice laughed, touched her hair, which was bushed out and half confined by a gold fillet running through its roughened black masses, and tried to evade the question.

«But you said you would n't,» she insisted. «I have never changed; have you changed?» She leaned forward so that the line of twilight sky between their dark heads narrowed to a thread and went out. Nora felt a physical loathing settling about her heart; but taking herself by both shoulders, she made herself attend to Mrs. Russel's talk.

When the carryall stopped at a long, low house behind a grove of massive shadow, Lili, with sudden, grave dignity, said in a different voice: «It is good to have you at home. There is papa on the gallery, waiting for us.»

A heavy, handsome figure moved toward them, and in the warm hand-clasp and cordial «Sister Nora!» she felt a lightening of the pain that had made the drive distressing—a restoration of her interrupted mood of happiness.

As they all stood talking for a few moments in the hallway that ran through the house, Nora was able to see Lili as something besides a shock of color. She noticed the square regularity of the modeling of her face, the masses of black hair, vital and wiry, and the extraordinary life and brilliancy of her eyes. It was really the scarlet of the dress, and the fillet giving emphasis to the studied disorder of her hair, that made her so striking, she thought. Maurice was studying her too.

«Do you like me, Uncle Boy?» she said, laughing, and clasping her two hands across his shoulder, and looking full into his eyes. «I had this dress made just for you, because you like red.»

As Nora stood by the fireplace in the square bedroom, where a few sticks burned on the andirons, and a great, greenish-white mass of Lamarque roses drowsed toward the heat from the mantel-shelf, Maurice came eagerly into the room, and before he was half across its wide expanse cried:

«Well, is n't she pretty?»

Nora steadied herself with one hand raised to the mantel, and pushed back a fallen log with the toe of her shoe.

«In a way,» she said; «but she looks like an actress, and she is no more like you said—»

«No,» he interrupted; «she is n't the least as she used to be. I never saw a girl so changed. But I thought she seemed very pretty still,» he added rather blankly.

«Your mother is a perfect darling, Maurice,» Nora said, reaching out her hand impulsively toward him.

As they stood talking, Nora felt that a new element, an unnamable element, had entered into her relations with her husband; and it was a relief that he did not try to detain her when, a few moments later, she left the room.

The next morning Lili came down to breakfast looking very demure in a black dress with broad cuffs and collar of white linen, and Nora realized that it was not the scarlet dress that made her striking. This nun-like severity smote on Nora's irritable sense as a piece of studied effect; and the dress certainly served to accentuate the white-and-black contrast of Lili's skin and hair, and the parted crimson of her lips was dewy bright.

Lili was very grave during the meal, engrossed with an earnest solicitude about her guests' comfort that Nora afterward learned was not an individual, but a universal, characteristic of the Southern housewife. Once when Nora called Maurice by name, Lili flashed a look at her from under her eyelashes, and said:

«Do you always call him that stiff ‹Maurice›? When I love people I don't like to call them what every stranger calls them.»

Digitized by Google

«When I love any one,» Nora said slowly, her voice trembling a little, for she did not talk of these things, «I do not care to publish it to every stranger.»

North and South looked into each other's eyes.

«Sister Nora,» said the major, from his end of the table, «would you call the rose in the center of that cluster a light silvery pink or a deep carnation?»

Maurice's mother laughed. «The major is always asking hard questions about the flowers. As long as my old eyes can tell a blue from a red I am satisfied.»

«You will come to the swing after breakfast; I want to show you something,» Lili was saying to Maurice as Nora went for her hat to go with the major to the garden. As she was pinning it on she heard voices and laughter in the front yard, and tilting the slats of her window-blind, she saw Lili swaying in the swing, and Maurice trying to unclasp her hands from the ropes.

«Oh, but, Lili,» he was saying, «you used to swing without holding on.»

The girl's face, full of sparkle and joyousness, was raised to his; he leaned over suddenly, and kissed one hand and then the other, so that she, laughing, twisted her arms about the ropes and clasped her hands behind her.

Nora tipped up the slats again, and went to join the major, whose handsome, pompous figure was drawn up in an attitude of dignified endurance on the side veranda. He held a flat, square book in his hand, and wore a large Panama hat pulled down over his forehead. Although they were but two, they walked to the garden as if in procession; and though somewhere in her heart Nora held a sense of pain, she heartily enjoyed the major's earnest talk about his roses. There were rows and rows of little bushes, just coming into bloom, planted in a long space left between the artichokes and the green peas. The rose-bushes had come from all parts of the United States, the major explained; and now that they were blooming, he was familiarizing himself with the names and colors.

«Will you hold this, sister Nora?» he said, handing her the book, which looked like one that she had used at school for compositions, while he adjusted his spectacles. In a moment he was ready for the book, which he opened, and from which he read in a deep, impressive voice: «Catharine Mermet, Paul Neyron.»

Between the names he looked sharply under his spectacles at the row of tiny bushes; and as the roll-call proceeded Nora half expected to hear «Present!» from the sandy loam at her feet. Now and then the major stooped to read a little wooden label wired to a bush, or to break off a new bud that she might analyze for him its exact shade of color; and so they proceeded up the long line, while the sun beat down wiltingly upon the thorny handful that Nora held.

At last the major closed the book, wiped his forehead, and sighed; his morning work was over. When they returned to the house, Lili and Maurice had left the yard—«Gone off on one of their long walks,» the major hazarded; and as their steps sounded in the hall, Mrs. Russel came to say that Lili had said they would be back soon, and, she went on, if Nora did n't mind, she should love to have her on the back porch.

It was pleasant and cool out there, for a big climbing rose with a yellow cup and a flaming heart bloomed its way up and past the eaves of the porch, and made an almost unbroken mass of shadow on the floor. On a table in the coolest corner stood bowls and saucers containing little heaps of flour and butter and baking-powder; and Mrs. Russel was busily lashing the whites of eggs into lather with a large slashed spoon upon a long meat-platter; as the wires struck the china at quick intervals it gave out a pleasant hollow sound, for the eggs were light.

No better moment could have offered itself for asking all those questions about Maurice's childhood; but instead Nora spoke of the major's roses. Mrs. Russel sifted the flour from a big round sieve, shifting it deftly from hand to hand till her worn old wedding-ring sounded faintly against the hoop of the sieve. But if the wife could be silenced, the mother could not; and when Celia had taken the pan from her mistress, and interrupted her directions about the baking with, «Law, Miss 'Liza, you knows I kin baike er caike!» a little rocking-chair was drawn up beside Nora's, and of her own accord she told the story.

It began at the very beginning—the story that a mother loves best to tell and a wife to hear. The two women swayed gently back and forth in the shadow of the rose, and laughed and cried, with the name that they both loved upon their lips. Once the voices sank to a whisper, and the wife laid her lips softly to the heavily veined hand that she held. Neither heard the sound of steps on the grass, and when Maurice drew the rose-bush aside, they started as though taken in scandal-mongering.

Digitized by Google

«Come, Lili! We are just in time to hear how I did n't die of the yellow fever.»

He and Lili seated themselves upon the low steps that led from the back porch to the detached kitchen.

«I 'll be bound that Nora never heard the story about your cousin Kate, Boy,» the old lady said maliciously. «You know, Nora, he was sort of half in love with Kate McDonald. It was n't a real engagement. I don't think he ever cared very much.»

Nora knew that Lili had turned her head, and was looking at her.

«Yes,» she answered good-humoredly; «I believe that is the only story Maurice was ever able to remember enough of to tell me. He told it while it was quite fresh in his mind, and since then I have been able to help him out if he forgets details.» In the past this had been a wound to Nora, and she was surprised to find, on this first touch from an outside hand, that it had lost its sensitiveness.

«I have a picture taken at about that time,» Lili said. «Shall I get it?»

She went back into the house, and presently brought an album; and they all bent over the photographs as if they were new to them. Four or five of the first pages were entirely given over to pictures of Maurice, from long clothes upward. There were duplicates of almost every kind.

«Why, Lili,» cried Mrs. Russel, sharply, «you 've got my baby picture of Maurice. I never told you you could have that, and I know there were no others, for they were all burned in the old house.»

Lili laughed. «I 've taken these from every one's album in the family, and most of them don't even miss them. I have them all, because I care more than any one else.»

«If that was your reason for taking them, you can't resent losing them by the same course of logic,» Nora said quickly, looking up from the book.

«Ah,» said Lili, putting out her white hand and touching the little row of Maurices caressingly, «then I can never lose them.»

Maurice had filled his pipe and reseated himself on the step; his interest in himself, never very keen, had flagged entirely.

Nora turned the page, and caught her breath.

«Oh, Lili!»

It was a large photograph, taking the whole page, of a boy of about nineteen, with a sweet, rounded face; upon it was the expression of dreamy innocence, almost stupidity, that looks out accusingly from our old photographs into our world-sharpened faces, and speaks of a time when we knew less and believed more.

«Oh, Lili,» she repeated with an accent of entreaty, «if you had not taken this one I might have had it.»

«No, Aunt Nora; not that one. There was only one of those; it was Kate McDonald's. I got it from her. She gave it to me to prove to me that she did n't care for Maurice Russel.» Lili laughed a little reminiscent laugh, and seating herself beside Maurice, drew his hand into her lap, while Mrs. Russel told in a syncopated way the rest of the story of Maurice's yellow fever.

«What a little, little hand!» Maurice was saying, pinching Lili's fingers together and turning her hand about; «that has n't grown much, Lili.»

«Lemme go, Uncle Boy,»—she twisted loose,—«I want to find something.» She pushed his cuff up as far as she could on the right arm, beyond where the firm white of the arm met the tan of the wrist, and bent over to look more closely.

«It is on the other arm, Lili,» said Nora, dryly.

«Oh!» Lili exclaimed, pushing the cuff down sharply, «do you know about that? He had that little heart tattooed for me when he first went to Panama.»

With a look of annoyance, Maurice got up, knocked his pipe out on his heel, and strolled off into the yard. The three women sat looking a little conscious until Nora found that she must go to her room before dinner.

She did not brush her hair at once, as she had proposed, but putting back the fleecy bobbin-net curtains of the great bed, stretched herself across it. Presently she heard Maurice's step at the door.

«You can't come in just now, Maurice,» she called; and the door that had begun to open closed again.

When he came next she let him enter.

«Why, what is the matter?» he asked, coming toward the bed, and seating himself near her. He put out his hand and touched her hair, and looked down into her face.

«I don't feel well,» she said, moving away from him.

He sprang to his feet, and said in a hard voice:

«Nora, what is the matter with you? You have been so different from yourself lately. I have almost thought that you did n't want me to be happy in my old home with my own people.»

«I know I 've been hateful, but it is because I have been so perfectly miserable.»

Digitized by Google

«You poor little thing!» he said tenderly; «can't you tell me about it?»

«Oh, don't pity me!» she cried passionately; «that would be the last straw. You need not make any more of these dutiful efforts to remember me. Lili is probably waiting for you now.»

Maurice uttered a short, relieved laugh.

«Why, Nora, how perfectly ridiculous! My dear little niece! You could n't be so absurd as to be jealous of my niece.»

«She does n't love you like a niece. She loves you as—as I do, and you like it.»

He caught her hand sharply.

«Hush, Nora! That would be disgusting if it were not so utterly preposterous.»

«It is disgusting—so disgusting that it makes me shudder to see you together. She cannot bear you to look at me or think of me, and tries in every way to absorb every moment of your time, and make me feel that my claim is newer and less intimate than hers. I should not mind that if you were different. She has no power to hurt me; it is only you.»

Maurice went to the bureau, and began fiercely brushing his hair with his double brushes. Suddenly he clapped them together, and turned to her.

«You don't understand in the least, Nora; you are so different; but don't you see that it is only that Lili has always stood first with every one she loves? This is the only time she has ever had to come second, and she does n't know how to take it. She is just a passionate, wilful child, and this is her first whipping.»

«Maurice,» called Nora from the big wardrobe, where she had gone for another dress, «this might be a funny situation if there were any one to enjoy it.» She laughed a little hysterically, and clung to the heavy door for support.

«You can't expect me to enjoy anything that puts me into such an idiotic position,» he answered shortly. But the air had cleared.

That afternoon they went for a long drive, and as neither referred to the morning's talk, Maurice's grim humor gradually fell away. It was April, and the Cherokee roses piled their snow in the fence-corners. The last of the pale jasmine stars, as though detached by the weight of their own sweetness, floated from their stems to the warm, sun-spangled earth beneath the beeches. Every breath of air was a sweet luxury of spring. The young beeches grew proudly, reaching out strong arms, the one perfect expression of strength and subtlety: noble muscles, not disguised as in the coarse-hided oaks, but swelling under the close-drawn skin as the sinews of an athlete stripped for the course, and above a translucent world of leaves and leaves. As she leaned and looked, a mood of gentle reverence folded itself about the wife. It seemed a simple thing to be magnanimous.

When they reached home it was almost dark. Lili's figure made a velvety blackness in the hammock. When Nora had laid aside her wraps and returned to the porch, she found Maurice holding Lili's hand with a new awkwardness. Her heart softened painfully when she saw the young girl's pale face and tear-drenched eyelashes; for instead of their vivacious upward curl, they turned down upon her cheeks with a pathetic, childish droop. She was in a subdued mood, hardly responding to Maurice's caresses, and in reply to his cajolery only summoning the shadow of a smile, quickly followed by the filling of her eyes with tears.

The week that Maurice had planned for his visit shortened itself into five days.

«I believe you would have stayed longer if Aunt Nora had asked you,» Lili said bitterly on the last day, when their going was once more futilely debated; and Nora, who, though she had learned to hold her tongue, had not quite curbed her lips, smiled without replying to the charge.

ONE night, some weeks later, when Maurice came home to dinner he found at his plate a letter.

«That was the queerest aberration of yours, Nora,» he said as he slipped his knife leisurely along the flap.

She made no reply, but sat for a moment with the ladle poised over the tureen as he read.

Maurice cleared his throat ostentatiously.

«Lili says I may tell you that she is to be married next month. A regular Romeo and Juliet affair; she told me all about it when we were down South. Most romantic!»

«Romantic! It must be cyclonic. I have seen Lili as a Platonist; I can dimly imagine the other rôle.»

Louise Herrick Wall.

LETTERS OF DR. HOLMES TO A CLASSMATE.

THE following extracts are from various letters written by Dr. Oliver Wendell Holmes to my father, the Hon. Isaac E. Morse of New Orleans, one of his companions in the class of '29 at Harvard. At the time of the publication of Dr. Holmes's memoirs these letters could not be found; but they afterward came to light, and, it is thought, may be of interest to the general public.

Of this very distinguished class almost all have passed away. Indeed, I believe the Rev. Samuel May is now the sole survivor. They are, in part, thus described in Dr. Holmes's own words:

That boy we call «Doctor,» and this we call «Judge.»
It 's a neat little fiction: of course it 's all fudge—

referred to Holmes himself and Judge B. R. Curtis.

That fellow 's the Speaker—the one on the right,

indicated Crowninshield.

Mr. Mayor, my young one, how are you to-night?

referred to Storrow. The «boy with the grave, mathematical look» was Professor Peirce. Others were described as «My-country-'tis-of-thee» Smith; «Bill Gray, one of us millionaires»; Chandler Robbins, «conservative preacher, and amiable in manner as of old»; «our Jo [Angier], who made music with both voice and piano on these blissful occasions» (*i. e.*, class dinners); Devereux, class orator of '29; and «Richardson of Worcester County, very efficient and popular, and spoken of in the highest terms for his humanity»:

You hear that boy laughing—you think he 's all fun;
But the angels laugh, too, at the good he has done.
The children laugh loud as they troop to his call,
And the poor man that knows him laughs loudest of all!

George T. Davis was meant by

. . . our «Member of Congress,» we say when we chaff;

and James Freeman Clarke by

. . . the «Reverend» What 's his name?—don't make me laugh!

They are all gone, but as long as «fair Harvard» stands, and the «Autocrat of the Breakfast-table» can tell us of the «boys,» their memory will be kept green.

A year or two after leaving college, my father and Dr. Holmes met in Paris, and were much together; and in one of his letters written from there Dr. Holmes refers to him as «my most pleasant and original classmate, Morse of New Orleans.» [1]

Later the thread of their old friendship was taken up when Mr. Morse came to Washington as a member of Congress from Louisiana, and from time to time visited Dr. Holmes in Boston or at Pittsfield—visits to which there are references in letters which are not thought to be of interest to the general reader, although they show in a charming light Holmes's unfailing friendship and gaiety, and his generous interest in the pursuits of his friend.

On January 7, 1847, Dr. Holmes writes:

MY DEAR MORSE: I meant this package for your New Year's present, but little matters took up my attention, and I was too late for the season of gifts.

But though it comes late and brings little, let me hope that as a token from your old friend and classmate it will be not wholly unwelcome; and if you should have thought that I was better as a promise-maker than as a promise-keeper, when you have broken the seal of this packet and seen your long-expected trifles blot out the accusation, and set me down among them of sturdy faith and sure memory. Yours most sincerely,

O. W. HOLMES.

Dr. Holmes's friendship and his sympathy were not weakened by distance or by years. Writing from Pittsfield, he says:

. . . I enjoy this country life beyond anything I ever knew, and the one drawback is that of my ordinary pursuits and habits the very memory seems to lose itself in this new and rapturous state of being. Nothing, I was going to say, holds on but old friendships, and they grow all the greener in the midst of this growing and luxuriant nature. . . .

Yours very truly,

O. W. HOLMES.

And again in 1853, the year of the great yellow-fever epidemic in New Orleans, when,

[1] «Life and Letters of Dr. Holmes,» Vol. I, p. 107.

Digitized by Google

one black Sunday, there was a death for every five minutes, he writes:

. . . I am thankful to hear that you and yours have been, so far, spared. I have often thought of you while we are hearing the sad stories from New Orleans, with anxiety and apprehension lest I should see some of your names in those melancholy lists. It is hard for us who have been living amidst the wholesome mountains of Berkshire to realize the scenes through which you have been passing. I trust by this time you may have had what we receive without thinking it a special blessing, namely, one of those frosts that seem to kill off the pestilence.

On July 17, 1855, Dr. Holmes writes from Pittsfield:

MY DEAR MORSE: I am very glad to hear from you anywhere and anyhow and for any reason. Hoora for the boy of seventeen and a half! My oldest is fourteen; says he is five feet one inch and a half high. I think he stretches the truth and the measure a little, but a very little. He is taller than his mother, anyhow, and can outrun, outswim, and outspatter me. A fair scholar—one of the best, I think, in his school; but loses some scholarship, and gains what is a great deal better, by passing five months in the country with the rest of us. You direct to Boston! Don't you know I am the landlord of a great farm up here in Berkshire County, a hundred and twenty years in my family, with a mile of river running through it, a forest of trees of three and four hundred years' growth, and a meadow big enough to feed all the bulls of Bashan? Don't you know that, hey? Because if you don't, I tell you it is so. Ask Judge Curtis—our old classmate Ben—if it is n't. His house is in sight from my door, two miles perhaps as the bee flies. I don't doubt that I have told all this word for word just so before (*n'épargnant pas un ognon*); perhaps twice before, or oftener. Never mind. The great fact is that I, with mine, enjoy the *opium cum digitalis*, as the retired 'potecary called it, on our broad hereditary maternal acres, which if you shall ever press with your feet, as I hope you may, I will give you draughts of sweet milk, with corn-bread and honey; also a ride, a row, a swim; item, a glass of claret, or, if you like it rather,

The foaming grape of Eastern France,

as Tennyson has it, and finish with a tranquil weed and a cloud of pleasant reminiscences.[1]

About commencement, alas and alackaday! I know nothing, except that I received a great card the other day from the president and fellows—very clever fellows, no doubt; but I can't and sha'n't go. I have not been down to the anniversaries for years. Pittsfield is a hundred and fifty miles from Boston, and I don't choose to leave my garrison exposed to the incursion of hostile tribes until my oldest boy is five feet two at least. . . .

Yours always faithfully,

O. W. HOLMES.

[1] See THE CENTURY for August, 1895.

The poems mentioned in the next letters were by a relative of Mr. Morse. After her death the family thought of publishing them, and Mr. Morse asked Dr. Holmes's opinion of them. There is another and much longer criticism, which shows the great pains Dr. Holmes took in reading and expressing an opinion of literary ventures; but of his generosity in that respect there are so many examples in the «Life and Letters» that it has been thought best to omit it. The French quotation—Piron's epitaph upon himself—reminds me that in many of Dr. Holmes's letters to Mr. Morse there are little French expressions and phrases, as if a slight flavor of their old days in France still pervaded the page.

Without agreeing to what has been said of Dr. Holmes, that he is a «Yankee Montaigne,» it must be admitted that this son of Puritan preachers was *doublé* with much of that fine, exact wit of France, which is so brilliant, and so difficult to define. His letters show how he tasted the intellectual pleasure of life in France, and make us wonder what would have been the result if, instead of that too brief sojourn in his youth, it had been his fate to dwell there in his more mature years:

BOSTON, Oct. 25th, 1855.

MY DEAR MORSE: You must not break the third commandment when you see my small sheet and brief lines. My table is strewed with letters, and among the busy men of busy Boston few are more occupied than I am at this time. Occupations: college lectures daily—begin in November; evening lectures (I make more money by them than in any other way) five days in a week almost constantly after November begins; poem-writing for Merc. Lib. Association; address before Pilgrims' Society in N. Y., Dec. 22, looming up in the distance; a correspondence which is frightful to think upon (twenty-six letters one morning a few weeks ago; that will do for one who is not a politician or a man of business, so called, won't it?); besides Rachel to see, children to take care of, and untold immensities of incidentals. In summer I am a gentleman, now I am a drudge. So I don't write long letters. To be sure, it will give me great pleasure to read the poems you speak of, and give you my opinion. Not that I like to promise opinions beforehand on any manuscript. I am fastidious, and, I suspect, slow to accept new forms of genius, so that I always tell young authors who come to me occasionally with their manuscripts not to take my opinion as final.

The presumption is, of course, that where you have been pleased I, too, shall find pleasure. I know your old Shaksperian tastes, and I cannot think that even personal attachment would make you see merit where it did not exist. But if you deliberately ask me my opinion, I shall have to give it to you, whatever it may be—politely, you

Digitized by Google

know; and delicately as I know how, if it should be different from your own; cordially and gladly if our tastes agree. Do not think too much of my judgment, at any rate, whatever it may be; our Northern standards are different from yours. I don't doubt, if Rouget de l'Isle had asked the opinion of the Academicians of Paris on the «Marseillaise,» they would have had a committee, and reported it stuff.

Remember, then, that I am

. . . rien,
Pas même Académicien,

when you send the MSS.

Nothing but still faithfully your friend,

O. W. HOLMES.

Remember Mrs. Holmes and myself to Mrs. Morse, with our kindest wishes.

BOSTON, Nov. 12th, 1855.

MY DEAR MORSE: I have read the lines you sent me over and over, so that I might, as I promised, give you an opinion about publishing. No one can fail of appreciating the feeling they show; they have the truth which real sorrow crushes out of a sensitive and delicate nature, and which is the stuff that poetry is made of. Nothing can be more natural, and, to those acquainted with all the sad events referred to, more touching, than this outburst of emotion at the thought of parting with a place so endeared by the most tender recollections.

In art the lines are deficient, perhaps too much so to be offered to the surly criticism of the public. You will find this axiom of mine true, I think: the more personal and intimate are the feelings which a poet reveals, the higher art is required to justify their exposure.

I think myself that verses like those you send me are not meant for the public. None but friends should read them. They are too artless, too careless, too much like an extract from a private letter, to be made common property. I should not, therefore, recommend their publication; but I am only one adviser.

I am up to my neck in every possible engagement, or I might perhaps talk longer. I will be as frank with you when you send the volume as now.

Till then good-by.

Yours very faithfully,

O. W. HOLMES.

The quotation in the next letter is a decided contrast. It seems to be from a popular doggerel campaign song in praise of General Jackson, or, according to the refrain, «the hunters of Kentucky.» I can remember hearing a few lines:

And for this opportunity conceive yourself quite lucky,
For 't is n't often that you see a hunter from Kentucky.
. . . . . .
We thought you knew geography, but misses in their teens
Could tell you that Kentucky lay, *just then*, below *Orleans*.

It must have been a favorite student song, and for that reason—certainly not from its intrinsic merits—had stuck in Dr. Holmes's memory. I do not know to what «commercial speculation» reference is made:

BOSTON, Aug. 13th, 1859.

MY DEAR MORSE: Once every few years a good, kindly fit comes over you, and I have the pleasure of hearing from you and reviving the recollection of our old friendship and old friends. I was pleased, and perhaps a little amused, at your commercial speculation. New England likes New Orleans. Too far off to be jealous. Sends a great many of her children there. Loves to have a great city that does not consider itself a mere tributary of New York. Of course there must be some jealousy on the part of neighboring cities of such a great, man-swallowing centre as New York; but really I don't think there is so much evidence of it on the part of Boston as there is on the other side. Witness the late attacks on our trade and sales. The truth is, New York is so enormous that a little place like Boston can't be *very* jealous, whereas a great centre becomes so monopolizing, it is very sore to see any other place holding out as if it felt independent. Don't be scared about merchants being prejudiced against making money by their philanthropy; they are not good enough for that yet. If it would «pay» to send a packet once a week to what-do-you-call-it, down there, for a load of what-do-you-call-'ems raised on combustibles instead of comestibles, they would send it every week, wind and weather permitting, from the end of Long Wharf. «Will it pay?» That is all our wicked merchants ask; not whether they agree about this, that, and the other matter with consignors or consignees.

So hurrah for New Orleans, I say!

Should n't I like to go down to «cypress swamp,» where «the ground was,» and I suppose is, «low and mucky,» and see where «Gineral» Andrew Jackson bagged (cotton-bagged) his mortal game and immortal glory! . . .

Truly your friend,

O. W. HOLMES.

The last letter, so kindly and temperate in tone, full of good feeling for old friends and «our brothers of the South,» yet as inflexible in its expression of adherence to the Union as a stanza of his fine poem, «The Voyage of the Good Ship 'Union,'» was written at the very beginning of the war:

BOSTON, April 15th, 1861.

MY DEAR MORSE: Your letter came most opportunely, for I had been for some time thinking that I would write you a few lines, at least, at my first leisure moment. Your letter (to one of the boys) was read at the last class meeting, and called out many expressions of kind feeling toward you. I

think I promised then that I would write and tell you how kindly you are always remembered among us.

Here we are under two different flags. I do not see that this has anything to do with our personal relations; at any rate, it is no question of political difference that can alienate us here from our old comrades and friends. In point of fact, until within the last few days there has been comparatively little excitement here among us. The firing on Fort Sumter, and its reported surrender, which has just come to us, are beginning to wake up our people. I do not think that there is anything like that hostility to the South which, no doubt, is honestly supposed to exist by many of our Southern compatriots. The violent abolition party does not at all represent our Northern sentiment; yet our democratic and part at least of our Bell and Everett press are always trying to make the South believe it.

We all look upon the Southern movement very much as Mr. Rhett does, as *not an event of a day*, not anything produced by Mr. Lincoln's election or by the non-execution of the fugitive-slave law, but as a matter that has been gathering head for thirty years. That is the way he sees it, and that is the way we do. The plain truth is, our civilizations have been diverging, and the old constitutional joints have worked loose. The slave system and the free-labor system have each come to a consciousness of the differences they had, as the nation has grown. I am afraid our difficulties are not functional, but organic. You may be right; certainly your position seems forced upon you by nature: but unfortunately, as one of the most accomplished ladies of the South wrote the other day to one of our classmates, civilization is against you.

I was exposed to bitter abuse a few years since in New York for reprobating the unkind feelings and language too often used among us toward our brothers of the South. I have never learned to approve the spirit of the language which I then reprobated. But now that the national property is appropriated, and the national flag assailed, the necessity seems to be forced on the government to measure men and money for a while with those whom it is necessarily bound to consider as conspirators. To make the duty of the government perfectly plain, nothing more was necessary than that its capital should be menaced! Henceforth you will find the North a unit.

It is a great grief to all good men on both sides that they may be called upon to spill the blood of those who were their brothers; but there are principles which can only make themselves recognized by trying the souls of their advocates. I have so much confidence in your honesty of purpose that I know you will join in saying, «God speed the right!» however we may differ in its interpretation. At any rate, if any of the boys of '29 ever meet under hostile banners, I know we should come out, like Glaucus and Diomed between the Greek and Trojan armies, and exchange arms, as did those doughty warriors, instead of fighting each other. Up to this time there has been nothing to show a visitor to Boston that there was any cause interfering with the usual prosperous order of things. *To-morrow* the regiments called out by the governor are to be mustered on the Common; and then, for the first time, our people will begin to realize the great fact which has reached them so slowly. Sooner or later, after thousands of lives and millions of money have been spent, we shall learn, as England and Scotland have learned, that we must live together in peace, in *some* fixed amicable relation. But is not suffering a part of the discipline of nations as much as of individuals? An old lady said long ago: «We want a war here in the North; we have been at peace too long.» No doubt we of the North have become too much like what Napoleon called England—a nation of shopkeepers; too rich, and many of us too lazy and selfish. If it could but have been a foreign enemy against which the steady North and the fiery South could have waved sabers and charged bayonets side by side! But I think the South is deceived in thinking that our commercial habits have in any essential point changed our old manhood.

Let me talk about pleasanter matters. My boy is six feet high within a fraction of an inch, if not quite that. Rather slight, good-looking, gentlemanly, strong on philosophy and art, pretty social; belongs to all imaginable societies—Φ B K, Porcellian, Hasty-Pudding, etc.; is one of the editors of the present Harvard magazine; took the prize for the best essay in the «University Quarterly» (open to all the colleges of the country); does not write much poetry, but chosen class poet almost without opposition. I will make him send you something of his com-positio-n. I don't think his poem will be printed; it is not usual to do so.

Hoping that nothing need ever change our old friendship, and that we may live to see peace between our States once more, I am

Always your friend,

O. W. HOLMES.

The friends of so many years never met again. My father died in February, 1866; and in announcing his death to the members of the old class Dr. Holmes wrote:

. . . Another of our companions, college classmate, life classmate, has taken his last degree—missing, but not lost from that

One circle, scarce broken, these waiting below,
Those walking the shores where the asphodels blow.

O. W. H.

Mary Blake Morse.

TOPICS OF THE TIME

Heroes of Peace.

THE virtue of military courage, and the part of that virtue in making and preserving nations, are never likely to be underrated. As Professor William James said in his recent address, quoted in the August CENTURY: «Man is once for all a fighting animal; centuries of peaceful history could not breed the battle instinct out of us; and military virtue is the kind of virtue least in need of reinforcement by reflection, least in need of orator's or poet's help.» Military courage, indeed, seems to be latent in the mass of mankind—so much so that, put to the test, its absence is exceptional and surprising. Nobody likes to be shot at, but few men will refuse to go into battle. There were panics in our Civil War; these are psychological phenomena by no means implying genuine cowardice; but in the whole war, and on both sides of it, how many genuine cowards were brought to light? The moral bravery we call «civic courage» is indeed a rarer virtue than the courage military among the citizens of the Republic.

But without, at the moment, dwelling upon the kind of patriotism which is sometimes displayed, and is so greatly needed, in times of peace, we wish to call attention to the series, now being published in THE CENTURY, on those «Heroes of Peace» who have done valiant deeds, not for their country, but for their fellow-men; who have been physically and morally brave in the emergencies of hazardous occupations, or in those of more commonplace and every-day life. None of the readers of this magazine can accuse it of having neglected to glorify the courage of the battle-field. Aside from those periodicals altogether devoted to military and naval matters, THE CENTURY would probably be called, on its record, the «fightingest» magazine of modern times, with its «war series» and lives of great soldiers, sailors, and war-time statesmen. In the language of the Southern orator, we and our readers have «fought, fit, died, and bled, no end» together this many a long year—and we still seem to see some fighting ahead! Perhaps a magazine with such a war record owes it to the fitness of things to make an equally powerful peace record. Not that the arts of peace have been neglected, but that the «Heroes of Peace» deserve from such a source particular and conspicuous attention.

It will be remembered that the first article of the series was Mr. Gustav Kobbé's «Heroism in the Lighthouse Service,» published in THE CENTURY for June, 1897. The second, on heroism in the police service,—that metropolitan police service of which Mr. Roosevelt, the author of the article, was lately the official head,—appears in this number. It is a study of the subject from the point of view of an expert; and it has a secondary, but most timely, interest in its bearing upon civic government—in fact, upon the pending campaign in the greater city of New York; for it shows the tremendous necessity of the government, not only of the police force, but, by implication, of every municipal department, without interference from national political organizations, especially from such organizations as are given over to selfishness and spoils. Mr. Roosevelt's story of the attack of the spoilsmen upon the board, because it insisted upon promoting fit men and heroes instead of the favorites of bosses, ought to make the blood of every honest citizen of New York boil, and boil to some purpose in this very campaign.

What Mr. Roosevelt says incidentally about the courageous lives of «engineers, firemen, brakemen, and train-hands generally» reminds us that an article from the most authentic sources will be here published on this very subject. Another, on the heroes of the Fire Department, will be from the pen of Mr. Jacob A. Riis. Other «Heroes of Peace» will have their place in the series, which promises to be as curious as it will be exemplary. The only difficulty in the way is the great embarrassment of riches in any such undertaking, as one may prove by the merest glance at the newspapers of almost any day of the year.

Leaders of American Thought.

IT is sometimes remarked as a misfortune of the American political system that the method of choosing legislators directly from the district to be represented, added to the habit of making frequent changes in the representation, tends to drive many men out of public life who are natural leaders. This, it is maintained, somewhat lowers the standard of our representative bodies, and deprives the country of the benefits which it would derive from a larger number of well-known and highly trained public servants. It can be shown, even, that while conspicuous success in Parliament means an uninterrupted career, a similar success in Congress may be the very thing that will stand in the way of the return of the congressman to the next Congress. For instance, if a congressman becomes a leader of his party, and actually carries through some party measure, the opposite party may think it worth while to concentrate its campaign work in his particular district, in order to discredit the cause by the personal defeat of its champion. Something like this has happened in at least two conspicuous instances in recent years, and to leaders of first one and then the other party in the House of Representatives.

Without stopping to discuss this subject further, or to quote the opinions for and against the American system, we only wish to note that, however frequent may be the changes among the official representatives of political policies and public opinion, America possesses a permanent group of representatives and leaders who are without any political position whatever. Our public thought is, to a certain extent, swayed by men of national reputation who are not in office; who, in some cases, have never held office, either representative or executive. This country has indeed a noble body of intellectual leaders—in numbers all too small, to be sure, but men honored everywhere for ability, character,

Digitized by Google

public spirit, and that unselfishness, that disinterestedness, which in a democracy like ours is a source of almost unlimited power.

We are moved to these reflections by the reading of two books of essays which have just come to our desk, one by the bishop of a metropolitan diocese, the other by the president of a great university.[1] Even more than by the intellectual and literary force of any one chapter of these works are we impressed by the ideality, the instinct for noble things, the passion for the nation, that permeate the whole of each of these high-thoughted volumes. The word patriot is in danger of degradation from the often confounding of the disgusting imitation with the sacred reality; but here speaks that sort of patriotism which is the continual salvation of the Republic; that noble pride in country which will have the country pure; that love of country which is in truth the love and service of humanity—which has in it a kind of worship surely acceptable to him who is the God of nations.

So long as the Republic nurtures and listens to such leaders of thought as these, no patriot can despair. The reign of corrupt bosses exists largely because of our absorption in the opportunities of freedom. It takes some imagination—some *attention*, at least—to realize the demoralizing empire of professional spoilsmen, when, after all, one finds himself comfortable in his home and business. But our true leaders—men like Lowell, Curtis, Schurz, Potter, and Eliot—are the creators of that nobler public opinion which finally reacts upon the entire machinery of government and the entire life of the community, to their gradual cleansing and bettering.

Fortunate in Enemies and in Friends.

We heard an interesting conversation, the other day, on the value of enemies. One of the speakers maintained —and who shall deny it?—that enemies discover and correct weaknesses, create definite policies, stir up friends, and excite energies that lead to victory. Enemies are as useful for causes as for individuals.

The last observation is appropriate to the obvious good turns that the enemies of civil-service reform are always doing that beneficent and triumphant cause. The recent activity of the enemies of the reform at Washington seems to have had much to do with the victory the reform has just enjoyed there. The congressional inquiry has developed unimpeachable testimony as to the practical superiority of the merit over the spoils system; and the threatenings with which the air was at one time filled were the means of showing the new administration (if it needed any such demonstration) how deeply the reform is based in the common sense and conscience of the American people. And now a most valuable object-lesson is being prepared, in the interests of the reform, by the formation, on the part of certain hungry patriots, of an Anti-Civil-Service League.

But the merit system has also been fortunate in its friends. President McKinley, by the widely extended guards he has put up against unjust removals, has again proved himself one of the chief friends of the reform. The new rule requires that no removal shall be made from a position subject to competitive examination, except for just cause and upon written charges, of which the accused shall have full notice and an opportunity to make defense. A similar rule, applying to clerks and carriers in the post-office department, was put in operation three years ago under Postmaster-General Bissell and President Cleveland. It has worked well there, and the principle is now made to apply to the entire competitive civil service.

President McKinley's action is all the more creditable as it is taken in the face of clamorous attacks upon the entire merit system by unwise members of his own party. The President is helping powerfully to fulfil his own prophecy, contained in his declaration, made years ago on the floor of Congress, that civil-service reform «has come to stay.»

Beauty as a Principle.

Nothing is more common than to find among otherwise well-educated people an incomplete development of the sense of beauty. There are people in whom the love of any art—music, or painting, or poetry—seems to be developed at the expense of the other arts, if not to their exclusion. The indifference of certain painters to music, or of certain musicians to pictures, may be accounted for on the theory that the sense of beauty is innate,—«born, not made,»—or that it is atrophied on one side by reason of excessive growth on another. But besides this lack of a nice and comprehensive esthetic sense among those of one's general acquaintance, one sometimes meets an artist who exhibits not only indifference to beauty of all sorts except the sort which he pursues, but an actual contempt for it. We have known admirable painters—who might better have been lamenting their lack of appreciation of the «faculty divine»—to waive aside the work of the great poets, as though they were deceivers or deceived, instead of new eyes with which to look at nature and truth. It has been said that «no one who has acquired an art in his youth can be wholly unhappy»; but it is certain that this acquisition may be obtained at the expense of a greater happiness, and even to the detriment of a larger sense of beauty. This broader sympathy is quite as likely to be found in those who merely enjoy beauty as in those who create it. The narrowness of musicians is proverbial, due, perhaps, to the necessity of specialization on the executive side; but in composition their feeling touches a more extensive range of human emotions. The influence of nature-study and of travel upon our people has been great, and yet one is often shocked by the failure to respond to natural beauty on the part of those who have chosen some form of art as a career, or who at least are part of the artistic world. It is not by the segregation, but by the unity and interplay, of the arts that the highest results are obtained, as in the Renaissance, when they went hand in hand in an activity the like of which has not since been seen. For one's own advantage, and for the advancement of the world, it is well to cultivate hospitality toward all forms of art, remembering that

> . . . God fulfils himself in many ways,
> Lest one good custom should corrupt the world.

OPEN LETTERS

How Boston has Systematized its Parks.

A LESSON FOR ALL AMERICAN CITIES.

IN answer to the editorial request to describe the Boston park system, I would say that it deserves careful consideration, on the part of all friends of municipal progress, as an exceptionally felicitous example of wise and artistic planning with reference to all the various recreative and sanitary needs that open spaces of a public character can be made to serve. It is notable that Boston was the last of the older great cities of the United States to become alive to the necessity of public parks, in the modern sense of the term, in the equipment of a progressive municipality. The reason for this lay in the park-like beauty of its suburbs, with woods and fields easily accessible to the population, and in the existence of the large, old-fashioned Common, and the more recent Public Garden, in the very heart of the town. But with the expansion of the city, and the consequent gradual disappearance of rural charms, the necessity for the preservation of areas of open space within convenient reach became apparent. It was twenty-two years ago that a special park act was accepted by the citizens, and it is about eighteen years since the work of construction was begun. Up to the present time something over twelve million dollars have been expended upon land and construction.

The regret has frequently been expressed in many quarters that the work could not have been undertaken years before, in view of the many lost charms of the surrounding landscape that might thus have been preserved. But, on the other hand, it is felt that it is better, after all, that the delay should have occurred, on account of the more artistic methods that have been developed, the growth in public appreciation of such methods, and the consequent disposition and ability to do things in a larger, more intelligent, and consistent way.

If a large city were to be planned for location upon a beautiful and virgin site, with our present knowledge it would be a comparatively easy task to adapt it to the conditions of the place with regard to all the requirements of use and beauty, and there would be an unspeakable advantage in the utilization of the natural landscape opportunities of the region. A city of ideal beauty might thus be created, and the work would be possible of accomplishment with remarkable economy of resource. While such an opportunity would be a piece of rare good fortune, it is worth remembering that in the assured expansion of many small towns of to-day into large and important centers there exist, in large measure, opportunities not dissimilar in character, and that the problem of the growth of our great cities also includes similar conditions. Intelligent growth, instead of the haphazard expansion of former periods, should be the aim in the municipal activities of the present age. Modern science has placed in our hands the means essential to such growth, together with a knowledge of what the circumstances demand. Of cardinal importance are the adaptation of every scheme for municipal development to topographical requirements, and a wisely considered use of the natural features of a site in determining the permanent character of landscape surroundings.

This principle has to an unprecedented degree governed the designing of the Boston park system. While that system has by no means been planned as a whole, these ideas have been followed as its development has gradually progressed from comparatively small beginnings. It would be instructive to trace the various steps in this development; but present limitations forbid, and it can now only be said that the system comprises a series of public open spaces, each related to and complementing the others, each possessing a marked individuality in landscape character and in the part which it plays in the general scheme of public recreation in the open air.

Boston is fortunately situated in regard to these ends: a maritime city lying upon an island-studded bay, with estuaries penetrating a strikingly diversified landscape; a region not modeled upon a grand scale, such as distinguishes the country about New York, but with a broad and liberal graciousness in the charmingly picturesque commingling of hills and valleys, woodlands and marsh levels, with many ponds and various clear streams, and margined by the sea in an irregular coast-line of bluffs and rocky headlands alternating with shining beaches —the whole country toned and softened by nearly three centuries of human occupancy. Much of this has been ruthlessly mutilated, and conspicuous areas are hopeless wrecks of former beauty. But much yet remains unspoiled, and the city, with such landscapes lying upon nearly every side, has been enabled to take good advantage of its natural endowment.

Boston had the good fortune to obtain the services of Mr. Frederick Law Olmsted at the outset, and the entire park system has been designed by that great artist and the firm of landscape architects at whose head he stands, and has been carried out under their immediate supervision. The Park Department is governed by a commission of three members, prominent citizens appointed by the mayor, who consider it an honor to serve the community without pay. They have had the good sense to follow the advice of the experts in charge of their work in practically all matters of design, construction, and administration. The department has been singularly free from political interference. The attitude of the commission in this respect has not infrequently aroused most vindictive resentment on the part of the mercenary element in city politics, but the civil-service law has been a strong bulwark against such aggressions. These conditions have given the Boston parks a noble artistic unity, which underlies and assures the widest popular utility in providing the various forms of recreation which public open spaces of different kinds can be made to serve.

Digitized by Google

The central feature of the Boston system is the great park of the city, Franklin Park, which corresponds in its general character to Central Park in New York and Prospect Park in Brooklyn, but more nearly resembles the latter in the simple breadth and unity of its scenery. Vistas of a noble range of hills bring several miles of country-side within the park so far as landscape effect is considered. A line of parkway, unique in character, connects Franklin Park and a chain of other pleasure-grounds with the heart of the city by an irregular route of something like seven miles, with drives, rides, walks, and a long reach of waterways. First in order comes the Arnold Arboretum,—the beautiful great «tree museum» so well described by Mrs. Robbins in THE CENTURY for April, 1893,—a tract of hill and dale where every variety of tree and shrub which can be made to grow in the Boston climate flourishes under the most favorable conditions in a way that combines delightfully the highest demands of botanical science with popular instruction and recreation. This has been done under the coöperation of Harvard University with the city of Boston.

A half-mile farther on is Jamaica Park—a fresh-water pleasure-ground, with most of its area occupied by the beautiful Jamaica Pond. The land acreage is just sufficient to assure an attractive margin of pleasant shores. At this park aquatic recreation is the main feature, with excellent opportunities for skating in winter.

Leverett Park is a continuation of Jamaica Park, with a striking diversity of scenery in groves and tree-clumps, grassy slopes, small ponds, brooks, and cascades, and provision for the establishment of a zoölogical collection of fresh-water aquatic life in and about a series of shallow pools.

Leverett Park continues the parkway along the valley of a charming stream, one of whose sources is Jamaica Pond, and which forms the boundary between Boston and the town of Brookline,—this and the succeeding division of the improvement having been carried out jointly by the city and the town. The next division is a long and comparatively narrow section called the Riverway, which in landscape character recalls some of the loveliest aspects of rural England. Then, just as the neighborhood of a streamlet on the New England coast changes as it approaches the sea, so as this clear little river joins the creek that now safely carries the waters of a once very troublesome stream—Stony Brook—to the estuary of the Charles, the scene gradually assumes a littoral aspect, and brackish waters meander through marshy levels with bosky banks. This remarkable reproduction of the tranquil landscape of salt-marshes is a novel feature in park design, and is notable as an absolute creation of scenery upon a foundation of nothing but repulsive mud-flats and a shallow bay, just as the Riverway is an instance of the restoration of a formerly beautiful landscape. «The Fens,» as the marsh scenery section is called, form the artistic guise of a necessary and very important engineering and sanitary improvement. A short and narrow section, the Charlesgate, brings the parkway to its terminus at the Charles River. A chain of picturesque and ever-varying scenery is thus presented all the way from Franklin Park. Under formal urban conditions the system is carried through the handsome residential Back Bay section to the threshold of the business districts at the Public Garden by way of Commonwealth Avenue, now in charge of the Park Department.

Another very important element in the system is Marine Park at City Point and Castle Island. This is the seat of the greatest yachting headquarters in the United States, and the maritime movement forms a brilliant and animated spectacle through the summer. The use of Castle Island for park purposes has been given by the National Government. The island has been connected with the main, and between it and a long iron pier at the Point a «Pleasure Bay» with a horseshoe curve gives opportunity for safe boating. Facilities for beach-bathing on a large scale are provided, sites for club-houses are allotted to the various yacht-clubs, and a great aquarium is contemplated. For two miles along the shore of the peninsula of South Boston the Strandway, now under construction, makes a beautiful bayside drive, and, continued as Dorchesterway to the end of Massachusetts Avenue, the chief cross-town thoroughfare, gives Marine Park a pleasant and convenient connection with the rest of the system. Another parkway line, just determined upon, will connect Franklin Park directly with the Strandway, and make a continuous line of park roads, about thirteen miles long, from the Public Garden to Castle Island.

There are several minor public grounds in various sections of the city, recently established by the Park Department, not connected with the main system, but models of their kind as local and neighborhood open spaces, in contrast to the sixty-five open spaces of various kinds which, for the most part, are shabbily and yet expensively maintained by the Public Grounds Department, apart from the regular park administration.

The municipal park system of the city forms but a minor portion of the area of public open spaces included in the Metropolitan Parks District of Boston, which in 1892 was created for this purpose, comprising a cluster of thirty-six municipalities. The metropolitan system already includes more than sixty-five hundred acres, with other large areas publicly held in various ways under the administration of that department by a board of five commissioners appointed by the governor. There are two noble public forest reservations,—the Blue Hills, with over four thousand acres, and the Middlesex Fells, with about thirty-two hundred acres,—besides the Stony Brook Woods, of about four hundred acres: the latter an expansion in a picturesque grand parkway which is to connect the Blue Hills with the Boston system at the Arnold Arboretum. Within the district is also the important public forest of the city of Lynn—the Lynn Woods, comprising two thousand acres. All these are wilderness tracts of remarkable sylvan charm, requiring only the simplest forms of judicious improvement to let Nature do her best and to adapt them to public use. This improvement need be little more than the planting, thinning, and care of trees, with expert disposition of appropriate varieties according to landscape conditions, together with a well-devised system of good roads to make the scenery in all parts conveniently accessible for the public.

A small tract of great importance is the Beaver Brook Reservation, to the westward of Cambridge in Waltham

Digitized by Google

and Belmont, embracing a famous group of grand and primeval oaks, and the cascade celebrated by Lowell in his exquisite poem. Of inestimable value in the metropolitan park scheme are the dedication to public use of several miles of ocean front at Revere Beach, and of the shores of the Charles River for a large portion of its course through the metropolitan district. Also included are the similar improvement of the shores of the two other rivers, the Mystic and the Neponset, so far as practicable, and the connection of the various reservations with the city and with each other by lines of boulevards and parkways, the latter to comprise in their chain the most important large ponds of the district, several of which are very beautiful.

Several of the metropolitan municipalities outside of Boston have recently engaged in the work of park improvement, most important being Cambridge, which has taken for the purpose nearly all the shores of the Charles River within its limits. Notable park works of picturesque character have also been undertaken by Newton, Waltham, Malden, and Winchester. Including the local grounds, there are already within the metropolitan district available for recreative purposes a grand total of between thirteen and fourteen thousand acres of public open space.

The metropolitan system as projected is a work which demands years for its consummation; but it is felt that the lines cannot too soon be laid down and adopted. Altogether the Boston scheme of park development, including with the metropolitan the several separate municipal undertakings, is undoubtedly the broadest and most comprehensive yet planned for any city; and by its thoughtful adaptation of the most essential elements of the regional landscape to the needs of a great urban population, it has justly aroused the enthusiasm of the foremost authorities on the subject.

Sylvester Baxter.

A New Parliament of Religions.

AN OPEN LETTER FROM A EUROPEAN ADVOCATE OF A NEW PARLIAMENT IN 1900.

WHEN, in 1893, the news came that a Parliament of Religions was in session at Chicago in one of the palaces of the Columbian Exposition, it gave old Europe a great and almost anxious feeling of surprise. We were told that before an assemblage of thousands, surrounded by one hundred and seventy representatives of the most diverse religions, Cardinal Gibbons had risen, his fine and gentle face set off and illumined by the scarlet of his cardinal's robe, his eyes beaming with celestial joy, and had recited the Paternoster, in the silence, as it were, of a sanctuary. The whole assembly had accepted *that* prayer as «the universal prayer.»

The Parliament of Religions, however, did not limit itself merely to this solemn and ideal manifestation. Following a very practical and precise program, the representatives of religious humanity, in their various sessions occupying seventeen days, studied the gravest problems of the present time. They spoke only of agreement, conciliation, souls, union, and fraternity. It was the first council where there were neither disputes nor anathemas.

Now, although Mr. Charles Bonney, a religious-minded thinker, was the first to propose the idea of a Parliament of Religions, and the Rev. Dr. Barrows, a Protestant minister, was its practical and effective organizer, yet it is but just to recognize that the coöperation of the Catholic Church in the United States made it a possibility, and assured its success.

As for the advantages which may have resulted from the Parliament of Religions, Mgr. Keane, who was obliged to attend the International Scientific Congress of Catholics at Brussels (September, 1894), in order to defend the great work of the American bishops against the attacks of the Jesuits and the non-compromising spirits (*intransigéants*) of the Church, set them forth thus in an eloquent discourse: «Mankind begins to detest hatred and hostility ever more and more. Humanity is making an undeniable effort toward milder forms and a more prolific blossoming of charity. And is it not the aim of religion to unite man with God and with his brethren? Religion is charity. Even though we may not be able to agree on questions of faith, may it not be possible to come to terms on charity? It would be much to give even *this* lesson to Christians: that in order to love God it is not necessary to hate one's brother who does not love him in just the way we do; that so as to be faithful to our belief, it is not necessary to be at war with a hundred who understand faith differently. But there was another very desirable utility—that of uniting the protest of every form of religious belief against materialism and agnosticism, against all forms of irreligion and unbelief, and thereby showing how contrary these things are to the fundamental ideas of mankind and its happiness.»

Might not old Europe, renouncing her past contentions, renew so great an act of generosity, liberality, and progress, and convoke a new Parliament or Universal Congress of Religions? That is the question which some French Catholics, Protestants, and Israelites asked one another. The year 1900 is to be glorified by the Universal Exposition at Paris, and it will rest on the apex of two centuries. Why should it not be chosen to mark the date of an immense religious rendezvous, where all believers might make a sole and same declaration of faith, «I believe in God»; and unite in a sole and same prayer, «Our Father, who art in heaven»?

Above all, at the present time, while problems of social transformation are engrossing and carrying away all minds, it is the duty of those representing the moral and religious ideal in this world to recall the fact that religion, whatever may be said to the contrary notwithstanding, has molded the soul of humanity in the past, has stamped its deep impression in the flesh and blood of all the generations whose heirs we are; and hence no dreams for reorganizing the world can afford to neglect the indestructible element of mystic aspirations.

The social benefit of these aspirations is incontestable. They alone are able to preserve a trace of idealism for us in the terrible struggle for life which, without them, would be merely material, brutal, and ferocious. «For the immense majority of men,» said Renan, «established religion constitutes the only share in their lives given to the worship of the ideal. To suppress or weaken this sole and great remembrance of nobility, in the classes deprived of other means of education, would be to debase human nature and take away the sign that distinguishes it essentially from animals.»

Digitized by Google

The inspiration most needed by humanity in our terrible times is surely that of charity, brotherly love, justice, and social solidarity. But whatever theories the sociologists may frame, those sentiments can have a solid foundation only in the supreme religion of the paternity of God and the fraternity of men.

The proclamation of this humanitarian religion, because it is best fitted for the social needs of the present time, would assuredly not imply the renunciation of more complete beliefs that go beyond it. There would be no recantations or vague compromises of doctrine. Every believer would keep his complete faith.

The very principle of a Parliament of Religions would be to proclaim the respect due to every sincerely pious conscience, and to every religion, in the individual form it takes in each conscience. Faith would be considered less on its *absolute*, and more on man's, side in relation to his heart and intelligence. Without failing to recognize the value and the rights of metaphysical truth, subjective or moral truth would be declared to be more important. It would be less a question about *truth* than about *sincerity*. Faith and sincere conviction would command every one's veneration.

If it were said that this is going too far, that this is in a manner recognizing the equal value of all religions, we can reply: «No; all religions are not equally valuable; but all honest and sincere consciences are, and they have the right to demand the respect due their free convictions.» It would be impossible to maintain the equal value of all religions, as regards their dogmatic assertions, in the *absolute*, but the equal dignity of religious consciences is an undeniable principle. The very nature of the Parliament forbids the discussion of the absolute truth of creeds. The gaps in one denomination's creed would not be considered any more than the superiority of another. Yet the mere spectacle of believers of such various faiths in session in one and the same assembly would proclaim that if a perfect faith is God's greatest gift, «good faith in incomplete truth, or even in error, is man's greatest merit, and is his sovereignly sacred and honorable right.»

The Parliament of Religions, in short, would accomplish what we should like to call the «moral union of religions.» But there would be a compact of silence on all dogmatic peculiarities dividing men's minds, as also a compact of common action on those points uniting their hearts, by the uplifting and consoling virtue dwelling in all faith. It would be the end of sectarianism. It would be a breaking away from that long tradition of wranglings which kept earnest men quarreling about subtle differences of doctrine, and would herald new times, when men would care less about splitting up into new sects and chapels, digging trenches and building barriers, than to spread the benefits, both moral and social, of religious sentiments by noble and cordial goodwill. The sublime example of tolerance and brotherly concord would tend powerfully to the formation and the progressive education of the general conscience of humanity—that is to say, the fundamental conscience of its moral and spiritual unity; and thereby religion would resume its true rôle, which is to reveal charity to men, and, amid the diversity of minds, prove the brotherhood of hearts.

Abbé Victor Charbonnel.

Is Common Sense un-American?

It is quite generally admitted that there are some serious defects in the working of popular government in this country. Few intelligent Americans deny that there is something left to be desired in our management of the business and finances of a great nation—its revenue, currency, and banking methods; in the treatment which our statesmen and legislators give to international questions; in the quality of our national and State legislators; in the way in which our nominating machinery works; in the assumption and exercise of the functions of government by party bosses, without regard to the rights and wishes of the people; and in the general results of universal suffrage as applied to the government of cities. Upon these and other points which might be mentioned there is virtually unanimous agreement among Americans who are not politicians and who are in the habit of giving thought to the subject. But with this general admission the agreement ends, and a division is made into two great classes, one of which contends that the only way by which the evils complained of can be remedied is by full and frank recognition of them in all their seriousness, without qualification or attempt at extenuation; while the other contends that full and frank recognition, especially in plain speech and terms, must be avoided as an unpatriotic reflection upon our institutions, as a pessimistic and degenerate proceeding unworthy a true American citizen, and that the only really patriotic and effective remedy is to refrain from plain or harsh characterization, and to claim that everything is sure to come out all right in the end, because we are the greatest and most glorious nation that the world has ever seen.

Let us see how plain common sense—what General Grant called «horse sense»—will operate when applied to these two methods of treating the evils which we have enumerated.

1. *National Revenue, Taxation, and Currency.*—Common sense would say: Follow, in the management of these questions, the teachings of experience throughout the world, which, summed up in a sentence, would be to take them out of politics and put them absolutely in the control of experts. Every business house in the world does this, not because it is the surest method of success, but because it is the only method, not merely of success, but of existence. No intelligent man can deny that if our national business were conducted in this way the results would be in every way an improvement upon our present condition: taxation would be more light, because more scientific and just; confidence would be universal and permanent, because of a sound currency and banking system; and periodic upheavals in trade and industry because of uncertainty about tariff rates would cease. Is there any other way by which such results can be achieved? Can things be bettered by questioning the patriotism of those who point out the defects of our present methods? Is it un-American to say that we should be intelligent enough to exercise common sense?

2. *International Questions.*—Common sense says: Conduct these in such a way as to preserve our own self-respect, to prevent a disturbance of our own trade and industry by causing unnecessary alarm, and to hold

Digitized by Google

us before the world as a civilized, Christian nation desiring to be just and honorable in all its dealings. This seems to be a very simple method of procedure, and one that is patriotic as well, unless it be true that there is a conflict between common sense and true Americanism.

3. *Quality of National and State Legislators.*—How many persons of intelligence are met in private life who maintain that the quality of our legislators is satisfactory? There is a virtually universal admission that the quality has been deteriorating steadily for many years, and is now little short of deplorable. This being the case, what does common sense say? Does it say the quality can be improved by concealing the facts? Does it say that we shall get better legislators by denouncing everybody who says we have poor ones, and holding him up to contempt and scorn as a degenerate American who is slandering the institutions and statesmen of his country? Is such a method of procedure as that calculated to drive unworthy men out of politics?

4. *Our Nominating Machinery.*—It is a notorious fact that in national politics this has passed out of the control of the people, and is now in the complete possession of bosses, who use it to put their servileagents into the public offices. What does common sense say about this? Does it say it can be remedied by concealing and denying it, and assailing as bad Americans all those who denounce it as an evil which must in time break down popular government if it be not rooted out? Does it say it can be remedied by everybody's going about and declaring that this is the greatest nation in the world, that nothing can harm us, and that all will come out right in the end? Does it not rather say that the danger must be recognized in all its force, and the best method possible devised to encounter and defeat it? And how can this be done without first arousing the people to the necessity for action by showing them what the danger is?

5. *The Misgovernment of Cities.*—What does common sense say about this universally admitted fact? Does it say, Shut your eyes to it, and wait for it to work out its own cure without your aid? Does it say you can reform it by denouncing as un-American all those who venture to call attention to it and to speak of it as a disgrace and a peril to free institutions? What is patriotism? Can there be a better definition of it than Lowell gave when, in asserting his own love of his country, he asked:

What better proof than that I loathed her shame?

Joseph B. Bishop.

«The Withdrawal of the French from Mexico.»

OLIVER P. MORTON'S CONFIDENTIAL RELATION TO THE EVENT.

ON October 28, 1865, Oliver P. Morton, the «War Governor» of Indiana, after undergoing extraordinary labors in keeping his State in the column of those loyal to the Union, was stricken with paralysis, a disease which came upon him like a thief in the night, broke down a frame of great vigor and endurance, and entailed continued suffering for the remaining years of his life. His physicians prescribed absolute rest, but for Morton this was impossible, and he was soon at work preparing an elaborate message to the legislature. They then insisted that he should withdraw absolutely from the duties of office, and that a change of scene and climate was necessary for his recovery. He had been told of the success of Dr. Brown-Sequard of Paris in the treatment of paralysis, so he made up his mind to go abroad and seek the aid of this celebrated physician. His message to the legislature was delivered on the 14th of November, and on the evening of the 17th he left Indianapolis for Washington, where he spent the week prior to his departure for Europe. While in that city he had several interviews with President Johnson, a man with whom he had held cordial and even intimate relations. In one of these interviews Mr. Johnson confided to him a secret mission, asking him to make a personal request of Napoleon III for the withdrawal of the French troops from Mexico. It had already been determined by the administration that the French must leave that country, even if it involved the necessity of war; but President Johnson hoped that the Emperor would consent to this voluntarily, if he could do so without too great a loss of prestige. The demand through the regular diplomatic channels for the withdrawal of these troops would be embarrassing to the French government, which as late as October 16 had insisted upon a recognition of the empire of Maximilian before the French army should be recalled.

It appears from an article in the May, 1897, number of THE CENTURY MAGAZINE that General Schofield had already been sent by the State Department to communicate to the Emperor unofficially the necessity for recalling the French troops; and President Johnson, learning that Morton intended to go to Paris, asked him also to intimate informally to the Emperor that it would be impossible for the administration to withstand the pressure of public opinion in America, which demanded the expulsion of these troops, if their withdrawal were longer postponed. He asked Morton to say that it would be easier for the French government to recall them voluntarily than to submit to the humiliation of acceding to official demands, and that by a voluntary withdrawal the good feeling between the two nations could be better preserved. Mr. Johnson impressed upon Morton the necessity of keeping this mission entirely secret, and he gave him the following autograph letter, which stated nothing of the object of his visit:

«EXECUTIVE MANSION, WASHINGTON, D. C.,
«December 11th, 1865.

«His Excellency Governor O. P. Morton of the State of Indiana has been *entrusted by the Government of the United States of America with important business in Europe.* As the executive of one of the States of the Union, and as a citizen possessing the confidence and respect of his country, he is cordially recommended to the kind consideration of all whom it may concern.

«ANDREW JOHNSON.»

A physician had been detailed by the Secretary of War to attend the governor until the departure of the latter in the *Scotia*. The voyage was long and uneventful. Morton arrived in Liverpool the day before Christmas. He proceeded to London, stopping only two days in that city, and then passed directly on to Paris, where he remained till the 1st of February. Here he had to undergo the ordeal of the moxa, or cautery, of the spine, which was performed by Dr. Brown-Sequard. Previous to this operation he had an interview with Baron Roth-

Digitized by Google

schild, who arranged for him a private audience with the Emperor. He delivered to Napoleon the message from President Johnson. The Emperor replied that it had never been his purpose to keep permanent possession of Mexico, but that his object had been to secure the rights of French creditors and residents, and to leave the people of the country free to make their choice of rulers. He spoke regretfully of a speech which had been made by General Logan in Congress, demanding the summary expulsion of Bazaine. It was shortly after this interview that the Emperor delivered his address to the Corps Législatif on January 22, to which General Schofield refers, in which he declared that the French occupation of Mexico was reaching its limit. After his private interview Morton also received a formal invitation to a reception at the Tuileries. He wished to go, but to do this he would be obliged to wear court dress and sword. At first he determined to do it. He went with his friend Berry Sulgrove, who had accompanied him to Paris, and selected a costume; but he had a great distaste for appearing in that way, and believed that standing for a long time at a great reception would be injurious to his health, so he remained away.

When Morton found that the operation of the moxa was not successful, and that his paralysis could not be cured, he became very impatient to return, and after a few days in Switzerland he started for England, and thence back to America.

Although Sulgrove knew that Morton had had a private interview with the Emperor, it is not believed that Morton ever spoke of the subject of this mission until during his final illness. The Hon. R. R. Hitt, who had been his private secretary in the Senate, visited him at Indianapolis shortly before his death, and read aloud to the sick man during a great part of the night. On this occasion Morton drew him down close to the side of his bed, and said: «I want to tell you about that mission to Paris. There is not a word about it on record, and when I die the secret will die with me. I was asked by Johnson to have an interview with the Emperor, and if possible to secure the removal of the French troops from Mexico. Mr. Bigelow was minister at the time, but he knew nothing of it.» Morton then related to Mr. Hitt the foregoing facts.

It is of course impossible to say positively to what agency the withdrawal of the French troops was mainly due. Possibly several things concurred to convince Napoleon that this step was necessary; but it is a fair inference that the distinguished statesman who talked face to face with the French Emperor in secret conference had much to do with it.

RICHMOND, INDIANA. *William Dudley Foulke.*

Kindergarten Progress in Indianapolis.

THE public schools of Indianapolis have received extended notice from the press throughout the country. No less admirable is the branch of training found in the free kindergartens, which are the result of ten years of persistent labor. The free kindergartens of this city are recognized in the National Association of Kindergartens as among the most progressive in the country. During the year just closed (June, 1897), 5297 children were reached by the kindergartens, of which there are eleven, all numbered but two, to which have been given the names of Arabella C. Peele, who was for a number of years president of the Kindergarten and Children's Aid Society, and of Miss Mary Turner Cooper, who did so much for the colored children composing the school. The kindergarten work proper is much the same as that in all similar schools. For a number of years no fine hand-work has been done, as Mrs. Eliza A. Blaker, who has been superintendent of the schools ever since they were opened, believes that the close attention demanded of the pupil for this work creates ailments in later years. A unique feature is the domestic training, which is not like the kitchen-garden, but is real training in practical housekeeping. One phase is to teach that cheerful faces, kind words, gentle tones, and clean rooms are as valuable as well-cooked, nicely served food and a clean dress. Thirty-one guests were served in the Domestic Training-school during the winter, with the entire menu of potato-soup, toast-sticks, breaded veal, green peas with white sauce, potato-balls, biscuits, celery and nut-salad, snow-pudding, and coffee, prepared by the pupils. The sewing-classes learn how to make dolls' clothes, and as the children grow larger they make dresses and underclothes, make and trim hats, mend, darn, and crochet. Under the supervision of Mrs. Blaker, there are kindergartens at many of the public institutions. Each school keeps a record-book containing the name, age, health, temperament, physical defects, etc., of each child. This is taken when the child enters, and the children are tested from time to time, and the result is added to the record-book, in order to keep a study of the child and meet the individuality of each. There is teaching in patriotism, the flag salute and national airs being an oft-repeated part of the exercises. Last Fröbel Day (April 21), in addition to the usual program, each child was presented with a packet of seeds, both flower and vegetable. The effect was almost miraculous, for in two weeks' time the greatest improvement in the yards of the families represented by the children was noticed. They were in order, patches had been fenced off, and one father made a little fence and gate for his child. A summer school is being maintained this year, with excellent results and large attendance. From the modest beginning special features have been added, until now the work reaches out in every direction, and not only the children but the parents are brought under its influence. Mothers' meetings, for an hour of rest, change, pleasure, conversation, instruction, and social intercourse, with some light refreshment and a story or song, make a bright spot for them, with an annual mass-meeting of mothers for an event of special importance. Friendly visiting to each family secures the coöperation of the family; evening socials for the fathers enlist their sympathies; and the Mothers' Band is helpful in raising money, visiting the sick, attending the entertainments, and assisting in the work. The literary societies in all of the schools are well attended, and are aided by the school library, which loans books to the families of the children who attend the kindergarten. The boys in the wood-whittling classes do all of the cabinet-work of the schools, and make articles for sale. Through the many influences of the schools which the different departments afford, a wonderful work of reformation is almost silently going on. On the social side, there are evening parties once a

Digitized by Google

month, where lessons of politeness and many courtesies are shown by example, and the children take turns in playing host and guest, or in serving. At the end of the school term the children know more of entertaining properly than many persons of the same age who have been brought up in homes of refinement. In addition to the kindergarten, there is the Normal Training-school, which offers professional training for teachers, making a specialty of primary and kindergarten work. Teachers have been sent from this school to all parts of the country. Wonderful work has been done by the introduction of kindergarten work in insane-hospitals and schools for the feeble-minded. Mrs. Blaker and her assistant, Mrs. Nash, are at the head of the schools in this city, which are supported by voluntary contributions and subscriptions.

Anna McKenzie.

IN LIGHTER VEIN

The Latest Fad.

NANNETTE is just the dearest girl;
To her I vow my love and duty;
From slipper-tip to shining curl
She 's my ideal of dainty beauty.
She 's all a fiancée should be;
No words are fond enough to praise her;
But life has lost its charm for me
Since Nan became a crystal-gazer.

The passing fad of each new day
Has caught and held her fickle fancy;
It nearly took my breath away
When she went in for chiromancy.
She studied psychical research,
And hypnotism did n't faze her;
She even joined the Buddhist church;
But now she is a crystal-gazer.

Some of her fads I rather liked—
Her cult of Ibsen or of Browning,
Her swagger costume when she biked,
Her dress-reform and Delsarte gowning;
I liked it when she tried to cook
Crabs à la Newburg in her blazer;
But life takes on a different look
Since Nan became a crystal-gazer.

Her fervid gaze she concentrates—
That crystal ball her constant focus;
She ardently invokes the Fates
And all their mystic hocus-pocus,
With muscles tense, and head erect,
Until the gleaming crystal sways her
(I 've known it to have that effect,
Though I am not a crystal-gazer).

Of course I know it 's but a freak,
The very latest London notion;
She may forget it in a week,
And find some other new devotion.
But with my heart too long she 's played,—
I wonder if it would amaze her
If I should woo another maid
While Nan remains a crystal-gazer.

Carolyn Wells.

Spontaneous History.

WILLIAM THE CONQUEROR.

A DUKE of Normandy, Robert the Devil,
Casting about him in search of evil,
Espied a tanner's daughter, Arletta—
The less that 's said about *her* the better.

. . . . . .

Forty years rolled away into line.
Duke Robert's son, aged thirty-nine,
Raised some forces and managed to land them
In England, met the Saxons, and tanned them.

. . . . .

None of recorded historical bastings
Is more complete than the battle of Hastings;
And William the Conqueror promptly determined
To have himself crowned and sceptered and ermined.

This purpose was shortly a realized hope.
By the aid of a sword and a bull of the Pope
Which was brought by a bishop, his own half-brother
(Quite unrelated to William's half-mother),
Who dropped vague hints about milk and honey,
Which, in the case of a bishop, means money.

William, with density almost alarming,
Bluffly confessed he knew nothing of farming;
Honey, he thought, should be easy to find,
But in following bees keep a trifle behind;
Then, too, if the bishop's milk-can was not full,
Why, doubtless, the bishop could milk the bull!
However, the bishop still harbored a doubt,
So was sent to a prison to think it all out.

The monarch now passed quite a number of acts on
The every-day manner of life of the Saxon;
He mapped out the land in a Doomsday Book,
In which all the Saxons were privileged to look
For the boundary-lines of their farms, great or small,
And to find that they did n't own any at all.

If their despair to unpleasantness led,
The king yanked the curfew and sent them to bed,
And turned to the Doomsday Book to enlist 'em
As villeins or serfs of his new feudal system.
Thus, in time, fair England was Normandized;
William, with dignity, rested and gormandized.

The Normans, meanwhile, their energies bent
To founding old families of Norman descent;
And modern statistics have rendered it plain,
By the number of people who come of this strain,

Digitized by Google

That most of the Normans abandoned as dead
At the battle of Hastings were buried—and bred!

Concerning usurpers, 't is often deplored
That in peaceable, prosperous times they are bored.
And William was wont to be fully content
Until he had nothing on earth to resent.

Thinking, in France, there 'd be some one to trounce,
He crossed to a place that I cannot pronounce,
Tendered some cheek to the king, who returned it;
Captured a queerly spelled city, and burned it.

He rode o'er the ruins; his horse, a mere foal,
Absent-mindedly stepped on a red-hot coal;
He thoughtlessly shied, and his rider's inside
Was severely tried—something went—and he died.

RICHARD III.

'T WAS softest spring. King Edward's internals
Collapsed; their possessor joined the supernals—
Or else the infernals. However, he died;
And Richard, observant of decency, cried.

Fearing the king might be lonely, though dead,
He sent for Lord Hastings, and cut off his head;
Sent for Lord Vaughan, who arrived at eleven,
Departed in sections, and lunched in heaven;
Sent for Lord Grey and the good Earl Rivers,
Who shortly appeared in a fit of shivers;
Begged them to follow the dear departed,
And in an hour they also had started.

While he was dying, they failed to remind
The king of his crown—Edward left it behind.
Such a contingency, as it appears,
Richard foresaw, and for several years
Had made preparations and plans of his own,
Of int'rest to those between him and the throne—
Slyly transforming each living impediment
Into an oozing, graveyard sediment.

For instance, that feeble Lancastrian hope,
Henry the Sixth, had neglected to slope;
And, minus his liberty, minus his reason,
Had taken apartments in town for the season—
In a romantic, historical bower,
By fashion frequented, and known as «the Tower.»

His son, whom Richard regarded askance,
Returned with his bride and his mother from France.
The trio were captured in Tewkesbury's hollows,
And Richard disposed of the family as follows:
The son, as a matter of course, he stabbed;
Paused to marry the bride, then jabbed
A hole in the father, and jailed the mother;
The rest he forgave—as there *was* no other!

Just at this moment it came to his ears
That Clarence, his brother, drank hard for his years;
And Richard determined at once to insure
A homeopathic but permanent cure;
So, stifling natural brotherly qualms, he
Drowned the young duke in a hogshead of malmsey.

Edward the Fifth, with his little brother
(Sons, by Edward the Fourth, of their mother),
Started for town to take up the crown
That Edward the Fourth had just laid down.
Richard and Buckingham, to their rapture,
Safely effected the princes' capture—
Their mother, indeed, was the only objector.
Richard, however, now lord protector,
Swore to father 'em, swore to mother 'em,
Hired a fellow named Tyrrel to smother 'em;
Heard of their death with the utmost delight,
Ascended the throne, made Tyrrel a knight;
Sent for the princes' mother, kissed her,
Poisoned his wife and proposed for their sister.

Buckingham, always the king's right hand
(Whose services Richard retained at command
To compass whatever unusual villainy
Called for a criminal expert to kill any
Relatives, enemies, foes, or friends—
In short, to subserve the good king's ends),
Remembering, foolishly, quite a lot
Of things that the king would have wished forgot,
And growing dissatisfied, quietly dusted;
Wrote to the monarch: «Dear Sire, I 'm busted,
And write to remind you it may be as well
To purchase some secrets I 'm anxious to sell.
Yours, B. P. S.: I must not be pursued or
I 'll join the forces of Henry Tudor.»

The fellow, indeed, was a good enough tool
When Richard directed, but simply a fool
With vague, rudimentary notions of evil,
Compared with his master, that pride of the devil.
As a matter of course, he was presently caught,
And straight before Richard the Third was brought.

The king addressed him gently: «Buck,
I 'm sorry to hear you 're out of luck.
You merit reward; perhaps there 's some
Reward for you in the world to come,
Where minds are exposed, but mouths are closed—
Headsman!» . . . Buckingham decomposed.

The census of 1485
Found few of his subjects remaining alive.
Toward the end of spring it became the thing,
With ghosts of fashion, to haunt the king:
Till, while in search of another victim,
Richard met Henry Tudor, who licked him,
Stabbed him repeatedly, broke his head,
Married his niece, and reigned in his stead.

Rows of histories—rows on rows—
Contain King Richard's life in prose.
Of verse, however, there 's not a line,
Except in Shakspere's works—and mine.

Walter D. Robinson.

How Would He have Painted Foxes?

DE DAUBER painted portraits in a rather funny way;
He had his brushes side by side in very odd array:
For flesh he used a flesh-brush, and a hair-brush painted hair;
A tooth-brush painted pearly teeth in mouths of ladies fair;
A nail-brush, clothes-brush, hat-brush, painted those for which they 're named.
«It is the only way to do,» De Dauber loud proclaimed.
And when he painted India shawls (I know you can't suspect)
He used a brush of camel's hair to get the best effect.

A Conversation on Golf.

Succeeded by the claim that it would show more skill to play [illegible] golf, one [illegible] tennis, tiddledy, hockey, hockey, cricket, cricket, polo, polo, lacrosse, lacrosse, and cricket, etc. etc.

SHE

"Why play that foolish game
Of chasing of a ball,
When fifteen miles, or more,
When one would do it all?"

HE

"Why use a spoon for soup,
When, if it does not spill
Your eating with a fork
Might show as much more skill?

"Why use an oar to row,
When rowing with a pole,
If really have you known,
Is handier, on the whole?

"Why use a book and fly
To fish, when pot and worm
Will take a fish's eye
And also fish and firm?

"Why use a rake to rake,
Or bet a bet to bet,
A stone will serve to make
A place for things to grow?"

And so we without end.
Why make we such ado?—
So many a time pretend
To meet, when one would do?

So with this game called Life;
Hard, social, novelist, we call
That all in the strife,
When love would do it all.

Larry the Thieve.

The Band is a-playin',
An' the best player there
Is Larry—bewild' Larry!
Sure, an' never was sich,
Or anything like—
Is worth playin', I swoth,
Could the Band be a-playin',
An' Larry not there!

The Band is a-playin',
An' Larry is there;
An' Katie Higginnis
An' Mary O'Hare,
Wid their ribbons a-flyin',
The boys are all eyein'—
For the Band is a-playin',
An' Larry is there.

The Band is a-playin',
An' Larry is there;
Faith, what sh'u'd I care
If Pat, Tim, an' Dennis
An' all t' ither boys
Swore—well, anywhere,
While the music is soundin'
An' Larry is there!

The Band it is playin',
An' Larry is there;
While now, an' 't is joyous!
Then, 't ere years are ware,
Comes a sudden an' grievin',
An' dim, like a prayer,
To the music a-throbbin',
While Larry is there!

[illegible]

[illegible] the Band it hasn't playin',
An' Larry is there;
An' the heart it is kinder
That Larry is 'ware;
For the cowrie looks I gave 'im
Were just to deserve 'im—
I 've a place in me heart
For Larry must 's there!

A Conversation on Golf.

Suggested by the claim that it would show more skill to play golf with one club than with driver, brassey, mashy, lofter, cleek, putter, niblick, bulger, mid-iron, etc., etc.

SHE

«WHY play that foolish game
Of chasing up a ball
With fifteen clubs, you name,
When *one* would do it all?»

HE

«Why use a spoon for soup,
When, if it does not spill,
Your eating with a fork
Would show so much more skill?

«Why use an oar to row,
When rowing with a pole,
I 'd really have you know,
Is harder, on the whole?

«Why use a hook and fly
To fish, when pin and worm
Will take a ‹kelly's› eye
And land him safe and firm?

«Why use a rake to rake,
Or yet a hoe to hoe?
A spade will surely make
A place for things to grow.»

And so on without end.
Why make we such ado—
So many a thing pretend
To need, when one would do?

So with this game called Life;
Hate, scorn, revenge, we call
To aid us in the strife,
When love would do it all.

Alice M. Ditson.

Foolin' Wif de Seasons.

SEEMS lak folks is mighty cur'us in de way dey t'inks an' ac's;
Dey jes spen' dey days a-mixin' up de dates in almanacs.
Now I mind my next-do' neighbor—he 's a mighty likely man,
But he nevah t'inks o' nuffin only but to plot an' plan.

All de winter he was plannin' how he 'd gether sassafras
Jes ez soon ez evah springtime put some greenness in de grass;
An' he 'lowed, a little sooner, he could stan' a cooler breeze,
So 's to mek a little money f'om de sugah-watah trees.

In de summah he 'd be wearin' out de linin' of his soul
Try'n' to ca'kilate an' figger how he 'd git his winter's coal:
'Twell I b'lieve he got his jedgment jes so tuckered out and thinned
Dat he t'ought a robin's whistle was de whistle of de wind!

Why won't folks gin up dey plannin', an' jes be content to know
Dat dey 's gittin' all dat 's fu' dem in de days dat come an' go?
Why don't folks quit movin' forrard? Ain't it better jes to stan',
An' be satisfied wif livin' in de season dat 's at han'?

Hit 's enough fu' me to listen when de birds is singin' roun',
'Dout a-guessin' whut 'll happen when de snow is on de groun'.
In de springtime an' de summah I lay sorrer on de she'f,
'Cause I know ol' Mistah Winter gwine to hustle fu' hisse'f.

We been put hyeah fu' a pu'pose; but de question dat has riz,
An' made lots o' people differ, is jes what dat pu'pose is.
Now, accordin' to my reas'nin', hyeah 's de place whah I 's arriv':
Sence de Lawd put life into us, why he put us hyeah—to live!

Paul Laurence Dunbar.

Larry is There.

THE Band is a-playin',
An' the best player there
Is Larry—bowld Larry!
Sure, an' niver an air,
Or onything fair-
Ly worth playin', i' sooth,
Could the Band be a-playin',
An' Larry not there!

The Band is a-playin',
An' Larry is there;
An' Katie Maginnis
An' Mary O'Hare,
Wid their ribbons a-flyin',
The byes are all eyein'—
For the Band is a-playin',
An' Larry is there.

The Band is a-playin',
An' Larry is there;
Faith, what *sh'u'd* I care
If Pat, Tim, an' Dinnis
An' all o' thim byes
Bees—well, *onywhere*,
Whin the music is soundin'.
An' Larry is there!

The Band it is playin',
An' Larry is there;
Whisht, now, an' 't is joyous!
Thin, 'fore yees are 'ware,
Comes a sobbin' an' grievin',
An' thin, like a prayer,
Is the music a-throbbin',
Whin Larry is there!

. . . . . .

Och, the Band it kapes playin',
An' Larry is there;
An' me heart it is kinder
Than Larry is 'ware;
For the cowld looks I gave 'im
Were jist to desave 'im—
I 've a rose in me bosom
For Larry that 's there!

E. S. Stilwell.

THE JUNE CENTURY

will contain several articles and a number of illustrations of timely interest in connection with

THE DIAMOND JUBILEE OF QUEEN VICTORIA,

to occur June 27, 1897. Among the other notable contributions to this number is a very fully illustrated article on

THE SHAW MEMORIAL AND THE SCULPTOR ST. GAUDENS.

The memorial to Colonel Robert G. Shaw, by Augustus St. Gaudens, will be unveiled in Boston on Decoration Day, 1897. It is a bas-relief of rare beauty and interest, and it will be fully described and pictured in THE CENTURY with other of Mr. St. Gaudens's works.

The Century Co.'s New Books.

PRISONERS OF CONSCIENCE,

By Amelia E. Barr,

Author of "Jan Vedder's Wife," "A Bow of Orange Ribbon," "A Daughter of Fife," "Friend Olivia," etc.

A POWERFUL novel of the Shetland Islands, showing the effect of the strict Calvinistic faith of the fisher-folk. Mrs. Barr has written nothing stronger or more readable. The illustrations, by Louis Loeb, are the result of a trip made to the scene of the story. In cloth, $1.50.

ONE MAN WHO WAS CONTENT,

By Mrs. Schuyler Van Rensselaer,

Author of "English Cathedrals," "Art Out of Doors," etc.

MRS. VAN RENSSELAER promises with such a book as this, to become no less well known as a writer of fiction than she is already as a critic in the field of art and architecture. In attractive cloth, $1.00.

NATURE IN A CITY YARD,

By Charles M. Skinner.

A LITTLE book which reminds one of "My Summer in a Garden,"—the work of a philosopher,—charming dissertations on nature, art, and society. The author is a Brooklyn journalist. 16mo, cloth, $1.00.

THE STAND-BY,

By Edmund P. Dole, of Hawaii.

A STORY of municipal effort in enforcing prohibitory liquor laws. The hero gains his name at college, where he is captain of a victorious crew, and retains it as the editor of a paper fighting a wealthy brewer. The novel is founded on fact, and there are no points in it where the reader's interest flags. $1.25.

"FOR THE COUNTRY,"

By Richard Watson Gilder.

A COLLECTION of the author's poems on patriotic subjects—Washington, Grant, Sherman, etc., including A Hero of Peace, The Heroic Age, etc., which voice the sentiment of good citizenship in times of peace. Price, $1.00.

Two Books by the Rev. Chas. H. Parkhurst, D.D.

Each 125 pages, cloth, $1.00.

TALKS TO YOUNG MEN.

THE pastor of the Madison Square Presbyterian Church was noted as a man of sound sense and a singular facility in the production of epigrams, even before he blew the trumpet-blast that shook down the walls of Tammany Hall. In these brief "Talks" he is as sound and as sententious as of old.

TALKS TO YOUNG WOMEN.

THOUGH a man among men, the famous New York preacher can address himself as effectively to an audience of women as to a mass-meeting of citizens or a congregation of both sexes. The secret of this power is that he addresses himself in every case straight to the heart and conscience

Sold by all booksellers. Sent, post-paid, by the publishers.

A Novel Educational Competition

COMBINES PLEASURE WITH INFORMATION AND MENTAL TRAINING.

The Century Co. announces an educational competition which it is hoped will arouse very general interest. Three examination papers, each containing fifty questions, have been prepared; the competitors have a month to answer each set. The prizes are as follows: $500 to the person sending in the best set of answers, $100 for the second best, $50 for the third, two of $25 each for the fourth and fifth, and thirty of $10 each for the next thirty in order of merit. Also another and special prize of $500.

THE QUESTIONS in these examination papers are based on the supposition that a public school graduate of average intelligence can score 75 per cent. if he gives ten minutes of serious application to each question. Any one, therefore, who devotes to them three hours a week should make a better score and stand an excellent chance of winning a prize.

Pleasure and Education Combined

The aim of the questions is to impart knowledge and to lead to a habit of investigation that will be of value through life. This they do in an astonishing degree. If you gain first prize, the knowledge you have acquired will be worth more to you than the $500 you receive. But whether you win that prize or not, you learn to concentrate your mind, sharpen your wits, and secure most valuable information.

Do not cease your education when you leave school or college; keep on learning. Horace Greeley said of Lincoln that his success lay largely in the fact that every day he lived he acquired new knowledge, and therefore broadened. Get the information that is in these questions. They are not the kind that are found in school-books; they deal with facts that men, women, boys and girls ought to know. No university extension lectures, no course of reading can help you as these questions do, because the lectures and the reading deal with theoretical knowledge, these questions with practical every-day knowledge.

University Extension Surpassed

Dumb-bells and bicycles may be equally useful in physical development, yet a thousand persons ride their wheels for one that uses dumb-bells. The reason is perfectly evident. Bicycle riding combines pleasure with exercise; the use of dumb-bells is drudgery. So with these questions; they combine pleasure with mental exercise. You cannot start work on the first one without continuing on to the last, and when you finish them you find that you are repaid a hundredfold.

An analysis of the first fifty questions shows that they deal with or touch upon a very large number of different and distinct points or bits of knowledge. That is, in answering fifty questions you have investigated fifty subjects, and, in addition, have touched upon hundreds of others. History and literature, the Bible and Homer, travel, machinery and law, operas and music, Shakspere and Scott, Paris and Boston, art and architecture, grammar and arithmetic, earthquakes and the heavens, cards and the stage, Napoleon and the North American Indians, the Amazon and the Mississippi, gold-mining and puddling, questions of home and of business — all these and a multitude of others are covered by these questions. Thus, in addition to the pleasure and the mental training, comes the new knowledge that will broaden you as Greeley said it broadened Lincoln. On request, we will forward you sample questions and full particulars of the competition.

$500 First Prize

If you do not possess a set of The Century Dictionary and Cyclopedia, address us and we will sehd your name to one of the few clubs that are now being formed, each member of which secures a set at a reduction of over 40 per cent. and has the privilege of paying for it in small monthly payments.

THE CENTURY CO. (Dept. Ja), New York.

THE CENTURY CO UNION SQUARE NEW YORK

By Royal Authority.

QUEEN VICTORIA

BY

RICHARD R. HOLMES, F. S. A.,

Librarian to the Queen.

PREPARED UNDER THE DIRECTION OF THE QUEEN.

A LIMITED EDITION of this beautiful work is to be issued in England to commemorate the most remarkable reign in the history of the world. Of the copies printed one hundred of the edition on Japan paper have been secured for America and six hundred copies of the edition on vellum paper, both of them printed from type. In England all copies of both editions have already been subscribed for, and at the time this magazine goes to press most of the copies of the American edition have been ordered in advance.

The work will be a personal life of Her Majesty, its letterpress including the story of her life as princess, queen, wife, and mother. Her Majesty's early years will be dealt with in some detail and some inaccurate statements will be corrected. Mr. Holmes, the well-known and highly esteemed Royal Librarian, who has charge of the books, prints, and drawings at Windsor Castle, will write the text, subject to the supervision of Her Majesty. It will be issued as a royal quarto, with forty illustrations, selected from the works of art in the collection of the Queen. These will be reproduced by Messrs. Boussod, Valadon & Co., of Paris, in the highest style of the art of photogravure. It will be a worthy memorial of the Victorian age.

Edition de luxe, on Japan paper, printed from type, with frontispiece in colors, duplicate proofs of full-page pictures, each copy numbered, edition limited to 350 for England (with an additional 25 for presentation by the Queen), and 100 for America. **$50**

Edition de luxe, on fine paper, with frontispiece in colors, printed from type, and the American edition limited to 600 copies. **$15**

Persons desiring to secure a copy of this notable work in either edition should at once notify booksellers or the publishers.

D. APPLETON & COMPANY'S NEW BOOKS.

New Out-door Books.

INSECT-LIFE.

By JOHN HENRY COMSTOCK, Professor of Entomology in Cornell University. With illustrations by ANNA BOTSFORD COMSTOCK, Member of the Society of American Wood Engravers. 12mo, Cloth.

A popular book of general value and interest which will meet a want felt by teachers and be indispensable for classes, and will also prove of constant service to those who have felt the need of a guide to the identification and study of insects.

BIRD-LIFE.

A Guide to the Study of our Common Birds.

By FRANK M. CHAPMAN, Assistant Curator of Mammalogy and Ornithology, American Museum of Natural History; author of "Handbook of Birds of Eastern North America." With 75 full-page Plates and numerous Text drawings by ERNEST SETON THOMPSON. 12mo, Cloth.

This book is designed for the use of those who would become familiar with our common birds in their haunts, learn of their migrations and how they are performed; their nests and the causes which influence their construction; the significance of birds' colors; the forms and uses of their wings, tails, feet, and bills; and the relation between their structure and habits.

New Editions.

HANDBOOK OF BIRDS

Of Eastern North America. Treating of all the birds found east of the Mississippi River, and from the Arctic Ocean to the Gulf of Mexico. With Keys to the Species, etc., and nearly 200 illustrations. By FRANK M. CHAPMAN. 12mo, Cloth, $3.00.

FAMILIAR FLOWERS OF FIELD AND GARDEN.

By F. SCHUYLER MATHEWS. Illustrated with 200 Drawings by the author, and containing an elaborate fifty-page Index. 12mo, Cloth, $1.75.

FAMILIAR TREES AND THEIR LEAVES.

By F. SCHUYLER MATHEWS. Illustrated with over 200 Drawings from Nature by the author. 12mo, Cloth, $1.75.

Novels Worth Reading.

THE THIRD VIOLET.

By STEPHEN CRANE, author of "The Red Badge of Courage," "The Little Regiment," "Maggie," etc. 12mo, Cloth, $1.00.

Mr. Crane's new novel is a fresh and delightful study of artist life in the city and the country. The book is altogether different from any of its predecessors, and the author's marked success proves the breadth and the versatility of his great talent.

HIS FORTUNATE GRACE.

By Mrs. GERTRUDE ATHERTON, author of "Before the Gringo Came," "A Whirl Asunder," etc. 16mo, Cloth, $1.00.

Mrs. Atherton is at her best in this vigorous and graphic story of an international alliance. Her theme is modern social life in New York and its relations to the titled foreigner in quest of an American wife.

THE BEAUTIFUL MISS BROOKE.

By "Z. Z.," author of "The World and a Man," etc. 16mo, Cloth, $1.00.

A clever and entertaining story. The theme is handled lightly, the conversations are vivacious and real, and the glimpse of certain phases of life in London and in Paris ateliers possesses actuality and interest.

LADS' LOVE.

By S. R. CROCKETT, author of "Cleg Kelly," "Bog-Myrtle and Peat," "The Lilac Sunbonnet," etc. Illustrated. 12mo, Cloth, $1.50.

In this fresh and charming story, which in some respects recalls "The Lilac Sunbonnet," Mr. Crockett returns to Galloway and pictures the humor and pathos of the life which he knows so well.

A GALAHAD OF THE CREEKS.

By S. LEVETT YEATS, author of "The Honour of Savelli." 12mo, Cloth, $1.00; Paper, 50 cents.

Mr. Yeats's new novel offers a picturesque and dramatic study of exciting episodes of Indian life in addition to the working out of the special motive from which the title is drawn.

A Delightful Travel Book.

IN JOYFUL RUSSIA.

By JOHN A. LOGAN, Jr. With 50 full-page Illustrations in colors and black and white. 12mo, Cloth.

A peculiarly delightful book of travel and sight-seeing, describing the splendid ceremonies at the coronation of the Czar, and also picturing Russian social life in Moscow and in the country.

Some Standard Books.

ANCIENT GREEK LITERATURE.

By GILBERT MURRAY, M. A., Professor of Greek in the University of Glasgow. The first volume in the "Literatures of the World" series, edited by EDMUND GOSSE, Hon. M. A. of Trinity College. 12mo, Cloth, $1.50.

THE BEGINNINGS OF ART.

By ERNST GROSSE, Professor of Philosophy in the University of Freiberg. A new volume in the Anthropological Series, edited by Prof. FREDERICK STARR. Illustrated. 12mo, Cloth, $1.75.

SOME MASTERS OF LITHOGRAPHY.

By ATHERTON CURTIS. With 22 Photogravure Plates after Representative Lithographs, and Appendices giving Technical Explanations and Bibliography. 4to, specially bound. Large Paper. Limited to 750 copies, numbered. Price, $12.00 *net.*

PIONEERS OF EVOLUTION.

From Thales to Huxley. By EDWARD CLODD, author of "The Story of Creation," "The Story of 'Primitive' Man," etc. With Portraits. 12mo, Cloth, $1.50.

For sale by all booksellers; or will be sent by mail on receipt of price by the publishers,

D. APPLETON & COMPANY - - 72 Fifth Ave., New-York.

May, '97.

Digitized by Google

IMPORTANT NEW BOOKS.

PHROSO.

By ANTHONY HOPE, author of "The Prisoner of Zenda," "The Dolly Dialogues," etc.

The most fascinating romance of the end of the century. *Second Large Edition.*

The most successful serial published in 1896, according to the *Bookman.*

With fifty illustrations, sixteen of them full-page, by HENRY B. WECHSLER.

"It seems to us that 'Phroso,' Anthony Hope's new novel, is likely to rank among the master works of sensational and exciting fiction. . . .

"We care not how sated and cynical a man may have become, we defy him to lay 'Phroso' down if he once takes it up; he will finish it at a sitting and count a night's rest well lost."—New York Sun.

12mo, cloth, $1.75.

Another delightful book by Mr. Hope is "The Heart of Princess Osra." 12mo, cloth, $1.50.

THE MUTABLE MANY.

By ROBERT BARR.

The basis of the novel is a strike in an English factory, but there is a love-story running through it, and it contains many interesting and amusing characters depicted in Mr. Barr's well-known vein. This book, which is now appearing serially, is regarded by competent critics as the best work that Mr. Barr has ever done.

12mo, cloth, $1.50.

Mr. Barr's other works include: "A Woman Intervenes." 12mo, cloth, illustrated, $1.25; "Revenge," 12mo. cloth, illustrated, $1.25; and "In the Midst of Alarms," "One Day's Courtship," and "From Whose Bourne," each 16mo, cloth, illustrated, 75 cents.

THE SACRIFICE OF FOOLS.

By R. MANIFOLD CRAIG.

An exciting story, with the principal scenes laid in India.

Part of the plot is connected with the ape worship of certain of the jungle dwellers.

"Interesting and absorbing."—London Spectator.

12mo, cloth, $1.00.

Two new volumes in the popular Twentieth Century Series.

THE THREE RICHARD WHALENS.

By JAMES KNAPP REEVE, author of "Vawder's Understudy."

The ancestors of the hero, who is a young society man of New York, have been of adventurous natures, and he himself is finally carried away by the same spirit, and goes off in search of a treasure on a mysterious island. The story is one full of stirring adventures.

"Almost as fascinating as a regular old-fashioned pirate tale."
—Evening World.

THE TOUCHSTONE OF LIFE.

By ELLA MACMAHON.

A strong romance with the scene laid in England and South Africa.

Each volume, 16mo, buckram, silver top, illustrated, 75 cents.

MODERN FICTION.

A new series of copyrighted paper-covered novels will be started in May, called the Series of Modern Fiction, which will include works by some of the most popular of living authors. "The Broom Squire," by S. Baring-Gould, will be the first volume in the line. This will be followed by popular works by William Le Queux, Iota, Adeline Sergeant, and other well-known writers. A feature of this series will be a cover designed by Miss Amy Richards, and having attractiveness as well as artistic value.

Price, each volume, 50 cents.

COMPLETE HOYLE.

By R. F. FOSTER, author of "Foster's Whist Tactics," etc.

Mr. Foster is probably the most thorough and scientific student of games of the present time. His books have a value for reference not equaled by any other similar works. This new Hoyle is an encyclopædia of all the indoor games played at the present day, with suggestions for good play, a full Code of Laws, illustrative hands, and a brief statement of the doctrine of chances as applied to games.

Mr. Foster has consulted practically every book published bearing on games, and has been at work for nearly eighteen months on this remarkable work. He has also consulted with the leading club authorities all over the world, and has had the benefit of their advice on all disputed points.

This book is one that no club or lover of games can afford to be without. In it are given the rules for over 250 games.

12mo, Holliston cloth, beautifully stamped with a hand of cards, chessmen, etc., in gold and colored inks, $2.00.

Mr. Foster's other books on games include: "Whist Tactics," 12mo, cloth, $1.25; and "Foster on Hearts," 16mo, cloth, 50 cents.

MIGHT HAVE BEEN.

By the REV. DR. JOSEPH PARKER, of the London Tabernacle.

A most interesting volume of reminiscences, together with many comments by the popular preacher on people, things, and life. Among the notable people who figure in this book are Henry Ward Beecher, John Bright, Phillips Brooks, John B. Gough, Harriet Beecher Stowe, Mark Twain, and Charles H. Spurgeon.

A thoroughly unconventional but interesting work.

"One of the most entertaining books published this year."
—Evening World.

12mo, cloth, $1.25.

AUTHORS' READINGS.

By ARTHUR YOUNG.

A unique book for all persons interested in public readings.

Made up of selections from the writings of popular authors, including Eugene Field, James Whitcomb Riley, Opie Read, Hamlin Garland, Will Carleton, M. Quad, and Bill Nye.

Each of the authors read selections from their writings, and Mr. Young sketched them as they did so. Each selection is illustrated by three or four of these sketches. The effect is exceedingly interesting and unique.

16mo, cloth, $1.25.

SECRET MEMOIRS OF NAPOLEON.

By CHARLES DORIS.

A most valuable historical work, dealing with the private life of the emperor. Full of personal reminiscences not dwelt upon by any other author.

Octavo, cloth, $2.50.

KNOWLEDGE IN A NUTSHELL.

Four books—a Dictionary, an Atlas with good colored maps, a Gazetteer of 433 pages, and a Handbook of General Information—bound in one volume, in small size, so that it can be carried conveniently in the pocket. With this useful work almost any question can be answered. It contains also several blank pages for addresses.

Cloth binding, 3½ x 2¼ inches in size, $1.00.

Leather, $1.25.

DIAMOND DICTIONARY.

A complete little dictionary, 1¼ x 1¼ inches.

Cloth, 50 cents.

For sale by all booksellers or sent postpaid.

TWO NOTEWORTHY NOVELS

HILDA STRAFFORD

A California Story

By BEATRICE HARRADEN, author of "Ships that Pass in the Night." With illustrations by Eric Pape.

12mo, Cloth, $1.25

This is the first novel Miss Harraden has written since her memorable "Ships that Pass in the Night." It is a story of Californian life and depicts the scenes in which Miss Harraden has, for the last year or two, been living. Miss Harraden, during her sojourn in the West, has been much impressed by the homesickness of those who have sought to create a new home and fairer prospects out on the Californian ranches. The forlorn feeling that overtakes the exile: the quickened sense of remembered joys, intensified by the imagination amid the loneliness of the life; the self-sacrificing toil of years — out of materials like these Miss Harraden has constructed a tragic tale of vivid power and fresh interest. It is a phase of Californian life which has until now remained untouched.

THE GREAT "K. & A." TRAIN ROBBERY

By PAUL LEICESTER FORD, author of "The Hon. Peter Sterling," "The Story of an Untold Love," etc., etc.

12mo, Cloth, with Frontispiece, $1.25

A novel that is admirable reading, for it is sure to rouse the interest of the most listless reader and to keep him on tenter-hooks to the happy ending, when all the mystery and complications are satisfactorily settled. The story is entitled "The Great K. & A. Train Robbery." It is of course a tale of the West, and the holding up of the K. & A. train has no parallel in all railroad history. The story is told in first-class style and the exciting incidents that follow the "hold-up" move almost as rapidly as an express train. It is bound to be widely and appreciatively read.

The above Books are for sale by all Booksellers, or will be sent, on receipt of their retail price, by the Publishers

Dodd, Mead & Company, 149-151 FIFTH AVENUE NEW YORK

Most emphatically endorsed by leading Educators, Divines, Editors, Literary, Professional, and Business Men and Specialists.

Officially adopted for the Public Schools of New York, Boston, and many of our principal cities.

HISTORY FOR READY REFERENCE AND TOPICAL READING.

J. N. LARNED, Ex-President American Library Association.

FIVE IMPERIAL VOLUMES.

In this work the great writers of history *speak for themselves.* Their choicest excerpts upon all subjects and countries, arranged by a marvelous plan of Cross- and Ready-Reference, forming

A COMPLETE SYSTEM OF HISTORY.

IT IS THE ONLY WORK REPRESENTING THE LITERATURE OF HISTORY.
IT IS A LIBRARY IN ITSELF, AND A GREAT SAVER OF TIME AND LABOR.
THE RESULT OF MANY YEARS' LABORIOUS AND DISCRIMINATING RESEARCH.
IT ENTERS UPON A FIELD HITHERTO WHOLLY UNOCCUPIED, WHICH IT FULLY COVERS.
NOT HISTORY BY ONE MAN, AT ONE TIME, IN ONE STYLE, AND FROM ONE POINT OF VIEW, BUT BY HUNDREDS OF WRITERS OF DIFFERENT PERIODS, STYLES, AND POINTS OF VIEW.
IT CONTAINS COMPLETE TEXT OF THE GREAT HISTORICAL DOCUMENTS AND CONSTITUTIONS OF THE WORLD.

Sent, carriage free, to responsible subscribers, on easy payments. Write for sample pages and circular containing full information. Solicitors employed.

THE C. A. NICHOLS CO.,
PUBLISHERS,
SPRINGFIELD, MASS.

Do not confound this work with books offered at seemingly great discounts. We have but one price for all, the same for introduction as afterwards.

THE MACMILLAN COMPANY'S NEW BOOKS.

JUST READY.

THE CHOIR INVISIBLE.

By the Author of "Summer in Arcady," "A Kentucky Cardinal," "Aftermath," etc.

By JAMES LANE ALLEN

Cloth, 12mo, $1.50.

The work will be a landmark in the history of American fiction, showing the revival of the historic sense which has been so marked across the sea. The story deals with the first appearance west of the Alleghanies of types of civilization, and is realistic as well as historic, at once fleshly and spiritual, and Mr. Allen has wrested from the old conditions a lesson always modern and always needed.

STORIES OF THE SAILOR'S LIFE.

THE PORT OF MISSING SHIPS

And Other Stories of the Sea.

By JOHN R. SPEARS.

Cloth, 12mo, $1.25.

Four stories of the sea which will be sure to interest those whose attention has been drawn to the sailor's life by the inimitable narrative of the writer of "On Many Seas."

The title of the first story is the name by which the book is to be known; others are *The Story of a Second Mate* and *The Skipper of the Nancy C.*

ON MANY SEAS.

The Life and Exploits of a Yankee Sailor.

By FREDERICK BENTON WILLIAMS.

Edited by W. S. Booth.

Cloth, 12mo, $1.50.

"Every line of this hits the mark."—*New York Tribune.*

"A picture of the sailor's life as it has never been drawn before."—*Providence News.*

"The charm of it is its simplicity and truth."—*New York Herald.*

NEW READING BOOKS IN PREPARATION.

THE HEART OF NATURE SERIES.

By MABEL OSGOOD WRIGHT,

Author of "Birdcraft," "Tommy-Anne and the Three Hearts," etc.

A Series of Readers which will provide answers for some, at least, of the "whys" asked by active children during the out-of-doors season.

I. **CITIZEN BIRD**—(Bird Life for Beginners). By Mrs. M. O. Wright and Dr. Elliott Coues. With Illustrations by L. A. Fuertes. **Ready in April, 1897**

A guide, in a narrative form, to the principal species of North American birds, with chapters on anatomy, economic value, habits, etc., also a field key to same.

II. **FOURFOOTED AMERICANS**—(Some Native Animals). Edited by Frank M. Chapman. With numerous Illustrations. **Ready in September, 1897**

Man and his relation to and dependence on other animals,—Food Animals, Fur and Hides, the Companionable Animals, Famous Native Animals, Mind versus Instinct, etc., etc.

NEW BOOKS FOR THE STUDENT OF BOTANY, GEOLOGY, ETC.

LABORATORY PRACTICE FOR BEGINNERS IN BOTANY.

By WILLIAM A. SETCHELL, Ph.D.,

Professor of Botany in the University of California.

Cloth, 16mo, 200 pp., **90 cents, net.**

The aim of the work is to cultivate making careful and accurate observations, and the proper inference therefrom; also to lead the student to take an interest in the phenomena of nature for future development.

AN INTRODUCTION TO GEOLOGY.

By WILLIAM B. SCOTT,

Professor of Geology and Palæontology, Princeton University.

12mo, cloth, pp. 570, **$1.90** *net.*

An admirable general view of the subject, for those who wish to lay a reliable, fairly proportioned foundation for later specialization, and for those who do not expect to do further work along these lines yet wish that knowledge of the fundamental principles of the science essential to every good education.

NEW VOLUMES IN **THE TEMPLE CLASSICS.**

Under the General Supervision of ISRAEL GOLLANCZ, M.A., Editor of "The Temple Shakespeare," the Publishers of that dainty edition are preparing a new Series.

They hope to include the great masterpieces of English Literature; but it will not be limited in scope.

Each work will be printed in full, with no Introductory matter; Glossarial Indexes, or brief Bibliographies, give needed Notes.

The books will be printed in clear type, in compact form. Shoulder Notes giving the contents of each Page will be a feature.

The Volumes will appear, it is hoped, two a month, in *cloth* at *50 cents* each, and *limp leather* at 75 cents each.

Volumes now Ready.

Southey's Life of Nelson.
Browne's Religio Medici.
Wordsworth's Prelude.
Gulliver's Travels.
Lamb's Essays of Elia.
Lamb's Last Essays of Elia.
Bacon's Essays.
Malory's Morte d'Arthur, Vol. I.
Malory's Morte d'Arthur, Vol. II.
Florio's Montaigne, Vol. I.

Others to follow.

THE MACMILLAN CO., 66 FIFTH AVENUE, NEW-YORK.

Charles Scribner's Sons' New Books.

A NEW BOOK BY MR. MITCHELL:

AMERICAN LANDS AND LETTERS.

From the *Mayflower* to Rip Van Winkle. By DONALD G. MITCHELL. With 90 illustrations. 12mo, $2.50.

Mr. Mitchell's new book covers the literature of our country from Captain John Smith to William Cullen Bryant. The author has for many years made a special study of the fountainheads of American letters, and this wide and intimate scholarship has combined with his personal knowledge of most of the great literary figures of half a century ago to create a peculiar understanding and comprehensive sympathy with his subject. The illustrations comprise a remarkable collection of portraits and views.

A Story-Teller's Pack.

A volume of Nine Short Stories by FRANK R. STOCKTON. Illustrated. 12mo, $1.50.

This new volume contains a selection of Mr. Stockton's best work during the last four years. The book is introduced by a characteristic preface explaining the use of the title and contains nine stories, each of them illustrating most charmingly, though in varying manner, Mr. Stockton's well-known original faculty and happy, fanciful humor.

The Builders, and Other Poems.

By HENRY VAN DYKE. 12mo, $1.50.

"It is a permanent contribution to literature."—Prof. EDWARD DOWDEN, in the *Saturday Review*. Of the poems about birds which are included in this volume John Burroughs says: "'Nothing truer to life has been written on these themes in this country'; and he repeats with infinite relish Van Dyke's beguiling fishing song, 'An Angler's Wish.'"—THE SPECTATOR in *The Outlook*.

NOVELS AND STORIES BY HAROLD FREDERIC.

Four volumes, bound uniform with "The Damnation of Theron Ware," constitute this new edition of novels and short stories by Mr. Frederic—**Seth's Brother's Wife, The Lawton Girl, In the Valley,** and **In the Sixties.** The last named volume includes "The Copperhead" and "Marsena and Other Stories." Each 12mo, gilt top, deckel edges, $1.50.

"The Scribners have in press a new uniform edition of novels and short stories by Mr. Harold Frederic. This is a well-deserved tribute to the abilities of a writer whose worth was recognized by discerning critics long before 'The Damnation of Theron Ware' occasioned something of a furor."—*New-York Tribune.*

Martha Washington.

By ANNE HOLLINGSWORTH WHARTON. A new volume in **The Women of Colonial and Revolutionary Times.** With portrait in photogravure. 12mo, $1.25.

With indefatigable industry, Miss Wharton has been gathering new materials for this volume from many out-of-the-way sources. Her picture of the family and social life of the Washingtons has both freshness and piquancy and will insure a wide popularity for the book, as well as a serious appreciation of its value as a contribution to the history of colonial life and manners.

Periods of European Literature.

An important series, the first volume of which is **The Flourishing of Romance and the Rise of Allegory,** by the editor of the series, Prof. GEORGE SAINTSBURY. Crown 8vo, $1.50 *net.*

The purpose of this series is to present a survey and to illustrate the development of the vernacular literature of mediæval and modern Europe. The period covered in Professor Saintsbury's volume is from 1100 to 1300, and the view that is given of the literatures of the various European peoples in this transition period following the dark ages is both scholarly and popular.

MR. BARRIE'S TWO NEW BOOKS.

TWENTIETH THOUSAND.

Margaret Ogilvy.

By her Son. With portrait. 12mo, $1.25.

"A book which it is almost sacrilegious to criticize. This is Mr. Barrie's finest and noblest book."—*British Weekly.*

THIRTY-FIFTH THOUSAND.

Sentimental Tommy.

The Story of his Boyhood. Illustrated. 12mo, $1.50.

"A work of fiction that is as original as it is fascinating. Here, indeed, is life itself and all the accompaniments thereof."—JOEL CHANDLER HARRIS.

Life's Comedy.

By various artists. A volume containing 140 drawings from *Life*, by Gibson, Wenzell, Van Schaick, Toaspern, Blashfield, and others. Quarto, $1.50.

Louis Napoleon and Mlle. de Montijo.

By IMBERT DE SAINT-AMAND. With portraits. 12mo, $1.50.

It presents an attractive picture of the Court of Napoleon III. and of the Second French Empire, the center of which was the engaging personality of Empress Eugénie.

How to Listen to Music.

By H. E. KREHBIEL. Illustrated, Fourth Edition. 12mo, $1.25 *net.*

Mr. WALTER DAMROSCH says: "I heartily commend this helpful and stimulating book to all real lovers of music."

America and the Americans.

From a French Point of View. 12mo, $1.25.

"The whole truth seems to be, if one takes the entire volume together, that the author has come nearer to understanding the real forces in American life than any foreigner who has visited us during the present decade."—Boston *Herald.*

THE ONLY COMPLETE EDITION OF THE WORKS OF GEORGE MEREDITH

With new portrait from a drawing made for this edition by J. S. Sargent. 32 volumes, to be published at the rate of 2 volumes a month. 8vo, $4.00 *net* per volume. Sold only in complete sets.

VOLUMES NOW READY.

Richard Feverel. 2 vols.
Sandra Belloni. 2 vols.
Evan Harrington. 2 vols.
Vittoria. 2 vols.

First uniform and complete edition of Mr. George Meredith's works. The issue will contain, in addition to all the novels and poems which are in print at the present time, some works which have not been accessible for many years.

Mr. Meredith has revised all his works for this edition, which he wishes to be regarded as textually final.

The issue will be limited to ONE THOUSAND COPIES for sale for England and America, signed and numbered.

The size will be octavo. It will be printed in bold-faced type, on white, thick, but light-weight paper, thus making the volumes delightful to read and easy to handle.

Houghton, Mifflin & Company's New Books.

The Mycenaean Age.

A Study of the Monuments and Culture of Pre-Homeric Greece. By Dr. CHRESTOS TSOUNTAS, Ephor of Antiquities and Director of Excavations at Mycenae, and J. IRVING MANATT, Ph. D., LL.D., Professor in Brown University. With an Introduction by Dr. WILHELM DÖRPFELD, a Map, Plans, and Tables, and over 150 Illustrations, including many full-page plates. Bound in handsome style, with embossed figures in gold, representing the ornamentation of the most distinctive objects found at Mycenae, the Vaphio Cups. Large 8vo, gilt top, $6.00.

A volume of remarkable importance like Schliemann's and Lanciani's great works, offering a careful survey of Mycenaean culture and registering the results of research at Mycenae to date.

The Cambridge Lowell.

Complete Poetical Works of JAMES RUSSELL LOWELL. *Cambridge Edition.* Uniform with the Cambridge Editions of Longfellow, Whittier, Holmes, and Browning. From new plates, large type, on opaque paper, and attractively bound. With a Biographical Sketch, Notes, Indexes, a fine new portrait, and an engraved title-page with a vignette of Lowell's home, Elmwood. Large crown 8vo, gilt top, $2.00; half calf, gilt top, $3.50; tree calf, or full levant, $5.50.

The first complete edition of Lowell's poems in a single volume. Both in the character of the poetry and the mechanical execution of the book it is of remarkable excellence.

Memories of Hawthorne.

By his daughter, ROSE HAWTHORNE LATHROP. With a new portrait of Hawthorne. Crown 8vo, gilt top, $2.00.

A charming book, covering the Hawthorne family life in Salem, Lenox, and Concord; the term of Hawthorne's residence in Liverpool as United States Consul; his years of travel in France and Italy, and his last years in Concord.

The Open Mystery.

A Reading of the Mosaic Story. By Mrs. A. D. T. WHITNEY, author of "Faith Gartney's Girlhood," "Patience Strong's Outings," "The Gayworthys," etc. 16mo, $1.25.

In this book Mrs. Whitney seeks to interpret the Pentateuch so as to enlist livelier and profounder interest in the Mosaic story. Back of simple narrative, she finds deep and helpful suggestions for our daily life and stimulus to our wiser thought.

Upon the Tree-Tops.

By OLIVE THORNE MILLER, author of "In Nesting Time," "Bird-ways," "Little Brothers of the Air," etc. Illustrated by J. Carter Beard. 16mo, $1.25.

Mrs. Miller devotes this book to birds that haunt trees—thrushes, the crow, sparrows, swallows, wrens, woodpeckers, humming birds, orioles, larks, bluebirds, and many others.

The Spoils of Poynton.

A Novel. By HENRY JAMES, author of "The Portrait of a Lady," etc. 12mo, $1.50.

A story of English scenes and characters told with the high perfection of manner and the fascination of style which mark Mr. James's best work.

The Wisdom of Fools.

By MARGARET DELAND, author of "John Ward, Preacher," "Philip and his Wife," "Mr. Tommy Dove," etc. 16mo, $1.25.

This book contains four stories, in which appear conditions, tendencies, and problems characteristic of society to-day. They are told with great vigor, and possess the well-known qualities of Mrs. Deland's style, which explain and justify the wide popularity of her stories.

A Transatlantic Chatelaine.

A Novel. By HELEN CHOATE PRINCE, author of "The Story of Christine Rochefort." *Second Edition.* 16mo, $1.25.

A dramatic story, the action partly in America, partly in France; the time includes the Civil War and the Franco-German war. It is very interesting, well written, and promises to be as popular as "Christine Rochefort."

The Spirit of an Illinois Town, and The Little Renault.

By MARY HARTWELL CATHERWOOD, author of "The Lady of Fort St. John," "Old Kaskaskia," etc. 16mo, $1.25.

The first story relates to the Illinois of about two generations ago. The interesting narrative is lighted up with the charming heroine, the Spirit of the Illinois town. "The Little Renault" is a touching episode of Tonty's life in Illinois in 1680.

Miss Archer Archer.

By CLARA LOUISE BURNHAM, author of "The Wise Woman," "Sweet Clover," etc. 16mo, $1.25.

Mrs. Burnham's large circle of readers will gladly welcome this new and thoroughly interesting story. The scene is partly on the coast of Maine, partly at an old "before-the-war" homestead in Virginia. Some chapters take in Fortress Monroe, Hygeia Hotel, and Washington.

The Day of his Youth.

A Novel. By ALICE BROWN, author of "Meadow Grass," "By Oak and Thorn," etc. 16mo, $1.00.

A very readable story, showing in the most interesting way how a boy bred in the solitude of the woods develops into a noble manhood through the strong influence of love, through the suffering produced by treachery in love, and by unselfish devotion to humanity.

The Young Mountaineers.

Short Stories. By CHARLES EGBERT CRADDOCK (Mary N. Murfree), author of "In the Tennessee Mountains," etc. With illustrations, 12mo, $1.50.

This book contains stories of adventure in the mountains of East Tennessee; they all have boys for heroes, and they are told in a vigorous, dramatic manner.

Sold by Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston; 11 East 17th Street, New-York.

Capt. Mahan's New Work

THE LIFE OF NELSON.

THE EMBODIMENT OF THE SEA POWER OF GREAT BRITAIN. By Captain A. T. MAHAN, D. C. L., LL. D., United States Navy, author of "The Influence of Sea Power upon History," etc. *Illustrated with 19 portraits and plates in photogravure and 21 maps and battle plans.* 2 vols., 8vo, cloth, gilt top, $8.00.

The Life of Nelson forms a third book in the series of brilliant works upon "Sea Power," recognized everywhere as an authority. Nelson's correspondence and despatches and other sources of information have been carefully examined. Captain Mahan has made *Nelson describe himself,—tell the story of his own inner life as well as his external actions.* While the first adequate life of the greatest sea-fighter the world has known, it is likely to take a high rank among Memoirs.

Uniform with The Life of Nelson

THE INFLUENCE OF SEA POWER UPON HISTORY. 1660–1783. 8vo, cloth, gilt top, $4.00.

THE INFLUENCE OF SEA POWER UPON THE FRENCH REVOLUTION AND EMPIRE. 2 vols., 8vo, cloth, gilt top, $6.00.

QUO VADIS.

The Remarkable Historical Romance by the author of "With Fire and Sword," depicting Rome at the Time of Nero and the Foundation of Christianity.

"QUO VADIS," a Narrative of the time of Nero. By HENRY K. SIENKIEWICZ, author of "With Fire and Sword," "The Deluge," etc. Translated from the Polish by Jeremiah Curtin. Crown 8vo, cloth, $2.00.

Now in its twentieth edition. Every one is reading it. One of the greatest books of our day.

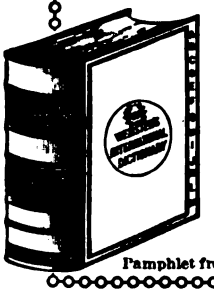
Webster's International Dictionary

The One Great Standard Authority,
So writes Hon. D. J. Brewer, Justice U. S. Supreme Court.



IT IS A THOROUGH REVISION OF THE UNABRIDGED,

The purpose of which has been not display nor the provision of material for boastful and showy advertisement, but the due, judicious, scholarly, thorough perfecting of a work which in all the stages of its growth has obtained in an equal degree the favor and confidence of scholars and of the general public.

IT IS THE BEST FOR PRACTICAL PURPOSES, BECAUSE

Words are easily found * * * Pronunciation is easily ascertained,
Meanings are easily learned * * * The growth of words easily traced,
and because excellence of quality rather than superfluity of quantity characterizes its every department. * * * GET THE BEST.

Beacon Lights of History

By Dr. JOHN LORD

Busy Man's Library

Not Sold in Bookstores.

A biographical review of the world's life and progress for five thousand years, — setting forth its great epochs and master minds, the thinkers of great thoughts, and doers of great deeds.

In Ten Volumes:

Jewish Heroes and Prophets,
Old Pagan Civilizations,
Antiquity,
Middle Ages,
Renaissance and Reformation,
Great Warriors and Statesmen,
Great Women,
Modern European Statesmen
American Statesmen,
and
Nineteenth Century Writers.

"These lectures take high rank. Many owe their enthusiasm in the study of history to Mr. Lord."— FRANCIS L. PATTON, *Pres. Princeton University.*

"He writes history as Plutarch did. . . . The choice of subject is happy, the grouping skillful, the style graphic. Great characters represent great ideas, and illuminate them."— PROF. W. S. TYLER, *Amherst College.*

"Valuable as contributions to history. . . . Peculiarly rich in comparisons and analogies."— REV. ANDREW P. PEABODY, D. D.

BROWNIE PAPER DOLLS.

A set of ten different Brownies, in colors, ready to be cut out, sent to any address for three 2-cent stamps.

Address THE CENTURY CO.,
Union Square, New-York.

$500.00 IN GOLD FREE

Are you a smart speller? We give $500 away in prizes to those able to make the largest list of words from the word SUBSCRIBERS. You can make at least twenty, we believe, and if you can you will get a present anyway, and if your list is the largest you will get $100.00 in cash. Here are the rules to follow: Use only words in the English language. Do not use any letter in a word more times than it appears in SUBSCRIBERS. Words spelled alike can be used only once. Use any dictionary, and we allow to be counted proper nouns, pronouns, prefixes, suffixes, any legitimate word. This is the way: Subscribers, subscribe, is, sir, sire, rise, rub, burr, cub, cur, crib, etc. Use these words. The publisher of the AMERICAN WOMAN will give away, on June 15, the sum of $500, divided into sixty prizes, for the largest lists of words as above. $100 to the person making the largest list; $50 for the second largest; $25 each for the next three largest lists; $20 each for the three next largest; $15 to each of the next three; $10 to each of the next nine; and $2 to each of the next forty largest lists. We want you to know our paper, and it is for this reason we offer these premiums. We make no extra charge for the privilege of entering this word-building contest, but it is necessary to send us 25 cents, silver or stamps, for which we will send you our handsome illustrated 28-page magazine for six months, and the very day we receive your remittance we will mail you free the following ten popular novels, by well-known authors: "Princess Bab," by Frances Hodgson Burnett; "Hugh Bickster's Wife," by Ella Wheeler Wilcox; "Amy's Lover," by Florence Marryat; "Why They Parted," by May Agnes Fleming; "Guy Newton's Revenge," by Mary Cecil Hay; "Our Mutual Enemy," by Jane G. Austin; "Clarissa's Choice," by "The Duchess"; "Laura Belton's Secret," by Helen Forrest Graves; "Gold and Glitter," by James Franklin Fitts; "Uncle Lot," by Harriet Beecher Stowe. This offer is the greatest you have ever had made to you. Send your list at once. If you win one of the prizes your name will be published in our July issue. Address THE AMERICAN WOMAN, 119 and 121 Nassau Street, Dept. 532, New-York City, N. Y.

New-York Military Academy

Cornwall-on-Hudson, New-York.

"WELL BEGUN IS HALF DONE." This proverb as applied to education means the proper training of the pupil while still quite young. Experience with very many boys over a period of many years has induced the authorities of this academy to add to its academic department a preparatory department for boys under fourteen years of age with a faculty, buildings, playground and equipment separate and distinct in every way from the more advanced department, and with a discipline adapted to the boy of tender years. The very great advantages offered here in this respect alone commend this academy to the attention of any thoughtful parent.

For catalogues, address **S. C. JONES, C. E., Superintendent.**

The spectre

of housecleaning needn't trouble you a moment. The person that dreads housecleaning knows nothing of **Pearline**—of its easy work, its quickness and comfort, its saving of paint and of rubbing. Go over everything with **Pearline**—floors, doors, windows, woodwork, paint, marble, stone, glass, carpets, bric-a-brac—and you'll get through any cleaning job in the shortest time, and with the least labor and fuss. You don't need any other help. **Pearline** is meant to wash everything that water won't hurt, 538

Beware Peddlers and some unscrupulous grocers will tell you, "this is as good as" or "the same as Pearline." IT'S FALSE—Pearline is never peddled; if your grocer sends you an imitation, be honest—*send it back.* JAMES PYLE, New York.

"WALTHAM" WATCHES.

The American Waltham Watch Company **not only makes each part of a watch movement at its own factory in Waltham, but also the machinery by which those parts are made. Foreign watches are made by a system of scattered and disconnected labor, many different trades being employed, all working separately. This is one reason why *WALTHAM* watches are more accurate than European. The movements engraved with the trade-marks *"RIVERSIDE"* or *"ROYAL"* (made in various sizes for both ladies and gentlemen) are particularly recommended by the Company. For sale by all jewelers in any kind of case. Do not be misled into paying a larger price for a foreign made watch no better than a *WALTHAM*.**

For sale by all retail jewelers.

cannot injure the finest hardwood floors if

BEST PREPARATION FOR THE PURPOSE.

For sale by all paint and oil dealers. Ask for pamphlet about it.

S. C. JOHNSON, RACINE, WIS.

May, '97.

GREATEST DURABILITY. SMALLEST COST. BEST PIGMENTS.

If you CAN know, positively, that the

PAINT for your HOUSE

is made with Pure Linseed Oil only, you know it will be durable and bright.

White Lead and Colors have very little to do with the **Durability** of Paint. That is in the **Linseed Oil** only.

The only way to know **positively** that your Paint is made with Linseed Oil is to put it there **yourself.**

HAMMAR PAINT is made of the best known Paint Pigments, such as all good painters use, and is ground THICK.

Half gallon Hammar Paint costs 87 1-2
Mixed with half gallon Pure Linseed Oil, anywhere . . . . 22 1-2 } **$1.10**
Makes 1 gallon of Pure Linseed Oil Paint, ready for use for . . $1.10 } **Per gal.**

HAMMAR PAINT and Pure Linseed Oil make the best paint, for all work, inside or out, that it is possible to make at any price. They cost 30 per cent. LESS than MIXED PAINT or WHITE LEAD and are guaranteed satisfactory for 5 years. It is little trouble to mix them.

It is only a practical, common-sense principle. Our book, "The Truth About Paints," gives full details. Send for it now! It is free! Ask your dealer for HAMMAR PAINT. If he does not keep it, don't let him sell you any other paint for his own benefit; he can't sell any paint that is better, and he will charge you more for what he sells, BUT SEND us your order; we will have it filled. Any order delivered; freight prepaid, at your depot.

F. HAMMAR PAINT CO., 1216 Spruce Street, ST. LOUIS, MO.

Send size and general idea of room.

Established 21 Years — ALLEN & PARKHURST, 337 Superior St., Toledo, Ohio.

Porcelain-Lined REFRIGERATORS

HEALTHFUL because they are never uncleanly.

DURABLE because the porcelain never breaks; nothing can craze, crack, chip nor peel it.

WHITE, everlasting porcelain moulded into one piece lines every food compartment. The whiteness makes every corner light as day, so you can see anything spilled there. The glaze enables you to wipe it up with a cloth. That's about all the cleaning ever necessary. The whole construction is so skillful that ice lasts till you wonder at it. They save their cost over and over in the ice that other refrigerators waste. The first cost is more than of some kinds but it goes into making them economical. We save you the dealer's profit by selling direct, freight prepaid. Nobody who could see one of these refrigerators would want the food of a lifetime kept in a poorer kind. We therefore sell on approval. Our new catalogue with pictures in colors, shows how dainty they are; write for it.

Pleasant Dreams

come to those whose surroundings are comfortable and harmonious. Furniture has much to do with the pleasure of living. It must be in good taste, and can be reasonable in cost. We have the largest stock of furniture in the United States. It is elegant, stylish, and original. Write for one of our Furniture Catalogues and examine it amid the surroundings you wish to improve. Write us about your wants and we will tell you the cost of each piece delivered at your nearest railway station. A fine mantel is the most conspicuous piece of furniture in a room, and will almost furnish a room by itself. We make wood mantels in all the hard woods. Send for our Mantel Catalogue also. It contains many illustrations of mantels, complete with tiling, hearths, grates, etc. We sell these direct at factory prices, ready to be set up by local mason, with printed directions for setting. Will quote prices, including cost of delivery at nearest railway station.

Established Over Sixty Years.

The Robt. Mitchell Furniture Co.

19 West Fourth Street, Cincinnati, O.

Manufacturers. Capital, $1,000,000.

DON'T BELIEVE THE DINGLEY BILL need add one cent to the retail price of foreign Knives, Razors, or Shears. They are sold now at from 100 to 300 per cent. profit, so the increased tariff will simply lessen the big margin of importers and retailers, and add to Uncle Sam's revenues. No American made goods will be a penny higher, but our mechanics will be doing work that is now done in England. We deal direct with one million consumers and warrant every Maher & Grosh blade to be *hand-forged* from *razor steel.* Be kindly; write us.

The upper cut is **Chauncey Depew's Pet.** Has 3 blades (one is a file), hand-forged from razor steel, file tested; replaced free if soft or flawy. Handle is choicest selected pearl; German silver back and ends. Price, in chamois case, $1.50, postpaid. Same knife, 2 blades, $1.00; plainer finish, 3 blades, same quality, $1.25; smaller, 2 blades, for lady, $1.00; plainer finish, 75 cents.

The lower cut is the pattern we call **"Our Masterpiece."** If ink and paper could show polished steel and shining pearl as they are, every reader would be unhappy until he owned the knife shown in this cut. Blades are highest grade of razor steel, file tested, warranted, strong enough for anything, fine enough for a quill pen, weighs 2 ounces, 3 blades. Price, with ebony handle, $1.25; ivory, $1.50; choicest pearl, $2.00, postpaid. Send for 80-page free list and "How to Use a Razor."

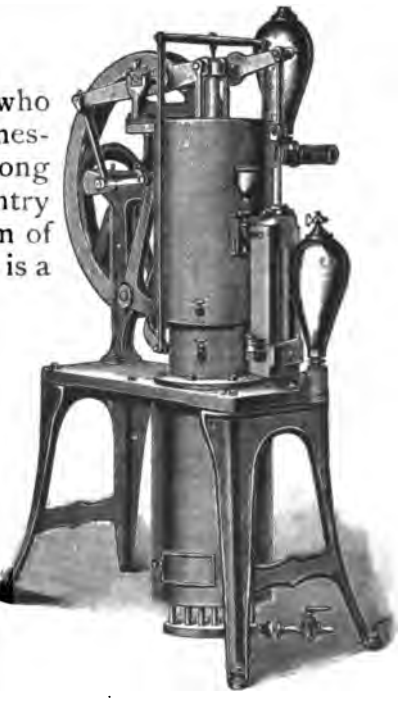
"The wind bloweth where it listeth,"



and no man is more aware of this fact than he who depends upon a windmill or air-motor for his domestic water supply. It requires but little inquiry among architects and builders to learn that for a country residence or public building of any kind the form of water supply which is now superseding all others is a

Rider or Ericsson Hot-Air Pump.

They are almost automatic, require no skilled attention, and *are independent of wind* or weather—safe in the hands of the ordinary child. The recent purchase of the plants of the Rider Engine Co. and the Delamater Iron Works has greatly reduced the cost of manufacture and brings these pumps within reach of the man of moderate means. A pump of fair supply can now be bought for $100. We shall be pleased to send descriptive catalogue "R" on application.

Costs less than Cooking by Coal or Wood;

and how much easier and quicker is the process. No smoke, no soot, no ashes or litter, no sweltering heat; a match builds the fire, a slight movement of the hand extinguishes it. Of course, much depends on the stove, and there is only one Gas Stove that combines the greatest economy with the highest efficiency and convenience. That's the . . .

A Stove that's made in "the Largest and Best-Equipped Stove-Plant in the World." . . . . . .

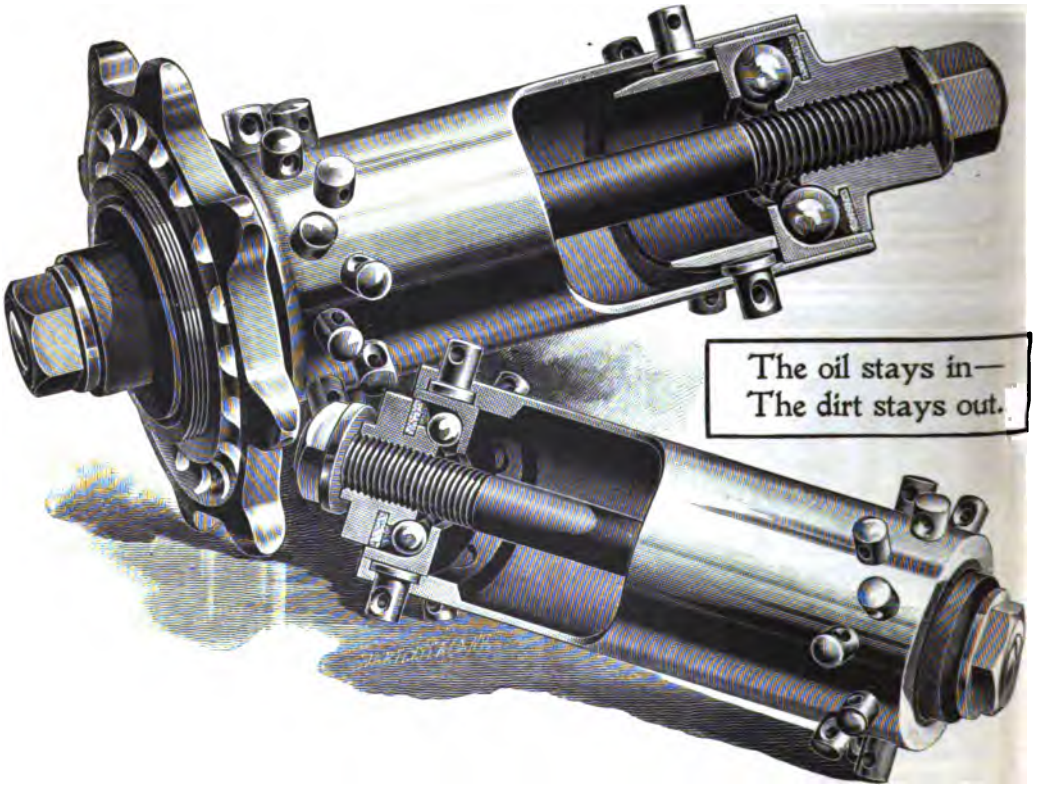
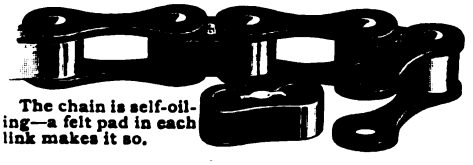
Columbia Bicycles

Large Balls 5-16-inch in rear wheel, 3-8-inch in crank-shaft. Add to ease of running and hill climbing. Double the life of bearings.

Movable Spoke Studs Adjust themselves to direct draught of spoke. Obviate bending. Insure perfect alignment.

Dust-proof Bearings The felt pad is an oil-retaining filter. Absorbs oil. Excludes dirt. Keeps the bearings clean. Gives perfect lubrication.





The chain is self-oiling—a felt pad in each link makes it so.

Not a single 1897 Columbia was sold until after thirty machines had been tested by over 100,000 miles of rough road riding.

LIFE GIVING

When a pneumatic tire is resilient (bounding, active) it is said to be full of life—it gives life to the wheel. PALMER TIRES are the liveliest tires made. A wheel fitted with PALMER TIRES will run easier and coast further than a wheel fitted with other tires. Their first cost is the greatest, but they are the cheapest .... tires in the end.....

PALMER PNEUMATIC TIRE COMPANY

...CHICAGO...

New York Offices: 66-68 Reade Street

PALMER TIRES

Cycling Enjoyment

depends upon the bicycle used. A low-priced cycling make-shift can't be expected to give the comfort, security and service to be had from the $100 Winton.

Winton quality ensures every advantage and pleasure that cycling affords. Examine the Winton special features before you buy.

To repair permanently any kind of hole, big or little, in the

DUNLOP Detachable TIRES

Dunlop Tires are FAST. Most world records have been made on them, and there is a noticeable difference to the road rider who tries them after riding some other make. The greater strength of the fabric enables a lighter, more resilient tire to stand rougher, harder work than any other, and the ease of repair gives a comfortable certainty of a safe return that adds much to the pleasure of a holiday.

The Emerson

This is the new Emerson "Bull Dog" Toe.

shoes are unique. They are not copies; they are *original* in every feature and detail. There can be no better shoe than the Emerson, although there are other good shoes. Men who buy good shoes are too busy to take time to learn every detail of shoe manufacturing; the *end,* not the means,—the finished shoe, complete in every modern and desirable feature, at maker's price,—is what interests them.

No one improvement and advanced feature of the Emerson Shoes is more useful, desirable and wholly satisfactory than the

Pratt Fasteners

that hold the shoe-laces without tying knots. The laces are short. There are no ends and loops to dangle, catch, and trip!! They save time every morning and every night, and actually—really—do prevent the shoes from coming "untied."

Every *Emerson* lace shoe is made with Pratt Fasteners. The Emerson Shoe Stores, in twenty-one different cities in U. S., are headquarters where Pratt Fasteners will be put on free of charge. The Emerson Shoes cost $3, $3.50, $4, $4.50, and $5, and are the only shoes that are sold by the makers, in their own stores, *exclusively at retail,* at maker's price. Send for our "C" Catalogue.

THE ENGINEERING MAGAZINE

AN INDUSTRIAL REVIEW

The Engineering Magazine has been aptly described as "*The Century* of the industrial world and the *Review of Reviews* to engineering literature—the two in one." Its leading articles treat the subjects uppermost in importance in industrial affairs. Its contributors include the foremost men of our times. It gives each month an exhaustive Review and Index to the world-wide range of technical literature—American, English, French, and German. It is read in every nook and corner of the civilized world. It is founded upon the idea of meeting the requirements of the busy and brainy men who manage, think, and plan for the engineering, architectural, electrical, railroad, mining, and mechanical industries. It has a larger bona-fide circulation among such men than has ever been attained by an engineering journal in all the history of industrial literature. It is priceless to the active man who needs to keep in touch with current developments. Its every page carries a living interest for intelligent readers who are in any way concerned with modern industrial enterprises. Its subscribers are its warmest advocates and the Magazine itself is its best solicitor. *Sample copy free.*

30 Cents a Number; $3.00 a Year.

Rochester Camera Co., 4 Elizabeth Street, ROCHESTER, N.Y.

$5,242.50/100 1000 PRIZES GIVEN AWAY

One hundred thousand people are talking enthusiastically about WOMAN'S WORLD AND JENNESS MILLER MONTHLY to-day. We want one hundred thousand *new* people to talk about it. To make the people friends and advocates, one must have a paper of substantial merit, and a premium of real worth, and have sincerity and honesty of purpose. Believing that we have the paper and the premiums of real value, we will give away, July 19, $5,242.50 in presents to new subscribers.

Why we give the rewards.—It is done to attract attention to WOMAN'S WORLD AND JENNESS MILLER MONTHLY, a beautiful, practical magazine for women and the home; edited by Mrs. B. A. Whitney, assisted by Dinah Sturgis, Sally Van Rensselaer, Helen Whitney Clark, and others; 36 pages; profusely illustrated with original matter by the ablest artists and writers in literature. Three great serial stories always running. Yearly subscription price, $1.00.

MEN OF NATIONAL REPUTATION WILL AWARD THE PRIZES.

The reputation of men of sterling integrity and one of the oldest and best ladies' publications in the country is staked on the honesty of this proposition. The men who will decide who win the prizes are known to everybody throughout the world, whose ability, worth, and integrity are unquestioned. The Board of Award are Rev. Joseph Sanderson, D. D., author, scholar, and divine; Horatio Alger, Jr., an author whose name needs no comment, and John Habberton, equally celebrated, and author of "Helen's Babies." Every person who enters into the contest for one of the prizes can rest assured that they will get just and impartial treatment.

$5,242.50 GIVEN AWAY

This is the amount we will give our subscribers. This is the amount we would spend in one month's advertising. We believe we can get a greater circulation by giving this amount direct to our subscribers than in spending it all in newspaper work. **Here are the 1000 prizes:**

1	Beautiful Rosewood Upright Wing Piano	$700.00

1	Webster's Dictionary, latest edition	10.50
100	Cash Prizes—$5 each	500.00
100	" " $4 "	400.00
100	" " $3 "	300.00
100	Dress Patterns, Organdies, 12 yds. each, $5 per pattern	500.00
300	Dress Patterns, Grenadines, 12 yds. each, $5 per pattern	1,500.00
167	Kombi Cameras, value $3 each	501.00
125	Cash Prizes of $2 each	250.00
1000	Prizes	Value, $5,242.50

Every prize in the above schedule is standard value, and is now in our office and paid for, ready for delivery as soon as the judges decide the winners.

HOW TO GET A PRIZE

The person sending us the largest list of words spelled from the letters in "Enthusiastic" will be awarded the Beautiful Upright Wing Piano, valued at $700.00. The person sending the second largest list, 1 set of Century Dictionary, 10 vols., with handsome Oak Stand The Third largest list, 1 Worcester Bicycle; the fourth, 1 Monarch Bicycle; the fifth, 1 White Bicycle; the sixth, 1 Racycle; the seventh, 1 set Standard Dictionary (2 vols.); the eighth, 1 Webster's Unabridged Dictionary, latest edition. The next 100 largest lists, $5.00 each, and the next 100 largest lists, $4.00 each, and the next 100 largest lists, $3.00 each; the next 100 largest lists, a 12-yard Organdy Dress Pattern, worth $5.00 each; the next 300 largest lists, a 12-yard Grenadine Dress Pattern, worth $5.00 each; the next 167, each 1 Kombi Camera, $3.00 each; the next 125 largest lists, $2.00 each.

These prizes will be given free and without consideration, except that the winners must pay freight charges on the Piano and express or freight charges on the Bicycles and Dictionaries. The Cameras and other articles are delivered free. To compete for a prize, you must send 50 cents in silver or stamps, and for that 50 cents we will send WOMAN'S WORLD AND JENNESS MILLER MONTHLY six months, and a Certificate of Entry in the great "Enthusiastic" spelling contest. It is a most fascinating study to make up the list of words and source of pride to have won in a contest of this kind. This certificate to be returned to us with your list of words, when completed, in the "Enthusiastic" contest, which will close July 19. No one will be allowed to compete for a prize unless they have paid 50 cents for a six months' subscription and received from us a handsome Certificate of Entry. Immediately upon receipt of your order with 50 cents we will send you **full particulars and directions for making list of words with all rules.** There are 1000 prizes. They will be fairly and honestly awarded by Rev. Dr. Sanderson, Horatio Alger, Jr., and John Habberton. You should send to-day for a Certificate of Entry, and so lose no time in making your list. These prizes are all exactly as represented and have an actual value of over five thousand dollars, and every prize **WILL BE GIVEN AWAY.** The names of the winners—and your name can be one of them if you try—will appear in the next number of our great paper after the awards are made. **THERE WILL BE 1000 WHO WILL WIN.** Isn't it worth your while to try for the Piano or one of the wheels, or the splendid Dictionaries, or one of the other premiums? In subscribing for our paper you know that you will get fair and honorable treatment. Send 50 cents to-day for a **SIX** months' subscription, get your Certificate of Entry, and begin at once on a list of words. An opportunity like this will not occur again. Do not miss it. Remit in stamps and silver, money order or registered letter. Address

BUFFALO, N. Y.

Peter Möller

in 1853 revolutionized the whole system of Cod Liver Oil manufacture by the introduction of the "steam process," and this has since remained the one method of preparing "high grade" Oil, but now Moller has introduced a new method which is as superior to the steam process as that was to the old and crude methods. By the new process the Oil is kept free from impurities, and does not come in contact with the atmosphere at any time during the manufacture. Moller's

Cod Liver Oil

is not sold in bulk, but is bottled when manufactured. The Oil is free from disagreeable taste or odor and causes no eructation.

In flat oval bottles, sealed and dated. See that our name appears on bottle as agents. Explanatory pamphlets mailed free.

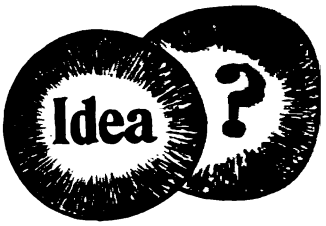
"The Nearest Thing To An Idea Is a Question"



For instance, take a business man who conceives the not uncommon idea that newspaper advertising is a good thing; the next step should be a question as to how it can be made a good thing for him. Without this question the idea is useless, for as Emerson said, ideas must be worked out by brains and hands or they are no better than dreams.

For twenty-eight years we have been working out newspaper advertising ideas. Many experienced brains and hands are here to practically answer the questions that must be settled if such ideas are to be of any real value.

Have you any newspaper advertising ideas? or any questions? If so, we would be glad to hear from you. . . . . .

N. W. AYER & SON,

Newspaper Advertising . . . . . Magazine Advertising

Philadelphia.

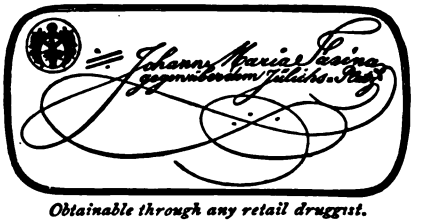
WOMEN AND WOMEN ONLY are most competent to fully appreciate the purity, sweetness, and delicacy of CUTICURA SOAP, and to discover new uses for it daily. To cleanse, purify, and beautify the skin, to allay itching and irritation, and to prevent chafings, excoriations, and ulcerative weaknesses, nothing so pure, so sweet, so speedily effective, as warm baths with CUTICURA SOAP, followed, when necessary, by mild applications of CUTICURA (ointment), the great skin cure.

Sold throughout the world. British depot: F. NEWBERY & SONS, 1, King Edward-st., London. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

☞ Send for our "Treatment of the Skin," a book of 64 pages.

What is genuine Farina Cologne?

It is the famous perfume first made at COLOGNE, Germany, in 1709—one hundred and eighty-seven years ago—by Johann Maria Farina, and the secret of its compounding has been handed down through his family from generation to generation. So famous has it become that its sale now extends to the corners of the earth, and its merit *is proved* by its many flagrant imitations. Dealers offer you "Farina this" and "Farina that," similar in name and almost identical in appearance until you scarcely know which really is the genuine. *The label should read:* **"Johann Maria Farina, gegenuber dem Julichs Platz"** (opposite the Julichs place), and in appearance should be exactly like this—even to the dots in the scroll.



Obtainable through any retail druggist.

Pamphlets free of Schieffelin & Co., New York.

The Day of the Hair Mattress Is Past

and it will be forgotten and ignored with the old-time feather bed — **Ostermoor's Patent Elastic Felt** will take its place. If you need a mattress let us convince you of its superiority without risk. We offer

The Ostermoor Patent Elastic Felt Mattress, $15.

and guarantee that the best $50.00 Hair Mattress made is not its equal in CLEANLINESS, DURABILITY, or COMFORT. We pay transportation charges anywhere, and sell on the distinct agreement that you may return it and get your money back (if not completely satisfactory) at the end of

THIRTY DAYS' FREE TRIAL.

We have advertised in the Magazines for many months, selling thousands of mattresses, and not one returned as yet. If you are skeptical about its merits, or don't need one now, send for our handsome illustrated pamphlet, "The Test of Time," mailed free for the asking. It gives full particulars.

The *New York Observer* (Feb. 4th, 1897) says:
"Ostermoor & Co. have advertised with us for some time. We have known them for years, and whatever guarantee they make they will undoubtedly fulfill."

TREASURY DEPARTMENT, OFFICE OF THE LIGHT-HOUSE BOARD, Washington, D. C., March 12, 1897.

In reply to your inquiry I have to state that your Patent Elastic Felt Mattress which I purchased more than sixteen years ago, is still in use, and as perfect in elasticity, freedom from knotting, and fully as satisfactory as the day I purchased it. I would use no other than Patent Elastic Felt if they cost double that of any other mattress made.
GEO. F. F. WILDE, Commander, U. S. Navy.

How to order: — State exact size mattress desired (size 6 ft. 2 in. x 4 ft. 6 in. will be sent unless otherwise specified), and give address plainly. Remit by check, money order, express order, or New York draft, and mattress will be shipped same day. Patent Elastic Felt Mattresses are not for sale by stores anywhere. Wretched imitations are offered by unscrupulous dealers — please write us if you know of such cases. We have cushioned 25,000 churches. Send for our book "Church Cushions."

Stop and Think.

The postal service of the United States is famous among the nations for its excellence. The greatest mail route in the world is that between the cities of Chicago and New York, over the Lake Shore & Michigan Southern Railway.

What Does This Mean?

Simply the Government's recognition of a great railway, in the selection of which, as the route for the fast mail trains, it furnishes to all travelers a most convincing proof of the efficiency of the excellent service which the Lake Shore & Michigan Southern Railway at all times provides.

Use it for travel between Chicago, Cleveland, Buffalo, New York and Boston.

A. J. SMITH, GEN. PASS. AND TICKET AGENT,
CLEVELAND, O.

HAMBURG AMERICAN LINE

To EUROPE. Twin-Screw Express Service.

By Magnificent Steamers } FÜRST BISMARCK, NORMANNIA, AUGUSTA VICTORIA, COLUMBIA.

For Plymouth (London), Cherbourg (Paris), and Hamburg.

Twin-Screw Mail Service.

By Handsome Steamers } PENNSYLVANIA, PERSIA, PATRIA, PHŒNICIA, AND PALATIA.

For Hamburg Direct.

This is the ONLY LINE carrying cabin passengers EXCLUSIVELY by twin-screw steamers.

THE EXPRESS SERVICE.

COMFORT The comfort and elegance displayed on these steamers are unexcelled by anything yet offered on any Atlantic liner.

SPEED This line holds the record for fastest time from New York to Southampton, London, and the Continent.

Passengers leaving New York on Thursday are landed in Plymouth or Cherbourg on the following Thursday, reaching London or Paris on the same day, thus bringing them from NEW YORK to LONDON or PARIS in less than a week, and to Hamburg, Berlin, etc., in less than 8 days, a feat not equalled by any other line.

THE MAIL SERVICE.

SAFETY Like the Express steamers, these boats are constructed on the twin-screw plan. Thus their whole working machinery is duplicated, and an accident to one set of the engines, shaft, and screw does not affect the other set.

SIZE Five of these steamers are of about the same size as the Express steamers, while the latest addition, the PENNSYLVANIA, is even larger, being the largest carrier afloat.

COMFORT Nothing has been omitted in the passenger accommodation of these steamers that could promote comfort. Cabin passengers wishing to obtain, at a moderate price, the comforts of an ocean voyage will find complete satisfaction on these steamers.

Following its customary plan the Hamburg-American Line offers **TWO SUMMER CRUISES TO THE LAND OF THE MIDNIGHT SUN**, sailing from New York June 17th and July 22d, 1897. For further particulars, illustrated pamphlets, rates, etc., address

HAMBURG-AMERICAN LINE,

337 Walnut Street, Philadelphia. 70 State Street, Boston. 37 Broadway, New York.

THE MEASURE OF PROGRESS.

Though it is difficult to make converts to a new method, if it is an improvement on the old, converts, once made, cannot be turned back. It is so with the Comptometer.

One as familiar with the Comptometer as with the old way prefers the Comptometer every time; in fact, it is so much of an improvement on the old way of *adding*, multiplying, and dividing as to be considered a necessity by those who have once used it. Will pay for itself over and over in any office.

GOOD ADVICE.

EATING AND DRINKING.

By ALBERT HARRIS HOY, M. D.

12mo, 304 pages, $1.50.

Prof. Albert H. Walker, author of "Text Book of the Patent Laws of the U. S.," in a letter of a column and a half to the *Hartford Times*, says, in part: " . . . It is the most profound and the most valuable, as well as the most clear exposition of this subject which I ever saw or heard of, . . . and desirous as I am at all times to do what I can toward extending knowledge of good ideas, I am minded to write you about Dr. Hoy's most valuable book and the theoretical and practical science taught therein."

"The doctor has made a study of digestion for thirty years, and writes his facts not from theory but from experiment. The writing is thoroughly scientific without being technical. It is clear, simple, and plain to every intelligent reader."—*Chicago Inter Ocean.*

"'Eating and Drinking' is the title of one of the most interesting books on dietetics we have ever read. We believe the author, Dr. A. H. Hoy, comes nearer to expounding the fundamental rules of dietetics than any other author."—*People's Health Journal.*

"The author deserves all praise for his research in a field hitherto so inadequately, and, as a rule, so unscientifically covered."—*The Medical Standard.*

For sale by booksellers generally, or will be sent, postpaid, on receipt of the price, by the publishers,

BUFFALO LITHIA WATER

Disintegrates, Breaks Down, and Eliminates Stone of the Kidneys or Bladder, Both Uric Acid and Phosphatic Formations. Its Value in Bright's Disease, Gout, Etc.

ANALYSIS AND REPORT OF

DR. A. GABRIEL POUCHET

Professor of Pharmacology and Materia Medica of the Faculty of Medicine of Paris. Director of the Laboratory of the Consulting Committee of Public Hygiene of France. Dr. Pouchet in express terms advises the use of Buffalo Lithia Water.

(Calculi "A" magnified 13 diameters.)

PARIS, February 12, 1897.

The collections of **disintegrated** or **broken down vesical** or **renal calculi** which form the subject of the following analysis and researches were sent me by Doc- Edward Chambers Laird, resident physician **Buffalo Lithia Springs, Virginia, U. S. A. They were discharged by different patients after the use of the mineral water of Buffalo Lithia Spring No. 2 for a variable time.**

I advise here from the experience of Dr. Laird the use of this mineral water, which has had with him a happy influence on the disintegration of the calculi and their elimination. It is to demonstrate this that he has requested me to make this analysis.

The collections of the **disintegrated calculi** submitted to my examination were eight in number. **A fragment** of each collection has been reproduced by photographs, which are designated by the same letters of the alphabet as the analysis here following:

(SPECIMEN OF CALCULI "A" MAGNIFIED 13 DIAMETERS.)

These disintegrated renal calculi are very numerous, and present themselves in the forms of grains of *various sizes* (*from that of the size of a pin to that of a pea*) of reddish yellow color, very hard and nucleus in the center. They are thus composed: Urate of Ammonia — for the greater part; Free Uric Acid — small quantity; Carbonate of Ammonia and Magnesia — small quantity.

(CALCULUS "C" MAGNIFIED 30 DIAMETERS.)

Vesical calculus reduced to crystalline powder, granular, of a greyish white color, rather friable. Chemical composition: Phosphate of ammonia and magnesia — for the greater part. Carbonate of lime — small quantity. Oxalate of lime — very small quantity. (Signed) A. GABRIEL POUCHET.

(*A portion of report omitted for lack of space.*)

(Calculus "C" magnified 30 diameters.)

According to distinguished Medical authority Uric Acid Poisoning shows itself in Gout, Rheumatism, Lithaemia, Stone of the Kidneys and Bladder, Bright's Disease of the Kidneys, Herpetiform, Neuralgic Affections, Nervous Prostration, Nervous Irritability, Nervous Asthma, Nervous Headache, cases of Mental Depression and in certain forms of Dyspepsia and Eczema.

BUFFALO LITHIA WATER dissolves and washes out of the system Uric Acid Deposit, and is Nature's own specific for these and all troubles of Uric Acid origin.

Taken as a common beverage or table water it acts as a preventive of Uric Acid deposit and of the distressing maladies caused by such deposit.

BUFFALO LITHIA WATER

is for sale by Grocers and Druggists generally. Pamphlets on application.

PROPRIETOR, BUFFALO LITHIA SPRINGS, VA.

GOING TO CARLSBAD

isn't necessary now. Carlsbad is coming to you. At least, the health-giving part of it is. You get every curative quality that has made the place famous for hundreds of years in the Carlsbad Sprudel Water and Salt. That is, if you get the genuine.

Beware of the many worthless imitations sold as "improved" or "artificial" Carlsbad Salt. These are only a mixture of common Glauber Salt or Seidlitz Powder, sold by unscrupulous dealers for the larger profit they yield. Take the genuine imported natural remedy only, which has the signature of "EISNER & MENDELSON Co., Sole Agents, New York," on every bottle. Write for pamphlet.

One bottle mailed upon receipt of One Dollar if it cannot be procured from your nearest druggist. Address 152 Franklin St., N. Y. City.

THE SIGN OF THE SPINNING-WHEEL

Is the symbol of "The Linen Store," the place of assembly of the choicest examples of the "Royal line" of fabrics. This wheel is present wherever "The Linen Store" appears in print, and as you may have noticed in the picture in last month's *Century*, it occupies a prominent place on our building.

It stands for Linen Store principles; three in particular: "Pure Linen," all cotton mixed goods are strictly excluded here; "Large Variety," such a stock of linens as is not found elsewhere; "Fair Prices," which are a satisfaction to everyone.

REGISTERED TRADE-MARK.

At the sign of the Spinning-wheel may now be found a full, fresh stock of all the approved makes and patterns in Art Linens, Bed Linen, Table Linen, Towels, together with the season's choicest novelties in these lines.

The Handkerchief Department is all that you would expect it to be in a store devoted to linens—every sort of individual preference in handkerchiefs has been considered and provided for so far as that may be done within the limits of "pure linen."

Washable dress goods in almost bewildering variety crowd our third floor. The best that can be found in each and all of the lines dealt in is provided for the patrons of "The Linen Store."

And the book about our entire stock will render it easy for linen lovers to purchase by mail, with full assurance of satisfaction. This book (catalogue) is freely sent upon request.

N. B. Special care is given to all details in the preparation of trousseaux.

"THE LINEN STORE,"

DID YOU KNOW THAT

MACBETH was a real person?

HAMLET only a mythical or semi-historical character?

KHYBER PASS, where the English are fighting in India, was traversed by Alexander the Great 2000 years ago?

COLUMBUS died thinking that America was a part of Asia?

GOLF was played long before America was discovered?

BEDLAM, madhouse, comes from Bethlehem, Christ's birthplace?

CZAR and **KAISER** are both derived from "Cæsar," the Julius Cæsar of our school days?

GLADSTONE entered Parliament in 1832, no less than 65 years ago, and was prime minister four times?

PAGAN means really "belonging to the country," while **CIVIL** means "belonging to the city"?

SHAKSPERE may have held horses at theater doors, but he was not guilty of deer-stealing?

KNAVE once meant "boy," with no implication of dishonesty?

CUBA is longer than from Canada to Alabama?

BOOM was first used in the political sense of "going with a rush" by the editor of a St. Louis paper in 1878?

GIRL originally signified a child of either sex, male or female?

CALIFORNIA BIG TREES are taller than the Capitol at Washington and live over a thousand years?

VILLAIN originally meant "farm servant"?

Every one of these facts is taken from **The Century Dictionary and Cyclopedia.** There is no one other work in which they can all be found.

The Century Dictionary and Cyclopedia contains thousands of such facts and statements. It has **150,000 Encyclopedic Articles**; no other work has one third as many. It has **500,000 Definitions**; no other work approaches this number. It has **300,000 Quotations,** eight times as many as any other; **8,000 illustrations,** far more beautiful and numerous than those of any other; **100 double-page Maps**—no other has such perfect ones. In short, it is the only work of reference that is a **Complete Reference Library** and that meets all wants.

Miniature reproductions of some of the prints.

THE CENTURY OF ONE

FOR many years the publishers of THE CENTURY have had constant calls for fine proofs of the beautiful wood-engravings of portraits which appear from time to time in its pages. A limited number have been supplied at $1.00 each for plain proofs, and $2.00 for proofs on India paper. The publishers have now determined to gather together the very best and most popular one hundred of the many hundreds of such portraits and to issue these in a portfolio at a nominal price to readers of the magazine.

It is unnecessary in these pages to describe the portraits. THE CENTURY has made a reputation for its art-work second to that of no other popular publication in the world, and perhaps the artistic feature that has attracted more general attention than any other has been its portraits. For the entire twenty-seven years of its existence THE CENTURY has made a specialty of portraits of famous people, and these have been engraved by the men who have made America lead the world in wood-engraving. The work of Timothy Cole, T. Johnson, W. B. Closson, J. H. E. Whitney, G. Kruell, Miss Powell, and others, is here shown at its best. The original portraits are the work of many of the best-known painters of the world and its most artistic photographers, and they include the best obtainable likenesses of crowned heads, statesmen, poets, artists, musicians, novelists, essayists, etc.

The portraits are printed on heavy paper with broad margins, size 9¾ x 13½, each on a sheet by itself, and gathered into a richly decorated box. The De Vinne Press has done the printing in the best possible manner, so that each portrait is like a fine proof A facsimile of the autograph has been added in nearly every case.

How the Portrait Gallery may be obtained.

The retail price of the Portrait Gallery will be $7.50, but it will not be for sale at any price at present, and can be had only in connection with subscriptions to THE CENTURY MAGAZINE,—new subscriptions or renewals for one year sent in after September 15, 1897; in this way the combination of magazine and Portrait Gallery is to be had by CENTURY readers *for $6.50*,—$4.00 for the magazine and $2.50 for the Portrait Gallery, which will be delivered carriage free anywhere in the United States or Canada,—elsewhere at the expense of purchaser.

For a year the Portrait Gallery will not be supplied on any terms except in connection with subscriptions to THE CENTURY.

When you Renew your subscription to THE CENTURY this season, a remittance of $2.50 extra will secure this beautiful collection of one hundred portraits *(two and a half cents apiece)*. Remittances may be sent direct to publishers or to any dealer who will obtain the Portrait Gallery for you in connection with your renewal.

Remit by check, draft, money-order, or in registered letter. Cash in letters, unregistered, is at sender's risk. THE CENTURY CO., Union Square, New-York.

"So adequate a combination of ability and of interest, of timeliness and of permanency, of criticism and of description, of fiction and of history, and finally, of literature and of art, is not attained by any other magazine."—*Boston Herald.*

THE CENTURY MAGAZINE
FOR 1898.

That THE CENTURY stands at the head of the world's periodical literature is hardly questioned in these days. The plans for the coming year justify the publishers in the belief that not only will all of the cherished traditions of the past be preserved, but that the magazine will make a distinct advance, winning new friends and adding to its readers in every land. Among the features that can be announced at this time are the following:

A NEW NOVEL BY DR. S. WEIR MITCHELL.

DR. S. WEIR MITCHELL.

THE ADVENTURES OF FRANÇOIS

Foundling, Adventurer, Juggler, Fencing-Master, and Servant During the French Revolution.

Dr. Mitchell's novel of the American Revolution, "Hugh Wynne, Free Quaker," was a most successful feature of the past year. Another story from the same pen will be a leading serial for the coming year. In this story of "hair-breadth 'scapes" Dr. Mitchell, with his peculiar philosophic wit and grasp of human traits, has presented a fresh and vigorous picture of the most thrilling episode of modern times. "François" is even more full of adventure than "Hugh Wynne"—the scene shifting from Paris to the provinces and back, with the changing fortunes of the erratic hero. The story will be illustrated by the brilliant pencil of André Castaigne.

HEROES OF PEACE.

THE CENTURY is preparing additional and very interesting papers in its series on "The Heroes of Peace." Interesting articles to follow those by Theodore Roosevelt and others are Jacob A. Riis's paper on "Heroism in the Fire Department," and Mr. Gustav Kobbé's on "Heroism in the Life-Saving Service." Mr. Herbert Ward and Mrs. Elizabeth Stuart Phelps Ward are preparing a paper on "Heroes of the Deep." Other papers will appear on "Every-day Heroism," the heroism shown in various occupations, and in the ordinary emergencies of life.

"GALLOPS."

Sketches of the Horse as a Member of Society.

By David Gray.

A strikingly original group of short stories under the above head will appear in the next volume of THE CENTURY. They are all about horses and the people who like horses. The nature of the sketches is indicated by such titles as the following:

"The Ride of His Life."
"How the F. B. L. was Stumped."
"The Parish of St. Thomas Equinus."
"Braybrooke's Double Event Steeplechase."

TENNYSON AND HIS FRIENDS.

The Poet's Life at Farringford, Isle of Wight.

THE CENTURY will publish in November and December some highly interesting sketches of Lord Tennyson, his wife, brothers and other members of his family and his more intimate friends. Tennyson's residence of "Farringford" is described in these papers; and unpublished reminiscences are given from several among those who enjoyed the companionship of the poet. The articles will be profusely illustrated, and are published with the consent of the present Lord Tennyson.

MRS. BURTON HARRISON.

A New Novel of New York Life.

"GOOD AMERICANS."

By Mrs. Burton Harrison.

Mrs. Burton Harrison, whose "Anglomaniacs," "Sweet Bells Out of Tune," "A Bachelor Maid," etc., have so vividly pictured certain phases of metropolitan life for THE CENTURY'S readers, has written a new novel for this magazine, in which contemporaneous social types and tendencies are brightly mirrored and described. The story will run for half a year, beginning with November.

A Serial Poem by

JAMES WHITCOMB RILEY.

There will be published in the November and December CENTURY "The Rubaiyat of Doc Sifers." Mr. Riley has in his characteristic vein described a quaint and lovable village doctor, giving anecdotes and descriptions of the doctor's ways and doings from the point of view of an old fellow-townsman. The poem will be profusely illustrated by C. M. Relyea.

EXQUISITE WOOD-ENGRAVINGS.

A new series of wood-engravings, by American engravers, will begin in November: Gilbert Stuart's Portraits of Women, with notes by Charles Henry Hart. T. Cole's notable engravings of the greatest English masterpieces will be continued. Mr. Cole is making these engravings, as usual, from the originals. His next group of reproductions will be some of the finest works of Gainsborough.

AN INTERVIEW WITH THE SULTAN.

One of the most important features of the November number will be a paper by Hon. A. W. Terrell, lately Minister of the United States to Constantinople, on the Sultan, in which he reports verbatim the Sultan's views on the Armenian question, etc. The words of the Sultan are given by authority, on account of his desire that his views should be made known to the American people.

GREATER NEW YORK.

The November CENTURY will contain a fine, inserted, colored map of Greater New York, especially prepared for the readers of the magazine, and giving unpublished statistics. An article on the "Growth of Great Cities" will appear from a high statistical authority.

ANDREE'S FLIGHT INTO THE UNKNOWN.

Described by an Eye-Witness: With Photographs.

THE CENTURY MAGAZINE has obtained for the November number a set of photographs of Andree's departure for the North Pole, made by the Swedish journalist, Mr. Jonas Stadling. They show interesting details of the preparations for the balloon journey, the last moment before the ascension, when sailors stood ready to cut the holding ropes, and include instantaneous views of the ascension and departure of the balloon, from near-at-hand to a distance of 12 kilometers, when it was nearly out of sight. Mr. Stadling will describe the incidents connected with the beginning of the daring journey.

MAXIMILIAN IN MEXICO.

A Woman's Reminiscences of the French Intervention.

Mrs. Cornelius Stevenson, a young American woman whose home was in Philadelphia, happened to be in Mexico during most of the period of the French Intervention and was acquainted with many of the powerful persons of the time. She has, in a brief series of papers for THE CENTURY MAGAZINE, noted her reminiscences of many of the leading actors and events of that extraordinary episode of modern history. The writer in vivid pen-pictures describes the tangle of cabals and political combinations; the struggles of the Mexican patriots; the fatuous course of Maximilian; the large movements of diplomacy; and the rush of events to the tragic climax. The articles will be illustrated with numerous pictures from portraits and sketches of the period.

The New Volume begins with November.

Subscription price, $4.00 a year. All newsdealers, booksellers, and agents take subscriptions, or remittance may be made direct to

THE CENTURY CO., Union Square, New York.

SCRIBNER'S NEW IMPORTATIONS

A NEW EDITION OF
SCOTT'S WAVERLEY NOVELS

Published in conjunction with Messrs. J. M. Dent & Co., of London, uniform in style and size with their "Temple Classics Series." Printed on tough opaque paper, small 16mo size, convenient for easy handling and for carrying in the pocket, and bound in limp lambskin leather. Issued at the rate of two volumes each month and to be completed in 48 vols. Price, 80 cents per vol.

NOW READY, WAVERLEY, TWO VOLUMES.

A special feature of this edition consists of forty topographical drawings by Mr. Herbert Railton (reproduced as photogravure frontispieces) of the Homes and Haunts of Sir Walter. These will give an additional touch of personal romance to the unrivalled stories, and will include a thoroughly representative series of views and portraits of the great novelist, and of those connected with him, which will be of special interest to all lovers of Scott.

THE SPECTATOR

A new edition reprinted from the first collected edition. The text edited and annotated by G. Gregory Smith. With an introductory Essay by Austin Dobson. Issued in conjunction with J. M. Dent & Co., of London. Portrait frontispieces. 8 volumes. Volumes to appear monthly, but sold only in sets. Foolscap 8vo, half canvas, per set, $12.00.

An exact reprint from the most authoritative copy with the original spelling, punctuation and capitals scrupulously preserved, thus maintaining the true flavor of the famous essays. The author's name, when known, will be placed within square brackets at the head of each paper, and biographical and subject indexes are included in the last volume.

THE ANNALS OF A PUBLISHING HOUSE

Life and Work of William Blackwood and his Sons, including a history of their Magazine and friends, by Mrs. Oliphant. With four portraits. 2 volumes, 8vo, $10.50.

Among the friends and correspondents mentioned in these volumes are Sir Walter Scott, John Wilson (Christopher North), J. G. Lockhart, William Maginn, James Hogg (The Ettrick Shepherd), Coleridge, Southey, De Quincey, Wordsworth, Byron, John Murray, Henry MacKenzie (The Man of Feeling), The Ballantynes, Archibald Constable, John Galt, Barham, Sir Archibald Alison, Samuel Warren, Douglas Jerrold, Leigh Hunt, William Hazlitt, George Eliot, and others.

THE MAIDEN AND MARRIED LIFE OF MARY POWELL
(afterward Mistress Milton) and the sequel thereto, DEBORAH'S DIARY

With an introduction by Rev. W. H. Hutton, and 26 illustrations by John Jellicoe and Herbert Railton. Crown 8vo, $2.25.

By the Same Author and Uniform.

CHERRY AND VIOLET

A Tale of the Great Plague. With an introduction by Rev. W. H. Hutton, and 26 illustrations by Herbert Railton and John Jellicoe. Crown 8vo, $2.25.

A most interesting and vivid picture of old London.

THE HOUSEHOLD OF SIR THOMAS MORE

With an introduction by Rev. W. H. Hutton, and 25 illustrations by John Jellicoe and Herbert Railton. Crown 8vo, $2.25.

A charming and beautiful picture of the times of Henry VIII.

THE ONLY COMPLETE EDITION OF THE WORKS OF
GEORGE MEREDITH

With new portrait from a drawing made for this edition by J. S. Sargent. 32 volumes, to be published at the rate of 2 volumes a month. 22 volumes now ready. 8vo, $4.00 *net* per volume. Sold only in complete sets.

First uniform and complete edition of Mr. George Meredith's works. The issue will contain, in addition to all the novels and poems which are in print at the present time, some works which have not been accessible for many years.

Mr. Meredith has revised all his works for this edition, which he wishes to be regarded as textually final.

The issue will be limited to ONE THOUSAND COPIES for sale for England and America, signed and numbered.

THE FIRST CROSSING OF SPITSBERGEN

By Sir William Martin Conway, with contributions by J. W. Gregory, A. Trevor-Battye, and E. J. Garwood. 8 colored plates, reproduced in facsimile from sketches by H. E. Conway, two maps and about 100 full-page and text illustrations from photographs and sketches. Medium 8vo, $10.00.

". . . Sir William Conway writes with that unfailingly light pen which commands the attention of the most superficial reader. . . . Mr. H. E. Conway's sketches more than justify his place in the expedition."— London *Daily Chronicle.*

"Sir Martin Conway is to be congratulated on a volume worthy to take its place by the side of his 'Climbing in the Karakoram Himalayas.' "— London *Standard.*

SOCIAL TRANSFORMATIONS OF THE VICTORIAN ERA

By T. H. S. Escott, author of "England: Its People, Polity, and Pursuits." Crown 8vo, $2.00.

"A very excellent and comprehensive survey. It would be hardly possible to point to any social movement which has not been touched upon in Mr. Escott's graphic and eloquent pages."— London *Daily Mail.*

A Brilliant Sporting Book

THE NEW AFRICA

A Journey up the Chobe and down the Okovanga Rivers. A Record of Exploration and Sport. By A. Schulz, M.D., and A. Hammar, C.E. With a newly drawn map of hitherto unexplored parts of the country, and 70 illustrations from original drawings by the authors, and photographs. Demy 8vo, $6.00.

Digitized by Google

THE MACMILLAN COMPANY'S

NEW BOOKS. READY NOW OR VERY SHORTLY.

F. Marion Crawford's New Italian Novel,

CORLEONE.

Another Story of the Saracinesca Family.

Mr. Crawford's most popular novels are held to be those which reproduce Roman society and are chiefly concerned with the fortunes of the different generations of the Saracinesca family. In his latest novel we follow our old friends Don Orsino and his cousin San Giacinto into the Sicilian mountains, where they fall afoul of the *mafia* and have exciting adventures.

In Two Volumes. Cloth extra. Price, $2.00.

STORIES OF WESTERN LIFE AND PEOPLE.

The Old Santa Fé Trail.

By **Col. Henry Inman,** late of the U. S. Army. With Full-page plates by FREDERIC REMINGTON, and other illustrations.

A Forest Orchid and other Tales.

By **Ella Higginson,** author of "From the Land of the Snow Pearls."

The General Manager's Story,

Old Time Reminiscences of Railroading in the United States.

By **Herbert Elliott Hamblen,** author of "On Many Seas."

THE LETTERS OF ELIZABETH BARRETT BROWNING.

In Two Volumes. With Portraits, etc. Medium 8vo. *Ready in October.*

These frank, simply written letters display every period of Mrs. Browning's life from her early girlhood, with many sketches of well-known people who were her visitors. Thus she gives us one of the very few *English* views of George Sand's striking personality.

Boston Browning Society Papers.

Selected to Represent the Work of the Society from 1886–1897. Cloth, 8vo. Price, $3.00.

The Statue in the Air.

An Allegory.

By **Miss Caroline Le Conte.** A prose poem of classical beauty with pages which recall the Socratic legends.

A Second Series.

Modern Poetry of the Golden Treasury of Songs and Lyrics of the English Language.

Selected and Arranged with Notes by **Francis T. Palgrave, M.A.,** late Professor in the University of Oxford.

PRACTICAL IDEALISM.

By **William DeWitt Hyde,** President of Bowdoin College, and author of "Outlines of Social Theology."

"The natural sequence of Dr. Hyde's theoretical 'Outlines,' which was pronounced 'a peculiarly original, interesting, and suggestive study.'"—*The Church Standard.* *Ready in October.*

Important Philosophical Works.

In Press.

The Conception of God.

A Philosophical Discussion concerning the Nature of the Divine Idea as a Demonstrable Reality. By **Josiah Royce, Ph.D.,** Harvard University, **Joseph Le Conte, LL.D.,** and **G. H. Howison, LL.D.,** the University of California. A reissue with a new and fuller essay by **Professor Royce.** Cr. 8vo.

The Social Teaching of Jesus.

An Essay in Christian Sociology. By **Shailer Mathews,** Associate Professor of New Testament History and Interpretation in the University of Chicago.

Second Edition.

Genesis of the Social Conscience.

The Relation between the Establishment of Christianity in Europe and the Social Question. By **Henry Spencer Nash,** Professor in the Episcopal Theological School, Cambridge, Mass.

"Perhaps not since the publication of Mr. Kidd's volume has a more genuinely popular sociological work appeared."—*The Outlook.*

The Myths of Israel.

The Ancient Book of Genesis with Analysis and Explanation of its Contents. By **Amos Kidder Fiske.**

THE STUDY OF CITY GOVERNMENT.

An Outline of the Problems of Municipal Functions, Control and Organization. By **Delos F. Wilcox, A.M., Ph.D.**

The author holds that the City Problem is the key to the immediate future of social progress in this country, and he offers for the first time a systematic outline for the study of the whole municipal field, indicating the chief problems of function, of control, and of organization.

The Finances of New York City.

By **E. Dana Durand.**

A well-written, clear, straightforward and interesting history of an important subject.

A Political Primer for New York State and City.

The City under the Greater New York Charter. With Maps. By **Adèle M. Fielde,** Sec'y of the League for Political Education.

SINGING VERSES FOR CHILDREN. *Just ready.*

Decorated in Colors and Set to Music. Verses by **LYDIA AVERY COONLEY.** Color designs by **Alice Kellogg Tyler.** Music by **Frederic W. Root, Eleanor Smith, Jessie L. Gaynor,** and **Frank H. Atkinson, Jr.** Cloth. Quarto. Price, $2.00.

Simple, natural verse, so varied that something can be found appropriate to each season; the illustrations show a rare sense of color, skill in drawing, and sympathetic imagination; the music is well adapted to the verse, and is designed to be sung *to* children as well as *by* them.

CITIZEN BIRD. Scenes from Bird Life in Plain English.

By **Mabel Osgood Wright,** and **Dr. Elliott Coues.** Illustrated by LOUIS AGASSIZ FUERTES. Cloth. Cr. 8vo. $1.50.

"In this book, a volume which cannot be too widely circulated, is a most charming story."—*Daily Advertiser, Boston.*

OTHER NEW BOOKS ABOUT OUT-OF-DOOR LIFE.

Birdcraft.

By **Mabel Osgood Wright,** author of "Tommy-Anne and the Three Hearts." New edition illustrated by LOUIS AGASSIZ FUERTES. Cloth, 8vo, $2.50.

Life Histories of American Insects.

By **Clarence M. Weed, D.Sc.** With full-page plates and other illustrations. *Just ready.*

Wild Neighbors.

A Book About Animals. By **Ernest Ingersoll.** Cloth, 12mo. *Just ready.* Chapters on animals, in their homes and in captivity. Freely illustrated.

To be published on October 6th, in Two Volumes, Medium 8vo, price $10.00 net.

Alfred Lord Tennyson

A MEMOIR. By HIS SON.

With Numerous Portraits and Illustrations.

This important work, upon which Hallam Lord Tennyson has been engaged for some years, and which will be comprised in two volumes of over 500 pages each, will contain a large number of hitherto unpublished poems, and many letters written and received by Lord Tennyson.

There will also be several chapters of Personal Recollections by friends of the Poet, such as Dr. JOWETT, the DUKE OF ARGYLL, the late EARL OF SELBORNE, Mr. LECKY, Mr. F. T. PALGRAVE, Professor TYNDALL, Professor LUSHINGTON, Mr. AUBREY DE VERE, etc.

There will be about Twenty full-page Portraits and other Illustrations, engraved after pictures by RICHARD DOYLE, Mrs. ALLINGHAM, SAMUEL LAWRENCE, G. F. WATTS, R. A., etc.

The Only Complete Editions of Tennyson's Poems are the Macmillan Editions named below.

Since all of Lord Tennyson's latest poems are copyrighted in the United States it is impossible for any other firm to issue complete editions of his works.

The Works of ALFRED LORD TENNYSON, Poet Laureate.

ÉDITION DE LUXE. Ten Volumes, Price $50.00 *net.*

Limited to one hundred and fifty copies. Sold only in sets.

This is the only octavo library edition of Lord Tennyson's Poems and Dramas published. It is beautifully printed on hand-made Dickinson paper. Each volume contains an exquisite frontispiece, is entirely uncut, and bound in English buckram.

COMPLETE EDITION IN SIX VOLUMES.

Crown 8vo, price $9.00.

This is the standard library edition, bound in cloth, gilt tops; special bindings to order.

COMPLETE EDITION IN ONE VOLUME.

Extra crown 8vo, price $1.75, *net.*

This is the standard edition for teachers and students, or wherever frequent reference to different poems makes a one-volume edition desirable. Handsomely bound in the dark-green cloth with portrait medallion and gilt tops, familiar as the uniform dress of the GLOBE Editions, it takes rank at once as the final edition for popular use of the laureate's life work.

HARPER'S ROUND TABLE

A Monthly Magazine for Youth

10 Cents a Copy *$1.00 a Year*

BEGINNING with November 1, 1897, HARPER'S ROUND TABLE will be greatly enlarged, and will thereafter be published

MONTHLY

instead of weekly. It will become an illustrated Monthly Magazine of forty-eight pages, with a four-page illuminated cover.

The principal feature of the publication in its new form will be the same as it always has been heretofore — that is,

STORIES

There will be long stories and short stories; stories of adventure, stories of the sea, stories of war, and stories of every-day life.

THREE EXCELLENT SERIALS FOR 1898

"TREASURE-TROVE," by H. B. Marriott Watson; "FOUR FOR A FORTUNE," by Albert Lee; and "THE COPPER PRINCESS," by Kirk Munroe

In addition to all this fiction, short and long, there will be practical and instructive articles; narrative and descriptive articles; articles on hunting, fishing, and sport of every kind; articles of travel and exploration; and articles on any number of interesting subjects.

PRIZES!

HARPER'S ROUND TABLE will offer money prizes for competitions in short stories, amateur photography, comic sketches, etc. The particulars and conditions governing these contests will be given in the November number.

Send ten cents for the first issue which appears November 1

To every one subscribing during October to HARPER'S ROUND TABLE for a year, from November 1, 1897, the paper will be mailed FREE from the date of receipt of subscription until the beginning of the new volume.

10 Cents a Copy *$1.00 a Year*

Dodd, Mead & Company's New Books.

AMELIA E. BARR'S NEW STORY.

THE KING'S HIGHWAY.

A Novel. By AMELIA E. BARR, author of "Prisoners of Conscience," "A Bow of Orange Ribbon," "Friend Olivia," etc. 12mo, cloth. $1.25.

"The King's Highway" is a novel of Socialism. Its theme is the duty and the responsibility which the wealthy owe to the community. Mrs. Barr has a popular style, fresh, simple and natural. Her book is full of quotable sentences and pointed, shrewd, and pithy sayings.

GEORGE MACDONALD.

Salted with Fire. The Story of a Minister. By the author of "Lilith," etc. 12mo, cloth, $1.50.

This is a strong and convincing book. In a sense the story is a sad one, depicting a minister's fall and degradation, yet it is told with much human feeling and takes a strong hold upon the reader's sympathies.

MAX PEMBERTON.

The Queen of the Jesters, and Her Strange Adventures in Old Paris. By the author of "The Little Huguenot," etc. Illustrated. 12mo, cloth. $1.50.

This story deals with that very fascinating subject, the lighter social life of Paris during the reign of Louis the Fifteenth.

HAMLET.

A new holiday edition of Hamlet. Illustrated by H. C. CHRISTY. Cover in full gold, gilt edges, $2.00. Large-paper edition, special binding, with impressions of the full-page plates on satin, *net* $5.00.

This is a new volume in the attractive and successful series of famous plays.

Uniform with the above: SHE STOOPS TO CONQUER, BECKET, RIVALS, SCHOOL FOR SCANDAL, FAUST, RICHELIEU.

THE ROMANCE OF THE IRISH STAGE.

By J. FITZGERALD MOLLOY, author of "Life of Peg Woffington," "The Gorgeous Lady Blessington," etc. With portraits, two vols., 12mo, cloth. $4.00.

This book is full of the quality that made the author's "Lady Blessington" such a popular book, namely, pleasantly told gossip, personal facts, and many entertaining recollections. It is a very picturesque treatment of a romantic theme.

JAMES MACDONELL, JOURNALIST.

By W. ROBERTSON NICOLL. With an etched portrait. 8vo, cloth. $2.75.

The contents include accounts of Hugh Miller, Matthew Arnold, Emerson, Guizot, Taine, Renan, Louis Blanc, Wordsworth and De Quincey, John Morley, John Stuart Mill, Ruskin, Brooke, Haweis, Liddon, Spurgeon, Manning, Newman, the Howitts, Mr. Froude, etc., etc.

A HISTORY OF THE LITERATURE OF THE VICTORIAN ERA.

By CLEMENT K. SHORTER, author of "Charlotte Brontë and her Circle." 8vo, cloth. (In preparation.)

Mr. Shorter is eminently fitted to write a sufficiently critical and yet thoroughly popular handbook on the literature of the Victorian Era.

THE SON OF INGAR.

By KATHERINE PEARSON WOODS, author of "Metzerott, Shoemaker," "John," "A Tale of King Messiah," etc., etc. 12mo, cloth. $1.25.

The story opens in Jerusalem, at the time of the Council of the Apostles, and depicts very graphically this period of early Christian history. Filate is introduced as a character, also Peter and Paul.

THE GODS ARRIVE.

A Novel. By ANNIE E. HOLDSWORTH, author of "Joanna Trail, Spinster." 12mo, cloth. $1.25.

The way in which a woman's environments influence and react upon her is firmly drawn, and the development of character is exceedingly well done.

THE NEW ENGLAND PRIMER.

Edited by Paul Leicester Ford, editor of the "Writings of Jefferson," etc. Illustrated. Limited edition. Small 4to, boards, *net* $8.50; large-paper edition, *net* $15.00.

The bibliography of this compendium has never before been satisfactorily worked out. Of several editions, single copies only are known to exist. Mr. Ford gives transcripts of title-pages, collations and descriptions of all known editions, with reproductions in facsimile of a large number of title-pages, illustrations and specimen pages of the text. In addition he has given a most interesting account of the origin and history of the "Primer."

THE BOOK OF PARLIAMENT.

By MICHAEL MACDONAGH, author of "Bishop Doyle," etc., etc. Illustrated. 12mo, cloth. $2.00.

"The Book of Parliament" aims to be a complete picture of the two houses of legislature engaged in the work of law-making, and to provide a full view of what may be called the human side of Parliament.

THE POETS OF THE CENTURY.

From George Crabbe to Rudyard Kipling. Edited by ALFRED H. MILES. In ten vols., small 8vo, cloth, per set, $15.00; per volume, $1.50.

Volume IX. (*now ready*), **Humor, Society, Parody, etc.**

Volume X. (*now ready*), **Sacred and Religious Verse.**

A NEW BOOK OF CHARADES.

The Green Guess Book. By MARY McL. WATSON and SUSAN HAYES WARD. 16mo, cloth. $1.00.

An entertaining book of Charades. While it is true that the market has recently been more or less flooded with books of this character, it is also the case that this particular volume embodies so many new ideas, and so many departures from the customary method of writing charades, that it is bound to receive general attention

Important announcements in the field of Fiction, Juvenile Literature and Religion are held over until another issue of this Magazine.

WITH A PESSIMIST IN SPAIN.

By MARY F. NIXON, illustrated. In press.

NOTES ON THE NICARAGUA CANAL.

By HENRY I. SHELDON, with maps and illustrations, 8vo, 214 pages, $1.25.

THE BIG-HORN TREASURE.

By JOHN [illegible]

RECENT BOOKS.

MRS. LATIMER'S HISTORIES OF THE 19th CENTURY.

SPAIN IN THE XIX CENTURY.

By ELIZABETH WORMELEY LATIMER. Handsomely illustrated, 8vo, $2.50.

Mrs. Latimer has achieved a signal success in this her latest, and probably the last, of her very popular 19th-century histories. The book gives information about the recent history of Spain that cannot be found in any other one volume now accessible. The history is brought down to the present day, and a chapter is devoted to the Spanish colonies in South America and a chapter to Cuba.

Mrs. Latimer's histories of the 19th century, illustrated and otherwise uniform with "Spain," that have already been published are:

FRANCE IN THE 19th CENTURY,	$2.50.
RUSSIA AND TURKEY IN THE 19th CENTURY,	$2.50.
ENGLAND IN THE 19th CENTURY,	$2.50.
EUROPE IN AFRICA IN THE 19th CENTURY,	$2.50.
ITALY IN THE 19th CENTURY,	$2.50.

ON THE RED STAIRCASE.

By M. IMLAY TAYLOR. 12mo, $1.25.

"After the many problem-novels, and the myriad psychological disquisitions disguised as fiction, a wholesome, breezy tale like this, honestly and brilliantly told for its own sake, is a real treat to be enjoyed without thought of criticism."—*The Bookman.*

THE METHOD OF DARWIN. A STUDY IN SCIENTIFIC METHOD.

By FRANK CRAMER. 12mo, 232 pages, $1.00.

"The work is a real contribution to the science of logical method and applied logic. We cordially recommend [illegible]

$1.50 a month—for cheaper edition in cloth binding.

$2.00 a month—for the handsomer and most durable half-Russia binding.

$2.50 a month—for the elegant edition in full morocco.

A work of this kind must fully meet your needs. Keep the set for ten days' examination, and it may then be returned if you wish. The dollar club fee will be handed back.

We deliver the books free in cities and towns where our wagons run. All express or freight charges are payable by you.

The edition is limited and the club will close without notice, when the sets are all taken.

RIDPATH'S HISTORY OF THE WORLD is all-satisfying to the citizen generally—a cyclopædic library in itself, yet withal a continuous and interesting narrative that will hold the attention of the most indifferent.

Mail or bring your application and club fee ($1) to either store. The books are ready for immediate delivery.

The work sells regularly by subscription at about double its cost to you through The John Wanamaker Club, and this remarkable offer must soon be withdrawn.

Specimen pages, with illustrations and colored plate and full information, sent upon request.

WEBSTER'S INTERNATIONAL DICTIONARY

WEBSTER'S ACADEMIC DICTIONARY

WEBSTER'S HIGH SCHOOL DICTIONARY

WEBSTER'S COMMON SCHOOL DICTIONARY

WEBSTER'S PRIMARY SCHOOL DICTIONARY

CAUTION. Do not be deceived in buying small so-called "Webster's Dictionaries." All authentic abridgments of the International in the various sizes bear our trade-mark on the front cover as shown in the above cuts.

Webster's International Dictionary

"Get The Best."

The One Great Standard Authority,
So writes Hon. D. J. Brewer, Justice U. S. Supreme Court.

THE INTERNATIONAL IS A THOROUGH REVISION OF THE UNABRIDGED, the purpose of which has been not display nor the provision of material for boastful and showy advertisement, but the due, judicious, scholarly, thorough perfecting of a work which in all the stages of its growth has obtained in an equal degree the favor and confidence of scholars and of the general public.

It is the one great standard authority of the **U. S. Supreme Court**, all the **State Supreme Courts**, the **U. S. Government Printing Office**, and of nearly all the **Schoolbooks.**

INVALUABLE in the home, in the school, and to the teacher, scholar, professional man, and self-educator.

IT IS THE BEST FOR PRACTICAL PURPOSES, BECAUSE

Words are easily found. Pronunciation is easily ascertained. Meanings are easily learned. The growth of words easily traced, and because excellence of quality rather than superfluity of quantity characterizes its every department.

John Wanamaker's Great Book Offer

There is just one great History of the World,—just one completely successful effort at telling the story of all nations and all peoples in one finished work.

John Clark Ridpath, LL. D.,

is the successful historian who gave the world this work. It is twice the size of any other work of similar aim—the **eight superb volumes** having 6400 larger pages than you are reading.

There are 3,900 illustrations, many of them gems of the picture-maker's art, in twelve colors; thirty-two colored historical maps; nine chronological charts; thirty-three genealogical diagrams; fourteen colored plates of the races—eight splendid books of about eight hundred pages each, giving in one simple, scholarly story the history of every nation, ancient, mediæval, and modern, and the progress of the races of mankind from the entrance upon the world's stage of the creature to the days of 1897.

This is the life-work of a busy, broad, wise man, and it comes to you now with his last revisions. Of the work

Scholarly

President McKinley says:
"Can commend it to the scholar as well as to the plain people generally."

For Ready Reference

Ex-President Harrison says:
"The author's labors are deserving of the highest praise. I most heartily recommend the work for study and convenient reference."

Broad and Correct

The Review of Reviews, of New York, says:
"The reader feels himself in the hands of an author who possesses not only a wide acquaintance with books, but also the corrective of a keen knowledge of men and human nature and a singular breadth of view and sanity of judgment."

Dr. Theodore L. Cuyler says:
"It is an accurate and spirited account of the great leading events in human history that must become widely popular."

But it wouldn't, because its publishers put the prices too high—$48 to $175 for the several editions. They 've sold only 50,000 sets. Should have sold ten times as many. Our help is asked, and **we take an entire edition** and form

THE JOHN WANAMAKER HISTORY CLUB

by joining which, **you have the complete set delivered immediately** upon the enrolment of your name and

THREE PATRIOTIC BOOKS FOR SCHOOLS.

THE CENTURY BOOK FOR YOUNG AMERICANS.

The Story of the Government.

By Elbridge S. Brooks.

Published under the auspices of The National Society of the Sons of the American Revolution.

With Introduction by GENERAL HORACE PORTER.

TELLING in attractive story form what every American boy and girl ought to know about the government,—the functions of the President, the Senate, the House, the Supreme Court, etc. Used as a supplementary reader in many schools. 250 pages, 200 illustrations, $1.50.

THE CENTURY BOOK OF FAMOUS AMERICANS.

A Pilgrimage to Historic Homes.

By Elbridge S. Brooks.

Published under the auspices of The National Society of the Daughters of the American Revolution.

With Introduction by Mrs. ADLAI E. STEVENSON.

THE adventures of a party of young folks on a trip to the historic homes of America,—the homes of Washington, Lincoln, Grant, Jefferson, Franklin, Webster, the Adamses, Clay, and others. 250 pages, magnificently illustrated, with attractive cover, $1.50.

HERO TALES FROM AMERICAN HISTORY.

By Theodore Roosevelt and Henry Cabot Lodge.

"No book ever published was more worthy of universal introduction into the school libraries.
—*New England Journal of Education.*

THE volume includes graphic descriptions of such historical incidents as the battle of New Orleans, the battle of Bennington, the sinking of the "Albemarle," with sketches of the lives of Daniel Boone, Davy Crockett, and other well-known heroes. 12mo, 300 pages, illustrated, $1.50.

Published by THE CENTURY CO., UNION SQUARE, NEW YORK.

Elgin Watches

—the evolution of time—

Not cold—nor heat—nor jolt—nor jar—nor incessant wear of years can swerve the

Full Ruby Jeweled Elgin Watch

from its duty of accurately recording time.

Science, the highest constructive art, and a third of a century's experience are combined in the materials and workmanship of a **Full Ruby Jeweled Elgin.**

Any dealer, anywhere in the world, will tell you the merits of Elgin Watches—ask for the Full Ruby Jeweled—they're the highest grade—cheapest in the end—all sizes—women's or men's—in any style case.

Send for our book about watches—sent free on application.

A Genuine Elgin Watch always has the word "Elgin" engraved on the works—fully guaranteed.

The Washing that's Easy

may be ruinous, perhaps. Plenty of things will save work in washing—if you don't mind more or less harm to the clothes. But if you do mind it, and want to be sure that you're not running any risk—then get **Pearline.** **Pearline** has been proved, over and over again, to be absolutely **harmless.** It saves more drudgery, in washing clothes or cleaning house, than any other thing that's safe to use. You can't afford to use anything that's doubtful.

Send it Back Peddlers and some unscrupulous grocers will tell you "this is as good as" or "the same as Pearline." IT'S FALSE—Pearline is never peddled, and if your grocer sends you something in place of Pearline, be honest—*send it back.* 532 JAMES PYLE, New York.

PATTON'S SUN PROOF PAINTS

Wouldn't you rather paint your house *once* with Patton's Paints, than *twice* with all-white-lead or any other paints? Half the cost, labor and trouble saved and double service and satisfaction gained by using Patton's Sun Proof Paints. To acquaint you with their worth, and help you to select right colors, we'll send

Patton's House Painting Model

(20,000 color combinations) postpaid, for 10c. A book of information about painting, "How to Increase the Size of your House with Paint," and a Master Painter's Tinting Card, mailed for 2c. stamp.

JAS. E. PATTON CO., Milwaukee, Wis., U. S. A.

Old Colony Days

AN INTERESTING BOOK.

We shall issue in the early autumn a book of new things and new old things. It will contain photographs of exact reproductions, in full size and in miniature, of many articles intimately connected with the early Colonial history of our country, with Souvenirs of Miles Standish and John Alden, and interesting things that were in the good ship "Mayflower." By kind permission of a living descendant of Mrs. Washington, and through the courtesy of The Century Company, we are able to reproduce many things closely connected with the life of George Washington at Mount Vernon.

The book will also contain a very full collection of high-class artistic articles in gold, silver, brass and leather, in personal belongings, desk fitments, table furnishings, etc., suitable for holiday and wedding presents, covering a wide range of prices, and will be an entirely unique publication.

Send your name and we will send you a book free when ready.

Testimonials Unnecessary.

We have just issued a handsome pamphlet, "The Test of Time," also one entitled "Testimonial Wonders," containing three hundred and fifty letters in praise of

The Ostermoor Patent Elastic Felt Mattress, $15.

which we desire to send you, but testimonials are really unnecessary, for our mattress is sold strictly on approval, and must at all times, and under all circumstances, do what we guarantee, *or all that you expect*, otherwise we refund your money. We positively guarantee that the best $50.00 Hair Mattress made is not its equal in cleanliness, durability or comfort. We prepay express charges and sell on the distinct agreement that you may return it and get your money back if not satisfactory *in every possible way* at the end of

Thirty Days' Free Trial.

Buffalo Stained Glass Works, Buffalo, N. Y.
203 Pearl Street, April 3, 1897.

Messrs. OSTERMOOR & CO:

Gentlemen:— Twenty-seven years ago (1870) I bought one of your Patent Elastic Felt Mattresses. It was in constant use without repairs of any kind until the Spring of 1896; then I sent it to you to fix and recover. We are now using it, and as far as I can see, it is as good as the first day we got it. We have three others of your Mattresses, bought within two or three years of the above, and are using them every day. So far we have not had anything done to them, and they are in good shape. I can recommend them for their marvelous merits, and absolute perfect freedom from vermin. Should I need a Mattress any time, I shall unquestionably get yours in preference to any other. They are the best in the world.

Yours respectfully, *F. J. REISTER.*

If you are skeptical about its merits or don't need one now, send for our handsome illustrated pamphlets, "The Test of Time," and "Testimonial Wonders," mailed free for the asking. They give full particulars.

How to order:—State exact size desired (size 6 ft. 2 in. x 4 ft. 6 in. will be sent unless otherwise specified), and give address plainly. If desired in two pieces remit fifty cents extra. Patent Elastic Felt Mattresses are not for sale by stores anywhere. Wretched imitations are offered by unscrupulous dealers — please write us if you know of such cases. *References: Bradstreet or Dun's Commercial Agencies.*

We have cushioned 25,000 churches. Send for our book, "Church Cushions."

OSTERMOOR & CO., 122 Elizabeth St., New York.

STITCHING AND EMBROIDERY

were the chief accomplishments of ladies in the Feudal Age. Singer's inventions, and their development by his successors, have since made the art of sewing common to all. That the value of the sewing machine as **a means of refinement** is exceeded by the printing press, may be an open question—but no question exists as to the superior excellence of

Singer Machines

For Family Sewing

Your choice of Three Distinct Types.

The Singer No. 15
Double Lock-Stitch. Oscillating Shuttle.

The Dressmaker's Machine; especially adapted for high-speed operation, producing greatest quantity of fine stitching, and requiring least effort by the operator. Has unusually large bobbin for lower thread and finest mechanical adjustment. Greatest range of work and lightest-running lock-stitch machine in the world.

The Singer No. 24
Automatic Chain-Stitch.

Guaranteed to be in every point the best single-thread chain-stitch machine on the market. The general advantages of this type of machine for family sewing comprise greatest ease and quietness of operation, simplicity of construction and elasticity of seam.

The Singer No. 27
Double Lock-Stitch. Vibrating Shuttle.

More generally used for family sewing throughout the world than all other machines combined. The movement of the self-threading vibrating shuttle being shorter than in any other similar machine, less effort is required for its operation.

Made and sold only by THE SINGER MANUFACTURING CO. Offices in every city in the world.

GREATEST DURABILITY. SMALLEST COST. BEST PIGMENTS.

If you CAN know, positively, that the

PAINT FOR YOUR HOUSE

is made with Pure Linseed Oil only, you know it will be durable and bright.

White Lead and Colors have very little to do with the **Durability** of Paint. That is in the **Linseed Oil** only.

The only way to know **positively** that your Paint is made with Linseed Oil is to put it there yourself.

A gallon of HAMMAR PAINT contains one GALLON of Paint Pigments. YOU ADD a gallon of Pure Linseed Oil, making PURE PAINT for $1.10 per gallon
30 per cent. SAVED
A gallon of Ready MIXED PAINT contains ½ gallon of Liquids, costing 75c and ½ gallon of Paint Pigments, costing 75c or $1.50 per gallon

Hammar Paint

is made of the best known Paint Pigments, such as all good painters use, and is ground THICK.

Half gallon Hammar Paint costs 87 1-2
Mixed with half gallon Pure Linseed Oil, anywhere . . . . 22 1-2 } **$1.10**

Makes 1 gallon of Pure Linseed Oil Paint, ready for use for . . $1.10 } **Per gal.**

HAMMAR PAINT and Pure Linseed Oil make the best paint, for all work, inside or out, that it is possible to make at any price. They cost 30 per cent. LESS than MIXED PAINT or WHITE LEAD and are guaranteed satisfactory for 5 years. It is little trouble to mix them.

It is only a practical, common-sense principle. Our book. "The Truth About Paints," gives full details. Send for it now! It is free! Ask your dealer for HAMMAR PAINT. If he does not keep it, don't let him sell you any other paint for his own benefit; he can't sell any paint that is better, and he will charge you more for what he sells, BUT SEND us your order; we will have it filled. Any order delivered, freight prepaid, at your depot. We will also sell you pure oil. **F. HAMMAR PAINT CO., 1216 Spruce St., St. Louis, Mo.**

A GENTLEMAN IS KNOWN BY THE KNIFE HE KEEPS.

Perhaps you find it hard to "keep" any knife? May be you never had a knife worth keeping? All men love a good knife, but most of you long ago decided that the making of good knives was a lost art. That's our excuse for asking your trade. Our blades are made to cut; the other kind can be had at every corner. The upper cut shows **"Chauncey Depew's Pet"**; has 3 blades (one is a file), pearl handle, silver ends, blades are hand forged from razor steel, file tested, warranted. Price $1.50 with case. Same, with but two blades, $1. Lady's elegant 2-blade knife, $1. Girl's 2-blade, 50c. Boy's strong 2-blade, 50c. The lower cut shows a stronger knife we call **"Our Masterpiece"**: has 3 blades (no file) and will cut anything from a quill to an axe handle. It is **made on honor.** Price, with ebony handle, $1.25; ivory handle, $1.50; choice pearl, $2, postpaid. Our trade is direct with consumers; no middle men. Send for 80-page illustrated free list and "How to Use a Razor."

SPECIAL OFFER: A Warranted Hollow Ground Razor with Strop to suit, and fine Brush, $1.62, by mail.

MAHER & GROSH CO.,

HOW TO TRAVEL.

If you are going to travel, it is important to know about the proper season, climate, altitude, resorts, and hotels of the places to be visited, and the most desirable routes for reaching them. The success of your trip will depend largely on your knowledge of these questions. Unbiased advice about everything pertaining to travel can be had on application. We might add that our tours offer the best facilities for traveling comfortably and leisurely, but we supply also railroad and steamship tickets at lowest rates to all parts of the world. Passports, foreign money, travelers' cheques, etc., supplied.

THE COMING YEAR FOR

ST. NICHOLAS.

AN IDEAL MAGAZINE FOR BOYS AND GIRLS, CONDUCTED BY MRS. MARY MAPES DODGE.

ST. NICHOLAS FOR YOUNG FOLKS will enter upon the twenty-fifth year of its successful career as the leading magazine for boys and girls, with its November number. The publishers believe that it will pass the quarter of a century mark with a volume unsurpassed — if even equaled — by any other volume of the whole twenty-five. The most important serials are:

"THE BUCCANEERS OF OUR COAST,"
By Frank R. Stockton.

This is a series of narrative sketches in which will be treated the origin, characteristics, adventures, and exploits of that wild body of sea-rovers calling themselves "The Brethren of the Coast." Mr. Stockton throws no glamour about the lives of these rovers, but in his own quaintly humorous style, and in a perfectly wholesome way, tells a chapter of American history that all boys and girls are sure to read.

"THE BIDDICUT BOYS,"
And Their Adventures with a Wonderful Trick-Dog,
By J. T. Trowbridge.

Mr. Trowbridge always assures to his readers the three essentials of story-telling — live characters, an interesting plot, and a good style. His latest story is strongly marked with these qualities. Excellent as are the human characters, the Biddicut Boys and the wily Mr. Winston, perhaps the palm of interest should be awarded to "Sparkler," the trick-dog, who deserves to take a foremost place among the dogs immortalized in fiction. The story is full of vivid interest and effective incident. There will be many characteristic illustrations by W. A. Rogers. In fitting contrast is a third serial,

A Romance of Chivalry,
"WITH THE BLACK PRINCE,"
By W. O. Stoddard.

This is an historical romance of the middle of the 14th Century, that time of knights in armor and lusty English bowmen, and is full of picturesqueness and power. It sets forth the fortunes and adventures of Richard Neville, a young English nobleman, who follows Edward III. to the battle-field of Crécy. A brush with English outlaws, a sea-fight, the capture of a French castle, and a vivid and accurate account of the great battle of Crécy, are some of the stirring and attractive features of the story.

A Fairy Tale of Science,
"THROUGH THE EARTH,"
By Clement Fezandié.

A short serial, with all of the charm of one of Jules Verne's romances. It tells of the daring conception of a scientist of the next century, who, by the enormously increased power of electricity, succeeds in boring a hole through the earth, and sending a boy in a cigar-shaped car through this tunnel! It embodies accurately the latest conclusions of science as to the composition and structure of the interior of the earth. William A. Mackay has drawn a number of striking illustrations for the story.

SHORT STORIES BY FAMOUS WRITERS.

Good short stories by favorite authors will be an especial feature of the new volume. Many of those that *St. Nicholas* has published in the past have already become juvenile classics, and the promise of the coming year in this respect is most flattering. Contributions have been promised by

Rudyard Kipling, Ian McLaren, James Whitcomb Riley,
Ruth McEnery Stuart, Mrs. Rebecca Harding Davis,

and a host of other favorite writers. The illustrations, as usual, will be by the foremost artists, and all of the departments will contain interesting and instructive articles.

No better or more welcome gift can be found for any household that contains boys and girls. Price $3.00 a year. Can be ordered through all subscription agents, book-sellers and newsdealers, or upon receipt of the price will be sent direct by the publishers,

THE CENTURY CO., UNION SQUARE, NEW-YORK.

Digitized by Google

Now Ready. Published by The Century Co.

Dr. S. Weir Mitchell's Great Novel of the American Revolution,

"HUGH WYNNE, FREE QUAKER

Sometime Brevet Lieut.-Colonel on the Staff of his Excellency General Washington."

Pictures by Howard Pyle. In two vols., small 8vo, $2.00.

If "Hugh Wynne" is not the long-sought great American novel, it at least comes closer to it than any novel of the decade.— *The Outlook.*

"There are not wanting those who think that Dr. Mitchell has now written the great American novel."— Dr. W. ROBERTSON NICOLL, in *The British Weekly.*

THE SCHOLAR AND THE STATE,
By Henry C. Potter, D.D., LL.D.
Bishop of New York.

8vo, cloth, 355 pages, $2.00.

A COLLECTION of Bishop Potter's public utterances, mainly on civic questions. Besides the papers bearing directly on civic righteousness, there are others on "The Rural Reinforcement of Cities," "The Ministry of Music," "The Gospel for Wealth," etc.

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON.

New Edition. 8vo, 500 pages, illustrated, $4.00.

A NEW EDITION, with a supplemental chapter. The story of the famous comedian's life, told by himself. Profusely illustrated with portraits of the author and of contemporary actors and actresses. *The Critic* calls it "the best book of its kind the century has produced."

Issued under the Auspices of the Empire State Society, Sons of the American Revolution. With Introduction by Chauncey M. Depew.

THE CENTURY BOOK OF THE AMERICAN REVOLUTION

BY ELBRIDGE S. BROOKS.

The Story of the Pilgrimage of a Party of Young People to the Battle-fields of the Revolution. More than Two Hundred Illustrations. A Complete Panorama of the War.

A BOOK which describes and illustrates the battle-fields of the Revolution as they really look. It contains the story of the Revolution told in the account of the trip of a party of boys and girls with their uncle to these historic scenes. 250 large pages, 208 illustrations, attractive buckram binding. Price, $1.50.

MASTER SKYLARK.
By JOHN BENNETT.

A STORY of the time of Shakspere. The hero and heroine are a boy and a girl, but the great dramatist and Good Queen Bess appear as characters in the story. Full of stirring adventure and reflecting all the romance of the Elizabethan age. 12mo, about 350 pages, with nearly forty beautiful illustrations by Reginald Birch. Cloth, $1.50.

JOAN OF ARC.
By M. BOUTET DE MONVEL.

A SIMPLE account of the life of the Patron Saint of France, written especially for children, by the great French artist, Boutet de Monvel, to accompany 43 superb illustrations drawn by himself in his most characteristic style, and richly printed in colors by Boussod, Valadon & Co., of Paris. The text is translated by A. I. du Pont Coleman. A beautiful and unique art work. Folio, oblong. Price, $3 00.

A NEW BABY WORLD.
Edited by Mrs. MARY MAPES DODGE.

A SUCCESSOR to the popular books for very little readers, of which thousands of copies have been sold. A new selection of stories, poems, jingles, and pictures from ST. NICHOLAS with a few of the old favorites retained. The book embraces the work of many popular writers, and there are pictures on every page. Quarto, about 200 pages. Cloth, $1.50.

THE LAST THREE SOLDIERS.
By WILLIAM H. SHELTON.

A WAR story of the North and the South. Mr. Shelton, who served in the war himself, has evolved a unique plot. Three Union soldiers, members of a signal corps stationed on a mountain-top in the South, are led to believe that the Confederacy has triumphed, so they cut off all communication with the world and become castaways. 12mo, about 300 pages. Twenty illustrations by B. West Clinedinst. $1.50.

Ready Oct. 8th: Rudyard Kipling's First American Novel,

"CAPTAINS COURAGEOUS"

Sold by all booksellers, or sent, postpaid, by

Hazen S. Pingree, Governor of Michigan, says: "I would not be without the Pratt Fasteners on my shoes if I had to pay 50 cents a piece for them!"

Pingree Shoes

GOVERNOR PINGREE'S reputation for honesty of purpose, thoroughness and reliability is the guarantee in all the shoes made by his firm, Pingree & Smith, Detroit.

"Composite Shoes"

are the best ever made for women at $3.00. We want every woman who reads "The Century" to see the "*Composite Shoe*," show this advertisement to her shoe dealer, and ask for these shoes. Any woman buying a pair can have her money back if the shoes are not right.

The Composite Shoe combines all the best features of modern shoemaking — style — durability — comfort — neatness and elegance.

Pratt Fasteners hold laces without tying, wide stay extending from heel to top prevents back seam from ripping, four rows of silk stitching secure seams.

Made by skilled workmen from *dull-finished*, soft, durable kid, with stout, welt-stitched, cork-filled damp-proof soles *for street wear*, and from fine *glazed kid*, with plump, welt-stitched soles *for dress wear*.

In Lace only, neat, stylish "Coin" toe, kid tips, medium opera heel, every size and width, top facings embossed with our name, soles stamped "*Composite.*"

Don't pay fancy prices for shoes when you can get $5.00 style, durability and comfort for **$3.00** with the reputation of the most famous manufacturer of fine shoes in the country, their *guarantee*, behind them.

If your dealer has n't them, and won't send for them, send us $3.00 with your name and address, with size and width you wear, and the name of your dealer, and we will see that you get them.

Modernized Mother Goose Melodies — illustrated in colors — sent FREE on receipt of your name and address (mentioning "Century Magazine") and those of three leading shoe-dealers in your town.

Address Dept. C,

RUBBER SHOD

DO YOUR FEET SLIP? Does walking jar your nervous system? Do you dislike wearing rubber shoes? These troubles are relieved by the **McKay Neverslip Rubber Sole Shoe** and **Composite Cushion Heel.** If your shoe dealer has n't them he can get them. **Ask to see them.**

The Neverslip Sole is made by inserting a piece of pure gum rubber (molded for this purpose) in a cavity made in the leather outersole by special machinery before the shoe is put together. It does not go through the sole, but is firmly secured in the cavity or pocket, so that it will stay there until the entire sole is worn out. The rubber will outwear ordinary sole leather, and can be easily replaced when worn through. It insures a firm, elastic tread, adds to the ease of walking and saves the discomfort and annoyance of wearing rubbers in wet weather.

The Composite Cushion Heel is a rubber top lift, with a wooden core, that can be attached to any shoe, old or new. The rubber is of pure gum and extra durable, while the core gives it firmness and lightness. They are noiseless, break the jar to the nervous system when walking on hard sidewalks, and are recommended by physicians for all nervous, heavy or delicate people.

Combined, these Soles and Heels make an ideal footing for *Policemen, Motormen, Postmen, Yachtsmen, Tourists, Bicyclists, Undertakers, Doctors, Nurses, School-teachers,* **and all who walk.** Shoes with these features are made by nearly all the leading manufacturers of Men's and Women's Shoes. Any shoe dealer can readily obtain them. They add but a trifle to the cost of the shoes, contribute considerable to their service, and have been in use for several years, standing the most severe tests.

"Just Like Home"

Wrote a lady to her friends, describing her trip from Boston to Chicago and speaking of the many little comforts and conveniences provided travelers over

The Lake Shore & Michigan Southern Ry.

Our book tells all about the trains and the route between Chicago, Cleveland, Buffalo, Boston and New York, and will be sent free by

A. J. SMITH, G. P. & T. A., Cleveland, O.

Grand Oriental Cruise

by the Superb Twin-Screw Express Steamer . . . . . AUGUSTE VICTORIA

of the

Hamburg-American Line,

Leaving New-York on January 27, 1898, and returning on April 6.

The itinerary includes: **Madeira, Gibraltar, Malaga** (Granada and Alhambra), **Algiers, Genoa, Villefranche** (Nice), **Bizerta** (Tunis), **Alexandria** (Cairo and the Pyramids), **Jaffa** (Jerusalem, the Jordan and Dead Sea), **Beyrouth** (Damascus), **Constantinople, Athens, Canea** (Crete), **Palermo, Naples,** and **Genoa.**

Canea (Crete) will be of great interest, owing to its association with the recent Eastern troubles.

Rates of passage from **$450** *upward.*

There is **no way** of reaching these places **with greater comfort** and **safety,** avoiding innumerable transfers, customs inspections, etc. Passengers can extend their stay in Europe and return to America later from Hamburg, Southampton, or Cherbourg.

For descriptive pamphlets, rates, etc., etc., apply to

HAMBURG-AMERICAN LINE,

New-York, Chicago, Boston, Philadelphia, San Francisco.

AN ALPHABETICAL INDEX

embracing a few hundred names can be kept satisfactorily in a book index, and rewritten when necessity requires without much labor or expense, but when the lists of names runs into thousands, trouble begins—too many spaces for some names, not enough for others, no room for expansion, dead matter accumulates, and in a short time the book is worthless.

The Globe Card Index System provides for the accurate indexing of an unlimited number of names, which never have to be rewritten—always clean, free from dead matter, and easily handled.

Fully illustrated and described in Globe Card Index Catalogue.

Oct. '97.

An Overlooked Feature of Newspaper Advertising.

An important, though often overlooked, feature of newspaper advertising is the good feeling which a pleasant invitation produces. Acquaintanceship between the reader and the advertiser is begun at the first reading of an advertisement. The invitation may not be accepted at once, but good-will has been established. Sooner or later the reader will see the article or the establishment, then the first exclamation will be one of recognition, "Oh, there is ——."

With what a feeling of ease and serenity one enters the store or hotel that is advertised; she is welcome; he has been invited to come. With what confidence you inquire for an advertised article; the proprietor himself believes in it, wants you to try it, is interested in your getting it. This very good-will, this appreciation of courtesy, this satisfaction in being pleasantly asked, has been the foundation of many a successful business.

Newspaper advertising is something more than spending money in the newspapers. If properly done it is the making of acquaintanceship and friendship that will surely be of great value in time to come.

Would you have your business or your article so favorably regarded? Make it known. If it is worthy, people will appreciate being asked. The papers are being issued and we are ready to—but let us write you or tell you about that.

REGISTERED TRADE-MARK.

We Have Weighed These Words.

On the counters and shelves of the entire five floors of "**The Linen Store**" at 14 West 23d Street there is now, as we believe, the largest, choicest and most varied stock of household linens, art linens and handkerchiefs to be found anywhere in the United States.

"**Linen Store**" linen means every thread pure linen.

"**Linen Store**" prices are just prices, alike just to purchaser and merchant.

To such a store conducted on such principles, with such a stock, we invite discriminating housekeepers.

In case it is inconvenient to call, a letter of inquiry, or an order by mail, will be treated with as great consideration as its author would receive if present. Every facility of the store will be at its command.

We have published a book about the stock of "**The Linen Store**" which we will be glad to send to housekeepers who desire it.

La Rose Combs

FOR WOMEN

Its Points of Merit:

Dries the Hair Quickly
Invaluable after the Bath
Cleans the Hair Without Wetting
Removes the Oil and Dust
A Boon to Cyclists
Saves Trouble
Saves Time
Is Simplicity Itself

"A Contented Woman" writes:

NEW YORK, March 31, 1897.

Gentlemen: During my constant use of La Rose Comb I discovered that it served as a cleaner fully as well as a dryer. The significance of this will be appreciated by the millions of women thus emancipated from the disagreeable necessity of having to wet the hair.

CAROLINE MISKEL-HOYT.

La Rose Combs are composed of three simple parts: A pure rubber comb, especially designed for the purpose. An absorbent band of terry cloth, which of itself would tend to give the hair softness and gloss, while collecting dust and dandruff or drying the hair after washing. A light, non-rustable holder, silver-plated, and silver-plated handle. Combs thoroughly tested by many women, and a hair-dresser of long experience, who having given them most persistent trial pronounces them ideal. There are absolutely no chemicals or other preparations of any kind or description used on the absorbents. The hair is cleaned solely by the absorbent on both sides of the comb holder, which only requires to be kept clean.

The complete outfit—comb and cleaner combined—is $1.00 by mail postpaid. One will last a lifetime.

And after using it merely as a hair cleaner for a month you wouldn't be without it for a hundred dollars.

Remit by check, post office order, or registered letter to

THE COTTIER MANUFACTURING CO.

Ivers & Pond

Baby Grand Piano.

There is no piano like the Grand for artistic effect and there is no Grand like the new Ivers & Pond Baby Grand. It 's a revelation in Grand Piano-building. It 's the triumph of the piano builder's art. It occupies but comparatively little floor space, being, so far as we know, the smallest Grand Piano in existence, and yet it possesses a volume and richness of tone and a range of expression that is really wonderful. The listener is captivated at once and falls in love with it at first sight.

The Price is an interesting feature. It 's an unheard-of price in the history of Grand Pianos and places this Grand within the reach of every home of moderate income in the land. **Write** us for special prices and full description of our Easy Payment Plan, giving one to three years to complete payments. If no dealer sells them near you, we ship at our risk and expense on approval and pay railway freights both ways if unsatisfactory. We also make and sell the finest Upright Pianos in this country. You can have our Catalogue for the simple asking.
